The Nation.

NEW YORK, THURSDAY, JULY 4, 1895.

The Week.

THE revenue of the United States Government for June has been, it seems, considerably in excess of its expenditure, and as this is the first month since the new tariff went into operation in which there has been a surplus, the Treasury officers are naturally encouraged as to the future. The deficit at the end of the fiscal year proves to be less than $43,000,000. The receipts from customs duties have been $21,000,000 larger than last year. The receipts from internal revenue are three and a half millions below last year's; but this is explained by the large withdrawals of spirits from bond which took place just before the tariff went into effect, and the disbursements this year will be enough smaller to make up for this loss. The New York *Tribune* offers a large assortment of reasons why the existence of a surplus should be regarded as a matter of no consequence. Marry, sir, the surplus is only a momentary one, and relates only to the past month. Secondarily, it is a very small surplus, while the previous deficiencies have been large. Moreover, it would take several hundred such surpluses as this to wipe out the former deficiencies. Sixthly and lastly, June is always a month of large receipts and small disbursements. Thirdly, expenditures have been kept down to an absurdly small figure to bring about this momentary appearance of a surplus. And, to conclude, the deficiency would have been twice as large as it is had a sum equal to the amount of the deficiency been applied as a contribution to the sinking fund. These reasons ought to be sufficient to dispel any cheerful anticipations that may have been aroused by the appearance of the surplus, and the *Tribune* assures its readers that no phenomenon of this kind will appear again for many months. But would it not be safer to guard this statement by the assurance that if a surplus should by any possibility recur this fall, it will be due to the anticipation of a restoration of the McKinley tariff?

The effect of the victory for sound money in the Kentucky Democratic State convention last week is already visible throughout the South in the increased confidence which it has given the opponents of free coinage. Hitherto many of them have been inclined to credit the claims of the silverites, that the masses were for "sixteen to one" by a great majority, but now they see that it is only necessary to set forth the truth in order to overthrow the delusion. The next Democratic convention to occur is in Mississippi, and the free-coinage men have counted upon a practically unanimous sentiment on their side among the delegates. The probabilities still are that they will control the body, but the sound-money men have instituted a "campaign of education" which only needed to have been started three months earlier to have transformed the situation. The truth is, that the sentiment for free coinage is almost always based upon ignorance and misrepresentation of the facts. The editor of the Natchez *Democrat* remarks that he has "observed in private conversations with reasonable men that some of them labor under the most egregiously mistaken ideas as to the free-silver theory, and as soon as their minds are disabused they admit their delusion, say that is not the way they understood it, and repudiate at once the idea of free and unlimited coinage." It was Secretary Carlisle's wonderful success in exposing such misrepresentations that caused so many thousands of Kentucky Democrats to change their minds, and the same thing will always happen where similar methods are pursued.

This year's election for Governor in Kentucky will be the first in which that office has been filled under the Australian system of voting. The ancient practice of *viva-voce* voting, by which the elector must publicly announce his choice, was maintained in Kentucky longer than in any other State, but a radical change was instituted when the new constitution was adopted. The Republicans think that the change will prove to their advantage, and this seems not unlikely. In a State where one party has long held sway, it often requires no little moral courage for a man to make public proclamation before his neighbors that he has concluded to support the opposition. The Australian ballot, on the other hand, enables him to give effect to his convictions without anybody's knowing how he stands. Vermont is a State which has been as overwhelmingly Republican as Kentucky has been Democratic, and the adoption of the secret ballot there, by the confession of the Republican managers, deprived the dominant party of some thousands of votes that they had been sure of so long as voters could be watched and the bolter could be "spotted."

These are dark days for the free-silver people. Michigan has been one of the States where they claimed to be especially strong, but when it comes to an actual count, their numbers take on an evanescent character. A few days ago, arrangements were made at Grand Rapids for a silver conference, but when the time came, the conference seemed to be "lost, strayed, or stolen." At noon only one man could be found who said he came as a delegate, and he had no credentials. In the afternoon that eminent apostle of free silver, Mr. Sibley of Pennsylvania, appeared, but his arrival, according to the despatches, "was a surprise." A "conference," indeed, consisting of one delegate without any credentials has many elements of surprise about it, and it is probable that Mr. Sibley was as much surprised as the conference. In view of this conference and of the 24½ votes in favor of free coinage which were obtained from nearly 900 delegates to the Democratic convention in Kentucky, the call for a convention at Washington issued by Senators Harris, Jones, and Turpie may have interesting results. These statesmen ought to be bound over, to one another and to silver in general, to attend the proposed meeting. It would never do to have only one delegate without any credentials constitute this national gathering. But Washington is not very attractive in the middle of August, and there is no inducement in the shape of mileage to draw our Congressmen thither. Unless some of the rich owners of silver mines can arrange for very low excursion rates, the rank and file of the "debtor class" may not find themselves pecuniarily able to respond to the senatorial call. As to the politicians, it looks as though they were pretty generally making up their minds that free coinage is a sinking ship, and before the middle of August they may have deserted it altogether.

Assured of non-interference by the federal courts, the Tillmanites in South Carolina are carrying things with a high hand in their attempts to suppress all opposition to the success of their faction in controlling the approaching Constitutional Convention. Tillman has repudiated an explicit agreement with the conservatives to divide the delegates equally between the two wings. His followers are now suppressing free speech. Col. John J. Dargan, the courageous editor of the Sumter *Freeman*, who has insisted strenuously upon giving the negroes a fair show, was announced to deliver a speech in Edgefield on Wednesday of last week, but was compelled by a mob of Tillmanites not only to abandon his purpose, but to leave town in order to escape personal violence. Such tactics are probably the best for bringing matters to a head. The rule of the Tillman oligarchy has been almost intolerable from the start, and, now that it breaks its pledges of fair play and suppresses free speech, an effective revolt can hardly be long postponed.

The *Bulletin* of the Iron and Steel Association sees the gloomy prospect that if

prices of rails go much higher, "consumers, especially if there is delay in meeting their wants, will do as was done in 1879—place liberal orders abroad. Then the market abroad would undoubtedly weaken." To prove the imminence of this danger, the *Bulletin* publishes a table which shows the present prices of thirteen articles abroad, and the foreign prices with duties and freight to New York added, and the present prices of corresponding domestic products at home. Thus it appears that foreign steel rails can be laid down in New York at $26.37 per ton, after paying $7.84 for duties and $1.50 for freight, while the price at mills in Pennsylvania is $24. Thus we see how near we are to ruin in consequence of the Wilson tariff. An advance of $2.37 in the domestic price opens the floodgates, and we are inundated. Would it not be wise for the railmakers to hold a convention and sign a paper, or take an oath, not to charge more than a dollar or a dollar and a half above the present price? Perhaps after reading the *Bulletin's* article they would be able to keep their agreements, and perhaps not.

The presentment of the grand jury in regard to the condition of the Tombs prison and House of Detention reads as if it were a description of the penal institutions of the Ottoman Empire rather than those of the first city of a Christian republic. Yet there is nothing especially new in the revelations. The crowded and filthy condition of the Tombs, its barbaric unfitness as a modern prison, has been exposed many times, but to no purpose. Our Tammany rulers, while always eager to come to the aid of political criminals, were always callously indifferent to the welfare and comfort of those who were not able to protect themselves with "pulls." They cared no more about giving these humane treatment than they did for giving it to the paupers and insane on Blackwell's Island. So in regard to the brutal practice of treating detained witnesses as criminals, depriving them of their liberty in defiance of law for long periods of time. The grand jury say that the Police Justices have ignored the provisions of the criminal code on this subject, and have treated innocent persons as if they had committed crimes. This shocking condition of affairs ought to be remedied at once, and the new City Magistrates can be depended upon to heed the request of the grand jury to put an end to it.

Doubtless judges rejoice in opportunities to escape from the severe requirements of conformity to statutes and precedents, and to indulge themselves in visions of things as they ought to be and not as they are. Such recreations also afford opportunities to the rest of the world to criticise the views professed by the judiciary without fear of discipline for contempt of court, or of encouraging disrespect for law. We do not hesitate to say, therefore, that the address of Justice Brown of the United States Supreme Court at the Yale Law School commencement, according to the reports we have of it, does not seem to be characterized by sound judgment. Justice Brown warned his hearers that the great powers of Europe were about to look for new fields of conquest in the extreme East, stating that "the process of absorption will go on with the usual indifference to the wishes of the native population, and another hundred years may see the entire eastern hemisphere under their control." He added that "the lust of conquest, like that of acquisition, knows no bounds," and that it would be the duty of his audience to see that the rapacity of the European powers did not extend to the western hemisphere. We incline to think that these observations may need some revision in view of the recent disclosure of the military capacity of the Japanese, and we fancy that the European powers are for the most part quite as anxious concerning Asiatic "lust of conquest" as Justice Brown is concerning the European variety of that revolting passion. But, however that may be, we think that it would have been better counsel for young men had Justice Brown turned their attention from the mote in the European eye to the beam in our own. There has been much "lust of conquest" manifested here concerning the Sandwich Islands, "with the usual indifference to the wishes of the native population." There was a certain affair with Chili not long since; and there is a constant menace on the part of many of our journalists toward Canada and toward Cuba. If Justice Brown could persuade our young men to insist on fair and honorable dealing with our neighbors in this hemisphere, he might safely assure them that European rapacity would need no other check.

It is difficult, also, to follow Justice Brown's reasoning in favor of Government control of "natural monopolies." The only reason which he assigns is, that a tendency in this direction exists in nearly every highly civilized state except our own, "where great corporate interests, by parading the dangers of paternalism and socialism, have succeeded in securing franchises which properly belong to the public." The natural inference from such statements is, that there are no dangers in paternalism and socialism which we need apprehend. This is certainly not a judicial view to take of the case. Paternalism and socialism flourish most vigorously in France, and certainly the condition of that country is not to be envied. Every business conducted upon a large scale is by judicial determination "affected with a public interest," but the logical gap between this premise and the conclusion that the Government ought to carry on every such business is wide, and, in our view, impassable. There is a premise lacking, to the effect that the Government is competent to carry on business with as much economy and with as good results, on the whole, as private enterprise. This premise can be established only by referring to experience, and those who "parade the dangers of paternalism and socialism" have no anxiety concerning the results of such an appeal. Whenever Government shall have proved itself a good business manager, it will very likely take control of natural monopolies; but it is important to insist that substantial evidence of this competency shall be furnished before private enterprise is driven out of the great field which it is now so splendidly exploiting.

Mr. H. D. Macleod has replied in the *Nineteenth Century Magazine* to the attacks on his former article on bimetallism. He addresses himself now to the subject of a particular ratio between gold and silver, and the deadlock in which an international conference would find itself if it should ever get so far along as to consider one. France would naturally insist on the ratio of 15½ to 1. That is what her bimetallists always insist upon. What would this signify to England? It would mean that every existing debt, including all deposits in banks, should be paid at the rate of ten shillings in the pound. In other words, repudiation of one-half of all existing obligations would be legalized. Now no English conferees and no English Parliament would ever agree to that. England would at all events insist on taking the market ratio of, say, 35 to 1 as a starting-point. What would that mean to France? The Bank of France holds 1,250,000,000 francs of silver, which is kept at par by the fact that the coinage is limited. If the coinage were unlimited, all the existing five-franc pieces would fall to their bullion value, and the bank would lose 625,000,000 francs at one blow. But that is not all. The five-franc pieces in circulation among the people are a much larger amount than the bank's holdings. These would fall in like manner. So the international conference would begin with a deadlock between England and France which would be absolutely insoluble. It is needless to pursue the inquiry in order to see in what manner Germany, the United States, Russia, Holland, and Austria would harmonize their coinages with each other and with those of France and England.

The fiscal condition of the French republic is becoming positively alarming. It appears from official figures that the yield of the indirect taxes for the first five months of the present year is nearly 12,500,000 francs less than was

anticipated, and 55,000,000 francs less than for the corresponding period in 1894. Something must be done to lessen the deficit, and there seems to be a growing disposition to follow the example of Russia in establishing a Government monopoly of the traffic in alcoholic liquors. As was to be expected, the protectionists are not averse to the experiment, and one agricultural society has already pronounced in favor of it, provided the Government shall purchase only alcohol made in France out of the products of French soil. M. Aglave, a professor of finance, thinks that the support of the agriculturists may be secured by having the Government agree to pay them such a price as will in effect give them a bounty upon their production sufficient to enable them to export the surplus. This plan ought to satisfy the most incorrigible grumbler that can be found among the farmers, and it is hard to find any fault with it, except for the hint that there may be an exportable surplus. In order to have universal satisfaction, as we have learned from our Populists, it is necessary that the Government should not be allowed to limit its purchases, but that it should be required to purchase all the grain that the French farmers offer to sell to it at prices sufficient to enable them to live in comfort. As to the net revenue to arise from a business of this character, Prof. Aglave is somewhat vague; but in the interests of financial science it might be desirable to make the experiment. The French Chamber has, it is true, postponed the discussion of this monopoly, but the majority was a small one, and it is probable that a determined attempt will be made to establish it.

One of the significant features of the recent International Miners' Congress at Paris, and one of the things that mark the general decadence of quack internationalism, was the failure to pass a resolution advocating a restricted production of coal the world over. The Belgian and French delegates were hot for the proposition, and painted charming impressionist pictures of the blessings that would crown both masters and men through a general agreement to be idle a certain number of months each year. But the unimaginative Englishmen would not hear of it. They pointed out that it was a difficult thing to take a vote in Paris that would be binding round the globe, especially when so large a part of the coal-mining globe was not represented. While the French and Belgian and English miners were eating their heads off waiting for the limited production to raise prices and wages, what would their American and Russian and Australian fellows be doing? Working night and day, beyond a doubt, and glutting themselves at the same time with the market. Such prosaic reasoning carried the day, and the proposal was defeated by the negative vote of delegates representing 756,000 miners against an affirmative standing for but 212,000. The case is typical, and shows how much there is of dream, and how little of actuality, in the idea that production can be regulated internationally. Any given country or combination of countries is perfectly willing that others should stop work, or even stop eating, but for itself will continue to hug the old superstition that nations, like men, get rich by industry and making the most of their natural abilities and opportunities. The thing reminds one of the old test question in theology that used to be put to candidates for the ministry, whether they were willing to be eternally damned for the glory of God; and of one badgered candidate who finally told his examiners that he was not, but was entirely willing they should be.

The social programme of the English Unionists is entirely of Mr. Chamberlain's making. In season and out of season he has been hammering at it since 1892, when he took up the question of old-age pensions. Later on, when the country was disturbed by the controversy on the employers'-liability act, and the proposals of the Radicals for the amendment of that measure, he put forward his plan for compulsory insurance to cover cases of accidents to workmen; and still later he hit upon that for using the credit of the Imperial Treasury to enable workingmen to buy their homes. These were the proposals which were in the minds of Lord Salisbury and Mr. Balfour when, in their recent speeches, they dwelt upon the importance of the cessation of the movement for organic reform, in favor of a movement in Parliament in behalf of social reform. The two prominent men in the Unionist party who have not endorsed Mr. Chamberlain's social-reform schemes are Mr. Goschen and Mr. Courtney. All three measures are strongly tinged with socialism. It will, therefore, be interesting to see the attitude which economists like Mr. Goschen and Mr. Courtney now take towards them. From Mr. Goschen's past utterances on the poor-laws, especially those of 1884 and 1885, when the last franchise act was under discussion, and those in 1893, when an inroad was made on the poor-law system as established in 1835, it appears hardly likely that he can have much sympathy with any of the proposals.

Now that the British have got Chitral, the question arises what they shall do with it. A vigorous controversy between the advocates of the "forward" policy and the "scuttlers" generally follows a "native" war, and the expedition to Chitral is no exception to the rule. The "forward" party points to the fact that the British troops quickly and easily overcame the difficulties of supplies, of transport, of high snowy passes and deep defiles, and asks triumphantly why the Russians cannot do the same thing from the other side of the Hindu-Kush. It is true that no large army could be moved through such a country, but a small force would constitute an effective flanking party. It is true that the tribes might combine to resist the Russian advance; but on the other hand they might all turn around and, intoxicated with the prospect of plundering the rich plains of India, pour down like a flood upon the British line of communications. On the other hand it is argued that the day for such marches as Xenophon's Anabasis are past, and that a Russian army would be utterly cut off from its base of supplies before it could get down into India. Moreover, if the policy of disregarding the independence of the tribes of Chitral is to be followed, and British troops are to occupy the region, it will be made permanently hostile, and will involve an expenditure which would produce far better results if applied to strengthening the Indian army or even to relieving the Indian budget. It is evident that no reconciliation is possible between the representatives of these conflicting theories, but it is safe to say that the British will not withdraw, or that they will do so only after providing a subsidy, as in the case of the Ameer of Afghanistan, that shall make it for the interest of the ruler or rulers of Chitral not to engage in intrigues with the Russians.

The groans of the ruling authorities of British India over the difficulties of obtaining revenue suggest the inquiry whether the expenses of government cannot be reduced. No answer, so far as we have observed, is ever vouchsafed to this question, except the bald statement that it is impossible to make any reduction. But some light was thrown upon the matter by a question recently asked in the House of Commons concerning the payment of the travelling expenses of the Shahzadah of Afghanistan upon his visit to England. It was disclosed that these expenses, estimated to amount, together with the expenses of entertainment, to about a million dollars, were to be charged to India, which was never consulted in the matter and had no voice in the invitation. No doubt it will be claimed that these disbursements are all made in the interest of India, but it cannot be denied that Great Britain is quite as much interested as her Indian subjects. Considering the financial difficulties under which the Indian Government is laboring, and the numerous expressions of sympathy which these difficulties have elicited from the British authorities, it might have been supposed that these authorities would be glad to assume a charge which in justice belongs to them. As it is, we have the unedifying spectacle of the British Government squeezing a million dollars out of the poor people of India and spending the whole of this sum in junketing in England.

THE VICTORY IN KENTUCKY.

ONCE in a while it happens in American politics that an election in a single State, even in an "off year," involves national questions of the first importance and decides the attitude of the country towards the burning issue of the day. Such was the case in Ohio twenty years ago. The panic of 1873 had been followed by two years of hard times. As always happens in periods of financial depression, demagogues came forward with all sorts of wild schemes for the alleged relief of the people. A movement for an inflation of the currency, "to meet the wants of trade," was started, which for a time threatened to carry everything before it. Outside of a few States on or near the North Atlantic seaboard, nearly all of the Republican leaders—Cameron of Pennsylvania, Morton of Indiana, Logan of Illinois, Carpenter of Wisconsin, Windom of Minnesota, Ferry of Michigan, Ingalls of Kansas—yielded to the craze. Inflation was declared to be peculiarly "the Ohio idea." Old "Rise-up" William Allen had been elected Governor of the State by the Democrats in 1873 on the wildest sort of a platform, and was to stand for reëlection as the representative of inflation in 1875. Faint-hearted Republican managers feared to make the issue sharply, and favored an attempt at a "straddle." But better counsels prevailed, and the canvass for Hayes as Allen's opponent led to a fair and square fight for honest money. The attention of the whole country was centred upon the contest, and the victory for Hayes was universally recognized as the death-knell of inflation, which never afterward was a threatening danger.

The panic of 1893 and the two following years of hard times raised a fresh crop of demagogues, who started a movement for the free coinage of silver at the ratio of 16 to 1. The Democratic President was sound, as the Republican President had been twenty years before, but Senators and Representatives of the dominant party were wrong by as large a majority as that among the Republicans of Grant's second term. The silverites were as confident and overbearing as the inflationists had been in 1875, and some of their opponents were quite as much inclined to compromise with the demagogues. Under these circumstances a State convention was called by the Democrats of Kentucky for the nomination of a ticket and the decision of the party's attitude towards the overshadowing issue. Joe Blackburn, a worthy successor of Bill Allen, took the field as the champion of the financial heresy, full of brag over the easy victory that he was going to have. The sound-money men saw that they must fight or suffer the most ignominious defeat. Kentucky is a State with fine traditions as to the way in which great leaders discuss public questions on the stump before interested audiences. The traditions were well maintained. The ablest Democrats took sides on the question. Secretary Carlisle, the clearest and most forcible speaker on financial questians in the country, assumed the lead of the sound-money men, and the Louisville *Courier-Journal* threw the weight of its great influence on the same side. For weeks the question was canvassed before the people. Before the delegates to the convention were chosen, everybody in the party knew what the controversy was about, and had made up his mind how he stood.

The convention met at Louisville on Tuesday week, and it soon became apparent that the sound-money men had won. The delegates from each congressional district met to choose its member of the most important committee—that on resolutions—and the silver-men could claim only three of the eleven, the others being ranked either as gold-men or as conservatives opposed to free coinage. Blackburn himself was beaten for a place on the committee from his own district. The permanent chairman of the convention named a gold-man and a silver-man as members of the committee at large, giving the silver-men four of the thirteen places. But only two of these four favored the report of a platform declaring for free coinage at 16 to 1, the other two being willing to go no further than to endorse the silver plank in the platform adopted by the Democratic national convention of 1892. The defeat of the silverites was thus rendered most unmistakable and emphatic. The convention itself adopted the report of the great majority of its committee endorsing the sound-money stand of the Administration.

When the last Democratic Congress adjourned on the 4th of March, after flouting and insulting President Cleveland in every possible way, if any prophet had said that within four months a convention of his party in Kentucky, chosen with a view to ratifying or rejecting his financial policy, would give him the most enthusiastic approval by more than a two-thirds majority, such a seer would have been called mad. That is the wonderful thing which has happened. It is not the only event of the kind in Mr. Cleveland's career. On the contrary, it is the recurrence of such events that makes his present triumph more impressive, showing, as it does, that the people are faithful to leaders who have once gained their confidence by an uncompromising adherence to the truth through evil as well as through good report. This victory in Kentucky smashes the silverites *in both parties*, and they know it. Mr. Cleveland more than any other man has done this. By his courage and fortitude he has not merely snuffed out a lot of pestilent demagogues in his own party, such as Blackburn, Bland, Voorhees, Morgan, and Altgeld, but he has dwarfed into relative insignificance a lot of weak-kneed trimmers and traders in the Republican party whose names will readily suggest themselves to the general reader. Furthermore, he has done what to most people, three months ago, was incredible—he has made a Democratic victory next year possible. He has done this by turning the party "about face," preventing it from walking over a precipice for which it was plainly headed. Nothing seemed more likely, prior to the holding of the Memphis convention, than that the whole South would go with a mad rush for silver at 16 to 1, in which case the party would have lost every Northern State east of the Missouri River, together with Delaware, Maryland, and West Virginia, and very likely Kentucky also. Indeed, there is no saying what States they could be sure of.

In ascribing to Mr. Cleveland the foremost place, we do not overlook the services of Mr. Carlisle, Mr. Patterson, and other able and zealous workers. They have fought a glorious battle, and are entitled to second place, but the battle would not have been fought at all but for Mr. Cleveland. We should have gone to silver monometallism two years ago but for him, and we should have wallowed in that mire until we had learned, by dear-bought experience, that a depreciated and fluctuating currency is never anything but a curse, and most of all a curse to the poor. It was Mr. Cleveland's initiative in calling Congress together in 1893 that made it possible to repeal the Sherman act. It was his determination that brought the Democratic Senators "up to the scratch." It was his rejection of compromises that compelled the taking of a vote on the naked question of repeal, without which we should be in a condition very different from the one we are now in, and far less satisfactory. Convalescence will now proceed rapidly, and it will not be restricted to the Democratic party. The Republicans will get some of the benefit. We shall soon discover an improved tone among their leaders. Harrison, Reed, and McKinley will all find it much easier to talk than they did a little while ago, and such newspapers as the *Tribune* will be much bolder than they were. These things, too, will be trophies in Mr. Cleveland's wigwam—scalps in his belt, so to speak. That he may live long to wear them is the earnest wish of the sober-minded American people.

ENGLISH ELECTION PROBABILITIES.

THE interest in this country in the outcome of the general election soon to be held in England is very much less than in either 1886 or 1892. In those years it seemed possible that upon the result of the polling depended a great and permanent change in the political relation of Ireland to Great Britain. Now no one either fears or hopes that a home-rule bill can become a law during the lifetime of the new Parliament. Three years ago there was something very stirring in the part which Mr. Gladstone was taking. The spectacle of an old man of fourscore,

personally conducting with eloquence and fire a desperate contest to right what he and millions of other men in all civilized countries believed to have been a great and continuous national blunder and crime, drew the attention of most English-speaking people to every phase of the struggle. Mr. Gladstone is now out of public life, and has left no successor behind him. Some of the Liberal party look to Lord Rosebery for guidance, others to Sir William Vernon Harcourt, others to Mr. Morley, or to Mr. Asquith, a few, perhaps, to Mr. Labouchere, while a great many, and very possibly the majority, feel themselves to be without any head. Under such circumstances, there is every reason to expect that the Salisbury ministry will win a handsome victory. Indeed, in the light of the results of the by-elections of the last three years, the reported claim of the Unionists that, in the new House of Commons, they will have a majority of eighty, does not seem at all extravagant. It is true that the movement of public opinion since 1892 in their favor does not appear to have been either as uniform or as strong as, during the period from 1886 to 1892, was the current against them. When, however, the results of the by-elections are analyzed in more detail, it becomes plain that if the constituencies in which these elections have been held are fair samples of the others in which no contest has occurred, the Liberals will lose heavily. This is particularly true of the sometime Liberal stronghold of Scotland.

Since 1892 there have been ten contested by-elections in Scottish constituencies. At the general election these places returned nine Liberals and one Unionist. They are now represented by six Liberals and four Unionists. Moreover, the total Unionist poll was about thirty-four hundred greater at the by-elections than in 1892, while the Liberal vote was nine hundred less—an average net Liberal loss of about four hundred and thirty to a constituency. Ten of the sitting Scottish Liberal members of the House were returned in 1892 by majorities of less than four hundred and thirty each. If their seats shall be lost at the approaching election, the Scottish delegation in the next Parliament will be almost equally divided between Liberals and Unionists. Such a result, if it shall come about, will vividly demonstrate the extent of the political revolution which has taken place in Scotland within the last ten years.

In England the Liberal losses have not been relatively so great. Exclusive of the by-elections resulting from the acceptance of office in August, 1892, by the members of the Gladstonian Government, there have been forty-two English seats filled since the general election. These constituencies in 1892 returned twenty-two Liberals and twenty Conservatives. Since then the Unionists have gained six seats, the Gladstonians four, leaving the net Unionist gain two. This ratio of net gain—two seats out of forty-two—if maintained at the general election, will result in the Unionists winning twenty-two seats carried by the Gladstonians in 1894. The division of the total vote polled indicates a more extensive Liberal loss. In the thirty constituencies contested at the by-elections and at the general election of 1892, the net Unionist gain was 6,742, or at the rate of 224 to a constituency. In 1892 there were 38 English constituencies other than these in which by-elections have since been held, each of which returned Liberal members by majorities of less than 224. The Unionist gain in votes polled, therefore, indicates that, in addition to the two seats already gained, 38 more will be won at the coming election. At present the 465 English seats are filled by 193 Liberals, 1 anti-Parnellite, and 271 Unionists. A loss of 38 Liberal seats will make the next English representation stand 155 Liberals, 1 anti-Parnellite, and 309 Unionists.

By-elections have been held in three Welsh constituencies. All of these returned Liberals in 1892, and all of them are still represented by members of that party. Only one of them has been contested, and in it, Montgomeryshire, the Liberal majority has been cut down 590 votes. It is unsafe to rest any conclusion on so narrow a basis. It is probable, however, that the Liberals will lose at least two or three Welsh seats.

The by-elections which have been held have made no change in the strength of the various Irish parties or factions. The Parnellites have made some slight gains in the total vote polled, but these have been very small. It is quite possible that, what with the serious internal dissensions within the ranks of the anti-Parnellites, and the bitter opposition of the followers of Mr. Parnell, the Nationalist strength may in some constituencies be so divided as to give two or three more Irish seats to the Unionists.

If the Liberal and home-rule voters throughout the United Kingdom can be brought to the polls in as relatively large numbers as in the by-elections of the last three years, they will still in all probability lose nearly forty English, a half-score Scottish, two or three Welsh, and a like number of Irish seats, and the Salisbury Government will have in the new Parliament about 375 supporters, as against a total Opposition strength of 295. If the first group of elections shall go heavily against the Liberals, it is probable that, in their present divided and disheartened condition, their demoralization may become great. In such event, the Unionist majority may rise to a much larger figure than the outcome of the by-elections now seems to foreshadow.

HUXLEY'S GREATEST SERVICE.

The services rendered to the cause of natural science by the great man whose death has just occurred, were sufficient to secure him a permanent place in the esteem of posterity. But the nature of these services can be properly appreciated only by men of science, and the world at large must content itself with accepting their verdict. Far better known is Huxley's work in diffusing knowledge of the facts as well as the theories of science among the public. He was one of the first to illustrate what was possible by means of "university extension," as it is now called, and, with the exception of Herbert Spencer, no man of this century —perhaps of any century—did so much to "popularize science" and to set people thinking upon the great principles that lie at the root of all genuine scientific investigation. By his work in this direction he built himself a monument more enduring than bronze.

Splendid as these achievements are, we incline to think that Huxley's greatest work was in the promotion of intellectual honesty. It is impossible for any one not of middle age to understand the feeling toward scientific inquiry which prevailed when Huxley began his public career. It is enough to say that hardly any one, either in England or in America, dared to express freely the conclusions which he reached, after honest and conscientious study, concerning the age of the world or the history of animal life. Not only the clergy, but the great mass of the laity, were suspicious of scientific men as a class, regarding them as prone to infidelity and materialism; and in order to secure a favorable hearing it was necessary for the man of science to begin by announcing that his conclusions would be found to be quite in harmony with the truths of revealed religion. Agassiz was nearly canonized for declaring that men were the children of God, and not the children of apes, and we could mention instances of professors keeping their chairs only by following the example of Galileo.

Now what this meant, as Huxley pointed out, was, according to all recognized standards of truth, nothing short of blasphemy. The common notion, one might almost say the universal notion, about creation, was that of Milton. At the command of the Almighty to bring forth living creatures—

> . . . The earth obeyed, and, straight
> Opening her fertile womb, teemed at a birth
> Innumerous living creatures, perfect forms,
> Limbed and full-grown. . . .
>
> The grassy clods now calved; now half appears
> The tawny lion, pawing to get free
> His hinder parts, then springs as broke from bonds,
> And rampant shakes his brindled mane; the ounce,
> The libbard, and the tiger, as the mole
> Rising, the crumbled earth above them threw
> In hillocks.

These conceptions seem grotesque enough now, but when Huxley began his fighting career they were not grotesque, but sacred. It was sinful to laugh at them, it was infidelity and materialism to question them, and it was flat atheism to reject them. Against the preaching of this doctrine, in the name of religion and morality, Huxley flung himself with his whole

strength. He boldly declared that animals never were created and never could have been created in any such manner as Milton described. He intimated his doubt as to whether a profound acquaintance with the views of the fathers might not disclose the fact that the Miltonic theory was not the orthodox one; but he cared little whether it was orthodox or not, because it was false. His position was stated with admirable clearness by himself:

"The question whether the earth and the immediate progenitors of its present living population were made in six natural days or not, is no longer one upon which two opinions can be held. The fact that it did not so come into being stands upon as sound a basis as any fact of history whatever. It is not true that existing plants and animals came into being within three days of the creation of the earth out of nothing, for it is certain that innumerable generations of other plants and animals lived upon the earth before its present population. And when, Sunday after Sunday, men who profess to be our instructors in righteousness read out the statement, 'In six days the Lord made heaven and earth, the sea, and all that in them is,' in innumerable churches, they are either propagating what they may easily know, and, therefore, are bound to know, to be falsities, or, if they use the words in some non-natural sense, they fall below the moral standard of the much-abused Jesuit."

Needless to say, such plain speaking as this caused much fluttering in theological dove-cotes. Every variety of attempt was made to confuse and obscure the issue, to meet it by general denial or confession and avoidance, and to overwhelm the author of the disturbance with that copiousness of imprecatory eloquence for which theological controversy has been distinguished. It cannot be denied that Huxley revelled in all this. He was not so earnestly devoted to truth in the abstract as not heartily to enjoy rolling a dishonest adversary in the dirt. But he was undeniably sincere, and the issue seemed to him to be of fundamental importance. He declared that the choice between reason and authority, offered to every one as he came to manhood, was like the great question of Elijah, "Will you serve God or Baal?" To choose the service of the Baal of authority was to disqualify one's self for the service of science. And if any one had the courage "to stand alone, face to face with the abyss of the Eternal and Unknowable, let him be content . . . to follow reason and fact in singleness and honesty of purpose, wherever they may lead, in the sure faith that a hell of honest men will, to him, be more endurable than a paradise full of angelic shams."

Again and again Huxley brought back the controversy between "religion and science" to this simple issue of truth and honesty. He was not an atheist nor a materialist. He held that a rational theology might exist. But, he insisted,

"The present antagonism between theology and science does not at all arise from any assumption by the men of science that all theology must necessarily be excluded from science, but simply because they are unable to allow that reason and morality have two weights and two measures, and that the belief in a proposition because authority tells you it is true, or because you wish to believe it, which is a high crime and misdemeanor when the subject-matter of reasoning is of one kind, becomes, under the *alias* of 'faith,' the greatest of all virtues when the subject-matter of reasoning is of another kind."

Such a warfare as this, of course, enlisted many followers, and the noise of the chariots and the horsemen has not yet died away. It can hardly be said that Huxley succeeded in bringing the clergy to admit that the Miltonic account of creation was false, or that they were guilty of immoral conduct in not publicly repudiating it when they had become satisfied that it was mythical. But what he did succeed in doing was to clear the atmosphere from the superstition and bigotry with which it was loaded. He leaves a world in which men of science are free to prosecute their investigations in accordance with reason and in every direction, without being hampered by the necessity of making their results conform to the obsolete dogmas of pharisaical conservatism. To have done much to secure the freedom of thought and freedom of speech now enjoyed by teachers and students is Huxley's permanent claim to the gratitude of the world. But he would have reckoned it a higher glory to be remembered as having accomplished this by bringing men to recognize that unflinching regard for truth is the highest righteousness and the purest religion.

ALASKA REVISITED.—I.

JUNE, 1895.

ABOUT a century ago Baranoff brought some three hundred Aleuts with their little skin boats from the Kadiak region to hunt in the channels of the Alexander archipelago, where sea-otters abounded. The trial proving satisfactory, he established a small colony on the strait extending northward from Sitka Sound to Salisbury Sound. This post or settlement was dedicated to the Archangel Gabriel and committed to his protection. A few years later the savage Tlinkit Indians determined to drive out the intruders upon their hunting-grounds, attacked and plundered the post, killed all the inhabitants except a few who took refuge in the forest, and destroyed the buildings. A Boston trader, Capt. O'Kane, reached the Sound shortly afterward and rescued some of the fugitives. Enticing some of the principal Tlinkit chiefs on board his vessel, under pretence of trading, he made them prisoners and held them for ransom, getting in exchange all the Aleut prisoners and most of the furs which had been taken from the Russian post. Meanwhile, a few Aleuts in their kayaks made their way along the coast to Kadiak, where Baranoff was informed of the massacre. A naval brig, the *Neva*, had just arrived there, and with her help Baranoff determined to punish the Indians and reëstablish the trading-post. The Tlinkits had fortified themselves at a well-chosen point on the Sound, and, as long as their ammunition held out, made a brave defence, finally withdrawing under cover of night, when their powder was exhausted. A new post was established on a small peninsula capable of being better defended, and, since the Archangel Gabriel had not fulfilled the anticipations of his admirers by warding off the native attack, the new post was dedicated to the Archangel Michael in the hope of better results. From this fact, and not (as commonly supposed) from Archangel in Russia, the settlement was colloquially spoken of as New Archangel. Since then it has become better known as Sitka, an Indian name for the bay and the tribe which inhabited its shores.

In 1865 Sitka had become a stockaded town of 2,000 inhabitants, with a village of more than 1,500 Indians outside the walls. It contained a Greek church, a Lutheran chapel, shipyards, warehouses, a foundry where copper and iron castings of moderate size were made, besides barracks, a sawmill, an officers' club-house, and, high above the rest on the original rock, a large structure in which the Governor of the Russian colony had his residence. This, known as the "castle," was defended by a battery and built of squared logs in two stories, with a cupola. The massive timbers of which all the buildings were made gave an air of solidity to the little town. All outer walls were washed with yellow ochre; the roofs, chiefly of metal, were painted red, and among them rose the spire and pale-green bulbous domes of the Greek church. Against a background of steep, snow-tipped mountains, densely clothed with sombre forests of spruce, the effect was very picturesque, and, compared with any other American settlement, quite unique. Outside the walls along the beach was a long row of large Indian houses, low and wide, without windows, built of immense planks painfully hewn out of single logs with stone adzes whose marks could still be distinctly seen. They were entered by small low doors rounded above, so that he who entered must bend to an attitude ill suited to defence. The smoke escaped through a large square hole in the roof; the front of each house was painted with totemic emblems in red ochre; within, the bare earth served as hearth, with raised platforms on either side, while (above) sinew, fish, or meat hung in the smoke to dry. A single house sometimes sheltered 100 persons, for the most part haughty and independent savages, the only touch of visible civilization appearing in the material of their clothing, still cut after aboriginal patterns, and in the gay kerchiefs of the women. Within the stockade, society was a bit of old Russia, with the manners, vices, and sturdy qualities of sailor, peasant, and courtier exemplified within its narrow limits. The needs of the business of the Company made Sitka a busy manufacturing town, in which military discipline was maintained, sentries paced the walks at night, and the sullen Indians beyond the walls were systematically watched.

At present the traveller of those earlier days finds a new Sitka very different from the old. The stockade has gone, though one or two of the old blockhouses are retained as curiosities, more or less decayed. Nearly all the old log buildings are gone, the few that remain being in the last stages of decrepitude, or so covered by weather-boarding as to differ little from the frame buildings which surround them. Castle Rock is no longer surmounted by a building; the old castle, repaired to serve as offices for the Territorial officials, was burned by an incendiary fire not long ago. The town has spread, especially to the southward, and the new buildings are frame structures, some of them neat cottages, but all of the American type. A new building has replaced the old sawmill of the Russians, and a second mill has been set up at the north end of the town; these two represent the present industrial activity of the white inhabitants, and are idle much of the time. Owing to the difficulty in

getting logs out of the forest, it is at present cheaper to buy lumber in Puget Sound and pay the freight on it than to utilize the growing timber of the vicinity of Sitka. The greatest change is in the Indian village. Not a single one of the old aboriginal houses remains as formerly. If the frame is there, it is covered by weather-boarding, pierced by two or even three ranges of glazed windows, with a panelled door of American make, and sometimes a small porch. Much of the wood is bare, but many of the houses are painted, nearly all have chimneys, and several of them have the owner's name on a small signboard. The head chief of the Kla-quan-tan clan has lace curtains in his windows, and the "princess" Thorn, a remarkably shrewd Indian woman, is reported to be worth twenty thousand dollars. The labret has disappeared from the lower lip of the Indian woman, though still she will often turn to the wall as one passes by. Clothing is wholly of civilized manufacture, but the Russian kerchief still holds its own against the bonnet. Even the coyote-like curs which still infest the Indian town show in their coats an occasional mixture of a more civilized breed. The neatest houses are usually those of converted Indians connected with the Presbyterian mission. The graceful canoes cut from a single log are still manufactured, but the modern ones have very generally substituted the oar for the paddle. Many Indians from distant settlements have come to Sitka, and much of their prosperity is due to the demand by tourists for basket-work and carvings of Alaska cedar. These articles are naturally less conscientiously made than those intended for the maker's own use in years gone by, but they are pretty, if less artistic than when the indigenous pigments had not been supplanted by aniline dyes. The manufacture of curios has grown to be an important business, and new carvings may frequently be seen hanging in the smoke of the chimney to give them the tint of age. The characteristic work in silver seems less common than formerly.

Much of the increase of the town is due to the numerous buildings connected with the Presbyterian mission, which maintains schools, a chapel, hospital, and many little cottages for married graduates who desire to keep themselves away from the influences of "Indian town." Those interested in this mission have shown a praiseworthy activity, and have doubtless done much good, though it could hardly be questioned that more effective and more permanent improvement might have been secured by adopting Mr. Duncan's methods, and removing the mission to a distance which would entirely isolate it from the influences of the town.

The existence of Sitka at present seems to depend upon its function as chief port and capital of southeastern Alaska, the tourists, and the mission. There is no business activity, though much is hoped for by those interested in mining property in the vicinity. Operations projected for the present summer will probably show whether these hopes are well founded. Meanwhile, the soft yet stimulating air, the lovely situation of the town behind its miniature archipelago of wooded islets, the serene cone of Edgecumbe (its cup-like crater filled with snow above the radiating lava ridges) in the distance—all combine to give the place a charm which custom does not stale nor memory willingly relinquish.

W. H. D.

BARRAS'S MEMOIRS.—III.*

PARIS, June 19, 1895.

BARRAS is at great pains to prove that the part taken by Bonaparte on the two days of the royalist rising of Vendémiaire was only subordinate; Brune was, under Barras, the commander-in-chief. Still, he is condescending enough to acknowledge that Bonaparte showed, on this occasion, "un coup d'œil militaire assez prompt." He himself presented Bonaparte to the Convention as his successor in the command of the army of Paris.

Bonaparte was at that time introduced by Barras to Mme. Tallien, Mme. de Staël, and others; but "in relations which might have seemed inspired by the love of pleasure, he saw only combinations which might lead up to something: his amiability had always a political and personal object." Bonaparte was a Corsican, and the Corsicans have very clannish feelings; his family was large, and, having been forced to leave Corsica, was in very straitened circumstances. Barras takes a mean pleasure in entering into all sorts of details concerning the humble condition of Bonaparte's brothers and sisters, at the time when Bonaparte was beginning to be known, and was making great efforts to obtain a high command.

"Bonaparte," he says, "spoke to me of the miserable position of his mother and sister at Marseilles. . . . I wrote to the Commissaire of the Department of the Bouches du Rhône to give Bonaparte's mother the most necessary articles of furniture, which might be taken for a time from the Government magazines. The mother and the young ladies, fed by the *commandant de place*—that is to say, by the Republic—received, therefore, more decent furniture from the Republic; but their conduct was not reformed, and continued to deserve the just criticisms of the scrupulous Marseillaises. The daughters of the Bonaparte family were considered to have so little morality that they were several times excepted from invitations to balls, notwithstanding the endeavors of their friends."

This idle gossip ought not to have a place in historical memoirs. What does it matter if Lucien had to make a living as a *garde-magasin* at Saint-Maximin; if, living in the house of the innkeeper Boyer, he married his daughter; if his uncle Fesch was employed in the subsistence department at Albenga; if Lucien and Fesch became, the one *commissaire des guerres*, the other army contractor; if Joseph married the daughter of a soap-manufacturer, etc., etc.?

The Directory, composed of five members, among whom was Barras, and the two legislative Councils, the Cinq-Cents and the Anciens, replaced the Convention. Rewbell was the first President of the Directory. "The Directory, on arriving at the Luxembourg," says Barras, who confirms on this point the Memoirs of Larevellière-Lépeaux, "had not a guard, nor a domestic, nor a table, nor a chair." Barras compares it to young Hercules, and indulges in interesting details about the daily work of the five men who had in their hands all the executive power of a country engaged in great wars, and proceeding to an entire reorganization of its own administration. Bonaparte was military governor of Paris, and, as such, he could enter the Directory at every hour of the day or night. He did not conceal his desire to have the command of an army. "I am very young," said he, "but Gen. Hoche is not much older than I am." He had become acquainted at the Luxembourg with the widow Beauharnais, of whom Barras says, "She was thought to have some influence with me; some people thought she had been my mistress, others that she was still so. What was certain was that she had been, to everybody's knowledge, the mistress of Gen. Hoche *e di tutti quanti*." If we can believe Barras, Mme. Beauharnais tried to induce Hoche to divorce his own wife; but he refused, and became in the end disgusted with her, to the point of saying, "As for Rose [the name he gave her], I leave her to Vanaker [an Alsatian soldier who kept the horses of the General]." Hoche was so ashamed of Mme. Beauharnais that he excused himself by saying, "It is necessary to have been in prison with her, before the 9th Thermidor, to know her so intimately; it would not be pardonable for a man at liberty."

Barras speaks somewhere of "French chivalry." I leave the reader of his memoirs to judge what sort of a knight he was. M. Frédéric Masson, who wrote an interesting volume on the 'Femmes de Napoléon,' is just now engaged in writing articles in the *Revue de Paris* on Josephine and her family; he gives cruel but authentic particulars regarding the La Pageries, Gen. Beauharnais, and Josephine. Barras had not the same rights as the modern historian, and, having received what are called the favors of Josephine, he was bound to give her at least the benefit of his silence. Far from doing so, he takes a fiendish pleasure in abusing her; he spares no details, and some of them are loathsome. With all the faults which he describes, Mme. Beauharnais inspired a great passion in Gen. Bonaparte. Barras would have it that there was nothing but ambition in his sentiments; that Bonaparte saw in Josephine merely an instrument for his designs; that he hoped to obtain by her influence the command of an army. There is much complexity in any human being; surely, Bonaparte was ambitious, but his correspondence, published under the Second Empire, showed that he felt for Josephine, when he married, an almost wild passion. The "petit général," as she called him, had, for a moment at least, fallen under the sway of the little god of whom a poet has justly said:

"Qui que tu sois, voici ton maître;
Il l'est, le fut, ou le doit être."

The pages in the second volume of the memoirs of Barras which relate to the marriage of Bonaparte and Josephine read more like a libertine novel of the end of the eighteenth century than like a chapter of history, and some parts of the manuscript have been replaced by dots. The editor writes, in a footnote: "The coarseness of the terms used in this passage is such that, although I have allowed Barras to express clearly enough his thought, I have been obliged, out of respect for the reader, to suppress some lines." The writer of the pages I refer to was evidently devoid of moral sense and of all delicacy of feeling. The only excuse which Barras finds is this: "If the account of the particular facts which I have just revealed appears a little indiscreet, in accordance with our French manners with regard to women, I might justify myself by saying that I have revealed nothing which was not already known to all the contemporary historians."

The Revolution found Bonaparte sub-lieutenant of artillery. Barras considers him as his creation, since he obtained for him the command of the army of Italy. Bonaparte was appointed general-in-chief of that army on the 14th Ventôse, year iv. The 19th of the same month (corresponding to the 9th of March, 1796), he was married to Mme. de Beauharnais

*'Memoirs of Barras, Member of the Directorate,' Volumes I. and II. Harper & Brothers. 1895.

at the mairie of the second arrondissement of Paris.

"During the twelve days Bonaparte had still to spend in the capital, I do him the justice to say that his honeymoon did not seem to absorb his time. He was occupied in tormenting the Directory, the ministers, in order to get more men, money, clothes. They gave him all that it is possible to imagine, and much more than the feeble means of the Republic allowed. After he had obtained everything, he still asked for more and continually complained, and went away saying with ill-humor: 'Since they refuse me everything, I must do without. I will now ask the enemy; I will find means to make him more generous.'"

Bonaparte was not long in proving that he was worthy of the command given to him. Barras's notes on the subject are uncommonly short and dry: "Victory of the army of Italy. Great defeat for the Austrian and Piedmontese army at Millesimo. They lost ten thousand five hundred men, their guns, flags, baggage, General Colli, the commander-in-chief of the Piedmontese army, Provera, commander of the Austrians. The latter general is prisoner of war with his troops."

About this time Mme. de Staël presented to Barras Benjamin Constant, as the author of a pamphlet entitled 'Of the strength of the present Government of France and of the necessity of rallying to it.' "I will not decide," says Barras, "which of the two brought the other—which was the man and which was the woman; for, whatever calumny may have said, I protest here, to the honor of Mme. de Staël, that I never knew really to what sex Mme. de Staël belonged. The virility of her figure, her face, her countenance, her manner of dressing, the strength of her intellectual conceptions, her vigor and exuberant energy, would rather have led me to think she belonged to our sex, if she had not given undoubted proofs of her own by various acts of maternity." As for Benjamin Constant: "the protégé of Mme. de Staël was a large young man of awkward, almost silly appearance—I think not purposely so in order to make a contrast with his *esprit* when it shone. Hair nearly red, small eyes which would have seemed red also if they had not been covered with spectacles, a thin, ironical mouth, which seemed to laugh at everything, and which tried to look even more ironical—such was Benjamin Constant at the age of twenty-five."

As soon as Bonaparte had arrived in Italy, he organized a political police. He called the attention of the Directory to the presence of Louis XVIII. in the Venetian states. Here are some of the details which were, by his care, transmitted to the Directory concerning the private life of Louis XVIII. at Verona:

"At eight o'clock in the morning he was dressed, with the insignia of his orders, and his sword at his side. He spent the greater part of the morning in writing, and was then visible only to his Chancellor. His repasts were frugal. After dinner, he gave a limited number of audiences, then shut himself up. One heard him sometimes walking in great agitation. Towards evening he was calmer, and, with some of his courtiers, listened to reading. He never went out, made no visits, either at Verona or in the neighborhood. He read carefully the *Moniteur* and the most important French papers. He always bore the name of Count de Lille, and when an *émigré* gave him the title of Majesty he heaved a profound sigh."

The presence of the French troops in Northern Italy obliged Louis XVIII. to leave Verona. He started alone, with Count d'Avaray and two servants, on the road to Switzerland, and afterwards joined the little army of Condé. This army had become merely nominal. "However, in order to do honor to the King, the remaining soldiers dressed in the uniforms of their regiments. One saw regiments of fifteen, of ten, even of four men. Louis XVIII. reviewed them with his solemn gravity. 'Sire, there is your regiment of Auvergne,' said as seriously the Prince of Condé. 'There is your regiment of Champagne, your Crown regiment, your regiment of Languedoc.'"

Bonaparte's great victories in Italy gave to the Government of the Directory a prestige which it could not have obtained otherwise. The Directors were divided among themselves; their ministers were almost unknown men, taken from the political residuum of the Revolutionary period. The enemies of the Revolution conspired incessantly, and the intrigues of the parties in the two chambers rendered the task of the Directory very arduous. There were still two princes of the royal family in France, namely, the young brothers of Louis-Philippe of Orleans; they had been kept in prison at Marseilles. The Directory decided to send these two princes to America. The Directory was as much alarmed as it was pleased by the triumphs of Bonaparte in Italy. The young general had by degrees assumed an almost regal dignity in upper Italy, and it seemed as if the fate of two countries was in his hands. The Directory had to defend itself against the anarchists on one side and the royalists on the other. During these inglorious struggles, Bonaparte was gaining victory after victory, and his successes more than counterbalanced the reverses which were suffered by the armies of Sambre-et-Meuse and of the Rhine.

Correspondence.

BICYCLE VERSUS HORSE.

To the Editor of The Nation:

Sir: Your suggestion in No. 1564 that the bicycle may become of service in scouting is best answered by the following incidents which happened to the writer. Lost one summer in the mountains of West Virginia, a mountaineer's hut was sought and the demand made that I be taken as directly as possible to the railway. The only horse was brought, a farm-horse, and the writer was placed upon him together with several yards of heavy chain, this latter for a certain purpose en route. The owner walked beside, but as my holding of the reins was not very satisfactory, he got on too. It was then learned that the proper way was to throw the reins on the horse's neck and let him take his own course. At a rapid walk he went directly down the mountain-side with only a forest trail to direct him. It had been storming, and the slippery moss, rocks, and mud on the steep decline terrified one rider, but not the other, to whom this was the most natural, in fact the only, means of travel. Wet trunks of fallen trees across the way offered no hindrance to the beast, who clambered over them; neither did the tops of those trees, for he walked right through them, the two riders lying down to escape being scraped off. A wide and swollen ford was reached, and here lying down was again necessary to keep out of the water, which was belly-deep, while the horse floundered around (successfully) over the angular and moss-covered rocks of the bed, some of them the size of tables. The farther shore was thickly strewn with wet saw-logs, which were "shinned over" in the same manner by the overloaded beast. At the end of my journey the same affection was felt for the beast that is felt for one's ship which has weathered the storm, but in higher degree, for the inanimate object can never excite the same warmth of feeling as the living. Where would a detachment of military wheelmen with their "swiftness" have been when no bicycle could have been carried, much less ridden, one step of the way? Certainly worse than "nowhere." And it is important to add that every foot of our route was under the fire of neighboring batteries during the last war.

That the horse "as an instrument of pleasure" has been laid aside, is wholly incorrect; few people who have tried it will exchange the feel of moving muscles under them, the independent will, the companionship of a live and intelligent animal, for a dull machine of steel and rubber. It is as a cheap *convenience* (on city and suburban streets) that the bicycle succeeds. As a pleasure and luxury the horse is in no manner approached by the bicycle, and, like all luxuries, it is costly and troublesome. The incomparable superiority of the wheel claimed by its devotees must receive a strain sometimes when they are engaged in laboriously wading and pushing their machines through merely moderate mud or gravel, and the horseman, high in the air, lightly passes them at a lope willingly taken by the mount and kept up for miles. Indeed, hard roads with but an inch of dust on them, called fine for riding or driving, have been pointed out by wheelmen as difficult.

In saying that the horse has been laid aside, you show further that you share the general assumption that all wheelmen formerly have been horsemen. Nothing could be further from the truth, for their ranks are filled largely by people who have been acquainted with no exercise, and who, in finding wheeling agreeable, in their ignorance assume that wheeling must then be the acme of bodily pleasure. It is in this line, indeed, that the wheel has shown its chief merit, in introducing thousands to the pleasures and benefits of exercise and fresh air who otherwise would remain in complete ignorance of these. The cyclist's aggravating ignorance of the "road," studied or real, is to be explained in the same manner—that he is practically never a person who has had previous contact with horses.

The æsthetics of the question must not be forgotten. One with any appreciation of physical beauty must turn his face away at the sight of even a fine man on a bicycle; the position, with knees near the chest and shoulders and neck forward, is essentially effeminate in the best riders, whereas an ugly man looks his best or even better astride even an ordinary horse. The city or country teamster and his horses (as he rides them to their lodging) often make a charming picture of unconscious grace and vigor all unaided by clothing, trappings, or schooling, and in what contrast to the costliest wheel and rider! The correspondent of the *Evening Post* must have a "virulent" heart indeed to find the animal which all literatures for many centuries have lavishly praised as willing and patient, "stupid, vicious, silly, obstinate, tricky," and worse. Surely he has lacked that saving factor in a liberal education, the above-mentioned contact with horses.

But horsemanship, as you say, will remain, as the violin and piano remain, in spite of many cheap and easy mechanical substitutes; and the figures which writhe around our streets can no more acquire nor comprehend the art than a lackey can a concerto. J. C. R., jr.

Dayton, O.

MAN AND BEAST.

To the Editor of The Nation:

Sir: Your correspondents who find many blemishes in the horse and the dog might, if they would turn their powers of observation on the genus homo, discern as many reasons for disliking their own kind. To point out human faults, too, would serve a more useful purpose surely, for while the poor brutes cannot very well change their natures, and are, all things considered, more in need of kind words from humane against heartless masters of creation, offensive mankind are generally so from choice, and are all the better for as much correction as their fellows can bestow upon them. The man, for instance, who deliberately makes a beast of himself with liquor, is at least as loathsome as the nastiest animal of the lower order he makes himself resemble; the creature with a soul who never touches water, renders himself more obnoxious than the irresponsible creature that is a nuisance in obedience to instinct. Is the dog which returns to its vomit, and clears away the disgusting object, as detrimental to our comfort as the man who expectorates along our thoroughfares; or at least would it be so if the former spectacle were as common as the latter? Is the disagreeable canine habit on which your defamer of the dog lays stress so careless of public decency as the orgies which, before the police were reformed, were to be seen at almost every street corner in New York among men and women? And what do we do with dogs that are guilty of improprieties as gross as that of scattering tobacco-juice wherever they happen to be? We keep them out of conveyances and other places that might be soiled by their acts. Yelping dogs, too, are bad; are they worse or more numerous than shouting human beings? We bipeds should need to be a good deal more nearly perfect ourselves to be qualified as critics of our four-legged slaves.—Yours truly,

G. F. Johnson.

New York, June 27, 1895.

To the Editor of The Nation:

Sir: The writer stood and watched the burning of a livery stable, some months ago, in which more than one hundred horses were consumed, thanks to the fact that they were all kept up stairs. The only loss of human life was in the case of one faithful groom who made a desperate effort to save a horse of which he and its owner were especially fond. This is only one instance of a peculiar friendship which often grows up between individual horses and human beings—a friendship which is generally in proportion to the development of what we recognize as the better qualities of the horse and certain, also, of the better qualities of the man.

On the other hand, in many of the callings into which the horse has been pressed, he has been "found out," or perhaps it would be fairer to say that, after stumbling around for many ages, we have at last hit upon better agents for many operations into which the horse did not thrust himself of his own motion, but was dragged through our own failure to perceive any better arrangement. In the same way we have "found out" almost everything else during these generations of modern experiment. My neighbor's back lot is full of little chickens, hundreds of them, but I hear nothing of the motherly clucking which would have greeted my ears a few years ago. *The old hen has been found out.* In numberless cases man has found *himself* out, as witness the many operations of machinery which were performed by the human hand within the memory of us all.

We can only say of the horse, then, that the sphere of his participation in human affairs is for ever narrowed, but his capacity for nobleness and usefulness, within fitting limits, is too evident ever to admit of his absolute dismissal from our service or our affections.

> "No, children, he shall not be sold;
> Go, lead him home and dry your tears,"

may still be included in our school readers, with certainty that the time will not come when it will fail to strike an answering chord—and a chord which it is well to have struck—in the breast of a goodly share of American school-children.

And now as to the dog: If your recent correspondent had drawn a faithful picture of the Digger Indian, and, on this basis, condemned the human race, his logic would have been scarcely more at fault than in his condemnation of the dog as such upon the basis of such dogs as seem to have fallen exclusively within his acquaintance. It would be safe to do this with herring, buzzards, polecats, and many other living creatures, but not with the dog, which has manifested in widely differing countries and periods, under favorable conditions, a capacity for a high degree of civilization. Many of us have seen him rise above all the grosser faults which Mr. Arnold has laid to his charge, and acquire a positive politeness, a deference to authority, and a modest reticence from which many a man or woman who moves unchallenged in the circles of good society, might well take lessons. I am not informed that the professional watch-dog has ever deteriorated under political influences to such a degree as the Tammany policeman, and the many well-authenticated cases of his self-sacrificing and effective efforts for the safety of his master or his master's children in time of peril need no recounting here. Then, too, many of the more highly civilized dogs are great lovers of fun, and capable of affording a great deal of amusement. True, their fun may cost you a pair of overshoes, or something else of the kind, once in a while, but, on the whole, it is cheaper than the "practical joke" nuisance of the smart boy.

Let us not be in too great haste, then, to condemn our old friends among the domestic animals, but let us give them due credit for the progress which they have made since coming into contact with human civilization, remembering that the most of them have been condemned to associate with the less cultured among us, and remembering, too, that we ourselves have not lost all traces of the mire of the pit whence we were digged.

W. H. Johnson.

To the Editor of The Nation:

Sir: Now that the dog and the horse have been touched up in the columns of your veracious journal, it seems no more than fair to animadvert on another pest to human kind—one that has caused more misery and rendered less service than either of the above-mentioned animals—I refer to the young child. Unlike either the horse or dog, he subserves no useful purpose; his manners in the natural state are execrable, and he is not even a safe ornament. He revels in dirt, and is subject to many and unreasoning fears. Even when treated most indulgently, he is most disagreeable; he is no respecter of persons or of the rights of others; his approach is a source of well-merited apprehension to strangers and friends. Ages of familiarity with mankind have not taught him, any more than the horse, not to accept hot biscuits and slabs of plum-cake offered him by foolish masters and mistresses. The fact, too, that he is extraordinarily difficult to use and to manage, far from causing complaint, has simply developed an art which, in some parts of this country, is held in great honor, but thus far has not brought much profit to its possessors: I refer to that much-to-be-commiserated class of laborers known as pedagogues. Unlike the horse, whose size and peculiarities of digestion have made his close association with mankind impossible, the child's peculiarities of digestion are well known and much deplored by the more cultivated portion of the human species. It is, perhaps, in the fact of his close contact with the rest of the human race that his particular obnoxiousness lies, for, unlike the horse or dog, he will not keep a civil distance, but persists in crawling over one with clammy, dirty hands and feet, often covered with perspiration and cockle-burrs. In the small hours he outdoes the dog in untimely vocal exercises. Now there is something refreshingly primitive in the dog's crunching a bone in his secure retreat, and to watch one's favorite horse nibble grass with his ears cocked for possible danger and his eyes on every leaf that stirs, is a sight at once restful and inspiring; but to listen to a young child sucking in his soup, slobbering over a bone, or champing at his bread, gurgling wind, and audibly grunting—this is enough to drive one to strong drink. The singular and banal inappositeness of his remarks at table has been often lamented.

The progress of the useful arts may finally relieve us of the horse, and the dog may be eliminated from refined society in generations to come; but it is high time that a correct diagnosis be made of the evils that mankind has to suffer from the apparently inevitable youthful savage. And it is a painful fact that the brutality, greed, ingratitude, cruelty, peevishness, and lack of self-respect that characterize mankind in its earlier stages, do not wholly disappear in later stages of development. The young child has almost all the dirty habits of the dog, only we take care not to let him exercise them, and, like a horse, he certainly is unreasoning in a panic in his early years. Any one who has watched the heedless cruelty with which a child will twist a kitten's leg, the serene imperturbability with which it inflicts torment on weaker animals, will hardly find a parallel in the horse or dog. The horse is often overloaded, beaten, kicked in the belly, his ears filled with sand, even his eyes gouged out in a frenzy of rage by his vastly less civilized master—what blame if his offspring have faults? Confessedly among the Arabs these faults do not exist in either master or horse; is it too much to say that the faults of these lower animals are but the reflection and survivals of our own brutish instincts?

E. L. Morse.

Chicago, June 28, 1895.

"RESPECTABLE."

To the Editor of the Nation:

Sir: To attempt treatment of this word after the exhaustive manner of Dr. Murray would be an undertaking attended with certainty of failure. At the same time, on looking over materials lying before me, I find that a much more satisfactory account can be given of it than any hitherto offered.

In the Low Latin of the thirteenth century occurs *respectabilis*, explained by "cui reverentia debetur."

As to *respectable* in French, on the credit of M. Lorédan Larchey, in his *Les Excentricités du Langage*, it was noted, in 1693, as an innovation. More definitely, the assertion has been ventured that it first appeared in Racine's *Ester*, 1689. Yet the lexicographer Cotgrave, in 1611, records the word as French and also as English.

Mainly as a curiosity, I transcribe part of a passage from Richard Verstegan, in which *respectable* has the very rare signification of "observable," "noticeable."

"And it is also *respectable* that the most ancient Germans, beeing pagans, and hauing apropriated their first day of the week to the peculier adoration of the Sun, . . . ordayned the next day to thease two most imminent heauenly planets," etc. *A Restitution of Decayed Intelligence* (ed. 1605), p. 10.

It was not till his *Dictionary* had gone through several editions that Dr. Johnson recognized *respectable*, which, though he does not illustrate it, he defines by "venerable; meriting respect." Retaining these definitions, Archdeacon Todd appends to them a single quotation, taken from a pamphlet by Burke, one of the latest of his writings, dated in 1796. Dr. Latham, revising and professedly amplifying Johnson and Todd, still has only the quotation from Burke, prefixing to it the definitions, "deserving, commanding respect; decorous." Dr. Richardson knows, for *respectable*, no authority but a work by Dr. Thomas Cogan published in 1802.

In advance on their forerunners, recent lexicographers do little further, as regards *respectable*, than give a string of its present and former acceptations, with quotations exemplifying one or two of the most usual among the latter. Nor do these lexicographers, any more than those who preceded them, furnish the least information about the approximate period when the term began to be current in literature, or about the uses of it which have become obsolete. On these points new light will be seen to be thrown by the subjoined citations, selected from fewer than half of what I have collected:

"A very candid and *respectable* author, speaking of the ancient restraints on free-thinking, says," etc. Bp. W. Warburton (1738), *Works* (ed. 1811), vol. i., p. 160. "His lordship, . . . in his *respectable* character of a Nobleman, a Statesman, and a Philosopher," etc. *Id.* (1755), *ibid.*, vol. xii., p. 85. And in vol. xii., pp. 191, 197 (1755).

"We can never make ourselves too *respectable* in the eyes of those we love." Anon., *Memoirs of Lady Harriot Butler* (1741), vol. i., p. 123.

"A Suit is commenced, in the spiritual Court, against a certain Lord. It will be insolent, though, to meddle with such *respectable* Characters." Arthur Murphy, *Gray's-Inn Journal* (1752), No. xi.

"Henry the Second . . . became a slave to the *respectable* attractions of Diana de Poitiers." Horace Walpole (1753), in *The World*, No. xxviii.

"I shall always be solicitous to procure the esteem of so *respectable* a body as the Connoisseurs." Coleman and Thornton (1754), *The Connoisseur*, No. ii.

"His private Character is not less *respectable* than his public." Bp. R. Hurd (1755), in *Tracts by Warburton*, etc. (1789), p. 217. "The ancient writers . . . how *respectable* soever, are no decisive Authority, indeed no Authority at all, in the present Case." *Id.* (1764), *ibid.*, p. 262.

"Wisdom, gravity, experience . . . we expect to find in fulness of years; and these make its wrinkles not only *respectable*, but even lovely." Mrs. Charlotte Lennox, *Henrietta* (1758), vol. i., p. 124 (ed. 1761). And in vol. ii., p. 260.

"He was all on fire for the honour of representing so *respectable* a place in parliament." George Colman, *The Genius* (1761), No. ix. "The Auditor is by far the most *respectable* character . . . of the two." *Id.* (1763), *Prose on Several Occasions* (1787), vol. ii., p. 35. "I represent the inhabitants of a most *respectable* city in the West of England." *Id.* (1764), *ibid.*, vol. ii., p. 45.

"Thus as he [Henry VII.] grew just in his own dominions, he became *respectable* abroad." Goldsmith, *Hist. of England in Letters* (1764), vol. i., p. 214 (ed. 1772).

"My accursed head . . . should have been laid low, and not this of the most *respectable* of women." Mrs. Frances Sheridan (before 1766), *Memoirs of Miss Sidney Bidulph* (ed. 1767), vol. v., p. 296.

"My ever *respectable* Aunt." Anon., *The Woman of Honor* (1768), vol. i., p. 205. "In short, she is a very worthy *respectable* woman." *Ibid.*, vol. ii., p. 218.

"It moves me to indignation, that two *respectable* nations [England and Spain], naturally made for friends," etc. James Harris (1770), in *Letters of the First Earl of Malmesbury*, etc. (1870), vol. i., p. 208. "Their address . . . was signed by all the *respectable* names of the county." *Id.* (1775), *ibid.*, vol. i., p. 330. "We were never in so *respectable* a state, in such a situation, I mean at the beginning of a war." *Id.* (1778), *ibid.*, vol. i., p. 382. "The works he has sent me . . . will be a very *respectable* addition to my library." *Id.* (1780), *ibid.*, vol. i., p. 454. "Bede, called 'the venerable,' from his *respectable* character, was an Englishman." *Id.* (1780), *Works* (ed. 1841), p. 497.

"The Apostles . . . we are expressly told in Scripture . . . had no such *respectable* appearance." Sir Joshua Reynolds, *Fourth Discourse* (1771). "In direct defiance of the most *respectable* opinions received amongst mankind." *Id.*, *Seventh Discourse* (1776). "The strongest proof of his [Majesty's] desire to make the [Royal] Academy *respectable*." *Id.*, *Ninth Discourse* (1780).

"Your conduct was always irreproachable, and, when called to the exercise of more extensive duties, must be *respectable*." *Test of Filial Duty* (1772), vol. ii., p. 226.

"I believe I have a pair of *respectable* metal buckles in the house, too." S. J. Pratt, *Liberal Opinions* (1775, etc.), vol. ii., p. 154 (ed. 1783). "It will not . . . inspire them with any *respectable* ideas of my understanding." *Id.*, *ibid.*, vol. iii., p. 126. "This will render the veteran *respectable* amongst his domestics." *Id.*, *ibid.*, vol. iv., p. 280.

"A *respectable* quantity of the aforesaid difficulty." *Id.*, *Emma Corbett* (1781), vol. i., p. 135. "A *respectable* contusion." *Id.*, *ibid.*, vol. ii., p. 44.

"The hospitable and *respectable* Lady Howard." Miss Frances Burney, *Evelina* (1778), ch. xxxix.

"As a moralist, Dr. Johnson was *respectable*, splendid, sublime." Miss Anna Seward (1785), in Dr. R. Anderson's *Life of Samuel Johnson* (1795), p. 301.

"A most *respectable* list it is, I assure you." Dr. John Trusler, *Modern Times* (1785), vol. i., p. 143. "A virtuous soldier is the most *respectable* character in life." "A *respectable* majority was to be carried upon every motion." *Id.*, *ibid.*, vol. iii., pp. 162, 226.

"My Cousin, Obadiah Project, Esq., formerly a *respectable* Deputy of Farringdon Ward Within." Rev. Henry Kett, in *Olla Podrida*, No. xlii. (1787).

"Her mother, the effigy of goodness, sat in our cheerful circle, and rendered it, by her presence, not a little *respectable*." *Generous Attachment* (1787), vol. iv., p. 219.

"If more *respectable* opinions than mine are still to prevail, they will not be the less *respectable* for being consistent." Jeremy Bentham, *Defence of Usury* (1787), p. 86 (ed. 1816). And in p. 183.

"Cast me not off, disclaim me not, oh, my *respectable* parent!" Lady Hawke, *Julia de Gramont* (1788), vol. ii., p. 8.

"He sent us to the most *respectable* schools he could select." *The Trifler* (1788), p. 140. And in pp. 143, 269.

"A far more powerful and far more *respectable* Writer." Rev. Dr. Samuel Parr (1788) in *Tracts by Warburton*, etc. (1789), p. 182. "I yesterday came to the parsonage of my most *respectable* friend, Mr. Maltby, at Buckden." *Id.* (1802), in Field's *Memoirs of Parr* (1828), vol. i., p. 431.

"I bade a mournful adieu to my charming Honoria and her *respectable* father." Anon., *Norman and Bertha* (1790), vol. ii., p. 188.

"His character, high in arms, and *respectable* for virtues, was thought an additional honour to the party." "He . . . painted her in the most amiable as well as the most *respectable* colours." Anon., *The Minstrel* (1792), vol. i., p. 64; vol. ii., p. 204 (1793).

"His father was a bishop of *respectable* character." Mrs. Eliza Parsons, *Woman as she should be* (1793), vol. i., p. 154.

"Oh, most *respectable* of women!" *The Devil in Love* (1793), p. 126. And in p. 167.

"A young man of two-and-twenty . . . who owes all his knowledge to himself, is, so far, a *respectable* character." "Send us whole essays, hints, good things, etc., etc., and they shall cut a most *respectable* figure." Robert Southey (1793 and 1795), in *Life and Correspondence* (1849), vol. i., pp. 195, 231.

"In 1761, by the interest of his near relation and very *respectable* friend, the late Edward Hooper, esq., of Hurn Court in Hampshire, my father was chosen one of the representatives in parliament for the borough of Christ Church." First Earl of Malmesbury (1801), in *Works of James Harris* (ed. 1841), p. vii.

"Clementina will hasten to pay funeral honours to the most *respectable* of fathers." *Victor* (1802), vol. iv., p. 344.

"In the portrait which you have drawn of the *respectable* Madame Valbona I behold the resemblance of her interesting daughter." *Zoflora* (1804), vol. i., p. 199.

"Nor would the painter fail to give a conspicuous place to the *respectable* sister Bignan, the present superior of those devoted females." *Paris Chit-chat* (1815), vol. ii., p. 174 (ed. 1816).

Several conclusions may, with some degree of confidence, be drawn from these premisses.

In the first place, down to 1750, *respectable* seldom figured in the vocabulary of any author. From shortly after that time, however, it rapidly grew into favour.

Secondly, some of its senses, including the higher, which were once very prevalent, have been laid aside since the early years of this century, or still sooner; and it would now seem to be Gallicizing to make it synonymous with, for instance, "venerable," "honourable," "dignified," "eminent," or "estimable."

Thirdly, all the various meanings and shades of meaning which it bears at present were acquired within a generation after its permanent establishment in our language.

To turn to its historical derivation, no less legitimately is it developable from our verb *respect* than from the French verb *respecter;* and the writers who originally brought it forward evince no consciousness that they consider it as an importation from abroad. No ground is there, consequently, for the view that it began, in English, as a Gallicism.

Respectableness and *respectably* were first registered by Archdeacon Todd, and not, as Dr. Worcester states, by Dr. Johnson. For the adverb I have quotations dated in 1775, 1785, 1801, 1802, 1807, and 1808. *Respectability* I have traced to 1785 and 1788; but a contributor to *Notes and Queries* for February 3, 1894, points out that the handsel of it was as good as claimed by R. Lewis in 1778. Like Shakespeare's *of respect* is Robert Gentilis's *respectful;* the two being comparable with *of worship* and *worshipful:* "Alcibiades . . . strives to become great, and make himselfe *respectfull*, by contending with great ones." *Considerations*, etc. (1650), p. 64. Following *unrespectable* has come up *disrespectable*, used by Sir Walter Scott, De Quincey, Carlyle, and others; and Sir Walter Scott and Thackeray have *disrespectability*.

F. H.

MARLESFORD, ENGLAND, May 10, 1895.

Notes.

FORDS, HOWARD & HULBERT will shortly issue 'Game Birds at Home,' by Theodore S. Van Dyke.

Ginn & Co. will have ready during the summer 'The Philosophy of School Management,' by Arnold Tompkins.

Mr. Edward Arnold, publisher to the India Office, London, will open in the autumn a branch house at 70 Fifth Avenue, New York. He is about to publish 'The Land of the Nile Springs,' by Col. Colvile, with many illustrations, and Prof. Walter Raleigh's recent address at the Royal Institution on Robert Louis Stevenson.

'A Holiday in Spain and Norway,' by Mrs. Caroline Earle White, is in the press of J. B. Lippincott Co.

Prof. Preston's 'Theory of Light' (Macmillan) has just passed into a second edition, thoroughly revised and decidedly augmented, and to our previous hearty praise of it we can now add that the defect we pointed out in the author's original neglect of Prof. Newcomb's experiments to determine the velocity of light has been conspicuously repaired.

Dr. and Mrs. Percy Frankland are joint authors of 'Micro-Organisms in Water' (Longmans), and their scientific reputation is a guarantee of the excellence of their work. It is a complete treatise on bacteriological investigation with reference to water, and is full of interesting and instructive information. The bacteriological chemist will find it a reservoir of knowledge direct and indirect, and its style and matter will attract intelligence that is not specialized. The chapter on the action of light on micro-organisms is the latest announcement in that branch of knowledge, and the conclusion is reached that while there has been a tendency to magnify the bactericidal influence of light, direct but not diffused sunlight does have a marked deleterious effect upon many forms. But unfortunately not all pathogenic bacteria are readily responsive, and the evidence is contradictory as to the defensive power of moderate layers of water against the sun's action upon these lower varieties. Probably the sunlight of the north is less powerful than that of the lower latitudes. The authors have fallen into an unimportant and once current error (p. 154) in supposing that in the Hamburg cholera epidemic of 1892 there was a hard-and-fast line along a particular street, separating two distinct water-supplies brought from the Elbe, over which the disease did not pass. That particular statement cannot be substantiated, but the vital fact remains that Hamburg, drinking untreated but comparatively pure water, suffered fearfully from cholera, while Altona, taking water polluted with the sewage of the great city of Hamburg, but filtered again and again through sand, was very lightly smitten. The experiments of the Massachusetts Board of Health are fully quoted as "a classical piece of work"; but were it not for the context one might not recognize in the city of St. Lawrence (p. 161) the manufacturing town on the lower Merrimack.

Dr. Anna M. Galbraith's 'Hygiene and Physical Culture for Woman' (Dodd, Mead & Co.) is a copiously illustrated, non-indexed book designed to assist "in the emancipation of her sex from the bondage of invalidism." The motive is laudable and the method is sometimes amusing. The statement (p. 95) that "during the month of August the temperature of the ocean reaches its maximum of 66.65 degrees F.;" is not of universal application. The Jersey coast, to say nothing of lower latitudes, dissents. "On no account must one enter the water when in a perspiration; let her first take a moderate walk along the shore until the perspiration has abated" (p. 97). If she does, she will almost certainly catch cold; whereas if she goes perspiring never so freely into water of reasonable temperature and *swims*, she will be safe. The distinction between bathing and swimming it is important constantly to bear in mind. Dr. Galbraith commends bicycling for women, and quotes the general rule for either sex that to open the mouth to breathe is a sign that the heart or the lungs are taxed. Within that limit bicycling is not only safe but serviceable. She clearly explains the apparent inconsistency of condemning the sewing-machine and approving the wheel.

In a note of transmittal, the publishers (William Wood & Co.) of 'Health Notes for Young Wives,' by Aimée Raymond Schroeder, M.D., naïvely suggest that "it might hardly be considered as suitable for a wedding present." That is eminently true, unless we keep the brutal coarseness of the English Church's marriage service too constantly in mind. This little book, by a very competent physician of their own sex, appears to us to introduce much that may uselessly alarm the timid, and to confuse the functions of the nurse with those of the patient. As a matter of taste, we do not think it would occur to a male physician of refinement to quote the incident noted on p. 134, which is certainly out of place, if it is not to be regarded as indelicate. Chapter ix. should be omitted outright, and about one-fourth of the remainder might judiciously be pruned.

Dr. Huidekoper's little volume entitled 'The Cat: A Guide to the Classification and Varieties of Cats, and a Short Treatise upon their Care, Diseases, and Treatment' (D. Appleton & Co.) was prepared somewhat hastily, as stated in the preface, in view of a demand likely to be created by the recent "Cat Show" in New York city. The author is a well-known veterinary surgeon, and also, as appears in many paragraphs, a personal admirer of the domestic cat. It is to be hoped that a new edition may be called for, and that pains may be taken to correct somewhat frequent typographic errors, improve the style of some sentences, and supply important omissions, *e. g.*, catnip and an index. The objections urged against the administration of anæsthetics for operations upon cats (p. 134) would disappear if, instead of attempting to hold the animal, it were put in a box with a glass cover. For killing cats humanely, chloroform is wisely recommended, but in our judgment the quantity recommended (two to four ounces) is excessive and distressing in its effect. There should also be enjoined the precaution not to let the liquid as such reach the eyes of the animal. The book is appropriately dedicated to the President of the American Society for the Prevention of Cruelty to Animals, and in the appendix is reprinted the State law under which that beneficent organization now accomplishes in New York city the protection of pets and the merciful destruction of waifs.

The "cat-house" at one of our universities bears the legend: "Snugly housed and fully fed; happy living and useful dead." So the volume just noticed has in one sense a fitting counterpart in 'A Laboratory Guide for the Dissection of the Cat: An Introduction to the Study of Anatomy,' by F. P. Gorham and R. W. Tower, Instructors in Biology in Brown University (Charles Scribner's Sons). It is, as announced in the introduction, more convenient in size than either Mivart's 'The Cat,' or the 'Anatomical Technology' of Wilder and Gage; but while the descriptions and the plates are fairly accurate, the latter are rather faint, and the directions so meagre that the unaided student would often be at a loss or commit serious errors. There is no figure of the eye or of the heart or other thoracic or abdominal viscera. Nevertheless, the book will certainly facilitate the instruction of its authors, and of others who are able and willing to supply its omissions by personal direction and information.

'Mathematics the Science of Algorithms,' by James Byrnie Shaw (Jacksonville, Ill.: Henderson & Dewpew), is a thesis for a doctor's degree far beyond the ordinary strength of such works, and will interest all students of the fundamentals of algebra. The word algorithm in the title does not in the least suggest the writer's meaning. We might notice that in a part of the brochure Dr. Shaw has been anticipated by others; but we cannot enter into special questions.

Sigmund Gundelfinger's 'Vorlesungen aus der analytischen Geometrie der Kegelschnitte' (Leipzig: B. G. Teubner) is a treatise characterized by its solutions of many complicated problems not in other text-books. It is almost altogether metrical, only one brief chapter being devoted to projective properties. It will serve as a convenient supplement to Salmon and Clebsch's works.

Those of our readers who believe in chirography as an indication of character, will be interested in a 'Lehrbuch der Graphologie' (Stuttgart: Deutsche Verlagsgesellschaft), by "L. Meyer," a pseudonym of Laura von Albertini, of Ragatz, Switzerland. The book begins with an historical and critical survey of the subject, and is amply illustrated with specimens of handwriting, which the author attempts to classify, and in which she discovers a distinct revelation of mental and moral qualities.

'Auf Missionspfaden in Japan,' by Hermann Dalton (Bremen: Müller), is devoted chiefly to an account of Protestant, Roman Catholic, and Russian missionary efforts in Japan, with a cursory survey and, on the whole, just appreciation of the religions which these three forms of Christianity are competing with each other to supplant. The author states that before Japan had been opened to European influences, Shinto and Buddhism had ceased to exert any influence upon the most cultivated Japanese, who, after having outgrown and discarded the faiths of their fathers, are naturally indisposed to bow their necks under the yoke of a foreign creed. The dogmas which they are urged to accept have in their eyes no superiority to those which they have repudiated, and if they want ceremonial observances, they see no reason for preferring the Roman or Greek ritual to the laws and prescriptions contained in the 'Yengishiki,' which their ancestors compiled nearly a thousand years ago. Herr Dalton thinks the Congress of Religions held at Chicago during the World's Fair had an exceedingly depressing effect upon missionary enterprise, from which the latter will not soon recover. The presence of Buddhists and the representatives of other Oriental religions as delegates, and the views they expressed, excited general surprise and awakened no little sympathy, while tending to refute the popular conception of the dense ignorance and moral degradation of non-Christian nations, and thus greatly weaken the plea

of an urgent necessity for rescuing them from their lost condition.

Among the ever-increasing recent French publications on the subject, M. Louis Brunet's 'La France à Madagascar, 1815–1895' (Paris: Hachette & Co.) deserves notice as containing much new material drawn from the archives of the Île de la Réunion, the colony which the author represents in the French Chamber. Although M. Brunet is known as an enthusiastic and successful promoter of French rule in the "great island," his book is by no means a political diatribe, but a source of genuine historical information and a tolerably complete record of the period it covers. In spite of the author's plain and anything but picturesque style, the reader is fascinated by such accounts as that of the persistent efforts and pathetic career of the obscure pioneer, Sylvain Roux, in the first quarter of the century, who saw his plans thwarted by English intrigue, the lukewarmness of the home Government, the opposition or hesitancy of the Governor of the Île de Bourbon, the treachery of native chiefs, and, worst and most fatal of all, the fever, whose malignity he denied, but which nevertheless carried him off.

A more detailed synoptical account of the events on and concerning the island, especially since the death of Andrianamponine (1810), the chief under whom the Hovas first asserted their authority over the other tribes, is found in 'Les Droits de la France sur Madagascar,' by Gaston Routier (Paris: Le Soudier), which has passed through seven or eight editions in the last four months. The texts of the treaty of December 17, 1885, between the French republic and the "Queen of Madagascar," and of the Anglo-French agreement of August 5, 1890, as well as reports of the most important recent discussions on the subject in the French Chamber, are reprinted in the volume, which contains, besides, a hundred pages of notes, not of very recent origin, on the resources, commerce, and industries of the island.

An interesting sketch of Svanetia, the most secluded district of the Caucasian highlands, is contributed to the *Scottish Geographical Magazine* for June by Victor Dingelstedt. Svanetia has an area of about 1,250 square miles, with a mean elevation of 6,000 feet. Glaciers are numerous and extensive, though gradually receding, from some undiscovered cause. The people, numbering from twelve to fifteen thousand, live in narrow and profound gorges, where even in summer the sun shines but a few hours. In the long and severe winter the only light is that reflected from the snow. Cut off from intercourse with the outside world, they have retained their ancient language and customs in a remarkable degree. Nominally members of the Greek Church, their religion is more nature-worship than Christianity. Their chapels are small, and women are rigidly excluded from them except at weddings. The soul is supposed to inhabit a house for a year after death, and during this time food and drink are regularly set apart for it after every meal. The Svanetians acknowledge the supremacy of the Russian Government, but are practically independent, the eleven communes being autonomous. All local affairs are debated in public meetings held in the open air, at which every adult member has an equal voice, and all resolutions must be carried unanimously. Cretinism and goitre are very prevalent; in one valley almost the whole population suffer from this latter complaint, due, according to the report of an official inquiry, to the abuse of arrack, but more probably to the poverty and wretched existence of the people in general.

Francis Parkman's autobiography is reprinted in the *Harvard Graduates' Magazine* for June. In the same number, the editor, Mr. W. R. Thayer, makes a most interesting review of the change in college societies wrought by the obliteration of class lines through the elective system, and argues therefrom in favor of a university club something after the Oxford pattern. There is much curious information in Mr. G. P. Baker's account of the attempt to reproduce the Elizabethan stage and playhouse manners in the revival of Ben Jonson's "Epicoene" last March in Sanders Theatre. Finally, the "documents" on the football question in its latest phase of the Faculty's ban are here conveniently placed on record. The price of the *Magazine* is to be doubled, in the hope of making it self-sustaining at two dollars.

The thirteenth annual report of the Society for Promoting the Return of Women as Poor Law Guardians in Great Britain, which comes to hand six months behind time, includes a complete list of women guardians chosen at the county elections under the Local Government Act of 1894. Prior to the elections of last December, out of some 29,000 poor-law guardians (many local magnates acting *ex officio*), only 169 were women; the number at present is 875, or an increase of over 500 per cent. This contingent is so distributed that of 648 unions, 342 now have women on their boards, while of the 30 metropolitan unions (London) only 5 are without women members. The full returns are interesting as indicating the growth in favor of women as public housekeepers, as well as the mass of conservatism that has to be overcome before more than a very minute leaven of feminine supervision can be introduced into the local boards having charge of the public health, sanitation, education, and juvenile and dependent classes of Great Britain.

We deeply regret to record the death, on June 29, of Daniel C. Eaton, Professor of Botany at Yale University, after a lingering illness, in the sixty-second year of his age. A pupil of Asa Gray, he had for thirty years filled his chair actively and with distinction, his chief work as an author having been 'The Ferns of the United States of America and British North American Possessions.' Of late years he had been a frequent contributor to the *Nation*. While endowed with a most amiable and attractive personality, he possessed marked independence of character, and his range of interests, both public and private, was very wide.

—At its Philadelphia meeting in December last, the American Philological Association resolved against any scheme of preparation for students of the classical course that required less than three years of instruction. A committee of twelve was appointed to give effect to this resolution, which was aimed at the "Classical Programme" of the famous "Committee of Ten," allowing only *two* years to the study of Greek. The result, say the Committee of Twelve, in a forcible appeal just put forth "to teachers of the classics and to all friends of sound learning in the United States," would be a course of study inadequate to admit to any first-rate college having fixed requisites, and to any of the freshmen Greek courses leading to higher in any college having elective requisites of admission. In other words, the colleges must lower their standard in Greek by a whole year in order to suit schools which adopt the programme of the Committee of Ten. The Twelve point out that the evil consequences of this neglect of Greek are not going to be confined to the classical courses in college, since a knowledge of that language is indispensable to proficiency in English or any other modern language; and theological schools would find it harder than they do now to require of their students a knowledge of Greek necessary for the study of the New Testament. Hence, among the signatures procured of non-members of the Association, we meet with those of Professors Child of Harvard, Woodberry of Columbia, Gummere of Haverford, Crane of Cornell, and Smyth of Andover, and in science Professors Whitney of Harvard and Young of Princeton. Prof. Goodwin of Harvard is chairman of the Committee of Twelve.

—By dint of thick paper, wide margins, many illustrations, and a dainty binding, Messrs. Harper have made an attractive gift-book for the parlor table out of four magazine articles ('Four American Universities: Harvard, Yale, Princeton, and Columbia'). Each university is described by one of its most distinguished professors—Harvard by Mr. Norton, Yale by Mr. Hadley, Princeton by Mr. Sloane, and Columbia by Mr. Brander Matthews; and from such pens the reader will expect, and will find, essays pleasantly written, abounding in just observation and happy phrases. But the papers hardly gain by juxtaposition. There is too unceasing a strain of comparison with rival institutions. This is, perhaps, least felt in Prof. Norton's account of Harvard; in the accounts of Yale and Princeton it becomes distressing. The authors have usually one eye on other colleges and one on the anxious parent who needs to be reassured, and no eyes at all (at any rate, on this occasion) for the real academic problems of the present. Granting that the old college life was a good thing, how are we to combine it with the attendance of a couple of thousand students? Granting, also, that the ideal of culture and of the humanities ought to be jealously guarded, how are we to find room for the ideal of science and of the advancement of knowledge? Mr. Brander Matthews alone faces the future. Fortunately, the position of affairs at Columbia relieves him from half the difficulty—the unmanageable horde of undergraduates; of the other half, of the purpose of a "university" as distinct from a "college," he discourses with an infectious optimism. Columbia has a unique opportunity, and seems to be taking advantage of it. The letterpress which, simply as writing, is on the whole excellent, is hardly honored by its association with the illustrations. Many are cheap and showy, and some are paltry. The publishers must have been hard put to it for illustrations, or in a very great hurry, when they inserted those on pp. 5 and 31. And when giving titles to the four folding sheets containing views of the various edifices, surely the slipshod error could have been avoided of "Bird's-eye view *of Harvard University*" and "*of Columbia University*"; the other two pictures are correctly described. Prof. Norton has, indeed, written in vain if the buildings are identified with the University they serve.

—The Boston Public Library, in its new and ample quarters, has a roomy and well-lighted bindery, wherein all the books of the library are clothed, at their need. Some little leather work is done therein, as it becomes necessary to bind

volumes to match other volumes of a set, but by far the greater part of the binding is in cotton or in linen. Large folios, their valuable plates strongly and neatly mounted on *onglets*, or "guards," in the most approved manner, and small duodecimos for free circulation alike, are covered with grayish brown cotton duck or with grayish white linen. One result of modern industrial triumphs is that good leather cannot, as a general thing, be got for binding—none that will be tolerably sure to last for twenty years, although there are plenty of bindings three hundred years old still at hand whose joints are yet solid and whose corners are yet sharp. We used to be told that Russia ought not to be used, because it would turn to dust and split all along the hinge of each cover, and that was true; but it is true also of calf, and now it is beginning to be said that even the once trustworthy red morocco must be given up. Hogskin there is yet, but it is heavy and hard and makes an expensive binding; parchment and vellum, too, but they crinkle and blister and refuse to cling to the boards, unless, indeed, the work is done at a very considerable cost. This, at least, is what the Boston Library people urge. It is in view of these very serious drawbacks to the old custom of binding in leather that the famous Boston institution has taken up textile fabrics as its covering material. On the other hand, the bookbinders by trade tell us that the leathers of fifty years ago are made now as well as then. If you want the Turkey morocco or Levant morocco binding of old times, you can have it, and at the same or equivalent prices as then. It may be a little dearer or a little cheaper, as duties or wages vary, but the leather is the same and costs the same. This, however, has happened: the market is deluged with cheap imitations, and the librarians have remade their own standard of cost to correspond with these. A sham morocco can be furnished at half the price of the real article, and the volume that would cost $2 to bind in the latter can be bound in the imitation for $1.60. The librarians say then that $1.60 is all they will pay; and binding done at this price will drop to pieces—there is no doubt about that. Forget the new commercial shams, go back to the old honest leather and the old prices, and you need not hanker after linen or cotton covering for your books.

—Binding in cloth has been somewhat used already by amateurs of small means. Such an one, having his long rows of French novels which he loved—Cherbuliez and George Sand, Dumas and Gautier, Daudet and About—and wishing to save his money and yet to have pretty books, thought of the bright printed calicoes which were in fashion for ladies' gowns that summer—those with small sprigs of flowers for their pattern. He laid in a stock of these, a different pattern for each author (and a good many yards were necessary of the styles chosen for Dumas and George Sand). The French volume of regulation size costs a franc a volume in France to cover prettily in this way, or a franc and a quarter a volume with "top edge gilt," not counting the cost of the printed calico which one buys by the yard; but this is *cartonnage*, or cloth binding of the usual sort, and the covers, although bearing the wear and tear of years without splitting or separating from the volume, do certainly spread at the back and grow unsightly. Now, if it were indeed true that modern industrial conditions do not allow of good leather being made, why not, so long as linen and cotton are still allowed us of reasonable strength and durability, bind in these? Plain gray and brown linen are there for the serious workman, and, for public libraries, variously colored stuffs are accessible for those who prefer them. Stamped work, which has now grown common in what are called commercial bindings, is capable of much if not forced beyond its limitations, and finally silk is available, and has even been used in several instances of late in the binding of whole editions of gift-books, although the binders tell us that silk does not behave as well as the humbler textiles. Velvet used to be familiar on the covers of church service books; and figured velvets, such as those made nowadays in Venice, brocades like those brought from Japan, and the heavier kind of Indian kimkhab might be used as well as printed or thread-dyed cotton. The cheviot of which our summer outing shirts are made would seem to be well adapted for book-coverings, and so would the tartan silks which are offered us this year (1895) for spring neckties.

—It is, perhaps, but a small class in this country to which the views of an intelligent French critic on contemporary English painting will prove interesting, but to this class the volume by Robert de la Sizeranne on 'La Peinture Anglaise Contemporaine' (Paris: Hachette & Cie.) may be confidently recommended. The only national school of art existing to-day is the English. In every country but England there exists much the same style of painting, and we do not quarrel with M. de la Sizeranne for calling this style French, since it is undoubtedly from France that the rest of the world has recently learned it, and in France that it has reached its highest expression. In England alone is there an independent and different art, and it is this art, its vices, its virtues, and its characteristics, that M. de la Sizeranne has set himself to study. He evidently knows it well, and his criticism seems to us eminently fair and just. Perhaps there is a thought too much generalization, and a tendency to find the merits or the faults he is looking for in works where they hardly exist—we should not have thought "bright color" a characteristic of the later work of Burne-Jones, for instance; but he is as capable of hearty admiration for the nobility of style and loftiness of motive of the best English work as of dislike for its crudeness of coloring and dryness of handling. The prominence he gives to the Pre-Raphaelite movement as the beginning of the national art of England, and to Ford Madox Brown as the first Pre-Raphaelite, is probably justified. As, however, no Frenchman, however well informed, could write of anything English without at least one amusing blunder, we must drag forth from the obscurity of Appendix V. the following passage, which nobly vindicates its author's right to the Gallic name: "Foster donna des dessins au *Punch*, édité par M. Lemon (citron), d'où peut-être le nom bizarre de ce journal satirique." The appendices and the index, together with the plans of the rooms devoted to the English school at the National Gallery and at South Kensington, form a valuable supplement to the book.

—The main results of the last census of Copenhagen and the neighboring communes for February 1, 1895, have been published in a preliminary report, with a French résumé, by Marcus Rubin, Chief of the Census Bureau of Copenhagen. From this report it appears that the total population at that date was 408,191, of which 333,714 persons were in Copenhagen proper, 56,076 in the suburb of Frederiksberg, and the remainder in the smaller communes. While the increase in population previous to 1880 was very rapid, it has during the past fifteen years shown a steady decrease, both relative and absolute; the decrease being specially noticeable in the city itself. During the last five years the total increase has been only 8.64 per cent. as against 20.22 per cent. for the period between 1880 and 1885. Since 1870 the population has doubled. The recent falling off in increase consists both in births and in immigration, and is attributed to the reaction from the unusual prosperity of twenty years ago. Of special interest are the tables showing the proportion of sexes in the capital. This has had an uninterrupted development throughout the century, at the beginning of which there was a very considerable surplus of men, in the middle a slight surplus of women, which has gone on increasing, until at the present day the original proportions are almost reversed. The exact figures for 1801, 1840, 1880, 1890, and 1895, showing the proportion of male and female inhabitants to each 1,000, are as follows:

Males.....	511	484	463	460	456
Females.....	489	516	537	540	544

The disproportion at the beginning of the century was due mainly to the large number of students, soldiers, and male servants; the present reversal has been caused partly by the relative decrease in these classes, partly by foreign emigration, partly by the increased emigration during recent years of female servants from the country as a result of the unwillingness of Copenhagen girls of the lower middle classes to accept positions that limit their freedom.

GARDINER'S HISTORY OF THE COMMONWEALTH.—II.*

History of the Commonwealth and Protectorate. 1649-1660. By Samuel R. Gardiner, M.A. Vol. I. 1649-1651. Longmans, Green & Co. 1894.

How far does Mr. Gardiner's History affect our estimate of Cromwell? The best answer we can give is, that Mr. Gardiner's thorough, impartial, and unimpassioned study of the Puritan movement leads, as regards the Protector, to three main results:

First. No one can read Mr. Gardiner's pages with intelligence and not come to the conclusion that Cromwell was out and out the greatest of Puritan leaders. Nothing testifies to this more than does our historian's admiration for the hero of the Puritan Revolution. Mr. Gardiner is not by nature a hero-worshipper. Judicial impartiality is incompatible with the adulation which writers as unlike as Carlyle and Macaulay reserved for their favorite statesmen. There is not a trace throughout our author's volumes of any desire to keep in the background, or to gloss over, the errors or faults of the leaders whom he respects. Moreover, it is towards the men of thought rather than towards the men of action that his sympathies lead him. We cannot suppose that he really likes James the First. That monarch had many flatterers in his day, but never possessed an attached friend, and, since his death, has not received a tenth of the admiration or worship which has been lavished upon his son. Yet Charles the First, if morally the superior of his father, was intellectually infinitely his inferior; and Mr. Gardiner, if he does not like James, thoroughly appreciates the King's thoughtfulness and intelligence. So, again,

*See the *Nation* No. 1554, April 11, 1895.

when our historian deals with a man of action such as Fairfax, the qualities which, in painting the General, he brings into relief, are not his gifts as a soldier, but his moderation and modesty as a man. It is therefore not at all likely that Cromwell's energy and his success should tell for too much in Mr. Gardiner's estimate of his merits. Yet, as the history of the Rebellion and the Commonwealth unfolds itself year by year, as we read what we have ventured to call Mr. Gardiner's 'Annual Register' of the Civil War, Cromwell's greatness becomes more and more apparent. Mr. Gardiner is no hero-worshipper; but Cromwell, from the very nature of things, becomes his hero. Hence, though there is not the least attempt to write an apology or to explain away Cromwell's defects, each successive volume removes the misconceptions which have damaged the Protector's reputation.

The charge of hypocrisy, for instance, if the word hypocrisy be taken in its ordinary and true sense, vanishes away; it becomes absolutely impossible to believe that Cromwell's religious fervor and passion was a mask hiding insatiate and unscrupulous ambition. His religion was a quality of his nature as marked as it was genuine. What Mr. Gardiner does not perhaps show is, that with Cromwell, as with many other men of genuine religious sentiment, there may not have existed a curious connection between strong religious convictions and a tendency towards tortuous ways of reaching what, to an enthusiast, seem absolutely good ends. Fanaticism is not necessarily allied with transparent honesty, and a politician who naturally uses the language of religion, and gains thereby the support of pious and fervent followers, is tempted to conceal under the phraseology of a preacher the political astuteness of a statesman. Such a man no doubt deceives himself, but it is because he is a self-deceiver that he is able to deceive others. Make, however, what reservations you like, and the charge of hypocrisy falls to the ground.

It becomes, again, apparent that, even before Cromwell became the ruler of England, he had imbibed broader ideas of statesmanship than were to be found among the leading men of his age. You can see in all his conduct a real concern for the interest of the nation as a whole. There never lived a man who had less wish to be the mere leader of a party. The character of a politician in the seventeenth century can be certainly determined by his attitude towards religious toleration. How far, in matters of theology, error could be tolerated was in reality the problem of the day, and Cromwell, paradoxical as the assertion must appear to Roman Catholics and to High Churchmen, leant towards toleration. Neither the Roman Catholics, nor the High Churchmen, nor the Presbyterians were prepared for a policy so little oppressive to the mass of religious men in England as the policy which Cromwell was inclined to follow. There existed, no doubt, in the England of Cromwell, persons whose spiritual insight or whose speculative power showed them that the conflicts which had distracted Europe since the beginning of the Reformation could be terminated only by a kind of toleration which no practical statesman would have proposed to establish in England in 1651, or for long after; but among the statesmen, and certainly among the Puritan statesmen, of his day, Cromwell must be considered as averse to all measures of persecution. He was the largest-minded among the Puritan leaders, as he was assuredly the most capable.

Secondly, Cromwell's military and political capacity becomes the more apparent the more his life is studied in detail. No man ever knew better what, for the immediate object he had in view, was the right course to be taken. At any given moment he saw what was the path to take, and, when once he saw it, struck into it with the utmost vigor. It is this combination of sound judgment and vigorous action which is the distinctive trait of his political, and, it may be suspected also (though this is a point on which only an expert can speak with authority), of his military career. It is true, and not at all inconsistent with what we have asserted, that there were moments when he obviously did not see clearly what was the best course to be pursued. There was a time when he thought it might be possible to come to terms with the King. It was but slowly that he made up his mind that the army must be used, or be allowed, to coerce Parliament. But though the existence of these periods of hesitation is undeniable, it is equally certain that, before the supreme crisis arrived, he in each case saw what was the policy which the circumstances of the moment required, and from that minute pursued remorselessly the dictates of his inspiration. It may indeed well be maintained that, as regarded the immediate success, he never made a mistake. Mr. Gardiner questions the wisdom, even with a view to the reconquest of Ireland, of the massacre at Drogheda. But our author's most legitimate detestation of merciless and perhaps faithless cruelty blinds him to the immense gain of terrifying every hostile garrison in Ireland. This is one of the few matters on which the passionate and hasty judgment of a born general is more trustworthy than the calm conclusions of a humane historian. To the combination of insight and energy is due Cromwell's unbroken success. In everything he attempted he succeeded. As a soldier, and from some points of view as a statesman, he could not stand comparison with Napoleon; but Napoleon's failures are as astonishing as his successes. Cromwell's course is marked by no defeats. To whatever he put his hand, in that he succeeded; he not only rose to power, but died in power. So firmly established was his authority that he transmitted it to his son, and in this he achieved a triumph denied to the genius of the first, and to the astuteness of the third, Napoleon.

Thirdly, it is Cromwell's success in all his actions taken separately which forces upon the reader's attention the weak point of Oliver's genius. His claim to be a great leader of men is past dispute; his claim to rank among statesmen of quite the highest class is open to serious question. He saw with astounding clearness what were the best means for the attainment of an immediate object, and, by adopting these means with passionate energy, gained his ends. But to judge even from the part of Cromwell's life which Mr. Gardiner has already narrated, the Puritan leader seems to have been gifted with far greater insight into the requirements of the moment than foresight as to the effect which a course of action would ultimately produce. Put aside, for the sake of argument, all questions as to the justice of Charles's execution; let the trial of the King be looked upon not so much as the arraignment and punishment of a culprit as a legitimate act of warfare and self-defence. These concessions, which may fairly be made, save the moral character of the regicides, but do not even tend to vindicate their statesmanship. As a matter of fact, the death of Charles was a death-blow to Puritanism. To remove a dethroned king with whom reconciliation was impossible, and to put in his place a claimant against whom no one had any complaint, was to prepare the way for the Restoration. Add to this that the dethronement of the King could, from a statesman's point of view, be justified only by the belief on the part of Cromwell that it was possible to found a republic in England or by his willingness to occupy the throne. That Cromwell was a believer in a Parliamentary Commonwealth is incredible; that when the moment for decision arrived he was not prepared to place the crown on his own head is certain. The execution of Charles removed an immediate peril, but Cromwell had never provided for the dangers of the future, of which the execution was certain to be the cause.

This, too, was not an isolated error. He made mistakes of a similar kind at other crises. The Protector may probably have expected to live some years longer than he did; still, he was, when he died, a man who had long suffered in health from his constant labors and anxieties, and who could not be surprised at the approach of death. It is doing him the barest justice to assume that he was intensely anxious that the fruits of the great Civil War and of all that he and his comrades had endured should not be lost, yet he took no adequate step to provide for the succession to the Protectorate. If he thought Richard a fit successor, Cromwell's usual sagacity had forsaken him. If, what is more probable, he had not fully thought out the best mode for providing for a contingency which he still looked upon as future, then Cromwell showed here, as elsewhere, a want of the foresight which statesmen of a different type occasionally at least possess. It is this one defect, combined with his extraordinary powers, which renders the life of Cromwell a summary of the Puritan movement. Cromwell and Puritanism both triumphed over their foes, and Cromwell and Puritanism both, to use an expression of Mr. Green's, "missed their mark."

SOME STUDIES OF REASONING.

A Critical Account of the Philosophy of Lotze: The Doctrine of Thought. By Henry Jones, author of 'Browning as a Philosophical Teacher.' Macmillan & Co. 1895.

Die Grundbegriffe der ebenen Geometrie. Von Dr. V. Eberhard. Erster Band. Leipzig: Teubner. 1895.

Riemann and his Significance for the Development of Modern Mathematics. By Felix Klein. [Translated by Alexander Ziwet. In the Bulletin of the American Mathematical Society for April, 1895.]

Elements of Inductive Logic. By Noah K. Davis. Harper & Brothers. 1895.

We may dispose of the last book first. It has the signal merit of being small—a double merit considering its quality. It plunges the "tyro," as the student is politely called, at the very outset, into perplexing disputes of which he will be utterly incompetent to form the least opinion, thus tending to pervert him into not the least nocuous of mental vices. It jumbles wholly irreconcilable theories. Its power of thought may be judged from a single specimen. The proposition "A scotched wheel does not revolve" is pronounced unscientific and inaccurate, because "in strictness a cause is essentially positive." It is a pity that those who have for the last three hundred years been trying to improve the condition of the world by the study of forces were not told this in time;

for they have always been regarding forces as acting continually, whether balanced by others or not, and have always treated friction, which is (we are forbidden to say the cause) the devil of the scotched wheel, as a force. It would be a grievous thing that young men should be taught such triviality instead of the methods by which useful reasoning is really performed, were it not that fortunately it runs off of them like water from a duck's back.

One of the leading mathematicians and mathematical philosophers of our age, Klein, gives another of those instructive comments upon mathematical procedure of which we have enjoyed a number from his pen. He again dwells, as he had already done, upon the importance of attentive intuition—in other words, of the *observation* of diagrams and the like—as an essential element of mathematical reasoning. Considering that mathematicians have long held that mathematics covers all exact reasoning, quantitative or not, it will be seen that Klein is going over to a logical doctrine which has had defenders in this country and in England. According to this, our assurance that $(2.4.6.8.10) \div (1.2.3.4.5) = 2^5$ is of the same nature as our assurance that sulphuric acid is precipitated by baryta, we having satisfied ourselves in each case that a single experiment is sufficient; only in one case we observe Nature, in the other our own construction. Dr. Klein remarks that although pure mathematics deals with a purely imaginary world, yet the course of its development is not arbitrary. He seeks to explain its orderly growth by historical continuity, and by the fact that as older questions get solved new questions "naturally" arise. No doubt they do, but that is precisely what needs explanation. We should like to know in what this "natural" succession of ideas, without any external *nature* to guide it, consists. Is there, for example, some Hegelian dialectic, or is there a different general law for this growth of pure concepts, or is it lawless?

The paper contains so many points of interest that we can only recommend it to the reader. The logical importance of Riemann's memoir on Trigonometric Series is pointed out. Klein says (in the absence of the original, we have taken the liberty of rubbing down some of the angles of the English translation):

"Riemann's collected works are neither numerous nor extensive. They are comprised in an octavo of 550 pages, and but half of that matter was published by him. Yet his sway over the minds of mathematicians was the most potent of his time; nor is it even yet come to an end. This is owing to the *originality* and the *penetration* of his mathematical thought. . . . Passing by the latter character, I desire to point out that Riemann's originality lies in a unifying central idea, the source of all his achievements. . . . He devoted much time and thought to physical theories. . . . These are preserved in fragmentary form in his posthumous papers. All have in common the hypothesis (since made prominent by confirmations of Maxwell's theory of light) that space is filled with a continuous fluid serving as a common medium for the propagation of optical, magnetic, and gravitational phenomena. . . . Those physical ideas are the mainsprings of his investigations in *pure mathematics*. . . . The mathematical work of Riemann is the counterpart of the physical researches of Faraday."

He remarks, too, that Riemann's growing influence is illustrated by two new French books, Picard's 'Traité d'Analyse' and Appell and Goursat's 'Théorie des Fonctions Algébriques.'

Dr. Eberhard's work is a welcome mathematical treatise on plane point-systems. We mention it because some thirty pages of the long preface are occupied with the basis and purpose of geometry. As in some other recent German work in the same direction, while the need is for a purely logical analysis, we are furnished with semi-psychological and epistemological reflections which would not answer the purpose even if they were beyond criticism. It illustrates, however, the purely empirical ground upon which geometry is now placed by mathematicians, considered as a science of actual space, although the very same men may be high idealists when they come to geometry of n dimensions or other pure mathematics. From generalities which might almost have been taken from Bain's 'Senses and Intellect,' or some such psychological treatise, Eberhard passes at once to the intersections of planes and straight lines, in entire forgetfulness that in order to exhibit the foundations of geometry he ought first to have treated topology, or that branch of geometry which relates to lines and surfaces whose exact forms remain undefined—a branch which includes the theory of knots, Euclid's formula for the number of summits, edges, and faces of a polyhedron (which need not have plane faces), etc. This plainly underlies the optical doctrine of straight lines and planes.

For those who like their philosophy drawn particularly cool and mild, Lotze's system is just the thing; and the 'Microcosmos' (would there were a handy imprint of Misses Hamilton and Jones's translation) would be as good a book to begin with as those could have for whom one big but easy tome on philosophy will be all they have the courage to undertake. Yet whoever perseveres to the end of that work will most likely want more such reading, and may probably next go on to the 'Logic' and 'Metaphysics' of the same author. Those twin treatises mastered, the reader will certainly find it to his advantage to examine the refutation of them of which the volume that heads our list is the first instalment. It deals with Lotze's 'Logic,' and another is promised to make mincemeat of the 'Metaphysics.' Lotze is somewhat in sympathy with modern physics; he might be said to be one-third imbued with the scientific spirit. He had a medical student's initiation into the outer courts of science. His chief master was Gustav Theodore Fechner, a many-sided man like himself, say three-quarters scientific; but Lotze was not half as much so. That which more than all else distinguishes the thoroughly natural-scientific philosopher from the theological is that, in the former, all other passions are swallowed up in the passion to *learn the truth*, while the latter is fired with the impulse to *teach the Truth*. It is amazing what disparate conceptions of truth and of Truth those opposite attitudes carry. As for Lotze, it was teaching and not learning that engaged his energies. The life of the man was devoted to curing fellow-countrymen of the malady of Schellingism. Now, to a superficial glance, Lotze, though not untheological, is high in the ranks of the scientific among metaphysicians; while Schelling, with his eye fixed on Deity, was a babe in exact science. Nevertheless, a scientific specialist may well feel nearer to Schelling than to Lotze, because Schelling seems to really desire to find out the truth, ready at a moment's notice to dump all pet dogmas for her sake. The two revolutions his opinions underwent, though they are in many critics' eyes his shame, are his honorable scars in those of the physical experimenter. Lotze, on the other hand, having embraced Kantian nominalism at his first confirmation in the church of philosophy, fought for it doughtily all his life long, with that sort of fidelity which, extolled in seminaries, sets the man of the world to looking out for other signs of immaturity or arrested development.

Prof. Jones has his attention far too closely riveted upon a single question (though it is undoubtedly the central question of Lotze's philosophy) to give a very good all-round account of Lotze's logic. For example, toward the end of the book he remarks in a foot-note:

"The doctrine repeatedly advanced by Lotze, that our ideas can be regarded as objectively valid, and that the process of thought leads to objective results merely because every one, on account of the constitution of the human soul, must arrive at the same results, does not seem to me to be worthy of serious discussion. Error would not cease to be error though all should commit it. It would, probably, not be recognized as error."

Now not "repeatedly" merely, but on every proper occasion Lotze advances that doctrine. It is, not certainly the most prominent, but the basic principle of his system, and if it is not worth serious discussion, why write a somewhat lengthy book about that system? But, after all, considering that Lotze holds that it is impossible for anything like the real to be thought, if all mankind were immovably fixed in a belief, so as to entertain no suspicion of it, in what would its erroneousness consist? It could not picture the real as different from what it is, since it cannot, on Lotze's theory, picture it at all. It could not represent things as like when they are not alike, if all things are somewhat alike, nor as unlike when they are like, if all things are somewhat unlike. Where, then, would be the error? It is difficult, not to say impossible, to see how, in Lotze's view, any judgment can be in error, except in the sense that it is destined to be reversed. Such reflections are, by this time, the very commonplaces of philosophy; but Prof. Jones seems not to be aware of them. As for what he can mean by saying that any error all men shared would *probably* not be recognized as error, the reader must answer that without any guess from us, for we can make none. The only plausible reply to Lotze's principle would seem to consist in denying that men ever can be immovably fixed in any error; but that *is* the principle stated in other words.

Prof. Jones is a half-idealist. He conceives himself to be a complete idealist; but he will find himself forced to pursue that path much further, for he has not yet emerged from nominalism. "No one," he says, "can assert that things in general exist." Can one not? A pendulum has been drawn to one side 86,400 times daily for twenty years, and every time it has returned to its position, and that at almost the same rate of speed. Was that chance-coincidence? If not, there was a really operative *law*. That law is general. It is not only general itself, but it applies to a general class of things; and if the law is real, the class is real. If for "assert" in the quoted sentence, we read "deny," we come nearer the truth. The idealist, to be consistent, will be forced to deny that individuals really exist, as such; and he will be ultimately led to hold that, while there are, of course, fictitious generals, yet some generals not only *exist* but *live*.

Lotze's 'Logic' was published twenty years ago. It is choked up with the eccentric notions with which the German logics of earlier date abounded. Thus, Lotze holds that every true hypothetical proposition is convertible; that is to say, from the proposition, "If attraction varies inversely as the square of the distance, the orbit of one particle round an-

other will be a conic section," it follows that "If the orbit of one particle round another be a conic section, attraction varies inversely as the square of the distance," although, in point of fact, it may vary directly as the distance. Again, he holds that our parts of speech are essential to thought, although it does violence to the majority of languages to classify their words in that way. A hundred such whimseys might be pointed out. But then logic was at a low and unpleasant ebb in Germany for the greater part of our century. Schröder's treatise, if the Germans will only go through it before they write, as they probably will, must render such nonsense impossible for the future.

No very close thinking was needed to refute Lotze's logic, at least in great part. Had it been required, and had Mr. Jones been able to supply it, it would have been impossible to set it forth in an easily readable book, in the literary way still expected in a philosophical treatise. An accurate logical discussion can no more be drawn up in such form than could a well-made balance sheet. The more elegant and perspicuous the style, the less clear would the statement be. However, in this case, nothing of the sort was needed; and the style is agreeable enough. Occasionally, points are made with remarkable neatness. Yet long successions of pages are diluted with such washings of insignificant words as we marvel to encounter from the pen of a student of poetry. Nevertheless, for the substantial result of the engagement, idealists of all stripes—and they make up the great majority of thinkers, nowadays—will opine that such deadly holes have been made in the sides of Lotze's frigate that no patching can render her seaworthy. At the same time, a goodly number will think Mr. Jones has himself some lessons to learn in idealism yet, and he certainly has much to learn in logic.

Recollections of War Times: Reminiscences of Men and Events in Washington, 1860–1865. By Albert Gallatin Riddle, formerly M. C. from the 19th Ohio District. G. P. Putnam's Sons. 8vo, pp. 380.

An intelligent man's recollections of the war times in Washington cannot fail to be interesting and valuable, and Mr. Riddle was not only intelligent, but he had a quick eye for what was going on around him. As a somewhat radical Republican he had opportunities for seeing the inside view of things in some important junctures, and his character makes him an authoritative witness as to what he saw.

On the capital question of civil-service reform he is an involuntary witness to its necessity, for he tells in the first person the story of a promising member of Congress killed by a post-office. A young man, gifted with the perfervid style of oratory which, in those days, might carry a man far in politics, he became a "favorite son" in the Cleveland district, and was nominated almost by acclamation. There were two able editors in Cleveland, Harris of the *Herald* and Cowles of the *Leader*, and, alas! there was but one post-office. In those good old days the post-office was a perquisite of the Representative, and Mr. Riddle gave it to Cowles. Implacable wrath, of course, filled the celestial mind of Harris. It is amusing, now that we look back upon it over more than a third of a century, but it was tragic then. As if most perfectly to adorn the tale, the blind devotion of Cowles to newspaper enterprise made him the fatal instrument to destroy his patron.

Mr. Riddle was one of a bevy of Congressmen who went out to the battle-field of the first Bull Run to hail the victors, but the fate of war made them part of the rabble rout hustling each other in the panic flight to Washington. The member for the Cleveland district yielded, a little imprudently, perhaps, to his literary facility, and wrote the story of the rout in some detail and with vivid penstrokes. He told of the able-bodied fugitives who outran their regiments, and of demoralized officers who tried to force their way into his carriage. True, his letter was a private one, but it was shown to Cowles, who proved that he was an able editor, to the manner born, by sacrificing everything to the promised sensation. He "had a nose" for a sensation, and Mr. Riddle saw his composition come back in cold print, but hot to the blazing point in unmitigated denunciation of the cowards who ran from the Manassas field, with (to his eyes) great gaps of omission of his praise of those who had done well.

Harris saw that the Lord had delivered his enemy into his hand, and he (being also an able editor) regarbled the garbled letter, and the Congressman was exhibited as a Jehu crazy with fear, lashing his horses through regiments of poor wounded soldiers, and pushing headlong from his carriage-door a bleeding and fainting officer, disabled in the noble performance of duty! Which was the upper and which the nether millstone, it were hard to tell, but between the two Mr. Riddle was ground to powder. He was burned in effigy, hanged and drowned. He was denounced in public and privately; he was threatened openly and anonymously. His explanations were hooted at, and when the time for renomination came, the favorite son fared worse than the prodigal, and was left to the husks outside the public crib. Naturally disgusted, the now ex-member shook the Cleveland dust from his feet, and closed his all too brief career by removing to Washington, where he became a well-known lawyer, as he was before a genial gentleman. And now in his old age he looks back and laughs with us (a little sardonically?) over the way in which, unbeknown to himself, he was made an object-lesson in civil-service reform.

> "But Heaven that brings out good from evil,
> And loves to disappoint the Devil"

(if we may borrow Coleridge's couplet), was preparing for the victim of the burdens of patronage a quiet retreat near enough to the great current of affairs for rare opportunity of knowledge, whence he could disinterestedly note passing events, and write for us an attractive and useful note-book on men and things. Of the Thirty-seventh Congress and the legislation which organized the great conflict for the Union, Mr. Riddle speaks, of course, with authority. Besides this, however, he has many personal reminiscences of Lincoln, Scott, Chase, Stanton, Wade, Black, and others, which will have permanent value in making up an authentic picture of Washington and its leading men in the war time. His extracts from his own speeches and writings give something of the character of autobiography to the volume, but the whole is so closely connected with the public side of his life and duties as to avoid any narrowness of personal experience.

A very interesting episode is his visit to Cuba as representative of the State Department in January and February, 1863. He had excellent opportunities to investigate blockade-running, its methods, its risks, its profits and its losses. This is an almost unique chapter in war history. As a whole, the book is worthy of an honorable place among the personal contributions to the story of a great epoch.

St. Andrews and Elsewhere: Glimpses of some gone and of things left. By the author of 'Twenty-five Years of St. Andrews,' etc., etc. Longmans, Green & Co.

"Boyd, who writes," was Carlyle's succinct indication of the author of these recollections. Long, long ago there were those who at first liked his 'Recreations of a Country Parson,' and then got tired of them, but "A. K. H. B." has never wearied of much writing; this is his thirtieth volume, and he is proposing to celebrate, next September, the thirtieth anniversary of his settlement at St. Andrews with another volume covering the period since his 'Twenty-five Years of St. Andrews' was written. It is likely to be as meagre as the 'More Memories' of Dean Hole, for in this volume he seems not only to have reaped but to have gleaned the field. All of his usual characteristics are here in full force: his abounding egotism; his dwelling upon trifles; his twittering sensibility to the honor of having known this or that distinguished person, and especially of having entertained them in his own house. His egotism would be more endurable were it more naïve, but it is intensely self-conscious. He tries to avoid the appearance of the evil by speaking of himself in the third person and calling himself "one."

> "One soon saw ten or twelve clerics listening more or less critically; the younger of them probably thinking they could have done it better themselves. For that, one did not care at all. But really when, after service, one of the most outstanding Bishops of the Anglican Communion walked into the vestry and introduced himself in the most brotherly way (the very pleasantest of men), even a man long past the days in which self-conceit is tolerable could not but think that it had been well the Prelate had heard one for the first and last time when more like one's self."

It is extremely funny when, finding himself getting badly tangled in this artifice, he breaks through into the joyous freedom of the first person singular. There is much depreciatory quotation of the praise he has received, and this is sometimes sickening, as where an extempore prayer is lauded by the local press; but in general it is more amusing than any other feature of the book, even the stories, of which there are many, and some of them very good.

The book will fail of its purpose if it is not widely read, and especially by those who have from time to time said disagreeable things of Dr. Boyd. All these have their appropriate comment. He pleads guiltless to the charge of having preached in lavender kids, and confounds the wretch who accused him of preaching the same sermon twenty times. Yet, though much is made of little, it is evident that Dr. Boyd has had a wide range of ecclesiastical acquaintance, including some persons of importance who have discounted his foibles in view of his substantial qualities of mind and heart. We may laugh at him more than with him, but his book is certainly entertaining, with the exception of fourteen of the shorter chapters under the general heads, "That Peaceful Time" and "Things Left." Could we imagine Dr. Boyd as thinking anything he had written too poor for publication, we should imagine these had been withheld until the need of padding had overcome his scruples. The closing chapter celebrates the writer's intimacy with Froude. The best thing in it is Froude's comment on a certain Roman Catholic archbishop: "Ah, he thought highly of Christ, did he? I venture to doubt whether that favorable opinion was reciprocal." In the same chapter Dr. Boyd sounds the praise of Dr. Holmes. "He did not care

to be called a Unitarian in the English sense. 'An American Unitarian was rather like an English Broad Churchman.'" If Dr. Holmes said anything so silly, his zeal was not according to knowledge, the resemblance being quite the other way. It would be hard to find another book in which so many compliments are distributed. But Dr. Boyd is not a master in the art of compliment. He lays it on with a trowel, and where all are plastered no one can feel himself much honored.

In the first chapter much is made of the consecration of St. Cuthbert's, Edinburgh, and the *magna pars fui* is displayed with great elaboration. Dr. Boyd is continually saying, I must not do thus and so, and then doing it. Thus, of "the beautiful Holy Table of white marble" in that broken English of which he gives us much, "One hardly likes to mention such a thing here. But it was a costly gift, as such ought to be." The verger seems to speak, yet to refrain from his usual exactness in pounds sterling. In the second chapter, Bishop Wordsworth (Christopher) and Principal Cunningham are the subjects of genial recollection. Bishop Wordsworth's 'Annals' encouraged Dr. Boyd to write his own and to rival the Bishop's speed—a volume in two months. "I record, gladly, that he was quite pleased with everything that was said of himself." If Emerson's cure for sentimentalists—"pit one against another"—were good for egotists, these two would have cured each other. On the Bishop's death his copy of the 'Christian Year,' which he had used for sixty-three years, became Dr. Boyd's. It is much annotated and with some interesting statistics of the various editions, of which ninety-five were published in Keble's lifetime. Dr. Boyd is nothing if not ecclesiastical. In the insufficient pay of clergymen he finds "the tragedy of modern life." But his sympathies are inclusive; he is on good terms with the different parties, and Bishop Frazer, "an Evangelical High Churchman with Broad Church sympathies," is a man after his own heart.

Chapters iv. and v., though not confessedly so, are evidently reprinted reviews of the biographies of Archbishop Tait and Dean Stanley. They are the best chapters in the book. Tait would not have pleased him much without the glamour of his archiepiscopal office. He discourses plaintively on the labors and sacrifices which justify a salary of £15,000. One incumbent, doing homage to the Queen, said she was the first official he had met who had not asked him for fifty guineas. There is a good story of Tait's encounter with a Scotch postmaster who first questioned his title and afterwards tried to make amends by saying, "I have a son in London, a lad in a shop; and he gaed to hear ye preach one day, and he was vera weel satisfeed." In the Stanley chapter we read that Stanley and Gladstone were both taught by the same Mr. Rawson, a parish clergyman, and he declared Stanley the stupidest boy in figures who ever came under his care except Gladstone, who could not grasp simple addition and multiplication. Such a beginning, considering Gladstone's career as a great minister of finance, is certainly encouraging for parents of dull boys. Stanley's compliment to Bishop Wilberforce was one of the double-acting kind, which are not desirable: "Any act of undoubted sincerity in him is worth ten times as much as it would be in another person."

There is an astonishing account of the origin of the famous 'Essays and Reviews' which Dr. Boyd got from John Parker, the publisher. Two or three of the Oxford and Cambridge Essays which had been paid for were left over. To save their cost, a few others were added and a book was launched which had an immense sale and occasioned a remarkable disturbance. In the chapter on Hugh Pearson, his visit with Stanley to the Pope is made more amusing than ever. The Pope was much interested in Bishop "Vealberfoss," and "Dr. Pousé." He thought Wilberforce was an Oxford professor. Stanley averred that he made more blunders in twenty minutes than any fallible person of his acquaintance. Stanley made one himself mistaking the question about Dr. Pusey for an inquiry whether he was himself *épousé*. Stanley and Pearson visited Dr. Boyd, and he could, he says, fill pages with his "recollections of that morning's marvellous talk." Yet none are given; why, we can hardly guess. Perhaps they are reserved for Dr. Boyd's thirty-first volume, which is coming soon.

Americus Vespuccius: A Critical and Documentary Review of two recent English books concerning that Navigator. By Henry Harrisse. London: B. F. Stevens. 1895.

The books under Mr. Harrisse's review emanated, one from the President of the Royal Geographical Society, and the other from an officer of the geographical section of the British Museum. The first is Clements R. Markham's 'Letters of Vespucci' as issued by the Hakluyt Society. The main object of this publication was to throw discredit on the arguments of Varnhagen and Fiske, adduced in support of the alleged voyage of 1497 to America. Harrisse, whose opinions have veered from time to time on this disputed question, now decides that "the accounts which have reached us, whether in Italian or Latin, are all liable to grave objections, which we certainly do not pretend to be in a position to remove"; which is a far more reasonable stand than the dogmatic assertions of supporters or doubters respectively. Without indicating the objections to the position of the doubters, Harrisse questions the advocates' ground because the abstracts of Vespucius's own unrevised narratives cannot be held to be definitive. Las Casas's contrary testimony, he contends, was based on no better knowledge than scholars have to-day; and there is, moreover, no documentary evidence to show that Vespucius was otherwise engaged at a date of the alleged voyage. It would seem, then, that Harrisse's present opinion is that Vespucius could have made the disputed voyage, though there is not indisputable evidence that he did make it.

The second of the books in question is the 'Voyage from Lisbon to India, 1505-1506,' issued originally in Flemish at Antwerp in December, 1508, and reprinted in 1894 with annotations by C. H. Coote, accompanied by an argument to show that the author of it was Vespucius. This book was reviewed in these columns in the latter year, and its fraudulent character suggested, and Mr. Coote's presumptuous and uncritical method exposed. These adverse asseverations are nearly if not quite substantiated by the disclosures which Mr. Harrisse now makes. Mr. Coote had relied on a statement in the Flemish text that Vespucius was the author of the tract, and had not discovered that the person to whom Vespucius was represented as addressing his narrative had been for three years in his grave. It further turns out, as Coote conjectured, that the Flemish narrative pertained to the Almeida Expedition of 1505. The publisher of it, however, to disguise that fact, had altered the given date (1500), had left out certain statements which would have disclosed the original authorship, had otherwise garbled the text, and had altered the preamble so as to make Vespucius the author, instead of Balthazar Sprenger, a Tyrolese who accompanied Almeida. To help prove this fraudulent practice of the Antwerp publisher, there are both Latin and German texts, professedly of Sprenger's narrative. The Latin text was discovered in 1718, and printed by the Benedictines in 1724, and proves in Harrisse's judgment to be most likely the text which the Flemish plagiarist followed, in some manuscript copy of it existing in 1508. The purpose of the change of authorship from Sprenger to Vespucius must then have been to avail for commercial purposes of the popularity, at that time, of Vespucius's name.

If the Antwerp date of publication, December, 1508, is an honest one, Sprenger's text was first put before the public in this fraudulent print, whatever may have been its earlier currency in manuscript. The next year, possibly to assert his claim to its authorship, Sprenger's narrative appeared, perhaps at Augsburg, in a German text, which may have been the form in which it was originally written; and of this only a single copy is known, preserved in the great library at Munich. Harrisse contends that the hypothesis that this German text was copied from the Flemish text of the preceding year is not consistent with evidences which we have of Vespucius's being in Spain at the time of Almeida's voyage.

In clearing the question up, there is too much necesssity for assumption in order to prove anything, to make it entirely certain that the meaning of it all is just what Harrisse declares; but in the present aspect of the evidence his views must stand till some better solution of the enigma can be found. Mr. Coote has not certainly made out his case. Mr. Harrisse has come very near making one out.

Annals of the British Peasantry. By Russell M. Garnier. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1895.

The subject which Mr. Garnier has chosen is certainly an interesting one. We are all children of the earth, and have within us some congenital yearnings for the country, sufficient to invest the life of the peasant with a glamour which may not be always based upon reality. There is a glory in the work of a skilled artisan, but the mass of those employed in factories are now mere adjuncts to machines, and the consideration of the conditions under which their lives are passed is a painful duty rather than an agreeable recreation. But even in the poverty of the peasant there is something picturesque, and his misery is toned down by the background afforded by joyous nature. Whether chattel, landed proprietor, farmer, soldier, rebel, tramp, pauper, or laborer, Mr. Garnier says he has found in the peasant much to admire and but little to despise. And his readers will find that his enthusiasm is contagious and that his pictures of rural life linger in the memory.

Nevertheless, it is hard to conceive just what class of readers is appealed to by such a book as this. It is not a work of original research, like those of Kenelm Digby, Thorold Rogers, Seebohm, Gomme, Vinogradoff, Cunningham, Ashley, and a host of others. Its bulk—450 pages 8vo—forbids its being regarded as a popular history of the English peasant. It is substantially a combination of the popular with the scientific. The author has evidently had much experience with the management of

land, and ample acquaintance with the tillers of the soil, and has also studied with intelligence and comprehension the works of such authors as we have named above, as well as many of the authorities upon whom they rely. He thus combines theory with practice, and on the whole with very good success. Of course, there are numberless points concerning which archæologists differ, and the reader must be cautioned against taking all of Mr. Garnier's statements without some allowance; but in the main we believe that he gives a sufficiently accurate picture of the times with which he is concerned.

So far as the account of the manor and the early feudal obligations is concerned, Mr. Garnier has little to say that is not to be found in the histories. But when he comes to depict the actual routine of peasant life at different stages, he shows that he has thoroughly identified himself with his subject, and has reconstructed the past in his own imagination. There is a refreshing absence of socialistic froth, and even a disposition to hold that employers of labor are not so black as they are painted. At the same time the oppressive character of many of the labor laws is clearly stated, and the chapters upon poor-relief contain a full analysis of the effects of injudicious legislation. The field which Mr. Garnier has entered upon is altogether too wide for comprehensive treatment, but he has attained perhaps as much success as was possible in such an effort, and has produced a book into which one may dip with entertainment and profit.

Les Origines de l'Épiscopat. Par Jean Réville. Première partie. Paris: Ernest Leroux. 1895.

When we consider the immense influence exercised on the development of Christendom by the organization of the Church, and the power wielded by its bishops under the claim of "apostolic succession," no student of European institutions will consider that M. Jean Réville has been too lavish of space in his 'Les Origines de l'Épiscopat,' although the first part, just issued in the "Bibliothèque de l'École des Hautes Études," forms a volume of over 500 pages and carries the question only to the time of Ignatius and Polycarp, or to about 115 A. D. The author's name is a sufficient warranty for the abundant learning and sedulous care with which his researches have been conducted, and that his minute examination of all the Christian texts is illuminated by whatever side-lights can be afforded by the institutions of all the races from which the early converts to Christianity were drawn. The keynote to his work is found in the epigrammatic remark (p. 24): "Jésus de Nazareth a fondé une religion, il n'a pas crée d'église nouvelle." The organization of a Church, in fact, was the work of the successors of Christ, and the task to which M. Réville has addressed himself is to trace, amid the scanty and fragmentary materials remaining to us, the various stages through which the little societies of the faithful passed until the foundations were laid of that puissant and majestic body which for so many centuries dominated and moulded the course of civilization.

No unbiassed student of the primitive Church can fail to recognize the independence and self-government of each individual community in all matters of discipline, and how long it was before there arose a sense of the necessity of unity and of an organization in which there should be a subordination of the parts to the whole. A marked feature of primitive times, moreover, was the respect accorded to those who acted, or thought that they acted, under the direct inspiration of the Holy Spirit, and who, without any official position, taught and preached, very much as in the Society of Friends of modern times. This brought its inconveniences when Docetic and Gnostic speculations began, in the Eastern churches, to develop and affect the Paulinian doctrines; and the logical remedy seemed to lie in lodging authority in an *episkopos*, or supervisor, who could watch over his little flock and preserve it from heresy. This process was gradual, even in Asia, and M. Réville points out that Ignatius, the passionate asserter of obedience due to the bishop, knows nothing of any apostolic origin of the office or of any apostolic succession. In the West, which troubled itself but little about theological questions, the strong Roman spirit of ritualism, sacerdotalism, and the organizing faculty led to somewhat similar results. The Christian community of Rome felt the necessity of lodging power in the hands of the leaders of the Church to prevent quarrels and disaffection among the members. Up to the end of the first century at least, this was attributed to a board or commission of *episkopoi*, or supervisors, and there is no contemporary evidence of a single or monarchic Bishop of Rome up to 115. Thus each individual community constituted itself according to its own needs, and the work of unification was slow, extending through the second and third centuries.

This development will form the subject of the second part of M. Réville's work, which we shall await with interest, confident that it will present the same features which distinguish the present volume—of close critical insight, searching investigation, and lucid exposition.

BOOKS OF THE WEEK.

Abbot, W. J. Carter Henry Harrison: A Memoir. Dodd, Mead & Co. $2.50.
Barrett, Frank. John Ford and his Helpmate. Lovell, Coryell & Co. $1.
Besant, Sir Walter. In Deacon's Orders, and Other Stories. Harpers.
Bigelow, Edith. Diplomatic Disenchantments. Harpers.
Biological Lectures delivered at the Marine Biological Laboratory of Wood's Holl in the Summer Session of 1894. Boston: Ginn & Co. $2.65.
Caldwell, W. W. The Tie that Binds; A Story of the North and South. Franklin, O.: Editor Publishing Co.
Gätke, Heinrich. Heligoland as an Ornithological Observatory. Edinburgh: David Douglas.
Hamilton, Gail. Biography of James G. Blaine. Norwich, Conn.: Henry Bill Publishing Co.; New York: Charles Barmore.
Hardy, Thomas. The Mayor of Casterbridge. Harpers.
Hulme, F. E. Natural History Lore and Legend. London: Bernard Quaritch.
Huntington, George. Robber and Hero. Northfield, Minn.: Christian Way Co. $1.
James, Henry. Terminations. Harpers. $1.25.
Knowles, James. The Legends of King Arthur and his Knights. F. Warne & Co. $1.50.
Kölkenbeck, Alfred. Rates of Stamp Duties on Bills of Exchange all over the World. London: Effingham Wilson.
Lie, Jonas. The Commodore's Daughters. Lovell, Coryell & Co. $1.

HAVE JUST PUBLISHED.

Specimens of

PROSE DESCRIPTION.

Chosen and Edited by Dr. Chas. Sears Baldwin, Instructor in Yale College. 16mo, xix+149 pp. Boards, 50c. *net.*

Includes selections of some length from Newman, Gibbon, Jessopp, Du Maurier, Gilbert White, Burroughs, Ruskin, Carlyle, Swinburne, Pater, Henry James, Brander Matthews, Hamlin Garland, Lamb, Landor, and Stevenson. Presents simply and clearly the whole theory of description with apt examples.

Earlier Companion Volumes to the above.

Modern Argumentation. (Baker), 50c. *net.*

Exposition. (Lamont), 50c. *net.*

For Speedy Issue.

Narration. (Brewster.)

Postage 10 per cent. additional.

JOHNS HOPKINS UNIVERSITY,

BALTIMORE.

Announcements of the Graduate, Collegiate, and Medical Courses for the next academic year are now ready and will be sent on application.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by Park & Tilford, New York, and all wine merchants. Send for price list.

LONGMANS, GREEN, & CO.'S

RECENT BOOKS.

St. Andrews and Elsewhere

Glimpses of Some Gone and of Things Left. By A. K. H. Boyd, D.D., LL.D., First Minister of St. Andrews, author of "Recreations of a Country Parson," "Twenty-five Years of St. Andrews," etc. 8vo, $4.00.

Memoirs of the Verney Family During the Commonwealth

1650–1660. Compiled from the Letters, and illustrated by the Portraits at Claydon House. By Margaret M. Verney. With 10 Portraits, etc. Vol. III. 8vo, $6.00.

Sold by all Booksellers. Sent, postpaid, by

LONGMANS, GREEN, & CO.,

15 East 16th Street, New York.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

GERMAN Teachers and Professors should send for a free copy of our new "Modern Language Catalogue," which includes a full line of Grammars, Readers, and Texts for all grades of instruction. D. C. HEATH & CO., Pubs., Boston, N. Y., Chicago.

The Nation.

NEW YORK, THURSDAY, JULY 11, 1895.

The Week.

THE advance in the price of grain and other farm products has not been large enough yet to wean Mr. David Lubin away from his pet project of having the Government give relief to agriculture by paying a bounty on exported grain. He is spending his time addressing such chambers of commerce on the Pacific Coast as he can get access to, and they are behaving quite generously to him. He finds, however, some very ugly questions to answer. When, for instance, he had laid before the San Francisco Chamber of Commerce his weighty argument, the Naval Officer of that port, Col. Irish, told him that all his theory amounted to was, that, to apply the protective system to farmers in this country, he would have our people taxed in order to give cheaper food to the people of Europe; and he wanted to know why, if protection was so unjust when applied to manufacturers, it would be any more just when applied to agriculture. The best reply that Mr. Lubin could make to this was, that, however desirable free trade might be, when it came to a vote our people would vote for protection every time (which the election returns do not bear out), and also that it does not concern us "at what price bread, cheese, and cobble-stones sell in Berlin or Rome." In Portland, Ore., Mr. Lubin was asked to explain where the Government would get the money with which to pay this bounty of his. That, he said, was to him an extremely easy problem. He would have the Government apply all, or a part of, the funds received as "protective revenue" for manufacturers in the payment of the bounty. If Mr. Lubin would only carry his cogitation a little further, he could easily get up a scheme by which protected manufacturers and protected farmers could tax themselves into millionaires in the course of two or three fairly wet summers.

The *Tribune* last week, evidently after a powerful mental effort, produced its tariff platform for 1896, by declaring that "the tariff question will be the controlling one." From this we infer that it anticipates either that the financial question will be finally settled under the present Democratic administration, or that the dodging process which all the would-be Republican leaders of to-day are practising will carry the Republican Presidential candidate outside of the current of financial discussion. But the *Tribune* imposes a big job on next year's tariff revisers. It tells them that the country

"will condemn a man as unfit for power if he is found advocating particular duties merely because they were wise in 1890, for the facts have radically changed. There is to be time for careful inquiry, which ought to go into the details of particular industries. Tremendous revolutions in modes of production have occurred, in part because of the extreme economies enforced by the prostration of 1893, and these teach lessons which no Republican leader can afford to overlook."

There is a whole volume of anti-protection arguments in these few sentences. It is conceded that a tariff bill framed with the utmost wisdom in 1890 becomes unwise five years later because "facts have radically changed," and that "no Republican leader can afford to overlook" the "tremendous revolutions in modes of production which have occurred." What greater economic folly could be imagined than to hand over to a body like Congress, largely made up of "practical" politicians, the framing of a set of regulations under which the business of the country must be conducted—regulations which ever-recurring "tremendous revolutions" in trade will demand shall be constantly amended? The only wonder is that any country, even with the natural vitality of ours, could enjoy any measure of business prosperity so long as its business interests were the plaything of parties and politicians. We only hope that the Republican leaders will accept the *Tribune's* advice, and ask a vote of the country on the question of turning back to McKinleyism.

Light is slowly breaking in upon the *Tribune* also as to the stimulating effect upon trade of the removal of tariff restraints, and it has now got so far as to warn its readers that the consequences of the new tariff are not yet known. This is a great advance over the period when these consequences were dogmatically asserted to involve the necessary ruin of American industry, and hardly any one can object to the proposition as an abstract truth. But its application in the concrete is not free from difficulty. For instance, wool has gone up about two cents a pound for some kinds—which, of course, is contrary to all the *Tribune's* predictions—and now it cannot comprehend how American manufacturers can pay this increased price as well as the higher wages which they have recently promised their hands, and meet foreign competition. They may somehow manage to do it in spite of the theory of protection, but at all events the great industries of the country will be "exposed to dangers against which, for many years under Republican protection, they were entirely free." There is some comfort in this, certainly, and it will be hard to disprove it. But on the specific case of the tin-plate industry the apprehensions of the *Tribune* may not prove to be well founded. It says that the rise in the cost of production has now gone so far that "tin plates can be imported a little more cheaply than they can be made here, and if this state of things continues, the industry with many thousand men is doomed." Happily this despondency of the editorial writer of the *Tribune* can have continued but a night, and joy must have come with the morning when he read in the financial reports of his own journal that the price of tin plate had advanced, and that "the commercial agencies report American tin-plate factories running at the highest pitch to meet the demand."

Now that a general rise in prices is actually taking place, the bimetallists have to abandon their great argument from declining prices, and betake themselves to other expedients. The most available of these is that of stability of prices under bimetallism. In the memorial recently addressed to Sir William Harcourt by the Bimetallic League, they asserted that so long as bimetallism was maintained through the action of France, "the standard of value was comparatively stable," whereas "it cannot be denied that since 1873, in some of the chief requirements which are expected of a standard of value, such, for instance, as stability, the single gold standard has lamentably failed." The London *Economist*, however, not only denies this, but supports its denial by facts and not by mere assertion. It points out that, according to Dr. Soetbeer's tables, the range of prices before 1873, as shown by the index number, was greater than it was after that date. This is corroborated by the tables constructed by the *Economist*. The fluctuation is recorded by Mr. Sauerbeck as for 1850, 77; for 1873, 111; and for 1890, 72. Thus, between 1850 and 1873, when bimetallism is asserted to have been causing stability of prices, there were actually wider fluctuations than in the period after 1873.

Sentiment among the Democrats of Iowa on the silver question has undergone a revolution during the past few weeks. From either advocating free coinage without qualification or maintaining silence on the issue, the editors of party newspapers have come to be almost unanimous in declaring for an adhesion in this year's platform to the financial plank adopted by the national convention in 1892, and for making the campaign on State issues. The Des Moines *Leader* recently asked the editors of the Democratic dailies what policy they thought should be adopted, and with a single exception the replies are against raising the silver issue. Most significant of all is the declaration of the editor of the leading German newspaper of the State, which says:

"Do not allow the party to commit itself to the Populistic theory of free and unlimited coinage of silver, for there are thousands of

honest voters who can never be made to believe that 50 cents is equal to 100 cents, and I am certain not many German-American editors could be found who would undertake the task to teach their friends such a treacherous and deceitful kind of arithmetic."

While a number of the most prominent newspapers in the South have been on the right side throughout the financial controversy, there have been several States where the reverse was the case. It is a fact of great significance that some of these journals are now changing their position. Thus, in Tennessee the Nashville *American*, the old Democratic organ at the State capital, has recently abandoned the cause of free coinage. In Mississippi the Vicksburg *Commercial Herald*, which for years has been simply wild about silver, has recovered its sanity. In Arkansas the Little Rock *Gazette*, which was formerly for free coinage and latterly noncommittal, celebrated the anniversary of national independence by coming out strongly against the policy. Declaring that "the people of the United States want no money but the best," it says that "the farmers of Arkansas who have been laboring so hard for years in search of markets for their fruits and vegetables and other products, and who have just found them, could hardly be expected to sanction a radical change in the currency system of the country that would cheapen the dollars they are now receiving for their varied and valuable crops," and proceeds:

"Agriculturists in other States where interest in the general welfare of the nation has not been wholly abandoned feel the same way, and those who are Democrats will not lose sight of this fact when they instruct their delegates next year how to vote in the national convention of their party on a question to debase the finances of this prosperous republic. The instructions will surely not be in line with those dictated by the mine-owners of Colorado."

While such newspapers as the abovementioned have changed to the right side, not one case has been reported of a change the other way.

Word comes from Kentucky that Senator Blackburn has so far recovered from the shock of the recent State convention as to "bow to the will of the majority." It is to be hoped that he may be left at home to do all his bowing in a private capacity, because there is no knowing what a man in his state of mind may do next. Bowing to the will of the majority in this case means merely that he will vote against the free coinage of silver, but it guarantees nothing as to his general financial policy. He may vote against any and every measure adopted or recommended by the Administration to maintain the gold reserve. It is probably true that he has no ideas on these subjects that are not liable to change on short notice—as short, for example, as that which has caused his present bowing to the will of the majority. The Senate needs men whose ideas are sound all the way through, like Senator Lindsay for example. The State of Kentucky wants a man of whom it can be said that "we always know where to find him." The late Mr. Lamar was such a man. Senator Caffrey of Louisiana, Congressman Patterson of Tennessee, Judge Brawley of South Carolina, Gov. Stone of Mississippi, Congressmen Cobb and ex-Gov. Francis of Missouri are all of this type, and we doubt not that ex-Gov. Buckner and Congressman McCreary of Kentucky belong in the same category. The South has plenty of such men if she only takes pains to find them.

Though prohibition makes no progress, there is in all parts of the country a growing sentiment in favor of such restrictions upon the liquor traffic as public sentiment will enforce. A notable evidence of this tendency is found in the new liquor law passed by the Indiana Legislature, which has just gone into effect. The principle of local option is one of its chief features, the majority of the voters of any ward of a city or election precinct having the power to prevent the establishment of a saloon within its limits by filing a remonstrance, and such remonstrance acts as a bar for two years. Another important feature of the law is the attempt to remove all attractions except liquor itself from the saloon. Neither games, nor music, nor slot machines, nor any other device for attracting patronage will be allowed; chairs and tables and lunch counters are forbidden. All places where intoxicants are sold must be situated upon a street or alley, and neither screens nor any other obstruction to a full view of the interior from the outside will be permitted. The liquor-dealers are going to contest the constitutionality of the law, but unless there are some technical defects not apparent on the surface, it is likely to stand.

The chief State issue in Iowa is the liquor question. The Republicans flattered themselves a year ago that they had got rid of it by the device of passing the so-called "mulct law," under which prohibition was not repealed, but localities were allowed to have saloons when a majority of the voters petitioned for their establishment. But the new law has not satisfied either the Prohibitionists or those who believe in a license system. The establishment of saloons under the protection of the law is a perpetual ground of offence to the extreme element on one side, while the rigorous requirements regarding signatures to petitions offend those who believe in a local-option system and a decision as to license or no license by a popular vote. In some cases only one more than a majority of the voters at the last election need petition to secure saloons, while in others 65 per cent. must sign their names. Then, too, controversies are possible as to the genuineness of signatures, and the saloons at Des Moines have just been closed pending the decision of a court that there were fatal irregularities in the petition. Moreover, the new Legislature must pass upon the question of resubmitting the prohibitory amendment. One feature of last year's compromise was the passage by the Republicans through its first stages of a resolution for that purpose, and now they must make up their minds whether or not to suppress it next winter. On both of these issues the advantage is with the Democrats, but the tide still sets so strongly against the party that nobody expects it to carry the State.

Governor Hastings of Pennsylvania has rendered a public service in following up a "campaign liar." While he was running last year for the office which he now holds, Frank J. O'Connor, a Democratic stump-speaker, accused him of most outrageous fraud, declaring that he was a bankrupt before he went to Johnstown at the time of the flood to take charge of the relief work, but that after his labors he erected a fine new residence and bought $60,000 worth of bonds. The accused candidate brought suit for libel against O'Connor, demanding $50,000 damages, and the case recently came to trial. The Governor's vindication was most complete. Gen. Beaver, who was Governor at the time of the flood, and appointed Hastings manager of the relief work, testified that every dollar of the funds handled had been properly expended and accounted for. The wretched O'Connor had no evidence whatever to present on the other side. Instead, he asked and was granted permission to plead guilty to having uttered a false and libellous charge, and the court allowed him to confess judgment in the sum of $3,000 in favor of the Governor. This verdict against a Democratic campaign liar happily supplements those secured by Van Ingen against Republican organs in this city that falsely accused him of having got a lot of "Cobden Club gold" in 1892 with which to help carry the election for Cleveland. We may now reasonably count upon a more decent standard of campaigning in the next Presidential canvass than was ever before known.

Boss Quay's telegram concerning the conduct of an ex-State Senator who had long followed in the Quay procession, is an apt expression of his sense of what is due to a boss. This State Senator, having decided to support before the next Republican convention certain candidates who are not supported by Quay, wrote a very friendly note to the latter announcing the fact. On receiving it, Quay was so shocked at this exhibition of human depravity that he immediately telegraphed: "This is the coldest-blooded mercenary stab I have encountered in this campaign of assassination." According to Quay's ideas this

man was disloyal. It is rank disloyalty to disobey a superior to whom allegiance is due. Quay considers himself the superior, and all other Pennsylvanians who are not Democrats his vassals. This is not singular. It is one of the commonest errors in our political life that men who find themselves obeyed for a shorter or longer time come to think themselves overlords, and to fancy that they are living in the feudal ages. The singular part of it is that large numbers of their followers think the same thing. Having been put into some office by him, he and they suppose that they are under obligations to serve him the rest of their lives. If they ever had a soul, it has been given to him henceforth to keep and use as he pleases, and he knows just what to do with it every time. "Tell me, oh Q., what thou desirest me to do, and thou knowest that I will cheerfully do it!"—this is their usual prayer; nor has he ever been backward in making his will known. It is against this fearfully demoralizing leadership that the people of Pennsylvania are now rebelling. They are moving for their own freedom, and Quay calls it assassination. The prospect is that it will continue, and that so many persons will be concerned in it that it will eventually take the form of a public lynching.

The Republican legislators of Connecticut are no more eager for honest elections than were Platt's men at Albany. A very good corrupt-practices act was introduced in the Connecticut Legislature early in the session, as was the case in 1893, but, before it could be passed, the politicians went to work at it and cut out the provisions which threatened most harm to their trade. They cut out the limitations which were placed on campaign expenditures, and changed a provision which unseated a successful candidate who was convicted of violating the law, into one which merely fined him. As finally passed, the law compels sworn publication after election, by both candidates and committees, of all moneys received and spent in an election. By including campaign committees with candidates, the law is better than the Hill law in New York, but it is doubtful if it will amount to much in practice beyond giving a certain amount of publicity to expenditures. No machinery is provided for enforcing the law, and it is made nobody's business to see to it that it is enforced. In these respects it is like most of the other nine laws which are now in existence in as many States, none of which causes serious inconvenience to the politicians who get their living out of politics and "handle" the funds for elections.

The greatest credit is due Secretary Morton for the economies which he has effected in the management of the Department of Agriculture. At a period of acute financial and industrial distress, when hundreds of great corporations ceased to pay dividends or interest, and when concerns that remained solvent were obliged to practise the narrowest parsimony, Congress refused to consent to any material reduction in expenditure. Probably the gross income of the country during the last two years has been 15 if not 20 per cent. less in amount than usual, and under such conditions any considerable remission of taxation would have afforded relief and perceptibly increased comfort. But measures that involved reduction of expenses were resisted in the House and suppressed in the Senate. The frightful waste incurred in printing tons of matter that is never read remained unchecked, and the construction of commerce-destroyers went on apace while commerce was declining of itself. In the Department of Agriculture, Secretary Morton pointed out to Congress, great economies might be introduced, and he entreated that body not to compel him to waste the money of the people in utterly unnecessary expenditures. But his appeals fell on deaf ears, as indeed might have been expected when we reflect that Congressmen actually suppose that their constituents elect them for the sake of the packages of seeds they send out from Washington. Secretary Morton, however, seems to have after all succeeded in getting the better of the Congressmen. They wanted to have his department expend $2,500,000, and they thrust an appropriation of that amount upon the Secretary. In spite of this the expenses of the department have been kept down to about $1,800,000, saving nearly $700,000 to the people. Last year Secretary Morton succeeded in saving nearly as much. We doubt if any one could show that the decreased expenditure has caused the loss of a dollar to the country, directly or indirectly, and it must be regarded as so much clear gain. It does not sound like a large sum; but it amounts to the entire annual income of 2,000 poor families.

No better evidence that the public sentiment of the nation is turning against the Jingoists could be furnished than the fact that Ingalls of Kansas, who is again a candidate for the Senate, has come out strongly against their policy. Henry Cabot Lodge has been delivering himself afresh of his favorite ideas in favor of annexing Hawaii and Cuba, and a "vigorous foreign policy." Ingalls, on the other hand, declares that the notion of acquiring dependencies and colonial possessions, "to be governed like conquered provinces," is not consonant with our system; insists that "the Hawaiian episode is one of the most scandalous chapters in American diplomacy," and that "it is to the credit of the common sense of the American people that they have not yielded to this mercenary clamor, and that they perceive the absurdity of maintaining costly establishments upon a group of islands inhabited by an alien race 2,000 miles from our shores"; and in the course of his article says:

> "For these and many other reasons the 'Jingo,' the aggressive, domineering advocate of a swaggering foreign policy, has never been a favorite in American politics. The people instinctively recognize the limitations of a representative popular democracy and cannot be misled."

Of course everybody knows that Ingalls is every whit as great a demagogue as Lodge, and that he would not be restrained from being as blatant a Jingoist by any considerations of statesmanship. The significance of his protest lies in the fact that he has been studying public opinion.

The systems of duties established reciprocally by France and Switzerland have been suspended, and a commercial arrangement just concluded between the two countries which is by comparison much worse than the Wilson measure. Its chief importance lies in the fact that it is the first departure from the principle laid down by France that there should be no duties below those prescribed in the *minimum* tariff. The French were willing to grant the minimum tariff in 1892, but the Swiss insisted upon reductions below this scale, which the protectionists in the French Chamber refused to grant. Since that time the trade between the two countries has rapidly declined. While this was of course satisfactory from the protectionist point of view, it had nevertheless some unpleasant features. One of these was the circumstance that the amount of the duties collected by the French Government upon imports from Switzerland under the high tariff was only about half a million dollars more than would have been produced by the minimum tariff, while the duties collected by the Swiss were more than five times as large. Thus, according to protectionist logic, France was hurt five times as much as Switzerland. What was worse, the high tariff almost extinguished the export of a number of articles from France, the bulk of the exports coming to be of things upon which the duties were low. But, worse than all, the very goods which the Swiss formerly bought of the French they were found to be now buying of the Germans and Italians; and of course the political relations between these countries and Switzerland were thus rendered more cordial, while the estrangement with France was increasing. Even the French protectionists, who are more extreme than any others, appear to have concluded that in this case there was something wrong with the working of the system, and the new commercial arrangement reduces the duties imposed by France upon some thirty articles of Swiss production even below the rates of the minimum tariff. The whole episode is interesting to the advocates of free trade, and seems to call for more explanation on the part of the protectionists than it has hitherto received.

SHORTER PRESIDENTIAL CAMPAIGNS.

THE Liberal Government was defeated in the House of Commons on the night of June 21, two weeks ago last Friday. The resignations of the Ministers were presented to the Queen on Saturday night. Lord Salisbury was summoned to Windsor Castle on Monday, and promptly organized a new government. Parliament remained in session a few days to pass certain necessary bills over which no partisan contest was possible, and was prorogued last Monday. The first elections for members of the new House will take place in the boroughs on Saturday next, July 13, and the other members will be chosen within a fortnight. A month from the time when the Rosebery Ministry was defeated will suffice for the choice of a new House and the settlement of the question whether the Conservatives or the Liberals are to control the government.

Now that the politicians in the United States are already discussing how early in 1896 they can open the next Presidential campaign, and trying to push forward the time for the nominating conventions to May, it is well for Americans to consider the sharp contrast between our system and that which prevails in England. Nobody in England complains that the electoral campaigns in that country are not long enough to fully inform the voters on the issues, and yet they never exceed a few weeks. It is true that the English do not have our system of nominating through party conventions the opposing candidates for the position of chief executive, which would somewhat lengthen the canvass; but even allowing a month for that, the whole process would extend over only about two months.

National conventions were first held in the United States for the Presidential election of 1832. The first party in the field was the Anti-Masons, whose representatives met at Baltimore on the 26th of September, 1831, and named William Wirt for President. The National Republicans, as those were then called who afterwards became known as Whigs, nominated Henry Clay on December 12, 1831, and the Democrats followed on the 21st of May, 1832, endorsing Andrew Jackson for a second term unanimously, and putting up Martin Van Buren for Vice-President. The preliminary canvass for the election of 1836 opened still earlier, Van Buren being nominated as Jackson's successor on the 20th of May, 1835. The "Tippecanoe and Tyler, too," campaign of 1840 was begun by the nomination of Harrison in a convention which met on the 4th of December, 1839. This was the last time that a Presidential candidate was named in the year before the election, and nearly all the subsequent conventions down to the civil war were held in either May or June. Since that time June has been the favorite month, though the Democrats have more than once postponed the choice of a candidate until July, and in 1864 did not meet until the end of August.

Two generations ago there were good reasons for an early opening of a Presidential campaign. The telegraph and the railroad were unknown, newspapers were few in numbers and small in circulation, and the modern appliances for promptly spreading information had hardly begun to be developed. If nominating conventions had not been held as early as the opening of the election year, it would have been difficult to make the scattered voters in the remoter regions fully understand the character of the candidates and the significance of the platforms upon which they stood. But we have changed all that. We live in an age of daily newspapers, of express trains, of electric telegraphs. People keep fully informed of the issues in a Presidential contest as they slowly shape themselves before the nominating conventions meet. The names of the candidates are known throughout the country within a few hours after the convention reaches its decision, and the platform is telegraphed in full to newspapers in even the most distant States. The canvass can therefore open within twenty-four hours after the meeting of the last convention.

Under such circumstances, to talk about holding a national convention in May, as some of the Republican managers are now doing, is the height of absurdity. Not a single argument based upon considerations of the public welfare can be urged in favor of the scheme. On the other hand, there are plenty of strong reasons against it. The people are opposed to such long campaigns. They are only wearied by attempts to stretch the excitements and distractions of a canvass over half a year. The scheme practically nullifies the value of a whole session of Congress. This body will meet early in December, 1895, and if Presidential nominations are to be made in the following May, legislative work will hardly begin before the politics involved in intrigues for the nominations will monopolize attention, and the public business will be neglected. Worst of all, a long campaign promotes corruption by furnishing an excuse for the managers to raise immense campaign funds that are not needed for honest purposes, on the plea of the great expense involved in carrying on a national contest for so many months.

Instead of holding Presidential conventions as early as May, they should be postponed until after the end of summer. Let a date early in September be fixed for the simultaneous choice of delegates in all the States, thus doing away with the schemes to help certain candidates unfairly by calling early conventions in States where they are strong; let the convention meet ten days later; and then let all hands turn in for a vigorous six weeks' campaign, ending with the election early in November. The people, the Government, the public morals would all benefit immensely by such a change.

THE UNSPEAKABLE MILLIONAIRE.

IT appears to be requisite to the complete and symmetrical development of human nature that it should be constantly furnished with some object of horror and reprobation. From the days of Gog and Magog down to the present time, no community has been so backward as to be unprovided with a bogy of some description, and indeed hardly any human being is so poor in spirit as not to be able to "view with alarm" some dangerous tendencies in the conduct of his neighbors. We have had our share of painful apprehensions in this country. There was dread of disunion and sectional strife in the first half of the century—alarm that was only too well founded, but that might have been more justly occasioned by the toleration of slavery. Since the Union was finally reconstituted, if we consider the lot of the other nations of the earth there does not seem to have been very much to worry about. But many minds are disquieted by visions of European aggression, and we spend the interest upon a thousand millions of money in maintaining a navy, in order to calm the nerves of those who cannot sleep for fear that England may get a foothold in Venezuela, or fasten the end of a telegraph wire to Hawaii.

But the most popular bugaboo at present is the outcome of prosperity. After the civil war was over, our people cheerfully set to work to get rich, and succeeded remarkably well. The condition of the poorer sort was greatly improved, and the general standard of living materially raised. But in the acquisition of wealth some succeeded a great deal better than others, and as it is easy to get richer when you are rich, their fortunes soon came to be large, and there came to be a good many of them. This was a consequence of prosperity which had apparently not been foreseen, and to the present generation it has become a positive nightmare. For a time the thunders of popular disapproval were visited upon rich corporations. These metaphysical entities were endowed with all the most dangerous of human passions, unrestrained by any human virtues, and have been most overwhelmingly belabored with every variety of abuse which the ingenuity of journalists and the zeal of demagogues could devise.

There has of late come some inkling into the popular mind that corporations are, after all, only legal fictions, and that what is real about them is their directors and stockholders. And as the wealth of a rich corporation may be owned by a large number of poor stockholders, including even the millions of depositors in our savings-banks, it has not seemed of late quite so popular a thing to denounce corporations indiscriminate-

ly. The alarmists have in fact begun to suspect that they have been "barking up the wrong tree"; and they are now locating the true danger to our civilization in the existence of millionaires. It is they who ignore the rights of labor in their lust for gain; who crush the poor competitor with their gigantic capital and combinations; who invade the halls of legislation and seduce our guileless aldermen and our innocent legislators from the paths of stern integrity.

We confess that we were of late a little startled to find the *Saturday Review* turning against the millionaires. No journal could permanently maintain the pace set by such intellectual athletes as Stephen and Freeman, but we were hardly prepared for such a breach with its past as is involved in an attack upon accumulated wealth. It is commonly believed in England that a certain Mr. Vanderbilt of New York has just built himself a house in that city at the cost of $5,000,000. This, according to a writer in the *Saturday Review*, is a proceeding which the community has an "economic right" to be consulted about. Mr. Vanderbilt did not produce this sum that he has assumed to expend. Probably it would have existed even if he had never come into existence. If he had employed this money productively, it would have been all right; but his action involved "what may be called the petrifying of wealth—the fixing of it in an immovable shape." This is "to arrest the circular flow of wealth into labor, and labor into wealth again." Mr. Vanderbilt "has taken an extreme portion of wealth created by himself and society, and imbedded it in a form from which it is unlikely that anything like a corresponding use can be got." This is to be condemned.

Now as to the condemnation by private or public opinion of the conduct of this generic Mr. Vanderbilt in building this hypothetical mansion, we shall not concern ourselves. We may add that the economic reasoning above quoted is entirely sound. It simply illustrates the distinction between productive and unproductive consumption, familiar to every reader of Smith and Mill and Fawcett. Does it follow from this that the possession of property to the amount of a million dollars shall be prohibited or discouraged by law? Or can the Legislature devise statutes that shall prevent millionaires from spending their money unproductively? Shall they be forbidden to buy paintings to an amount in excess of, say, fifty thousand dollars, to pay more than five thousand dollars for a statue, or to have their books bound in anything but cloth? And if we can choke out the millionaire, will not all the same evils exist if we tolerate the possessors of a half-million, while the aggregate wealth of the community will be diminished?

The truth is, that dalliance with this notion that millionaires are a social curse and ought to be abated by law leads straight to communism. To the vast majority of the community the disparity between their condition and that of the man with ten thousand dollars seems as great as the disparity seems to the latter between his fortune and that of the millionaire. Outside of the towns, a man with a fortune of a hundred thousand dollars has far more influence and power in his community than a millionaire has in the city of New York. His unproductive expenditure is just as trying to his neighbors' peace of mind as that of Mr. Vanderbilt to the *Saturday Review;* and if we are to have any legislation on the subject, we may be quite sure that the people will not be satisfied unless it strikes well down to the ten-thousand-dollar limit. A late Chief Justice of Massachusetts was once approached by an inquisitive carpenter who lived near him, with the suggestion that it might cost him nearly $1,500 a year to maintain his family. The reply of the Chief Justice that he should be glad if he could get along on twice that sum, nearly paralyzed his humble neighbor, who could only gasp: "Why, Judge, that's wicked!" Such is the natural attitude of men towards any expenditure much in excess of their own. They feel that there must be something wrong in the constitution of society that permits such extravagance; but woe to the community that begins to legislate at the dictation of envy. That passion can never be gratified until every distinction or advantage gained by ability or virtue or even good fortune is done away with, and equality is attained by bringing all down to the level of the lowest.

REPRESENTATIVE GOVERNMENT IN INDIA.

The task of ruling her great Asiatic dependency, as every one knows, was not deliberately undertaken by Great Britain. The possessions originally acquired by a trading company became, in the course of time, too great to be governed by any power that was not sovereign, and when the responsibility had once been assumed it could not be laid down. It is common to hear the English rule denounced as illustrating "the lust of conquest," and to speak of it as forced upon the inhabitants of India without their consent. But no sober writer can deny that where England has for generations maintained unbroken peace, there would have been without her control incessant and internecine war, or that the lust of conquest would have been indulged to the last expense of Oriental ferocity. Under her rule millions of men and women have lived tranquilly and in comparative freedom who would have been slaughtered or enslaved had she withdrawn from India, and the country has gradually acquired many of the conveniences and comforts of modern civilization. If such government can be called oppressive, it must yet be admitted that any government that would have sprung up had the English not maintained their dominion, would have been far more so. The management of this great trust has been largely in the hands of Englishmen of the highest order of ability, and there are few communities in Europe that might not be glad to be relieved of their present rulers, if their legislation and general jurisprudence could be planned and moulded by Macaulay and Maine and Stephen.

Yet it has been felt as a reproach by many enlightened Englishmen that so many millions of their fellow-creatures should be held in such complete, even if beneficent, subjection. The steady extension of the suffrage in Great Britain has made the inconsistency of denying representative government in India more conspicuous, and of recent years the English Radicals have demanded some modification of this policy. At the same time the progress of education in India and the admission of natives to administrative positions under the Government, have created something in the nature of a public sentiment among the Hindus, and this sentiment has manifested itself in a demand that some voice in the government should be conceded to the subjects. The difficulties in the way of such a concession, it is easy to see, have been enormous, and complete self-government is, and will be for an indefinite time, out of the question. Nevertheless, some steps have been taken in this direction, and although the details are too technical to be here presented, the scheme may be stated in outline.

It is scarcely necessary to say that there is nothing "logical" about the plan adopted. It is not the English way to lay down a system of principles and endeavor to construct a body of institutions in harmony with them. The plan followed has been to make use of representative bodies already in existence, such as the municipalities and district boards, and to allow them to select such persons as they think will best represent their constituencies in the provincial Legislature. Thus, in the province of Bengal, with its seventy millions of inhabitants, the choice of the seven representatives whom it was decided to allow it to send to the legislative council was arranged as follows. The recognized divisions of Bengal are, and always have been, Calcutta and the country outside of Calcutta. As the correspondent of the London *Times* explains:

"Calcutta is not merely the seat of the provincial and imperial governments in Bengal, its one huge emporium of trade and steam manufactures, and the outlet for its products; it is also the single university city of the province, the metropolis of its accumulated wealth, and the focus of the intellectual and political forces that are now at work among the educated classes. The Bengal plan of an electorate recognizes this fact, and assigns three of the seven representatives in its Legislature to the interests centred in the capital. The corporation of Calcutta elects one member, the Calcutta University a second, the Bengal Chamber of Commerce in Calcutta a third. The four other members are elected by

the municipalities and district boards throughout the province."

But in order to distribute the representation with some regard to population and local area, a different district is taken at each election as the area to be represented. The result is, that the municipalities of each division of Bengal respectively send, once in eight years, a representative who sits for two years in the legislative council of the province. A similar method is applied to the rural divisions. The district boards, which somewhat resemble the county councils of England, are formed into eight groups. Two groups send a member every two years, and thus once in eight years each group sends a member who sits for two years. In this way the disturbance of a biennial election throughout the whole province is avoided, and the apprehended machinations of the Calcutta politicians are frustrated. The general result is, that an election occurs in every group once in four years; a member being chosen from the municipalities every eighth year, and one from the rural districts also every eighth year.

The method by which these electoral units select their representatives is that of the electoral college. Every municipality, or every district board, as the case may be, appoints one or more electoral delegates, according to its importance. These delegates are assembled at some convenient local centre by summons from the Government, and choose a representative by majority vote. It is true that elections so made have, strictly speaking, only the effect of nominations. The Lieutenant-Governor of the province has the power of appointment; but as a matter of course he appoints those who have been elected. It should be added that a large proportion of the legislative council is still made up of members directly appointed by the Lieutenant-Governor.

It is of course idle to forecast the future of this significant experiment. The consequences may be of the most far-reaching kind, or they may prove to be entirely nugatory. But so far the results have been unexpectedly gratifying. It had been feared that the representatives from Bengal might not be of high character, but as a matter of fact exactly those men were chosen who had long been recognized as the heads of the great interests of the province. Two Hindu nobles were chosen, two Hindu barristers, and a Hindu journalist. The others were a titled Mussulman and a British merchant. The Hindu representatives are with one exception Brahmans, representing every phase of Hinduism, from one "who spends a little fortune every morning in feeding Brahmans," to another "who educates his sons at Rugby and at Oxford, and divides his year between his house in Calcutta and that in Surrey." We see no reason why many of the advantages of representative government may not be obtained through this system of election. Democracy of course impossible in such a society as that of India, and the scheme of representation adopted seems calculated to secure the advantages of aristocratical government without its dangers.

ALASKA REVISITED.—II.

METLAKATLA.

JUNE, 1895.

ALL interested in missions to the Indians know of Mr. Duncan's famous settlement at Metlakatla, B. C., and how it was broken up by the senseless bigotry of those who "give tithes of anise and cummin," yet neglect the weightier matters of the law. Mr. Wellcombe's book containing the painful details was reviewed some years ago in the *Nation*. The strife was ended by the community abandoning their home and all their non-portable possessions and migrating in a body to Annette Island, Alaska, where, under their faithful leader, a new Metlakatla was established on the shores of the harbor of Port Chester. This island, an uninhabited wilderness up to the time of Duncan's settlement, now possesses the prettiest, most progressive, and successful native settlement on the whole Pacific Coast. Here first was electric lighting introduced into Alaska, the power being supplied by a mountain stream, which also runs a saw-mill and supplies the town with pure water. Neat cottages are ranged in orderly fashion, with good plank sidewalks and broad streets (from which, it is true, the stumps are not yet eliminated), school and church, the beginnings of a still larger place of worship, warehouses, workshops, an excellent pier of timber, and several neat sailing-vessels at anchor in the bay—all the property of the community. It is, as may be supposed, a sober, hard-working, self-respecting, and religious community, and, for greater security before the law, has been incorporated as an industrial association.

Mr. Duncan explained his system briefly to a party which called on him while the steamer discharged its freight. First, in his opinion, it was important to obtain a thorough knowledge of the native language, so as to be able to talk freely to the people and to convey to them new ideas on morals and religion without filtering them through the debased medium of the Chinook jargon so commonly used on this coast; then, having interested them in such matters, and convinced them that their material welfare must necessarily march with progress in spiritual matters, cleanliness, and the acquirement of knowledge, to remove them bodily from contact with the vices of the trading-post and frontier town. Isolation he considered imperative for the beginner in the new way, but the second generation, brought up away from contamination, he thought largely able to resist temptation and stand alone. This view is corroborated by the fact that many of the younger people go to mining camps, and even to Puget Sound, where their industrial training renders them useful, and come unscathed out of the trial. I had the pleasure of talking with one of them at Seattle, where he was employed as a sort of clerk on the steamer dock, and found him a bright, sensible fellow, talking English as well as any one about him, and apparently fully as well able to hold his own in any respectable community as any other young man of his age and training.

The original Metlakatlans were Chimsian Indians, but at Port Chester they have been joined by many other Alaskan Indians who have a desire to share in the prosperity of their new neighbors. Of a newcomer it is required that he absolutely renounce liquor of any sort, and agree to conform to the regulations by which the community governs itself, and to remain in the community until such time as he may be regarded as able to withstand temptation. He may go away at any time, if dissatisfied, but if he desires to stay, he must conform to the rules. He must take his part in the common village work, and live on friendly terms with those about him. Among other industries recently introduced by Mr. Duncan is that of curing and smoking halibut, which are very fine and abundant in the neighborhood. Our steamer took away a first shipment of some forty large cases of this delicacy.

The village is picturesquely situated on a good harbor, and is surrounded by a considerable area of level land, mostly forested, but, when cleared, showing a deep, rich black loam well suited for vegetables; several gardens were already tilled. In the background rise steep round-topped mountains, from which the water-supply is obtained. In 1891 Congress reserved the whole of this island for the use and occupancy of the Metlakatla Indians and such others as may hereafter join themselves to them for mutual improvement, subject to regulations by the Interior Department. Recently some traces of mineral veins have been discovered by prospectors on the east side of the island, and application has been made to the Department of the Interior for permission to conduct mining operations. Meanwhile it is stated that a party has landed without permission and proposes to hold a claim forcibly, on the ground that the language of the act does not specifically exclude miners, and that its intent was only to convey a tenancy external to the mineral rights. The latter assertion is, of course, erroneous, as every one interested knows that the intent was to secure isolation for the Indians, and keep out exactly those things which accompany mining camps. The Interior Department will doubtless refuse its permission; but, if there be any ambiguity in the law, or any doubt as to the duty of the authorities to exclude all intruders, all friends of the Indian should unite at the next session of Congress to have the defect cured. Otherwise the old sad story will be repeated, and the most hopeful experiment ever made with our Northwestern Indians is doomed to failure. I have reason to believe that the policy of the Interior Department in regard to the Indians of this region is all that the friends of justice could wish, but this policy should be backed up by public opinion.

It may be thought that disproportionate attention is here paid to a single mission when other praiseworthy and analogous establishments are to be found in Alaska. But all those familiar with the coast are aware that Mr. Duncan's work is unique, not only in its methods, but in its success. It is the only mission establishment on the coast which compels appreciation and praise from both friendly and unfriendly critics of missions. Every other sailor-man, miner, or fisherman one meets will have a growl about missions and missionaries in general, but I have never met one who did not, on further questioning, make a more or less willing exception in favor of the Metlakatla mission. That the churches have not accepted Mr. Duncan's methods is partly explained by the fact that the latter are really non-sectarian, though thoroughly Christian, on the side of religion; and that on their business side they require an unusual amount of good judgment and capacity for affairs, as

well as a knowledge of business methods very rare among missionaries. I inquired of Mr. Duncan whether he thought the community sufficiently well advanced to hold its own in case he were suddenly taken from the work. He replied that he thought it could. I may add that rumors are frequently started, and even printed, to the effect that Mr. Duncan is about to leave his work, to retire with a fortune, etc.; but these may be ascribed to those to whom such action would be welcome, and who seek to weaken the public support the mission has heretofore received. It may be safely asserted that his place is with the people he has rescued from ignorance and sin, and that he does not dream of leaving them. In the willing service of the older men and the bright and intelligent faces of the young people, one may trace the affection he has inspired and the reward of his persistent labor. It seems almost incredible that the descendants in the third generation from untamed savagery should have developed into the intelligent manly and womanly young people we saw about us. That the agency instrumental in bringing about this change should be wrecked by public indifference and private greed would be a national disgrace. W. H. D.

THE LIBERAL OVERTHROW.

London, June 28, 1895.

The Liberals have been defeated, and a general election is imminent. To estimate the situation regarding Ireland, we must take a broad view of political events. In Irish affairs, the past and the present are near to each other. Half a century ago, in 1845, Ireland was acknowledged by liberal-minded politicians to require reform as to the Established Church, the Land, Local Government, and the Municipal Franchise. Disestablishment was not carried for twenty-four years, and then mainly in consequence of the attention drawn to Irish affairs by the Fenian conspiracy. No important land reform was effected until thirteen years later, after an agitation that shook Irish society to its foundations and led to extensive alterations in Parliamentary practice and procedure. The peculiar position of Ireland has been additionally emphasized since 1859, when in Great Britain the volunteers sprang to arms. It was then, and it has ever since been, considered unsafe to trust Irishmen in like manner with arms for the defence of their country. The year 1885 found Ireland behind the sister country in many respects, and in all those main reforms held desirable forty years previously which disturbance had not forced on British attention. Another and a more important reform, the concession to Ireland of national self-government, had all along been demanded by the Irish people. This was, in 1885, admitted to be just and necessary by Mr. Gladstone and the Liberal party. Both British parties had come to declare their willingness to place Ireland in a position of equality with Great Britain in local affairs and internal administration. In 1886 the Conservatives succeeded to power. After a severe recrudescence of discontent in Ireland, they granted additional land reform, at the same time imposing upon Ireland the most drastic coercion act of the century, an act subjecting her to the almost arbitrary rule of whatever Lord Lieutenant might be in office, and which, moreover, was to be of perpetual application. No attempt was made at the reforms generally acknowledged to be required in Ireland. By the same Government, County Councils were instituted in Great Britain. Rent reductions in England to a greater extent than in Ireland were brought about voluntarily without suffering or legal process, by the force of public opinion, and through the good will English landlords bore their tenants. In 1892 Mr. Gladstone and the Liberals returned to power, pledged to remedy every Irish grievance and terminate the strife of centuries. The party of progress have loyally done their best. They have carried large and wide-reaching measures for Great Britain. For Ireland they carried a Home Rule bill in the House of Commons, and instituted valuable commissions of inquiry into the administration of the Irish Land acts and the financial relations of Great Britain and Ireland, but they have *accomplished* nothing regarding home rule or great reforms considered necessary in 1845; they have not been able even to repeal the Coercion Act. As in Byron's time, "The castle still stands, though the Senate's no more."

Ireland, after all her hopes and strivings, has gained nothing. Great Britain could not have obtained what she has obtained without the help of the Irish members. Ten years ago Great Britain appeared overflowing with sympathy and enthusiasm for Ireland. Yet she saw almost without a murmur the Home Rule bill contemptuously thrown out by the Lords. Why has she become so apathetic? The Irish representatives, disappointed in their own hopes, have not shirked their duties at Westminster, where their attendance is far more difficult and onerous than that of British members. The *Daily News*, the acknowledged organ of the Liberal party, in commenting on Sir William Harcourt's valedictory speech, writes as follows: "His acknowledgment of the assistance he had derived from his political supporters would have been incomplete indeed if it had not included the Irish Nationalists, whose splendid fidelity to the Liberal cause in England and Scotland has never been surpassed throughout the history of political alliances." They have done in Ireland what the Liberals could not do in Great Britain—held their seats against all comers. Mr. Parnell, after having conferred on Ireland greater benefits than any other statesman within the century, proved himself to most Irishmen unreliable, and blasted his own reputation as his English enemies had failed of doing. At the election of 1892, the Irish people, through their representatives, by 72 to 9, declared against him. No people, even in the greatest crises of its history, has been homogeneous. The English and Scotch were divided in their allegiance between the Stuarts and the Hanoverians. Lincoln, in the throes of the war of the rebellion, was not elected unopposed. Irish differences are accentuated by the fact that in Ireland political majorities have no more power than minorities. In boards, councils, and corporations in Ireland where the majority has power to enforce decisions, business proceeds as smoothly as in other countries. Any tendency in the Liberals to retrocession regarding home rule on side pleas, such as Irish opposition to voting funds for a Cromwell statue, would have looked like repudiating obligations after having gained material advantages through Irish assistance.

The present supineness in Great Britain regarding Irish home rule can be accounted for only by the quiescence of Ireland and the steady opposition of Irish Protestants to the measure. Ten years ago, when British sympathy was at its height, Ireland was in a condition of semi-rebellion, with hundreds of excellent men, including the Lord Mayor of Dublin, M. P., and other mayors and members of Parliament in prison and treated as common malefactors, under summary processes of law unknown in Great Britain. Ireland is now quieter than ever before within the century. John Bull, while particularly sensitive to disturbances and suffering under his eyes, is singularly unable to enter into the feelings of others regarding grievances not apparent to him. On the other hand, British platforms are now thronged with Protestant delegations from Ireland, declaring that the concession of home rule would entail upon them at the hands of the Catholic majority disabilities and outrages like those inflicted on the Armenians by the Turks. Constituencies are flooded with men and women from Ulster whispering into the ears of their fellow-Protestants prognostications which there is no opportunity of openly combating. Were England Catholic, would she be more influenced by a Protestant majority or a Catholic minority in Ireland? This is, in truth, the *crux* of the Irish difficulty—Irish Protestants hold a position of domination over the Catholic majority; this position they cling to with desperate tenacity; they have a steady influence over British public opinion, which is broken through by the Catholic majority only in seasons of unrest and turmoil. Irish feeling abroad, on which Ireland formerly so unfailingly counted, besides having been discouraged by divisions in a once united party at home, is not, since the enactment of effectual land reform, maintained to the same extent as before by a constant accession of exiles burning with a sense of ill treatment from their landlords. Having been freed from an alien church establishment, and having obtained a measure of land reform, Ireland would now be incapable of another Fenian organization. Ireland, decade by decade, through depopulation, is weaker to wrest reform from the sister island. Since 1844 her population has decreased from 8,200,000 (44 per cent. that of Great Britain) to 4,700,000 (14 per cent. that of Great Britain).

The chances of home rule, which, ten years ago, appeared assured, are now uncertain. While the Liberals have never failed in ultimately making law any great measure which they had once carried to a second reading, no other such measure ever met such opposition as the Home Rule bill, and the feelings of the masses in Great Britain prove not to be deeply engaged in it. On the other hand, Ireland remains the only distinct English-speaking community in the world that has not practically the management of her own internal affairs. A central Parliament cannot legislate intelligently for the minute concerns of four different peoples numbering 40,000,000 as well as for a foreign empire of some 300,000,000 subjects. Ireland is, however, with the exception of the Province of Quebec, the only English-speaking country in which the race and religion that dominate in all other English-speaking portions of the empire are in a minority; in which settlers from England retaining their historical traditions and their religion, have failed to impose their own creed upon and completely subject the native race. And in no other such country were greater cruelties resorted to or more strenuous efforts made to secure these ends. The home-rule idea carries with it the traditions not of the dominant but of the conquered and unassimilated people (whose capacity to resist is, however, no doubt largely due to the fact of their mixed race partaking of the steady qualities of their oppressors). In view of all these considerations, and of the determined opposition of Irish Protestantism adde

to Irish bickerings and divisions, it requires some clearness and steadiness of political vision to perceive that home rule is the only means of obtaining union for common interests and harmonious coöperation in Ireland and between Ireland and Great Britain—of eliminating bitter memories, and raising Irishmen generally to responsible, self-respecting citizenship. The Salisbury-Ulster view of Irish affairs is based on the assumption that Irishmen are essentially and necessarily different from and inferior to others, that eternal unrest and enmity between Irishmen in Ireland and between the two islands is inevitable. The home-rule view is that this unrest and enmity will disappear when those principles of government are restored to Ireland which once worked well there and which succeed in other countries.

The immediate future cannot be forecast. The home-rule party is divided and apparently short of funds. The Unionist party in Ireland was never more spirited and compact, and is amply supplied with the sinews of war. The present influence of the Catholic Church, as a church, in both Great Britain and Ireland, seems to be against change. Agitation on purely home-rule grounds before home rule was amalgamated with the land question, was but scantily supported in Ireland. The Unionists profess themselves ready to settle the land question. National ideas are usually best supported in large civic centres. Ireland has few such. A permanent alliance between British Non-Conformists and Irish Catholics can hardly be expected. Irish voters will show wonderful perspicacity if the failure of the Liberal party to carry Irish measures does not increase the followers of Mr. Redmond, who has steadily maintained that, in adhering to the Liberals after the defeat of home rule, Irish members were following only a will-o'-the-wisp. The majority of the Irish members, in continuing to support the Liberal policy, showed their wisdom and foresight, but their action was peculiarly open to misconception and misrepresentation. Mr. Morley has manifested more real sympathy and greater capacity than any other Irish Chief Secretary. But he has not succeeded in settling the education difficulty or in governing entirely without packed juries, force at evictions, suppression of public meetings, or recourse to a statute of Edward III., obsolete in Great Britain. Trenchant Liberal criticism of Conservative arbitrariness in Ireland will be difficult. Whatever occurs, Irishmen will hardly consent permanently to lag behind their British fellow-subjects in government and administration. Once radical changes are attempted in the present centralized Castle system, it will be found almost impossible to proceed on other than home-rule lines, and without in some way enlisting on the side of law and order the abilities and the national sentiments of Irishmen. National feeling animated Irish Protestants when they depended not upon external force, but on the good-will of their fellow-countrymen. In most Irish Protestants, under present circumstances, such feeling appears dead. Is it not rather in abeyance? Would it not again assert itself under former conditions? D. B.

ITALIAN AFFAIRS.

ROME, June 18, 1895.

NOTHING could be more curiously indicative of the demoralization which political passion has produced in Italian affairs than the letter of "J. W. M." in the *Nation* of June 6, and the writer's evident blindness to the conclusion which must be drawn as to the hopeless degradation of Italian politics. "J. W. M." seems to have lost sight of the fact that political liberty in Italy runs to the extreme of an almost ungovernable license, and that moderate public opinion has been for a long time calling for a tightening of the bonds which secure society against anarchy. Under the administration of Signor Giolitti the social revolution had been allowed to plot and plan undisturbed until all the capacities of his Government were insufficient to control it, and all parties except the revolutionary had united in the call for Crispi as the only man in the country capable of restoring order.

Leaving out all differences of opinion as to the qualities of persons, and the larger questions of form of government, the misstatement of facts in the letter referred to is such as to call for rectification. The question of taxation by royal decree is an old and obscure one, but past governments have resorted to it for temporary purposes, and the decision of the Court of Cassation, which corresponds (as nearly as the system permits) to our Supreme Court, has decided that it is legal. It is a question of the imposition under pressing emergency of a tax which has to pass the ordeal of subsequent approval by the Parliament, and, in case of refusal to approve it, the amount of the tax collected has to be refunded. In this case the Parliament had approved the budget as a whole, and had adjourned before all the items of the provision had been voted, though they had been accepted by implication. Only those taxes were applied which had been so included in the approved scheme, and all the subsequent propositions of the Minister of the Treasury were suspended until passed by the Parliament. On the reconvocation of Parliament it became evident that the Radicals were determined to prevent the Chamber from doing any business as long as Crispi remained in the Government, and the sittings were a continuation of scandals and violence such as I have never seen in that most disorderly of all assemblies, so that day after day was passed without a single item of business being transacted. On the last day the violence was such that the Deputies actually came to blows in the lobbies, and the next day there was a largely expressed determination to go to the Chamber armed, and, by the testimony of well-informed witnesses, there was danger of actual fighting. The Chamber was prorogued to prevent violence.

This measure had been prepared for several days before on account of the general condition of the atmosphere of the Chamber, but the subsequent acute state of storm developed by the Giolitti *plico*, now seen to be the concoction of the most disgraceful conspiracy this land of conspirators has ever hatched, made it impossible to go on. The meeting in the Sala Rossa was a convocation of all the leaders of the Opposition and their flocks, to the number of about 150, to devise measures for compelling Crispi to resign and meet the charges contained in the Giolitti *plico*; and in that meeting it was determined to carry on that agitation in the Chamber. The Senate, meanwhile, had examined the *plico*, and pronounced it unworthy of attention, and it was clear to everybody that the use sought to be made of it in the Chamber was simply factious. Under these circumstances the Government declined to reconvoke the Parliament until signs of a better disposition should appear. But that Chamber was hostile to Crispi—had been elected under Giolitti, and by an amount of illegal pressure never known before in the history of Italian Parliaments, except in the case of some by-elections under Nicotera; and the general feeling of the country having long before demanded its dissolution, this would have been decreed but for the troubled state of the country following the insurrectionary movements in Sicily and Lunigiana, and the impossibility of holding elections in the provinces where martial law existed.

The Ministry finally decided to dissolve, but, as the Parliament during its sane moments had passed a law to purge the electoral registers of all the illegal inscriptions (which in some districts were nearly half the entire registration), it was considered indispensable to await the result of this operation. The insinuation that this was a pretext is without a shadow of justification, for delay told against the Government more than in its favor, and Crispi repeatedly and continually urged the prefects to hurry the operations. But these were not carried on by the prefects, but by the communal and provincial councils, with final revision by the Court of Cassation, so that the Ministry is absolutely precluded from exercising any influence on the register. Those local authorities are very slow, and it was only possible, with all the urging of the Ministry, to get the registration completed and revised in time to hold the elections in the month of April, as intended, and they were even very irregularly made on the 26th of May, many of the functionaries created for the purpose of supervising them being still ignorant of their duties. The "half a million" voters struck off the list were there illegally, and were struck off by the operation of the law and without the slightest intervention of the Ministry. The delay had nothing to do with the action against Giolitti, and was injurious only to the Ministry, especially to Crispi, as delay in convoking the new Parliament endangered his getting a vote on supply before the end of the financial year, which would have doubled all his embarrassments and made the collection of the taxes impossible. Throughout the whole affair Crispi acted in the strict observance of the law as interpreted by the courts, though he did what he had a right to do, taking the full advantage of the law. Even the heads of the Opposition admitted that he kept to the letter, though they accused him of violating the spirit of the law. The Court of Cassation, by the way, did not decide that Giolitti could only be tried by the Senate, but that the Chamber of Deputies must decide how he should be tried—by the ordinary tribunals or by the Senate.

The accusations regarding the disclosures regarding Crispi are equally unjust; all that was shown was, that one of the provincial journals had been subsidized by the prefect of the province to the amount of $100 a month, whether for such services as he had a right to pay for or not. Nor is there any evidence of money being spent to prevent the election of Imbriani, and, as I happen to know, Crispi would be very sorry to see him excluded from the Chamber. In the recent elections the universal order to the prefects was to indicate to the electors which were the candidates whose election was favored by the Government, as is the invariable system in a country where there is no party organization and the only difference is that one party opposes and the other supports the Ministry; but the severest orders were given to do nothing to interfere with the freedom of the election, and I hear from the most authoritative and impartial prefect of my personal acquaintance that there has never been in his recollection an election in which

that freedom was so complete. There have been cases in which the prefect used more than the legitimate influence in favor of one or the other candidate, but not in all cases for the official candidate.

The graver question of "numerous unhappy prisoners arrested illegally and sent to Port Ercole" must be answered in a severer manner. The law of "domicilio coatto," or confinement in limits, of people who are reasonably accused of belonging to illegal organizations or criminal attempts, is very old, and has been applied by all governments since 1860, and by Nicotera was made the instrument of punishing political opponents. The only ameliorations to it are those made by Crispi, in 1889, and in the last Parliament. By the last amendment the Department of Public Security is absolutely deprived of the power of arbitrary imprisonment, and the persons arrested under it are judged by a commission of the various judicial and executive authorities without a jury. The first condemnation passes to an appeal to a provincial commission, and this to revision by the Minister of the Interior —in this case, Crispi. The only part Crispi has had in these condemnations has been the annulling of all those which he had any doubts about, and this he has very largely exercised. No prisoner has been condemned illegally, and if they have been maltreated in the prisons, it has been by the brutality of the jailers, who have been in the cases known removed. But to some people any political offender, even in the regimen of the completest political liberty, is an innocent victim of tyranny.

The case of Signor Marescalchi was simply this: Marescalchi was an employee of the Ministry, whose special function was that of representing the police in the examination. He was, in fact, a sort of public accuser, and his business was to prosecute; the commission as a whole judging and condemning or acquitting, as the case might be. Marescalchi volunteered the defence *en bloc* of the accused before the commission to which he was delegated without waiting for the evidence. For this he was reproved by his direct superior. He replied by an impertinent letter and the publication of the official correspondence in one of the Radical papers, which is a criminal offence. As it was impossible for him to remain in the same office with this superior whom he had insulted, the head of the department, Commendatore Sensales, transferred him to another and not remote district. He refused to go where he was sent, and resigned in another insolent letter, on which Crispi refused to accept his resignation, and dismissed him from the service, not for anything he had done on the commission, but for insubordination. No "perfectly innocent man because a Socialist" has been imprisoned, but for the advocating of the violent propaganda, as it is called, of the social republic, a number have been. Nor has any man been imprisoned for his opinions, but, when imprisoned, it has been for the method of propagating them.

Crispi has not "posed" his candidature in twenty or even six colleges, but, as he was attacked in person, and especially by the Opposition and the scandal-mongers, he was, with his approval, proposed in several colleges, especially Palermo and Tricarico, his old constituencies, Naples and Rome as great centres of public opinion; and he was put up without consulting him in five others by his friends, and voted for in two or three others incidentally and as the expression of enthusiastic admirers outside of any movement. The only one of his colleagues in the Ministry who was nominated in more than one college was Boselli. The governmental organization for the elections was so very incomplete that in many colleges there was no Government candidate put up till two or three days before the election, and in others there was none. In closing, let me remark that the "programme of the Piedmontese opposition" was repudiated by the Piedmontese people, who sent most of them about their business, and sent a strong ministerial delegation to the Chamber of Deputies. W.

Correspondence.

ANTHROPOLOGY AT THE UNIVERSITY OF OXFORD.

To the Editor of The Nation:

Sir: Anthropology has become one of the acknowledged branches of university studies in America. It is many years since Sir Daniel Wilson introduced the study of it in the University of Toronto. The University of Pennsylvania has long had an anthropological department in charge of Prof. Daniel G. Brinton. At the time of the foundation of Clark University in Worcester the department of Anthropology was established as one of the subdivisions of the department of Psychology. At Harvard, anthropological instruction has been given for a long time by Prof. F. W. Putnam, and a separate department was founded in 1892. At the same time an anthropological department was introduced at the University of Chicago as one of the subdivisions of the department of Political Science. During the last two years the University of California has established an anthropological department, and Columbia College of New York has included courses of lectures on this subject in its curriculum. In all these universities the science of Anthropology is taught successfully. To these institutions may be added numerous universities of Europe in which Anthropology is taught: first of all Paris, with its École d'Anthropologie; then Rome, Munich, Leipzig, Berlin—to mention the most important schools only.

Notwithstanding these facts, the University of Oxford in Convocation declined the proposed establishment of an anthropological department, on the alleged ground that this science is not capable of being taught! As a matter of fact, Anthropology as a branch of university education was recognized at Oxford in 1883 by the appointment of the eminent scholar Dr. E. B. Tylor, as a University Reader. In 1883 the University accepted the gift of the Pitt-Rivers collection, and in 1892 appointed a curator. A large collection of material adapted for the teaching of Physical Anthropology was formed by the late Prof. Rolleston, which has been added to since, and is now available for this branch of study. In 1885 Anthropology was admitted as an additional subject in the Final Honour School of Natural Science. This recognition was, however, rather formal than real, as the scope of the subject is too wide for it to be taken as an extra subject. During this time a considerable number of students have attended lectures and profited by the museum collections. The annual expense involved in this mode of instruction amounts approximately to $6,000.

These facts make the attitude of Convocation still more curious. We should expect that the practical bearings of Anthropology, if nothing else, would appeal to the members of the University. The great importance of the study to officers of the colonial service would seem evident. It is their duty to deal with people whose customs and beliefs form the subject-matter of anthropological instruction. Upon their proper treatment depends the welfare of colonists and of aborigines. The University is so blind to these facts that the lack of practical bearings of the study was brought forward as one of the reasons against the establishment of the department. In Holland and in Germany, on the other hand, officers of the colonial service are expected to attend anthropological courses before entering upon their duties.

As a matter of fact, the opposition to the measure was founded on the deep-seated theological aversion to the scientific study of man. A great many curates were brought in to vote against it, and I am assured that by this means the vote of 68 against 60 by which the proposition was lost, was secured. Thus England is still without an adequate representation of Anthropology in its universities, and Oxford has missed the chance to be the first to take this step, which must be taken, sooner or later, if English universities desire to keep in the ranks with the advance of science. To us the theological opposition is a reminder of bygone times when the results of the study of the manners, customs, and beliefs of man were ill understood. The aims of Anthropology are better appreciated in America, and many are the theologians whose contributions to the advance of this science we should be loath to miss.

Franz Boas.

London, June 20, 1895.

Notes.

Brentano's has begun a series of translations from the French, under the title of "Modern Life Library," and the editorial supervision of M. Henri Pène du Bois. "Gyp's" 'Mariage du Chiffon' will figure as 'A Gallic Girl.'

The John L. Boland Book Co., St. Louis, have in press 'Electricity and Magnetism,' a mathematical treatise by Prof. Francis E. Nipher.

Dr. Henry C. McCook will once more invest with a literary interest his natural-history researches, this time among spiders and other insects, in 'Old Farm Fairies: A Summer Campaign in Brownieland against King Cobweaver's Pixies,' which will be published next week by George W. Jacobs & Co., Philadelphia.

The New York Shakspere Society will begin during the present summer a printing of the Five-Text Hamlet, folio, *de luxe*, Bankside style.

The Putnams, as the American agents of the English publishers, H. Grevel & Co., have brought out a new (fourth) edition of Maspero's 'Egyptian Archæology,' which is designated as a manual for the use of students and travellers. The original work and the translation by the late Amelia B. Edwards have been before the public about eight years, and full recognition has been accorded to their merits as to accuracy, fulness, and attractiveness. It were impossible to find a more competent writer or a more sympathetic translator. The present edition has all the admirable features of the earlier, and some others in addition, viz., ten new illustrations, showing recent discoveries such as those of Petrie and Naville, or setting forth the text more fully; some very

welcome alterations from the outlandish spelling of proper names taken from Murray's Handbook; explanatory titles to all illustrations; minute page captions, and an index covering twenty-two double-columned pages. Besides, the author has revised the text, and has made changes in the views expressed where it was necessary in order to bring them into accord with recently discovered facts. The pages are of equal contents, but they have narrower margins, and their total number has been increased by thirty. Naturally the use of the cuts in four editions has not improved them, and in the present instance some of the fine lines have been broken down. For the use of travellers a thinner paper might have been employed to advantage.

Dr. J. R. Cooke's 'Hypnotism' (Boston: *Arena* Publishing Company) is a fairly good exposition of this form of nervous disturbance. For suitable cases hypnotism is a reasonable remedial agent; in unintelligent hands it is objectionable, if not dangerous.

Dr. W. R. Dawson of Dublin has rendered pathologists good service by translating Dr. Anton Weichselbaum's 'Elements of Pathological Histology' (Longmans). The obscurity and prolixity of style that so often encompass German science are absent. The book is clear and concise, and the English is excellent. It has been prepared with special reference to practical methods, and it gives the help of eight plates and many illustrations.

The republication in two volumes of 'The Federalist, and Other Constitutional Papers,' edited by E. H. Scott, deserves little notice from the scholar, though the preface announces that the work is specially intended for that class. The text of 'The Federalist' is that of the Philadelphia edition of 1818, which seems an unnecessary reversion, after Mr. Dawson's labors had made the true text so easily obtainable, and the editor assigns the authorship of each number according to that edition, though his preface shows that he is well aware that it is inaccurate. The second volume is a reprint of a part of the material contained in Paul L. Ford's 'Pamphlets on the Constitution' and 'Essays on the Constitution,' with not much care for typographical accuracy, and the whole work will hardly supersede the editions of 'The Federalist' as edited by Dawson or Lodge, nor Mr. Ford's volumes, though its greater cheapness may tempt the undiscriminating.

The June number of the *Portfolio* is devoted to Antoine Watteau, and the text is by Claude Phillips. There is nothing specially novel in it, either as to biographical fact or criticism, but it gives in a handy form the little that is known about this "greatest of little masters," as Mr. Phillips felicitously calls him, and a fair appreciation of the quality of his art. There is more freshness in the illustrations, and the photogravure of the Berlin version of the "Embarquement pour Cythère," which will be new to most readers, is especially welcome. One is only inclined to regret that the Louvre picture, though so well known, was not also reproduced, if only in outline, for immediate comparison with the more elaborate if less spontaneous production. Welcome, also, is the half-tone plate after the lovely "Amour Paisible" of the royal collection at Potsdam—a picture permeated in an unusual degree with the Giorgionesque charm which lifts Watteau's best work so far above the level of his century.

Mr. Abbey's much-talked-of series of decorative paintings for the Boston Public Library —"The Quest of the Holy Grail"—are reproduced in half-tone on a liberal scale and published in a thin oblong volume by R. H. Russell & Son with explanatory text. Mr. Abbey's talent as an illustrator has not deserted him in this work in a more ambitious field, and his designs are admirably suited to black-and-white reproduction. In this form they will be seen and admired by many who will never see the originals, and their fulness of incident, richness of detail, and wealth of characterization are likely to give them a far wider popularity than would fall to the lot of paintings more closely adhering to the purely decorative tradition. We do not know who is responsible for the text, but the first sentence of it is somewhat startling. "The British race," it begins, "to which we primarily belong, the leading nation of the great Celtic family"; and reference is made later to the "racial pride" which renders the Arthurian legend specially suited to "the decoration of a great library built by a people of British race." There are undoubtedly a great many Celts in Boston, and we are aware that in the modern view the Britons were by no means so absolutely supplanted in Britain as used to be thought the case; but we were still under the impression that the English, and by consequence the New Englanders, are primarily Angles and of Teutonic stock.

Mme. Jeanne Rival's 'Annexés' (Paris: Armand Colin & Cie.) will have little interest for readers other than patriotic Frenchmen. To these the story of major and minor persecutions to which Alsatians are subjected by their German conquerors will no doubt appeal strongly. To others, however, the very commonplace subject, the commonplace treatment of it, the dull, fatiguing style, and the total failure to excite interest in either the admirable French or the execrable Germans, will suffice as an excuse to put down the book for good and all before many pages have been read.

Capt. Émile Simond's 'Le Capitaine de La Tour d'Auvergne' (Paris: Perrin & Cie.) is a well-meant effort to clear away from the historical figure of the "first Grenadier of the Republic" the mist of legendary tales which threatens to obscure its real traits. The book is not well written and is fatiguing to read; the clearing away is done effectively, but no very distinct impression of the man remains. This is a pity, for the life and deeds of La Tour d'Auvergne-Corret easily furnish material for a brighter and more interesting volume even with strictest adherence to veracity. Such as it is, however, this biography repays perusal, and will be referred to for information.

The *Geographical Journal* for June contains an account by Mr. A. P. Low of extensive explorations made in the interior of Labrador during 1893-'94. A great part of the region traversed was barren, apparently from the frequent forest fires. In the southwest the larches were all dead or dying from the ravages of the imported European larch gad-fly. A possible source of wealth is the fish, principally trout, land-locked salmon, whitefish, and carp, which swarm in the rivers and lakes. Prof. Chamberlain concludes his paper on the Luchu Islands with a description of the language, which, he says, is related to the Japanese much as Italian to the French. There are also accounts of an expedition to the Taita Highlands in East Africa and of Mr. Borradaile's explorations in northern Mongolia. Referring to the principal industry of the inhabitants of this region, the caravan trade, principally in tea, between Russia and China, he remarks that this will entirely cease on the completion of the Siberian Railway. A curious incident in the journey was the seeing the sacred Buddhistic formula, "Om mani padme Hom," written in white stones on the turf of a hillside. An interesting sketch of a recent whaling voyage in the Antarctic Ocean is given by a Mr. Borchgrevink, who shipped as a seaman in order to make scientific observations.

The American merchants who send rum to Africa will welcome a defender of this traffic in Sir Gilbert Carter, the Governor of Lagos. In two letters to the London *Times* he practically denies the familiar and well-founded charge that the admission of spirituous liquors under the present system of low duties is increasing native drunkenness to an appalling extent and is shutting out all other European goods and manufactures. He claims that the reports of the missionaries in regard to the native demoralization are exaggerated, that the gin itself is "not a poisonous, unwholesome compound, as some aver, but a safe and palatable stimulant, if properly diluted," and that the money obtained from the duty on spirit is necessary for carrying on the government. He also shows that the value of the gin and rum imported into Lagos in 1893 was only £93,508, "while the value of other imports amounted to £749,027," and that a similar proportion existed in the colonies of the Gold Coast and Sierra Leone. In entire conformity to these views is his novel and cynical assertion that the best remedy for the gin disease lies, not in the prohibition of its importation, but "in the encouragement of the Mohammedan religion," which commends—but does not enforce—temperance to its votaries. We have much satisfaction in believing with the *Times* that Sir Gilbert stands nearly alone among African administrators in upholding a traffic which is the twin curse, with slavery, that a Christian world has forced upon the Dark Continent.

Among the jewels found by M. de Morgan in his excavations in the pyramids of Dahshûr, an account of which he has recently published in *Le Monde Moderne*, are three pectorals. Upon them are figures of men and birds and the cartouches of three monarchs of the XIIth Dynasty (from 2466 B.C.). The signs of the latter are made of "cornelian, lapis-lazuli, and turquoise, set in gold; the other figures are likewise set with precious stones." The workmanship is said to be admirable both in its delicacy and in the perfection with which the precious stones are set. They are far superior in every respect to the similar jewelry of the Rameses period a thousand years later. It is certainly one of the strange facts in the history of the human race that, "in the case of the Egyptians, the further we look back, the higher we find their culture."

The most noteworthy fact in the forty-third annual report of the Boston Public Library is that "the growth and circulation of the Central Library" in the year 1894 "have been greater than in any preceding year in the history of the institution." The additions include some collections of rare value, as, the President John Adams Constitutional library, numbering 3,368 volumes, the gift of Charles Francis Adams; the A. A. Brown musical library, 6,686 volumes, of which Mr. W. F. Apthorp gives a characteristically interesting description; and the remarkable collection of historical manuscripts and autographs contained in 154 volumes, the gift of Judge Mellen Chamberlain. The removal into the new quarters permits the placing of some 40,000 volumes, a perfect reference library, where the public can freely use them, a bold experiment, which there can be little doubt will be entirely successful. The report of the examining commit-

tee closes with an enthusiastic, though rather grandiloquently expressed, eulogium on the new building.

The recent purchase of the library of the late Prof. Rudolf Hildebrand of Leipzig by the Stanford University, California, has added one of the most valuable collections of Germany to the constantly growing book treasures of our country. Prof. Hildebrand was one of the greatest of contemporary linguists, the foremost of the continuators of Grimm's 'Wörterbuch,' and his library, of course, contains his extensive working material, comprising the entire field of lexicography—the latter consisting of 333 rare numbers—and of German literature from the earliest times to the present day. His collections in the domain of the literature on Goethe and on the Volkslied were so famous that only for lack of special funds the German Government and the Goethe-Schiller Archives of Weimar were prevented from acquiring them. Nearly all of the 10,000 volumes contain extensive and most instructive notes in Hildebrand's own hand—a feature which greatly increases the value of the library for the students of German literature and philology.

—Our readers were promptly apprised of the inception of the new quarterly *American Historical Review* in April last, as one of the latest fruits of coöperation among our universities. It will be remembered that at the conference held in this city on the above date, an editorial board for the first year was chosen, consisting of Profs. George B. Adams of Yale, Albert Bushnell Hart of Harvard, Harry P. Judson of Chicago, John Bach McMaster of Pennsylvania, William M. Sloane of Princeton, and H. Morse Stephens of Cornell. This board has appointed Prof. J. Franklin Jameson of Brown managing editor; arrangements for publication have been made with Macmillan & Co., and the first number will be issued on October 1. The Association of Guarantors appears to be sufficiently large to justify a beginning, but it will doubtless bear extension; and any one may join it by pledging $5 a year for three years (the annual subscription price of the quarterly is $3), and as much more for the term mentioned as may be affordable. Two hundred pages will be devoted to leading or body articles, embodying "the latest and most important results of historical science"; inedited documents of value, especially relating to American history; reviews, signed and unsigned; and historical notes and news. The *Review* will not deal with "discussions of present conditions or problems in political, social, or economic life, except as a part of studies tending to show historically how things came to be as they are." Prof. Sloane will write the introductory article for the first number, which will contain also articles on Count Edward de Crillon, by Henry Adams; the Loyalists of the American Revolution, by Prof. Moses Coit Tyler of Cornell; and State-Making in the West, 1772–1789, by Prof. Frederick J. Turner of the University of Wisconsin. Among documents, there will be letters of Col. Wm. Byrd of Westover, Va., on slavery and indented servants, interesting letters of John Marshall, Theodore Foster, and George Rogers Clark, and a contemporary diary concerning the battle of Lake Erie. On this enterprise, as on a need of long standing, all cultivated Americans must look with friendly eyes and large expectations. It only remains to add that the managing editor's address is No. 196 Bowen Street, Providence, R. I., and that the secretary and treasurer is Prof. A. B. Hart, No. 15 Appian Way, Cambridge, Mass.

—Although there is no dearth in this month's *Atlantic* of valuable matter of serious import, even the serious reader will be likely to pause and muse over the clever piece of fiction, or fictitious excerpt from real life, which occupies a central place among its contents. The hero of "A Philosopher with an Eye for Beauty" has for recording angel a philosophic student of human nature with an eye for its weak points, and a dangerous habit of stopping to moralize in mid-career of his narrative. The danger of the habit happens, however, in this particular case to be fully neutralized by a fortunate conjunction of style and humor, which, added to the philosophy of life and a turn for epigram, place the story upon the footing of the literature that will bear rereading. To poetry of a similar rank belongs Mr. Van Dyke's happily inspired "Song of the Veery." The simplicity, easy flow, and spontaneous sentiment of these verses can hardly fail to secure them a place in the slim anthology which the fastidious reader culls for himself from among contemporary verse-makers, while it is even possible to imagine them translated, without desecration to the latter, to a modest place among the classic lyrics of the English songsters. Also well built on lines of argument adapted to further the end in view is the paper, by Henry J. Fletcher, on "A National Transportation Department." Need for such a department of government in the threefold interest of shareholders, employees, and "the general body of the people who use the railways and waterways in trade and travel," is urged as manifest from recent and current experience, and the functions of its proposed judicial and executive officers, in expounding and enforcing an intelligent code of laws, are outlined in contradistinction to the "anomalous dual character" of the present commission. Mr. Fletcher's definition of crime in an employee involves the far-reaching principle that "the public has a right to require the man who has once assumed a duty to proceed with it until he can lay it down without direct and necessary injury to the public."

—By no means so distinguished as this contemporary in its mass, the current *Century* has for noticeable feature one of the papers of distinction which, let editors covet them as they will, opportunity makes rare. Personal reminiscences of Robert Louis Stevenson, as youth and youthful unknown author, have in them of necessity the making of delightful reading. Mr. Gosse's paper has all the air and charm of its having been to him a labor of love to give an impression of "the most inspiriting, the most fascinating human being that I have known," and the gracious, inconsequent "Louis" of his pages fully makes good the large promise of this opening sentence. Mrs. Burton has managed to make out a fair though conventional and artificial case for her "American Rural Festivals"; a truer rustic ring is, however, to be found in Arthur Lawrence's "Bryant and the Berkshire Hills." A translation of a Japanese life of Gen. Grant, with Japanese illustrations, is curious, and Mrs. King's and Mrs. Van Rensselaer's stories are each in its way a good one. Brander Matthews treats with pleasant dilettanteism of "Books in Paper Covers," the interesting illustrations of which will no doubt pasture the eyes of an increasing class of amateurs.

—The waxing general interest in this last and its related topic of artistic posters is further attested by the most conspicuous article of the month in *Scribner's*, where M. H. Spielmann specializes his branch of the subject by limiting it to "Posters and Poster-Designing in England." Failing an exhibition of pictorial posters, such as Paris and London have already seen (the latter in the Aquarium last autumn), the curious in this country may apparently rely on the magazines to give them a telescopic view of the international achievements of art in the service of commerce. So far as concerns the work of the newer Englishmen in this department—Anning Bell, Wilson Steer, and Beardsley—and of the older ones—Frederic Walker, Crane, and Herkomer—a better résumé than this could hardly be asked; it is merely an instance of the usual contradictory tendencies in the affairs of men that while the eye is more and more outraged by the disfiguring inroads of advertisements, artists are multiplying their endeavors to prove that "real beauty" may be spread broadcast in the artistic poster. "Life at the Athletic Clubs," by Duncan Edwards, belongs to the better class of "writing up" of popular themes. Otherwise, apart from Mrs. Humphry Ward's finding of a verdict in the case of Bessie Costrell, delivered at the hand which might have been expected to avert its extremity, the level of *Scribner's* is flat.

—In *Harper's* the intrusive vulgarity of rural advertising is, for the nonce, turned to a good account as the motive of a short story by Margaret Sutton Briscoe (Mrs. Hopkins), in which the commonly overlooked value of mother-wit, if merely as material for brightening fiction, is shown to lively advantage. Attention will be centred, however, upon Poultney Bigelow's brilliantly executed study in German history. Mr. Bigelow has contrived a happy method of showing the social condition of the court and people of Prussia, on the eve of the battle of Jena, by means of vivid sketches of individuals, including one of the ever-attractive Königin Luise. He presents a wholesome corrective to the Napoleon-worship of the hour by showing how a field may be won as much by the supine folly of the vanquished as by the skill of the victor; and there will be few who will read his thoughtfully planned account of Jena without gaining a clearer mind in regard to some of the ups and downs of warfare in general. Assent will be sure to follow upon Owen Wister's conclusion to his paper, "Where Charity Begins," that "you must reach the vagrant at the dawn of his day, before he has walked the streets too long, before they have taught him too much." But his pretty bit of feminine logic, "I would not go a month without this self-indulgence" of putting a hand in pocket for the passing beggar, is capitally illustrative of the wavering mind of the charity of the day, which is bent upon doing away with the youthful vagrant by all means except the effectual one of stamping out his propagator.

—M. Frantz Funck-Brentano seems in a fair way to win for himself a name as a legend-killer. He has already grappled with the mystery of the Man in the Iron Mask, and he has lately attacked the long-prevalent belief in the sale of blank lettres de cachet under the old régime. This legend has had the support of many historians. It passed unquestioned into the works of Michelet, Rambaud, Duruy, and into the 'Encyclopædia Britannica.' M. Rambaud, perhaps, gives the story best and most concisely. He says, in his 'Histoire de la Civilisation Française,' that any person of in-

fluence could obtain "lettres de cachet in which the name was kept blank, and could write in the name of his personal enemy, his rival, his creditor. Under Louis XV. they could be had for money. La Vrillière, when he was minister, made a business of selling them through the Countess de Langeac; they came to be sold by his lackeys. It cost only twenty-five louis to have any one arrested." Duruy tells a piquant story of a husband and wife, each of whom solicited a letter of which the other was to be the beneficiary. Both succeeded, and both were disagreeably surprised at the result, for both were shut up on the same day. M. Funck-Brentano himself had no doubt of the correctness of the story at the time when he was put in charge of the archives of the Bastile. These archives contain not only the dossiers of the prisoners of the Bastile itself, but also those of all who were confined under lettres de cachet in other prisons and hospitals or convents of Paris and its environs. Within the last ten years sixty thousand of these dossiers have passed under his eyes. In all the innumerable quantity of letters from persons of every rank and station which these contain—applications for orders of arrest, appeals for liberation, petitions of friends, reports of officials from ministers down to police spies—in all this mass of documents M. Funck-Brentano finds not only no trace of any lettre de cachet issued in blank, but not even a hint that any such letter ever was asked for.

—It cannot be objected to his conclusion that these secret documents may have been taken away from the Bastile and destroyed, for it has been demonstrated that the old régime left such untouched. The Bastile was precisely the safest and surest place in the kingdom, and confidential letters and secret documents were sent there for safe-keeping. But M. Funck-Brentano has something better than merely negative evidence to rely on. He has a letter which the lieutenant of police Hérault addressed on February 21, 1731, to the Duchess de Lorges, explaining the long series of regular formalities which had to be gone through before a lettre de cachet could issue. And of more weight yet—of conclusive weight, in fact—is a letter written on the 20th of August, 1770, by the Duc de La Vrillière himself to M. de Blossac, in which he says, in reference to a man who had threatened the King's life: "You will send me a report at once, in order that upon this I may transmit to you orders (*lettres de cachet*) for his transference to the Bastile; but it is not possible to send these to you in blank. That would be against all rule, and against the usage I have constantly observed since I have been in the ministry." But how did the legend of blank lettres de cachet arise? M. Funck-Brentano has a very simple answer to the question. Up to the last years of the reign of Louis XV., until the royal Government became administrative, lettres de cachet were wholly written by hand. The administration then for the first time had some forms printed, and in these, of course, blanks had to be left for names and dates, as well as for the signature of the King. From these blanks, no doubt, the legend sprang.

—The last report (1895) of the London School of Medicine for Women exhibits in detail the high standing and work of its students. These British medical women, year in and year out, have taken the highest position in the examinations of the University of London, the College of Physicians and Surgeons (Edinburgh), and the Society of Apothecaries (London); and although the examinations of the University of London are among the most severe in Great Britain, on different occasions women have appeared at the head of its medical honors list. A steadily increasing number of the school's graduates are being appointed to responsible official positions in Great Britain and the colonies—such as medical officer to the General Post-office (London), examiner for the Government life-assurance fund, Queen's lecturer on physiology to the National Association of Nurses, lecturer to the Technical Instruction Board London County Council, assistant medical officer St. Stephen's Hospital, Delhi; resident physician Kama Hospital, Bombay; lady principal female department Ceylon Medical College, and resident physician Lady Aitchison's Hospital for Women, Lahore. Last, but not least, we may mention by name the acting house surgeon at the Kama Hospital, Bombay, Rukhmabai. This high-caste young Indian woman, after successfully resisting, through the English courts, an attempt to coerce her into fulfilling a marriage contract made for her during infancy, came to England to study medicine; she passed satisfactorily all her examinations, and took the triple qualifications of the Scotch colleges and the M.D. degree of Brussels. To many Americans, accustomed to M.D. degrees dispensed by the thousand from scores of so-called medical colleges—regular, homœopathic, and eclectic—the list of 161 "registered medical women" which the London School of Medicine for Women claims as its contribution to the noble army of modern scientists may seem trifling. Their mere existence and honorable status, however, measure an astonishing growth in public opinion since the autocratic Society of Apothecaries, in 1865, put its bar sinister on medical women. It is matter for regret that the arrangements under negotiation last year for affiliation of the School with the University of St. Andrews have not yet become effective.

THE TRAGEDY OF FOTHERINGAY.

The Tragedy of Fotheringay, founded on the Journal of D. Bourgoing, Physician to Mary, Queen of Scots, and on unpublished MS. documents. By the Hon. Mrs. Maxwell Scott of Abbotsford. With portraits, illustrations, and facsimiles. London: A. & C. Black; New York: Macmillan. 1895. Pp. xiii, 272.

CONTEMPORARY descriptions of historic scenes, however artless, have always an interest beyond the work of the greatest literary artists, even such literary artists as Macaulay and Froude; just as the rudest contemporary sketches have an interest beyond the work of the greatest historical painters. The new contemporary materials used by Mrs. Maxwell Scott in this volume are drawn chiefly from the journal of Dominique Bourgoing, the last physician of Mary, Queen of Scots, published by M. Chantelauze in 1876, recounting the events of the last seven months of Mary's life, including her trial, of which Bourgoing was a witness. Mrs. Maxwell Scott has also two contemporary drawings in a rough style, one of the trial, another of the execution, from the Calthorpe collection, with annotations in the handwriting of Beale, the clerk of Elizabeth's Council, who took down the warrant for the execution. She has made up a volume interesting, as well as attractive to the eye, and her partiality for Mary, though strong, is too frank and undisguised to be misleading.

It is impossible to believe that Mary's last speeches are given to us by Bourgoing exactly as she uttered them. Evidently they have been dressed by the reporter. Yet in substance his accounts agree with those given in the Letters of Sir Amyas Paulet and by other authorities. Once we probably catch him tripping. Mary having, after the trial, asked Paulet some question about the different commissioners, in whose faces she thought she had read varieties of feeling, Bourgoing makes Paulet reply: "Those who accused you and those who kept silence were all actuated by the same sentiment. Not one of them was favorable to your cause." Paulet would hardly have described the judges to Mary as partial and unanimously adverse to the accused. What he did say, as appears from his letter to Walsingham, was that "he prayed her to conceive favorably of the whole assembly, and to think that those which spoke and the rest which were silent were of one consent and mind to hear her cause with all indifference."

The controversy about the character of Mary, Queen of Scots, will probably be settled only by the Last Trumpet. On any hypothesis, great allowance must be made for the influences to which, in the wicked and corrupt Court of Catherine de Médicis, and afterwards among the savage, plotting, and turbulent nobility of Scotland, her young heart was exposed. Her death scene, at all events, here fully described, is in the highest degree magnificent and touching. Her bearing on the scaffold, and from the moment of her condemnation to death, superbly combines royal dignity with Christian resignation and meekness. The death scene of Socrates is not superior in its way. It is not easy to understand how the woman could have gone through it as she did if there had been anything heavy weighing upon her conscience — though what would weigh very heavily on a conscience formed under Catherine de Médicis and the Guises it is difficult to say. Perhaps the murder of Darnley, supposing Mary to have been an accomplice, as we can hardly help doing, need not have weighed on her conscience as the murder of a husband, seeing that he had broken into her chamber with a gang of murderers, stabbed her favorite attendant almost in her arms, and, to justify the outrage, whispered foul slanders against her honor. With Froude, Mary's behavior on the scaffold, like her conduct throughout life, is but the last exhibition of the wiles of the consummate actress and "enchantress." The nerve which could sustain such acting on the scaffold would be almost as admirable as genuine virtue. But Froude is also an enchanter in his way. Mary, when she bent her head to the axe, appeared entirely clothed in red. "Thus," says Froude, "she stood on the black scaffold, with the black figures all around her, blood-red from head to foot. Her reasons," he proceeds, "for adopting so extraordinary a costume must be left to conjecture; it is only certain that it must have been carefully studied, and that the pictorial effect must have been appalling." The fact is that she came on the scaffold in black; but when she was disrobed for execution, her red or crimson petticoat and bodice ("blood-red" Froude chooses to call them) were, probably on her part unexpectedly, at least without any premeditated effect, exposed to view. When her head was cut off, Froude tells us, "the coif fell off and the false plaits; the labored delusion vanished. The lady who had knelt before the block was in the maturity of grace and loveliness; the executioner, when he raised the head, as usual, to show it to the crowd, exposed the grizzled features of a

withered old woman." This is the literary artist's version of the simple contemporary statement that Mary's "dressing of lawn, falling off from her head, it appeared as gray as one of three-score and ten years old and polled very short, her face in a moment being so much altered from the form she had when she was alive as few could remember her by her dead face." Any face, probably, would be altered by decapitation. But decapitation could not suddenly produce "wrinkles." Froude revels in the falling off of the false hair and the revelation of the gray locks beneath. But surely a woman in those days, at all events, might wear false hair without being a Duessa; and Mary's head, as we see, was covered by a coif. Her own hair might well be gray.

The courts of justice at that time for the trials of state prisoners were, as Hallam says, little better than the caverns of murderers. The trial of Mary, Queen of Scots, was conducted, as under the direction of Burghley and Walsingham it was sure to be, with strict regard to decorum, and without any such insults to the prisoner as disgraced the trial of Raleigh. But it was not fair. The witnesses Nau and Curle were not confronted with the accused, though she earnestly called for their production. She was not allowed access to the papers on which the case against her was founded. She was not provided with counsel, while the Attorney-General, the Solicitor-General, and the Queen's sergeant appeared against her for the Crown. Alone in the frowning conclave of forty commissioners, she had to face the interrogatories and plead her own cause. In fact, the verdict had been settled, as usual in state trials, by the Privy Council, and the trial at Fotheringay was a legal pageant. History, therefore, must enter a verdict of Not Proven. Mary solemnly protested to the Earl of Kent and his associates, with her hand on the New Testament, that she had "never either desired the death of the Queen or endeavored to bring it about or that of any other person." Such a protest is compatible with the hypothesis that she was guilty of participation in Babington's conspiracy as a plot for her own release from prison, and perhaps as a plot for a rising in her favor, but innocent of it as a plot for the murder of Elizabeth. Participation in a plot for her own release alone would be hardly criminal. That a trap was not laid for her by Walsingham we feel less sure than Froude.

On the other hand, if the ex-Queen of Scots had committed a crime, especially if she had plotted the assassination of Elizabeth, there was no real force in her passionate claim to the inviolability of a sovereign. She had resigned her crown, very reluctantly, no doubt; but not involuntarily in such a sense as to invalidate the resignation. At any rate she had lost it *de facto*. When she sought an asylum in England, she submitted herself to English law. Was she to be at liberty to cut the throat of the English Queen with sovereign impunity? Nor had she any ground for asserting, as she constantly did, that she died a martyr to the Catholic religion. It was not for her religion that she was, or was ever in danger of being, put to death. She was put to death for political conspiracy and as a person dangerous to the State.

What to do with her when once she had been admitted to asylum was a puzzle which, further perplexed as it was by the shifting moods and fancies of Elizabeth, it might well be too much even for such heads as those of Burghley and Walsingham to solve. One thing, however, there was which ought clearly to have been done, and which Elizabeth's Council and her Parliament alike desired: the succession to the crown ought to have been settled by act of Parliament on Mary's son, to the exclusion of his mother; to allow Mary, with Guises pulling her wires, to reign over a Protestant nation being out of the question. Mary's position would then have been unmistakably defined, and she might have been warned at once that if she plotted against the succession, she would be guilty of treason. But to the nomination of a successor the Queen of England was insuperably opposed. She could not bear that while she lived any one should be able to call himself her heir. She preferred to leave the kingdom to the perils of disputed succession, into which, but for the prompt action of the Privy Council, it might have fallen. The execution of Mary, which, it was supposed, would put an end to the danger connected with her, not only made a Catholic saint and martyr, but killed a hostage, and was immediately followed by the sailing of the Armada.

The habit of "the great Queen," whenever anything questionable had to be done, was to shift the responsibility on others. On this occasion Elizabeth outdid herself. She displayed extreme reluctance to sign the death-warrant. At last, Secretary Davison having laid it before her, coaxingly mixed with other papers, she signed it, and with a jest which showed that her feeling of reluctance was not very deep. Then she, through her Secretaries of State, instigated Mary's keepers, Paulet and Drury, to relieve her of the responsibility by putting their prisoner privately to death. Paulet, being, though harsh and somewhat rude, a man of honor, returned, in his own name and in that of his colleague, an emphatic refusal, for which Elizabeth abused him as "a dainty and precise fellow," adding that she had Wingfield, who would not flinch. Paulet, therefore, when he assured Mary that she had no reason to fear assassination, though he told the literal truth, was holding something back. The Council having acted on the warrant by putting Mary to death, Elizabeth flew into a frenzied passion, vowed that the warrant had been used without her consent or knowledge, and actually went through the perfidious farce of disgracing Secretary Davison, throwing him into prison, and condemning him to a heavy fine. The ministers must have been patriots indeed who, for the sake of the country, could have continued to serve such a mistress. Sir Amyas Paulet, after a brief gust of the Queen's displeasure, was restored to favor and made Chancellor of the Garter. He was the keeper of a secret which gave him a strong claim to favorable consideration. Elizabeth by her trickery only let the world know that she had acted against her sense of right in signing the warrant for her kinswoman's execution. In the interest of royalty, indeed, she might well have hesitated, for with the planks of Mary's scaffold was built the scaffold of Charles.

The frontispiece of this volume is a full-length portrait of Mary, Queen of Scots. As it represents her at the moment of execution, it can hardly be authentic if it was taken in this world. There is probably no authentic portrait of her. About a dozen pretended portraits were once exhibited together in London, but they bore no resemblance to one another, and none of them had a good pedigree. The Oxford one had nothing to connect it with Mary at all, beyond having had a fancy portrait of her of late date painted over it. What was this Circe like? The following is given us in the appendix to this volume as from a manuscript endorsed *Executio Reginæ Scotorum*, and apparently from the Tanner manuscripts in the Bodleian Library at Oxford, though it is not so headed:

"First, she was of stature high, big made and somewhat round-shouldered, her face broad and fatt, double chinned and hazel eyed: her borrowed hair aborne [auburn], having on her head a dressing of lawn edged with bone lace, a pomander chain, an Agnus Dei about her neck, a crucifix in her hand, & a pair of Beads at her girdle with a golden Cross at the end of them, a veil of lawn fastened to her caul bowed out with wire and edged round about with bone lace, a gown of black satin printed with a train, and long sleeves to the ground set with acorn buttons of jet trimmed with pearl, and short sleeves of satin black cut with a pair of sleeves of purple velvet whole, under them a whole Kyrtle of figured satin black, her petticoat upper body's unlaced in the back of crimson satin and her petticoat skirts of crimson velvet, her shoes Spanish leather with the rough side outward, a pair of green silk garters, her nether stocks of worsted coloured watchette clocked with silver and edged on the tops with silver, and next her legs a pair of Jersey hose white."

Mary was buried with royal state in Peterborough Cathedral, but afterwards removed by her son, then King of England, to Westminster and laid among the tombs of the Kings. Of Fotheringay, a great and strong castle at the time of the tragedy, there remains nothing but a green mound, an isolated mass of masonry, and a few thistles. Mary was a dethroned Queen, the connection and correspondent of Catherine de Médicis and the Guises; therefore Catholic Europe thrilled with emotion at her death, and great historians have vied with each other in their descriptions of the tragic scene. There were at that time a good many other tragedies with which the names of Catherine de Médicis and the Guises are linked, and of which the victims, though they suffered not less than the Queen of Scots, nor in a worse cause, not having been royal, sleep in forgotten graves.

RECENT NOVELS.

The Gods, Some Mortals, and Lord Wickenham. By John Oliver Hobbes. D. Appleton & Co.

Eve's Ransom. By George Gissing. D. Appleton & Co.

Tales of Mean Streets. By Arthur Morrison. Boston: Roberts Brothers.

Bog-Myrtle and Peat. By S. R. Crockett. D. Appleton & Co.

A Man without a Memory, and Other Stories. By William Henry Sheldon. Charles Scribner's Sons.

The Marriage of Esther. By Guy Boothby. D. Appleton & Co.

The Impregnable City. By Max Pemberton. Dodd, Mead & Co.

THE gods, if there yet be righteousness in heaven, might well resent the close association forced upon them with some of the mortals whose iniquities and weaknesses are discussed in the latest and longest book by John Oliver Hobbes. Lord Wickenham could afford to forgive the implication of intimacy in the title in consideration of the small and stately part assigned to him and of the judicious obituary, including a moral of wide application, which he is permitted to pronounce upon his friend, Dr. Simon Warre. After some generalization on noble ideals and the imperative necessity of living up to them which is imposed by

the misfortune of once having cherished them, "we," says Wickenham, "should do nothing —we should say nothing—we should content ourselves with nothing—which seems to fall below the highest we can think of. . . . Warre took the lesser thing. That is the sum of his folly." Unconscious lapse into triteness is not one of the author's defects, so it may be supposed that she puts this excellent platitude into Wickenham's mouth, and applies it directly, in order to make plain to a heedless public that there is something more in the book than the description of a corrupt and shameless woman—the lesser thing that Warre took and that drove him through degrees of misery to despair and death. From an artistic point of view, so plain a statement of motive is a mistake, and unnecessary for a sympathetic reader, who soon feels the presence of good intention and its increasing passion. Still, at a time when women novelists frisk with indecency simply for love of the sport, any literary expedient that may prevent misapprehension is to be forgiven. The question whether any motive can justify the delineation of such a person as Anne Delaware is a wider one, but a discussion on that would include an argument that it is right for old-fashioned, sober, sane people to go about with shotguns and pick off decadents and degenerates at sight.

There are many ugly possibilities in life, and Anne Delaware is among the ugliest. Fundamentally, she exists in the provinces and slums, quite as noxious and vile there as in the high places of London, though less dazzling. Flaubert called her Mme. Bovary, and it seems superfluous to provide people curious to make her acquaintance with any other biography. As Anne Delaware she presents some slight divergence from the type, partly peculiar to herself and partly the result of surrounding and circumstance. Having the luck to cross the path of so sentimental and chivalrous a man as Warre, the utmost license is given to her talent for working woe and desolation. Coarsely speaking, Warre's behavior from the tragic moment which reveals Anne's gross past is that of a fool—a fool whom nobody wishes to care for or respect, yet is compelled to by the deep feeling and clear reason shown in the treatment of his subtle and unbalanced nature. When he resolves to stand by his wife, the hopelessness of his case is evident, and there is no comfort in following it further, except for those who enjoy deep depression of spirits and a bath in the gall of bitterness.

The author's rather touching attempt to mitigate the bitterness by bringing on Allegra, Warre's forsaken ideal, is futile, for she is no more than an allegorical figure for youth, innocence, and virtue. The most she does is to illustrate the limitations in art of the confirmed pessimist. Unadulterated optimism is dull, but prolonged pessimism is intolerable; therefore until grace is given to the author to perceive and believe in some compensations for the evil of life, one may hope that she will write no more novels. In the long run her unquestionably sincere gloom and cynicism overcome her assumed lightness and indifference, and the life goes out of her style. All that she can do better than any of her contemporaries is done in the first ten chapters, which are remarkable examples of vivid, though disconnected, narrative, and frank, comprehensive characterization.

The principal character in Mr. Gissing's short novel may certainly be described as a "doubtful person." He never speaks plainly about Eve Madeley, but is constantly agitated by horrid suspicions, which to some readers may appear confirmation strong. Patty Ringrose, Eve's pal, might have given a succinct and interesting account of her character and career, but she is dowered with a rare discretion. The only downright expression of opinion is in her letter to Eve's lover, Hilliard, in which she tells him that he has been jilted for more money, and remarks, "I felt sure it would come to this, and, if you'll believe me, it's just as well." No reader is likely to differ with Patty, and the most cheerful feature of the tale is that Hilliard soon came to accept her view without regret. Eve is decidedly too deep for Mr. Gissing, and her portraiture therefore is indistinct and unsatisfactory. In Hilliard he is on surer ground, drawing him firmly, and proving his superiority to his class by showing how his character was strengthened instead of debased by the reckless and irrational expenditure of a few hundred pounds accidentally acquired. Such a result of gross if not criminal extravagance points no moral useful to the philanthropist who eloquently urges the working classes to put their money in a savings-bank, and attributes all their miseries to a fatal preference for putting it in a beer-mug.

Better inspiration for denunciatory rhetoric lies in the pages of Mr. Morrison's 'Tales of Mean Streets.' The social condition he describes is a stratum lower than that on which Mr. Gissing gazes with intent and melancholy eye, and its general aspect less monotonously gray. Tragedy and comedy meet in Mean Streets, and human nature of a poor sort expresses itself freely, restrained only by strictly local standards of decency and manners. Mr. Morrison appears to know Mean Street so well that he can seize the average temper and temperament of its denizens, and through well-devised incidents illustrate the prevailing shiftlessness, low morality, and lower intelligence. When his Squire Napper "comes into a little money," he spends it prodigally, even as Mr. Gissing's Hilliard; but, being no better than his kind, the Squire's soul profiteth nothing by temporary liberty from toil. On the contrary, his spiritual and physical condition is lower when the money is gone than before it came, and he justifies the unsentimental opinion that the poor are themselves responsible for their poverty. On the first story, "Lizerunt," a pretty accurate judgment of local morality may be based, and the average intelligence of strikers, rioters, and anarchists is not underrated in such sketches as "Without Visible Means" and "The Red Cow Group." All the tales are good examples of the fiction produced by a close observer with a critical sense of literary value. Here there is no need for imagination and no room for guessing at motives and constructing a probable inner consciousness. For a full representation of the life of the Street, the selection of episodes is admirable, and the neatness, force, and naturalness of the author's expression deserve unstinted praise. His work makes the strongest impression of actuality, and suggests the practical inference that astuteness rather than piety and a certain hardness of heart, rather than moral fervor, are the needful qualities for significant missionary work in the mean streets of London.

Mr. Crockett's 'Bog-Myrtle and Peat' rejoices in a mystic preface. Whether the author's first intention is poetically to bewail a disparity between his aspiration and achievement, or to reprove one or two critics who have fallen short of his own good opinion of some of his published works, is not clear, but there is no vagueness about the naïve egotism of his introduction to his latest collection of tales. Some of these are excellent, several are surprisingly bad, and most are betwixt and between. The good and indifferent are drawn from Galloway, the bad from Edinburgh, London, and places even less redolent of myrtle and peat. Now Galloway appears to be uncommonly blessed with fragrant air, fine scenery, and people profoundly interesting to any one with a sense of humor. Still, Galloway cannot last for ever at the rate of a book or two a year, and, if Mr. Crockett is to live at all by the profession of letters, he must be permitted occasional excursions into fresh even if less fertile fields. He might even escape censure for falling below his best Galloway level, because local writers who make success by describing the difference between what they know by heart and the rest of the world, very seldom come off so well when they forsake the exhibition of special knowledge for the exposition of general principles. Nevertheless, a meagre capacity for self-criticism would surely have preserved for the sacred seclusion of 'The Book Sealed,' referred to in the preface, so inconsequent and amateurish a tale as "Saint Lucy of the Eyes." The youthful bumptiousness and triviality of the Edinburgh student tales could also have been enshrined there without detriment to the volume under consideration.

In the comparisons inevitably drawn between Mr. Barrie and Mr. Crockett they have frequently been pronounced equal, and sometimes the earlier writer has been severely admonished to content himself as second fiddle. An examination of the best work of each, 'A Window in Thrums' and 'The Stickit Minister,' can hardly fail to show that Mr. Barrie's greatest strength is in delineation of the essentially human, while Mr. Crockett's lies in emphasizing the accidental and eccentric. There can be no question about which is of greater value, actual and literary, and which promises best for sustained excellence in fiction.

The title-story in the volume entitled 'A Man without a Memory' is not the best. It recalls a great tragic story by Kipling, 'The Man Who Was,' a pure bit of bad luck for Mr. Sheldon, for the scenes of the two incidents are so far apart, and the details so dissimilar, that there is no good reason to suppose he had ever read Mr. Kipling's tale. A defect for which the author may be justly held responsible is indirectness, a propensity to wander in the vague and linger on the insignificant, thereby enfeebling a pathetic and dramatic situation. The same fault is noticeable in a second war-story, "The Adventures of Certain Prisoners," but is happily absent from "The Demented Ones" and "The Horses That Responded." The tales in which there is no smoke of battle are not above mediocrity, indicating industry and will rather than literary impulse.

The opening situation in 'The Marriage of Esther' reminds us at once of a similar and better one. It seems to us doubtful whether if Mr. Stevenson had not begun 'The Ebb Tide' with the picture of three vagabonds of Papeiti, Mr. Boothby would have plunged into the history of two vagabonds of Thursday Island. Nevertheless, Murkard and Ellison are sufficiently original outcasts to stand on their own legs metaphorically, especially Murkard, even though excessive indulgence in whiskey frequently incapacitates him physically. The adventures of the strangely matched pair at a pearling station on the Australian coast are novel and interesting, and the somewhat improbable and fantastic Murkard particularly

is well sustained. Perhaps in desperation for some new way of accounting for the degradation of an English gentleman, the author hit on the expedient of making Ellison an incurable liar. Whether his happy escape from a very bad scrape (effected by Murkard's heroic friendship) served as a permanent deterrent from unveracity is doubtful, but the chances are that he might romance vividly for the rest of his life without getting again into such a tight place. Towards the end of the tale the author appears to be completely rattled, introducing arbitrarily a black-hearted villain and running riot in irrelevant crime.

Except for heedless youth, there can be no illusion about the story of the 'Impregnable City.' The author incautiously attaches the date 1892 to the action, and grown-ups say, "No, it cannot be; we should, indeed, be idiotic had we forgotten the columns of type surely devoted by the press to such extraordinary happenings." For boys, on the other hand, the story is rather spoiled by making the motive of the kidnapped physician's attachment to the refugees of "the Impregnable City" a violent and perfectly senseless passion for the daughter of the philanthropic Austrian Count, who harbors and rules a colony of political criminals in his island fortress. The idea that a single devotee to the cause of humanity might surreptitiously relieve European nations of the care of their troublesome subjects is attractive. It is incredible that the French or any other Government should wantonly sacrifice good sailors and war-ships to recover anarchists and assassins who had been securely and eternally removed from the scenes of their activity by a benevolent old gentleman.

A History of the City of Brooklyn and Kings County. By Stephen M. Ostrander, M.A., late member of the Holland Society, the Long Island Historical Society, and the Society of Old Brooklynites. Edited with Introduction and Notes by Alexander Black, author of 'The Story of Ohio,' etc. 2 vols. Brooklyn, No. 95 Madison Street: Mrs. S. M. Ostrander.

THE honors of this publication are much more evenly divided than the title-page denotes. Mr. Black's editing has been so extensive that the completed book must be regarded as nearly or quite as much his as Mr. Ostrander's, and what praise or blame attaches to it must be shared about equally between them. A series of articles published in the Brooklyn *Eagle* in 1879–'80 were Mr. Black's original stock in hand. Mr. Ostrander, a descendant of Pieter Ostrander, who came to America in 1659, had written these articles with the enthusiasm and affection of a Dutchman for the Dutch beginnings of New York and Brooklyn, but they were not written in a strict chronological order and they were far from being a complete history, especially of the more recent times. They were fullest for the middle period, from the beginning of the Revolution to the time of the consolidation of Brooklyn with Williamsburgh and Bushwick in 1854. From this time onward there was an unfinished sketch covering some twenty years. A chapter on the twenty following, "The Modern City," is entirely, we understand, the work of Mr. Black.

The appearance of the book is very different from that of the ordinary city and county history. Every detail of paper, type, and binding is not merely handsome, but sumptuous. Indeed, the type is so large and printed so openly, and the margins are so wide, that the amount of matter in the two volumes (pp. 304, 292) is small and the book is quickly read. While there are many complimentary allusions to individuals in the concluding parts, in no respect does the book compare so favorably with the characteristic local histories of recent times as in the absence of all elaborate puffing of persons anxious for notoriety. There are no steel engravings or other portraits paid for so generously by the subjects of them that the book might go to press with no liabilities and the subscriptions be clear gain. Mr. Ostrander was a local politician, and his style has something of the genial warmth which one expects from members of his class. He was also a lawyer, and the legal aspects of various matters consequently receive an emphasis which is often interesting and important, but is sometimes excessive, as when the litigation which resulted from an aldermanic scuffle is given with considerable detail. In other respects, too, the right proportions in the treatment of important matters are not always well observed. This is notably so with the account of the Brooklyn bridge. We have several pages of effusive rhetoric quoted from the addresses made at the celebration of its completion, but a very meagre account of the structure, its various proportions, the difficulties encountered, and the means by which they were overcome. The tragical death of the elder Roebling is treated somewhat expansively, but of the accident which made his son a chronic sufferer for years, unable to observe the progress of the work except from a distance, there is no mention whatsoever. There is in general an exaggeration of civic celebrations and parades, in one case even the benediction of the clergyman who ornamented the occasion being duly set down.

The endeavor to "make things pleasant all around" has operated to obscure the character of certain political persons and events. The local Democratic leaders are treated handsomely, each getting his nice bit of compliment; and of Hugh McLaughlin, "who has retained his position at the head of the party since before the Rebellion," we are told: "The period and completeness of this local leadership probably finds [*sic*] no parallel in American political history." It is true that "no analogous situation has ever existed in the Republican party" in Brooklyn, but that the Republican ring has been more respectable than the Democratic, or less corrupt, does not appear. A temper more engaged than that of these pages with the spirit and the methods of political reform would have added to their significance. No one would gather from them what was implied by the election of Mr. Seth Low, or that it was effected by the aid of a few thousand independent Democrats, or that the refusal of the Republicans to support any Democrat, however unimpeachable his character, brought chaos back again.

The opening chapter on the geology of Brooklyn and Long Island smacks of antiquity, while it holds up to ridicule the geological lucubrations of an earlier historian. A chapter on the Dutch and the Indians quotes at length from Mr. Douglas Campbell (misspelling his name) a perfervid Scotch indictment of English cruelty as compared with the clemency of the Dutch settlers. It is not from his *opus magnum*, but from an address of 1880, and is valuable as indicating that the Dutch conquest of his imagination had so remote a date.

There is an interesting chapter on the social and domestic life of the Dutch settlers. The invaluable journal of Dankers and Sluyter, published by the Long Island Historical Society, contributes less than it might have done to the pages relating to these matters. For the excellent account of Gov. Leisler's honorable career and tragic death we are more indebted to its intrinsic interest than to its pertinency in a Brooklyn history. The chapter on the Revolutionary period is signalized by the most important historical event which Brooklyn has ever witnessed—the battle of Long Island. Here it was difficult to go astray with Field's able and exhaustive monograph on the battle to rely upon for intelligent guidance. Mr. Ostrander's chapter would probably have been fuller but for his fear of borrowing too freely from that. As it is, the gaps in his narration often leave much to be desired. There is not a word, for instance, of the happy fortune of Washington in having a regiment of Marblehead fishermen to put his army across East River on the night of the retreat, without which the business would apparently have been impossible.

The chapter, "Brooklyn after the Revolution," which opens the second volume, derives much of its interest from the oft-told story of the prison-ships, and from the contrast which the village of a century ago offers to the city of to-day. Then a man on horseback had to open seventeen barred gates along the shore of East River towards Williamsburgh within a distance of a mile and a half, there being no public road. New York insisted on her ownership of the river to the Brooklyn side, and in due course the sailors on board ships at the Brooklyn navy-yard voted in the New York Seventh Ward upon the basis of that claim. There is some very loose writing in chapter x, "Brooklyn Village," Fiske's "critical period of American history" being confounded with the first years of the present century, and some pages quoted from it as describing these. That the first steam ferry-boat, May 10, 1814, made forty trips the Sunday following, indicates a double fearlessness—of the new motive power and of Sabbath-breaking. In fact, the modern pessimist will find many things here written of the former times to encourage his sad heart. In 1832 there was one tavern to every sixty-nine persons—one district had a tavern for every thirty-six persons—while a saloon for every two hundred and twenty-five persons was recently the Brooklyn proportion.

From the time that Brooklyn was made a city in 1834 this narrative is hardly more than a statistical account of political changes and the rise of different institutions of education, charity, punishment, and so on. In the paragraphs on Brooklyn libraries a few statistics would have been welcome, comparing the circulation of the small free libraries with that of the Brooklyn Library, which is for subscribers only. Two of these, with about 70,000 books, have an annual circulation of nearly 400,000 volumes, while the Brooklyn Library, with nearly twice as many books as both of them together, has a circulation only about one-fourth as large. We read of "the free library of the Long Island Historical Society," but it is merely a reference library for the use of members only. There is a good account of the Brooklyn Institute; and where the distribution of compliments is so generous, Prof. Hooper, the Director, might well have had a larger share. The complimentary allusion to Dr. Talmage was evidently written before his third church-burning and general collapse. Doctorates of divinity are given with a generosity that shames the gingerly conduct of the universities. If the editorial profession had its degrees, its representatives would no doubt have fared as well as

the clergymen. As it is, they wear their rosemary with a difference, but none have reason to complain. The industrial growth of the city has no adequate treatment in the body of the book, but this lack is in part made good by a statistical appendix. There is no such confession, but it is evident that Brooklyn has suffered in many ways from her nearness to New York, but with great compensations. A careful statement for and against consolidation would have been a natural and agreeable climax to the book, as we have not had one yet from any quarter; but for some unknown reason it has been withheld.

The Church in America [National Churches]. By Leighton Coleman, S.T.D., LL.D., with map. James Pott & Co. 1895.

THIS volume, we are told in the first words of the preface, "belongs to a series intended to give a comprehensive history of National Churches." The writer frankly anticipates that "it may be difficult to convince some of [his] readers of the propriety of calling the Protestant Episcopal Church the National Church of America"; but that he is justified in doing so will, he hopes, be acknowledged "when it is remembered that in the beginning what is popularly known as the Episcopal Church was by charter and law established in the older colonies; that, more than any other ecclesiastical organization, she had to do with constituting the nation, and, in the period of the civil war, with its maintenance and reunion; and that, while conservative and catholic in her character, she is yet distinctively American in spirit." But these theses are left standing, for the most part, as if they were self-evident propositions, and they fall short of being this by several degrees. However it may have been *de jure* in the colonies, *de facto* the Episcopal Church had but a feeble grip on them, and such as she had was that of the Church of England, not the Church of America. Then, as to "constituting the nation," a series of events known as the War for Independence, or the Revolutionary War, had much to do with this, and over this Dr. Coleman passes lightly with a *suppressio veri* which comes very near to being a *suggestio falsi*, if it does not overlap. It is true that there were Episcopalian clergymen and laymen of fine parts and lofty character on the American side, but the clergy as a body were faithful to their oath of allegiance to the Crown, and nothing in their lives became them more than their fidelity. To pretend that the Episcopal Church, as such, took a conspicuous and honorable part in "constituting the nation" is, to speak plainly, ridiculous.

Equally ridiculous is the claim of splendid service rendered to the "maintenance and reunion" of the nation in the civil war. This claim is briefly argued in chapter xii., and the specifications urged in justification of it are (1) that "after a long and brilliant debate" in the Convention of 1862, "a series of resolutions was adopted susceptible of a favorable interpretation on either side of the house"—in Dante's phrase, "neither for God nor for his enemies." (2) "The efforts of the majority were directed to prevent, so far as possible, anything being said or done to hinder a spontaneous reunion of the Church," an anchor to windward more suggestive of self-interest than of patriotic devotion. (3.) At the Convention of 1865 ("The God of peace and love Himself presided there"), "when the Southern bishops asked to be excused from attending the service of thanksgiving, the Convention agreed to strike out from the report of the joint committee words to which they had objected, and which some thought had political bearing"—naturally, as they expressed gratitude for the destruction of slavery. On this subject Dr. Coleman's book is as silent as the General Convention. The reader not otherwise informed would not imagine that the civil war had anything to do with slavery, or that there was any such social institution implicated in our national life.

In chapter xxii. the rapid growth of the Episcopal Church is urged as another reason why its claim to be the American Church should be allowed. But if numerical preponderance is to decide, it will be long before the Episcopalians overhaul the Methodists and Baptists, and when they do so, their church will be as far from being national as it is now, seeing that a national church is one which is formally united with the State, and this is something which no church in the United States will ever be.

Apart from its particular absurdity, Dr. Coleman's book has the disadvantage of being extremely dull—a chronicle of desiccated facts from which all of that moisture which is called humor has been pressed out, and, as far as possible, all human interest. Those who have read Dr. S. D. McConnell's 'History of the American Episcopal Church' will have no occasion to read this, and, if they attempt it, they will wonder how the later writer could feel called to write so flatly and heavily what was already written so well and so delightfully. The endeavor to minimize all differences has resulted in a lack of definite impression, and a monochromatic wash obscuring all the natural color of events.

The American Congress: A History of National Legislation and Political Events (1774–1895). By Joseph West Moore. Harper & Brothers. 1895. Pp. xii, 581.

THIS rather bulky and rather showy volume is rather a good book, but it cannot honestly be called very good. It recalls the classic endorsement of Artemus Ward's labors addressed to those who liked that sort of literature. It may be that some persons want a new History of the United States, written as if by one who had lived at our successive seats of government ever since the first Continental Congress, becoming familiar with the members of Congress and other public men, and the successive customs of the halls of state, competent to give neat personal descriptions and concise biographies, abstracts of great debates, and analyses of stirring public questions. Some of this work, whether recasting old and familiar matter, or bringing into light what has been forgotten, is well done. But as it is a familiar remark that persons who live and move and have their being exclusively in Washington know very little of the real state of the country and public opinion, so this history, written from the point of view of the Capitol, shows no true proportion in its insertions and omissions. There are several long lists of prominent Representatives and Senators at different periods in Congressional history, but these are so chosen as to combine members belonging to different national generations, and to leave out many quite as important. For instance, Charles Francis Adams is named only as the arbitrator at Geneva, though in his short Congressional service he was very conspicuous, and his diplomatic services in England are never alluded to, though those of the Pinckneys and others under Adams and Jefferson are detailed. The election and succession of Presidents is generally given, but Monroe's first election is passed over entirely, and likewise the succession of Fillmore by the death of Taylor. These are but a few instances of a general want of principle in selecting whom and what to commemorate.

In the same manner, while much of the book is scrupulously accurate, there are here and there very bad mistakes. As amusing a one as any is transferring Mr. Emerson's lines about the "embattled farmers" to the field of Lexington (p. 42); for which the author must be prepared to meet the shots of embattled Concord. Lyman Hall appeared as an independent delegate at Philadelphia from the Midway Parish before the Colony of Georgia made him her delegate (p. 51). Napoleon's Decrees are spoken of as if called out by the Orders in Council (p. 202); but the most offensive of these was in retaliation for the Berlin Decree. The British soldiers at Bladensburg are called "veterans of Waterloo," which was not fought till nearly ten months later (p. 208). The Holy Alliance was not formed till after the Bourbons were restored (p. 229). The signer of the Clayton-Bulwer treaty was not Sir Edward Bulwer (Lord Lytton), but his brother, Sir Henry (Lord Dalling) (p. 233). The President's power of removal was seriously contested in Jackson's time, thirty years before Johnson (p. 419). A different kind of carelessness is shown in calling the columns of the old Hall of Representatives variegated marble (p. 212). Among other delicacies of style may be pointed out a most gratuitous change of "and to prove it" as written by Washington, into "and to prove which" (p. 155). Also, "avonched" for "averred" (p. 258), Narcisco Lopez (p. 351), and Conners (p. 428), are prominent misprints. The author has earnestly tried to betray no party leanings which might prevent his doing justice to all. But he cannot help calling the Mugwumps of 1884 "apostates" (p. 480).

The Source and Mode of Solar Energy throughout the Universe. By I. W. Heysinger, M.A., M.D. Philadelphia: J. B. Lippincott Co. 1895.

DR. HEYSINGER writes charmingly, and has made a better book than any mere crank could ever make. Nevertheless, we do not read far in it before we find he has not the knowledge his difficult problem requires. The following undiscriminating sentence, which we come upon at the beginning of the third page, is conclusive as to that:

"The authorities cited in this work include many illustrious names: Proctor, Tyndall, Helmholtz, Langley, Huggins, Newcomb, Young, Flammarion, Balfour Stewart, R. Kalley Miller, Herschel, Nichol, Lord Rosse, Urbanitzky, Crookes, Fraunhofer, Ball, and many others, all of whom are known throughout the world as among the master minds of science."

The theory is not perspicuously stated, but some features of it are plain enough. Dr. Heysinger, while not utterly rejecting the condensation theory of the sun's energy, thinks that there are only slight condensations and expansions of the sun. These answer the purpose of a fly-wheel or governor to keep the radiation uniform. He holds that the instrument for the collection of energy in the sun is an electrical instrument. The total amount of energy spent is only that absorbed by the planets, for the rest is put in bank—that is, the thermal radiation into vacuous space becomes converted into electrical energy. How does that portion which is spent get replenished?

We should suppose by the retardation of the orbital motions of the planets, since Dr. Heysinger argues, and with no small force, that they must be influence machines. But he seems to think influence machines work at the expense of the energy of the air, though everybody who has ever turned the handle of one is conscious of doing more work as the machine comes into action. However that may be, the electricity thus collected flows, says Dr. Heysinger, to the sun, and its energy is there converted into heat.

This conflicts at several points with opinions that are backed by pretty solid considerations. It supposes, for example, the planetary spaces to be filled with ordinary vapors. Why, under those circumstances, the sun does not withdraw the atmospheres from the planets, is a problem the author ought to have worked out before coming before the public. That the resistances, mechanical and electrical, would not be too great to be admitted, is not shown. The calm way in which aqueous vapor at the temperature of the planetary spaces is talked of is startling. Its pressure might be something like that of Crookes's tubes—what are called "high vacua." In fact, the difficulties are multiform. At the same time, there is hardly room for doubt that electricity does play a part more or less important in the solar system, and speculations of the same complexion as Dr. Heysinger's, but more exactly reasoned, will be much heard of in the near future. The book is certainly not without interest as suggestive of points some of which may be sustained.

The last chapter but one is occupied with a minute verbal examination of the Hebrew form of the Chaldæan cosmogony.

In Stevenson's Samoa. By Marie Fraser. Macmillan & Co.

MANY more instructive and pretentious books of travel have been written than the little sketch called 'In Stevenson's Samoa,' but few so pleasing and unaffected. Miss Fraser happened to be among the last Europeans who saw Mr. Stevenson often and intimately, and this fortuitous circumstance may lead many to look at her book who will gladly read it through for other reasons. As a matter of fact, she touches the novelist lightly, rather avoiding the appearance of airing an acquaintance with a great man. What she does say about him is in the best possible taste, and confirms the impression that Mr. Stevenson's death is a greater loss to his friends even than to letters.

Miss Fraser has the happy knack of a clever, fresh girl who wants to tell people about what she saw in a strange and pleasant land, indulging in few reflections and not concerned to draw instructive inferences. She describes her search for a house at Apia; the house after it was found; the servants; the food and the manner of cooking it; her visitors, their manners and customs, or lack of it; the daily life of the people, and all the native feasts and functions that she happened to assist at. She enjoyed it all thoroughly, and makes us feel that no one is truly happy but the Samoan who squats in the sun, dressed in fresh-plucked flowers, smoking and gossiping all the year round.

PERFECTION FOR THE PIPE.

Send 40 cents for 4-oz. sample to

SURBRUG, 159 Fulton St., N. Y. City.

Educational.

Montclair Military Academy,

Montclair, New Jersey.

LOCATION.

Montclair is fourteen miles from New York via the D., L. & W. R. R. or Greenwood Lake branch of the Erie—It is pre-eminently a community of homes; the residents, in the main, are New York business men.

The academy is on the southerly slope of the Orange Mountains, and commands an extended view of the Palisades, New York, Newark and New York Bays, Staten Island, and the beautiful country intervening.

The academy buildings are all new and were built for our special purpose, and that purpose is to develop the highest type of manly boy, who is sure to grow to a manly man.

Parents are cordially invited to visit the academy before making next year's school plans for their sons.

J. G. MacVICAR, Head Master,
Montclair, New Jersey.

HAVERFORD COLLEGE
Nine miles from Philadelphia.
For information address the President, Haverford, Pa.

THE MISSES VINTON'S
SCHOOL FOR GIRLS,
RIDGEFIELD (formerly of Pomfret), **CONN.**
Will reopen Thursday, October 3.

ST. AGNES' SCHOOL, Albany, N. Y.—Under the direction of Bishop Doane. 25th year.
Miss ELLEN W. BOYD, Principal.

MAGNOLIA TERRACE Springfield, Mass.
Home and Day School for Girls. JOHN McDUFFIE, Ph.D.

Bingham School for Boys. ASHEVILLE, N. C.
Established in 1793.
1793 Major R. BINGHAM Superintendent. 1895

GERMAN Teachers and Professors should send for a free copy of our new "Modern Language Catalogue," which includes a full line of Grammars, Readers, and Texts for all grades of instruction. D. C. HEATH & CO., Pubs., Boston, N. Y., Chicago.

KINDERGARTEN SUPPLIES
at Schermerhorn's, 3 East 14th St., N. Y.

Teachers, etc.

A FRENCH PROTESTANT GENTLEMAN, a graduate of an American University, who has already had some experience in teaching, wants a situation as Teacher of Modern Languages, Greek, Latin, History, etc. Address G., *Nation* office.

A GENTLEMAN WHO HAS HAD large experience in teaching the classics and German, and who has spent the last year at one of the best German Universities, desires a position. Best references. PH.D., care *Nation*.

AN ASSISTANT IN MATHEMATICS of five years' experience in one of the best State Universities (still engaged), desires improved position. Degree is M.Sc. Excellent testimonials. Address C., care *Nation*.

THE PRINCIPAL of a well-known Preparatory School for Boys will receive into his family for the next school year two desirable boys. No other boys received. Address L. W. P., care *Nation*.

A TEACHER OF REPUTATION will take into his family a boy of good habits who will pay well for home care and education. Address Prof. J. F. MORTON, Andover, New Hampshire.

EXPERIENCED AND VERY SUCcessful tutor in all preparatory subjects. Address, in care of Prof. G. R. CARPENTER, Columbia College.

HARVARD—Tutoring for Admission.—H. H. BROGAN, Ph.D., 858 Main St., Cambridge.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

School Agencies.

THE FISK TEACHERS' AGENCIES, 4 Ashburton Place, Boston; 70 Fifth Ave., N. Y.; 355 Wabash Ave., Chicago; 32 Church Street, Toronto; 803 Twelfth Street, Washington, D. C.; 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

AMERICAN AND FOREIGN TEACHers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to Mrs. M. J. YOUNG-FULTON, 23 Union Square, New York.

ALBANY TEACHERS' AGENCY, 24 State St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. Correspondence with school officers and teachers is invited. HARLAN P. FRENCH, Manager.

THE ALBERT & CLARK TEACHERS' AGENCY, CHICAGO, 211 Wabash Ave.—C. J ALBERT and B. F. CLARK. Northwestern Office, Marshalltown, Iowa, C. P. Rogers. Good vacancies in Western colleges and normal schools.

THE NEW AMERICAN TEACHERS' AGENCY.—Teachers seeking positions and those wishing a change at an increased salary, should address C. B. RUGGLES & Co., (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

COLLEGES, SCHOOLS, FAMILIES supplied. Teachers placed. Schools conscientiously recommended to parents. Musical Department. MIRIAM COYRIERE AGENCY, 150 5th Ave., N. Y.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St, N. Y.

AMERICAN AND FOREIGN TEACHers' Bureau. Miss GRACE POWERS THOMAS, M'g'r, 3 Park Street, Boston, Mass.

AN AGENCY is valuable in proportion to its influence. If it merely hears of vacancies and tells you about them THAT is something; but if it is asked to recommend a teacher and recommends you, that is more. Ours RECOMMENDS
C. W. BARDEEN, Syracuse, N. Y.

MT. DESERT.
P. O., Northeast Harbor. Cottage of fifteen rooms, furnished for housekeeping. Five minutes' walk from Kimball's. Price reasonable. Address Mrs. K. J. WHITMORE.

FOR SALE OR TO RENT.
Mrs. Head's School for Young Ladies and little Girls, 104 West Chelten Avenue, Germantown, Philadelphia, Pa. Accommodation for 125 pupils. Large assembly-room and a gymnasium.

MT. PLEASANT ACADEMY,
SING SING ON HUDSON.
Open for boarders during July and August; extensive grounds; large, comfortable rooms; excellent library; six minutes' walk from station. Address C. F. BRUSIE.

TO RENT.—A VERY DESIRABLE furnished house in the best part of Cambridge, near the University. Twelve rooms and bath. For particulars apply to P. W. DAVIS, 110 Irving Street, Cambridge, Mass.

The Nation.

NEW YORK, THURSDAY, JULY 18, 1895.

The Week.

THE State bankers' convention adopted a brief, concise, and intelligible statement of their views regarding the standard of value, saying that they represented an indebtedness to the public of nearly nine hundred million dollars payable on demand, which they desired to pay, as called for, in as good money as they received. They were, therefore, opposed to the free coinage of silver at the ratio of 16 to 1. They were opposed, also, to any other debasement of the currency. They were likewise opposed to having two different qualities of money at the same time, and they were in favor of a sound and elastic currency, as good as gold, "good everywhere, good by the standard of the world, good in the marts of the world, and as good in the hands of labor as in the hands of capital." They do not believe that the poor man needs poor money, any more than he needs water in his milk, sand in his sugar, or shoddy in his clothing. They consider it patriotic to support the best standard in the world for the best country in the world. All this seems quite logical, and pretty sure to win in the long run. A resolution was adopted also in favor of the appointment of a commission, under the authority of Congress, composed of experts and business men, whose duty it shall be to report to Congress for its consideration a comprehensive currency system adapted to the commercial needs and interests of the nation. Undoubtedly such a commission is necessary now, the last Congress having failed to take action of any kind on anything relating to the currency. That its failure to take action was due to ignorance of the subject and to unwillingness to take a step in the dark is now evident. It is probable that future Congresses will for the same reason be unwilling to move until they have expert testimony upon which they feel that they can safely lean for support.

If some future historian shall devote himself to the history of the free-silver movement in this country during the Cleveland administration, he will find a good deal of material that will border on the humorous. In fact, aside from the terrible losses which the threatened success of the demand for free silver has caused to the country, there is a funny side to almost every aspect of the question. One of these amusing features is the uniformity with which every Democrat of any prominence who has a grievance against the Democratic President is found in the silver camp. Missouri furnishes a pertinent illustration of this. The father of the idea to hold an early Democratic convention in that State is J. W. Farris. The origin of his silver craze is found in the documents of the Pension Bureau. Mr. Farris served in the army and was mustered out of service in August, 1865. Sixteen years later, in 1881, he discovered that he was afflicted with chronic diarrhœa, and that this was due to his army life. On the strength of this claim his name was placed on the pension roll. This, however, did not satisfy him, and a few months later he filed an application for an increase of pension on the ground that the diarrhœa and the debility consequent thereon had seriously affected his eyes. The medical referee of the Pension Office who examined his case reported that it was impossible to connect his weakened eyesight with his other ailments, and the application was refused. Thereupon his Representative in Congress, the silver apostle Bland, introduced a special bill in his behalf, increasing his allowance from the Government, and this was passed.

President Cleveland, however, was struck at once with the uniqueness of Mr. Farris's eye complaint, and with cold-blooded honesty he vetoed the bill, which the House on February 22, 1887, failed to pass over the veto. In giving his reasons for his disapproval the President said:

> "The ingenuity developed in the constant and persistent attacks upon the public Treasury by those claiming pensions, and the increase of those already granted, is exhibited in bold relief by this attempt to include sore eyes among the results of diarrhœa. I am entirely satisfied with the opinion of the medical referee, who, after examining this case in October, 1885, reported that 'the disease of the eyes can not be admitted to be a result of chronic diarrhœa.' On all grounds it seems to me that this claimant should be contented with the pension which has been already allowed him."

More distinguished men than Mr. Farris have been made active exponents of the silver cause for less weighty reasons than this, and Mr. Farris's gun has been trained on the White House ever since. He was among the first to lay the responsibility of the panic of 1893 at the President's door, and it was he who sent out a request to each county committeeman in Missouri asking him to demand a State convention to commit the party to free silver. His busying has proved so disastrous even to his own cause that the Missouri silver men lately informed him that they should be able to make more favorable terms with the State committee if he would stop writing and talking. As this is something, it is said, of which he is incapable, he is likely to play the part of Old Man of the Sea to the silver party of Missouri, and to be in at its death, he and his vetoed pension.

We have received a letter from a correspondent in West Virginia, who says:

> "We have just organized here a sound-money club to fight the 16-to-1 craze. I meet many intelligent men who think there is danger that the Rothschilds and others may *corner* gold. I have been hoping to see in your columns some exposition of the groundlessness of such apprehensions."

We would ask anybody who really fears that the Rothschilds may "corner gold" two questions: (1.) What is meant by "cornering gold"? (2.) What will they do with it when they have cornered it? We can understand what is meant by cornering wheat. That means buying all that comes into the market in order to make the "shorts" buy from the cornerers at such prices as they choose to ask. There is no recorded instance of a corner in wheat merely for the purpose of putting up the price on ordinary consumers, because, even if all the wheat were bought, the ordinary consumers would be too slow in taking it, and they might not take it at all—that is, they might substitute corn, rice, oatmeal, and other things as articles of food to so large an extent that interest charges would eat up the cornerers. Therefore a corner in grain, or in cotton, or in stocks is never undertaken except where a large number of people have sold the things for future delivery and must buy, or "cover," as the saying is, within a certain brief period. Now let us ask how anybody could have a motive to "corner gold." Nobody has sold gold for future delivery, except possibly the Rothschilds themselves. There are no consumers of gold except jewellers, dentists, etc., who are not of sufficient commercial importance to make it worth while for cornerers to "go for" them. The gold which exists in the form of money is not consumed from year to year. It is a growing mass, estimated at three or four thousand millions, to which is added $180,000,000 or more per annum. The magnitude of this mass and of the incoming supply suggests another question: Could anybody or any group of men corner gold if there were a motive for doing so? The attempt to corner copper a few years ago ruined one of the largest financial institutions in the world, besides a lot of the richest men in France, although they had to buy only the annual product of the copper-mines, not the accumulated copper of past ages. In this case the consumers of copper deferred their purchases until the incoming supplies broke the backs of the cornerers.

Probably owing to the influence of Mr. Bagehot, it has become the custom of those who watch the fluctuations of trade to regard the iron market as the best barometer. Iron is the great tool of almost all industries, and they cannot increase without supplying themselves with a larger stock of this tool. The present activity has

therefore been somewhat surprising, and apparently a little premature. It can only be explained as due to the recovery from paralysis caused by apprehension of governmental bankruptcy—a recovery which merely enabled industry to go on at its previous rate, and involved no great extension of business. But whether this explanation be accepted or not, there is no doubt that the iron market now shows unmistakable signs of coming activity. The production of pig-iron is increasing at the same time that stocks on hand are diminishing. The unsold stock on the first of May was about 780,000 tons, which was reduced on the first of July to 543,000 tons. The weekly capacity of furnaces in blast a year ago was about 86,000 tons, while it is now about 171,000 tons. This figure, it is true, was nearly attained last December, but a decline occurred both in production and in prices, which really continued almost till June. It is necessary to go back two years to find this record of capacity surpassed. The advance in price has more than kept pace with the production, and there are everywhere signs of a very large extension of business. So soon as the railroads have earned or borrowed a little more money they will come into the market with orders which have been kept back for a long time, and which will be on that account larger and more pressing. It seems probable, therefore, that the activity that is now manifest in the iron trade will continue for a long time to come.

At last, Commissioner Wright informs us, the conclusion of the census of 1890 is in sight. By the end of the present year he will have issued the final volume, and the country will have paid the last of the $11,500,000 which the census has cost. The cost of this enterprise was originally calculated at $6,000,000, and it was represented that its results could be presented in a few months after 1890 and within a moderate compass. We have not yet learned all these results, and they are contained in twenty-five volumes. As we have from time to time pointed out, the defects of this census are so numerous and so grave as to deprive it of value, and it is likely to work positive mischief by its misleading statistics. But even if it were trustworthy, it is impossible to estimate its value at any such sum as it has cost. The tenth census, under Gen. Walker's charge, was of much more value than that of 1890, and it cost less than $6,000,000. Yet even this sum is altogether in excess of the value of such a collection of figures. To number the population is a constitutional requirement; but the collection of statistics is, as a rule, better done by such agencies and bodies as can be held responsible for inaccuracy.

The spirit of Adam Smith might well be disturbed by the new anti-Trust law of Texas. Under this law an illegal combination is created whenever two or more persons combine their "capital, skill, or acts" so as to restrict trade or prevent competition, or so as to increase or reduce prices, or so as to fix the price of any article. There are other provisions of a specific character, but they may all be reduced to these. The penalties are correspondingly severe. Foreign corporations violating the law are prohibited from carrying on business within the State, and individuals are to be imprisoned in the penitentiary. This is certainly a *reductio ad absurdum* of the anti-monopoly theory, and it is perhaps for the best that this theory should be stated in its most extreme form. An insurance agent who should make his rates in accordance with an established tariff would violate the law and subject himself to imprisonment for a long term of years. But it is entirely impossible for an insurance agent to carry on his business except by offering rates fixed by the companies. Under the wording of the statute we do not see how it is possible for any agent to carry on business, for he must necessarily combine with his principal by his acts, or it would be impossible for him to make any contract for the sale of goods. Indeed, the law would seem to terminate all partnerships at a blow. A partnership is essentially a combination of two or more persons of such a nature as to require them to fix prices. If the partners in a retail shop had no agreement fixing the prices at which they would dispose of their wares, they would very soon have to stop doing business. Customers would be very quickly disgusted with a concern which sold the same goods at different counters for different prices. So, it would seem, all charges for professional services, such as are customary among medical associations, must now be left to individual determination.

The truth is, that the apprehensions generally aroused by the magnitude of the modern combinations of capital have degenerated into a popular craze. It is impossible to contend that there is anything morally wrong in an agreement made by a farmer with a dealer, by the terms of which the farmer is to sell his produce at a fixed price. No agreement more innocent or more necessary can well be imagined. And if the farmer, finding the dealer disposed to drive a hard bargain with him, gets his neighbors to agree upon the same fixed price as that at which they will sell their produce, it is hard to see the turpitude of the act. Such a combination may be for the advantage of all—of the farmers, of the dealer, and of the community. The time wasted in chaffering is saved, and the price fixed is as likely to be, upon the whole, as low to the ultimate consumer as if every farmer held out as long as he could for the highest price he could get. Commerce cannot go on without innumerable combinations of this kind, and legislation prohibiting them merely degrades the name of law. The danger which may really threaten the welfare of the community lies in the magnitude of trade combinations; but such legislation as this tends to exempt the great Trusts by placing them upon the same level with the smallest coöperative enterprises.

Senator Hill has put forth a frantic bid for the support of the liquor vote, which, we should suppose, he would feel confident of having anyway. He has never made any concealment of his belief that this vote was of far more value than that of the more respectable elements of society. During the seven years in which he was Governor he never failed to yield to the liquor interests whatever they demanded of him. In return they voted solidly for him at every opportunity, and will doubtless do so whenever he comes before the people, directly or indirectly. His appeals for continued support under these conditions seem unduly excited and indicate a panicky feeling on the part of the writer. He overdoes the thing in denouncing the Police Board as a "busybody and notoriety-seeking" commission, and in saying that the "Puritans are in the saddle" both here and in Albany, and that since Gov. Morton was born in Vermont, he "apparently inherits the illiberal tendencies and prejudices on the excise question which characterize the rabid Republicans of that State." This is the violent language of a "rattled" politician who is too badly scared to talk calmly. If Mr. Hill were calm, he would see the folly of appealing for votes which he and his party are sure of anyway, and of making his appeal in such tone and temper as will be certain to alienate votes which are absolutely necessary to success. The liquor vote is powerful, but Mr. Hill had the most of it last November, and yet he lost the State by 156,000 majority.

What a complex and puzzling affair the question of proper Sunday observance is was shown again at Boston on Sunday in the conference upon the subject held in connection with the Christian Endeavor convention. A delegate from the West, where Sunday is a holiday, longed for such a Sabbath as New England enjoys; but a Montreal delegate was horrified at the desecration of the Lord's Day to be seen on all sides in Boston. Americans, he maintained, were far behind Canadians in reverence for the Sabbath, and this, principally, because they "were not ready commercially to pay the price of the Puritan Sabbath." A delegate from Scotland strongly denounced the running of Sunday street cars. This is to go back to the attitude of Albert Barnes, who for years bore his testimony against the Sunday cars in Philadelphia, himself patiently walking his three or four

miles, if we remember, to church. But what would the Philadelphia churches do now for an audience if the trolleys and cable-cars were not allowed to carry worshippers? What is proper Sunday observance? Nobody is authorized to tell us. Kansas says one thing, Massachusetts another, Toronto another, Glasgow another; as for what Christians in Germany, or France, or Italy say, the only comment possible to the straitest sect is that of the severe old Scotchwoman when reminded of the Saviour's carelessness about Sabbath observance, namely, that she never did think the better of Him for that.

Mr. John W. Foster is a politician of sufficiently long experience to be cautious about being interviewed, but he seems to have committed the mistake of expressing himself freely upon his arrival in this country without considering the political consequences of his remarks. He was so rash as to tell a reporter in Washington that of all the countries diplomatically concerned in the contest over the terms of peace between China and Japan, "the United States has come out of it with better grace than any other." He added:

"Her interest has been recognized by both belligerents as purely disinterested, her only desire being to render such service as would bring about an honorable and lasting peace. The conduct of the State Department in its very delicate relations with both combatants has been marked by good judgment and by few mistakes, and the good offices of our Ministers and Consuls in China and Japan, where they represented the interests of both Governments, have been very useful, and are highly appreciated by both nations."

Mr. Foster ought to be subjected to discipline by the leaders of his party, and it would be an appropriate punishment to compel him to read the back numbers of some of our prominent journals. He would there learn that, so far from "coming out of it better" than other powers, the United States has from the beginning to the end occupied a most disgraceful and humiliating position. The conduct of the State Department, he would find, has not been marked by good judgment and by few mistakes, but has been a long succession of blunders, of most outrageous stupidity and folly. But while Mr. Foster has hopelessly ruined his reputation as a practical politician, his utterances will secure him the regard of his fellow-citizens as an honest man. It is not easy for us at this distance to form clear ideas of what is taking place in the East, and Mr. Foster's assertion that our country's position has been dignified and creditable must be accepted as the testimony of a well-informed witness who has no reason for manifesting partiality to the present Administration.

The motion made in the French Chamber for a permanent treaty of arbitration with the United States brings up the fact that our Government, first through Mr. Blaine, Secretary of State, and our delegates in the Pan-American Congress, and again by a vote of the House of Representatives, made overtures of the most formal character to all civilized nations of its readiness and desire to enter into such treaties, for the express purpose of avoiding war as a means of settling international disputes. We quote again the words of Mr. Blaine in closing the Pan-American Congress:

"If, in this closing hour, the conference had but one deed to celebrate, we should dare call the world's attention to the deliberate, confident, solemn dedication of two great continents to peace, and to the prosperity which has peace for its foundation. We hold up this new *Magna Charta*, which abolishes war and substitutes arbitration between the American republics, as the first and great fruit of the International American Conference. That noblest of Americans, the aged poet and philanthropist, Whittier, is the first to send his salutation and his benediction, declaring, 'If in the spirit of peace the American Conference agrees upon a rule of arbitration which shall make war in this hemisphere well-nigh impossible, its sessions will prove one of the most important events in the history of the world.'"

After the agreement for arbitration *inter se* had been reached, the delegates adopted another resolution, agreeing to urge its acceptance by the powers of Europe in their relations with the countries of North and South America. These things took place in the latter part of the year 1889.

From that time until we began to have difficulties with Chili there was much enthusiasm in Congress on the subject of arbitration as a permanent policy, and on the 5th of August, 1892, the House passed a joint resolution requesting the President to invite, in an especial manner, the nations of Europe to send delegates to a convention to be held at Chicago during the World's Fair to consider the subject. That being the last day of that session of Congress, the Senate failed to act on the resolution. The trouble with Chili came on early in the following year, and the enthusiasm for arbitration subsided. Still, our movements were taken seriously in Great Britain, and a petition to the Queen, in harmony with the principles of the Pan-American Congress, was prepared and signed by about two-thirds of the members of the House of Commons, and Mr. Cremer was sent as a delegate of the Peace Society to bring a copy of the document to this country as a preliminary response to our invitation. The coolness which set in when the Chilian disturbance took place, waxed colder when the Hawaiian imbroglio began. It was assumed by the Jingoists that England wanted Hawaii, or if she didn't want it France did, or if neither of them wanted it Japan did. In any case we must be prepared to fight. These conceptions were fed by the consciousness of a growing navy and the need of having something to show for it. So, in one way and another, all our fine words on the subject of arbitration as a means of settling international differences have thus far failed to bear fruit. We hope, however, that France will proceed on the line of finding out whether we mean what we said or not. We have no traditional enmities with France, but the contrary, for without her help we should not have gained our independence in the last century. Probably the best way to begin the work of which Mr. Blaine was so proud is to begin with France.

While the results of the English elections thus far declared show a strong tide running against the Liberals, it is too soon to affirm positively that they will be as badly beaten as now seems probable. Sporadic gains for them are to be discerned in the midst of the losses. In 1892 the early elections were jubilantly hailed by the Conservatives as foreshadowing their certain triumph, and it was not till Hodge, in the rural constituencies, began to show that the long scratching of his head meant plumping for Liberals, that Mr. Gladstone's majority hove in sight. This was a great triumph for Mr. Schnadhorst and his assiduous tillage of the country vote, but whether any such skilled cultivator is at work this year, or whether the parish-councils system of local self-government is going to help the Liberals as much as they hoped, time and the event alone can say. What the Irish are desperately striving for, meanwhile, is evidently a return to their old strategic position of holding the balance of power, and making and unmaking parliamentary majorities according to their own sweet will. It must be said that the chances are now uncommonly good for a Conservative majority over Liberals and Irish combined.

If Sir William Vernon Harcourt cannot hold his seat at Derby, what Liberal candidate can feel sure of returning to St. Stephen's? The effect upon his followers would have been disheartening enough had their leader in the Commons, himself the best stump-fighter of them all, been beaten for reëlection in a close and doubtful constituency. What will be the result when he loses Derby, which has been a Liberal stronghold time out of mind? In 1892 Sir William and his colleague led their opponents by 2,000 votes in a total poll of 13,000; now they are beaten by an average majority of 850 in an aggregate vote about 1,600 greater. Even in 1886 they had 2,000 more votes than their Unionist rival, while in 1885 their majority was almost 3,000. In 1880 the Liberals polled nearly three votes for every one cast for the Conservative candidate. Sir William's championship of the local-veto bill has doubtless played a large part in bringing about his defeat. Some nine years ago a Radical paper said that "Derby had been as Liberal as a Liberal firm of brewers can make it for years and years." Prohibition, even upon the local-option plan, is not likely to prove a vote-winning issue in such a constituency.

THE BANKERS AT SARATOGA.

THE State bankers' convention at Saratoga last week was notable for the general expression by the members of their belief that the silver craze in this country has been mastered, coupled with a determination to keep it down at all hazards. Many other valuable ideas have been put in shape for popular enlightenment. These bankers' conventions would do good, if in no other way, by merely showing that the highest interest of banks is the highest interest of the people. The highest interest consists first in preserving a sound standard of value, of uniform goodness; and, secondly, in substituting credit, as far as possible, in place of cash as a medium of exchange. The closeness of connection between these two things is not generally perceived. It is a general advantage to substitute credit for cash, because credit requires less capital for a given amount of work; but credit depends largely upon a sound standard of value and upon the assurance of its uniform goodness. Thus the two things lean upon each other, and it is the business of bankers to uphold them both. In so far as they are successful in this they serve the public interest at the same time that they serve their own interest.

It is sometimes well to get a foreign opinion of ourselves, and it is seldom that we get so candid or so valuable a one as that which Mr. Walker, President of the Canadian Bankers' Association, gave us on Wednesday week. We fancy that the ideas which he presented were new to many of his immediate audience, but not to all of them, since Mr. Cornwell of Buffalo is himself the author of a valuable commentary on the Canadian banking system. Mr. Walker first stated a fact of the highest importance, viz., that our currency system is unlike any other system in the world, and that even at the point where it approaches nearest to some other systems (the national bank-note issues), it is still far removed in principle from any of them. It is also far removed from the best of the older American State systems.

It needs no argument to show that our greenbacks and other fiat money (including silver dollars coined on Government account) are *sui generis*. They are the remains of a state of bankruptcy which was induced by war, which the people have become accustomed to, and which many persons are fond of because they have never known anything better. When we come to our national bank-note issues, we have to acknowledge that these too are unlike anything under the sun. They have an apparent resemblance to the Bank of England system, but it is only apparent. The Bank of England issues against Government securities an amount of currency which, it is supposed, will be in use at all times and never presented for redemption. The corresponding amount in this country is issued by the Government directly, in the form of greenbacks or other fiat money. The Bank of England then issues additional notes against deposits of gold, pound for pound. The national-bank system has nothing corresponding to this. Therefore it does not correspond to the Bank of England system at all. The latter is not the best system in the world, in our judgment, but it is better than ours. It does not admit the element of credit into bank-note issues, but it is self-regulating; the note issues rise and fall with the demands of trade, and they are always backed by gold. The credit element is equally excluded from our system, but the note issues do not rise and fall with the demands of trade, and they are not backed by gold.

Mr. Walker draws attention to the Scotch and Canadian systems, which he considers preferable to the Bank of England system. The vital principle of Scotch banking is credit, and its employment instead of capital as a medium of exchange. How far this system has been perfected may be seen by a glance at the statistics, which show that a deposit account of more than £80,000,000 is carried on a gold reserve of less than £5,000,000. It is carried safely, too. There have been only three bank failures in Scotland in one hundred and twenty years. The Ayr Bank failed in 1772, the Western Bank in 1857, and the City of Glasgow Bank in 1878, and in none of these cases were there any losses to note-holders, not even by depreciation. How is it possible for deposits to be kept at par with gold when the latter is only 6 per cent. of the former? The answer is found in the system of branch banks. The banks are ten in number and they have altogether 900 branches. The Royal Bank alone has 125 branches. Every hamlet in the country has its branch bank, or more than one. All discounts, all "cash credits," all depositors' checks, at the branches are paid in the notes of the bank, which are redeemable in gold at the head office. Therefore it is not necessary to keep gold at any other place than the head office; but, in practice, if anybody wants gold at a branch bank he can get it. The condition in this respect is very much as it was in New England under the Suffolk system, when all New England bank-notes were redeemed at the Suffolk Bank in Boston. Although the country banks were not relieved of the necessity of redeeming their notes at their own counters, it was found that as much gold was deposited in those banks from day to day as was called for by depositors or note-holders.

The Canadian system differs from the Scotch system somewhat, but they both have the advantage of branches, and are enabled thus to put the surplus capital of the business centres at the service of borrowers in the country districts. This is an advantage to the bank as well as to the borrower. If it were not so, the lending would not take place. It serves to equalize the rate of interest on equal security all over the country. That is the crying need in the United States. Mr. Walker makes the suggestion that all national banks having a capital of $5,000,000 or more be allowed to have branches. There is no objection to this that we can see. It is something for our bankers to think over.

THE SILVER CRAZE SUBSIDING.

THE total and tremendous overthrow of the silverites in Kentucky has had the expected effect. All through the South there has been a subsidence of the craze. So marked has been this tendency in Georgia that the Democratic silver convention called to meet at Griffin today, in imitation of the one held in Illinois a few weeks ago, is already doomed to failure. The meeting held at Atlanta to appoint delegates to this convention, after much advertising by the *Constitution* newspaper, brought out only forty-seven persons, including the colored janitor, one traveller from Ohio who happened to be in town, several Populists, and the staff of the *Constitution*. Several leading Populists were chosen as delegates. The previous evening a large meeting of sound-money Democrats in Atlanta was addressed by Congressman Patterson of Tennessee. The most interesting occurrence here was the enthusiastic and long-continued cheering when the speaker mentioned the name of President Cleveland. This was a casual and unpremeditated incident, and the response was as unexpected as it was gratifying to Mr. Patterson and the friends of sound money in Atlanta and everywhere. What took place at Atlanta is taking place in other parts of the State. The Savannah *News* says:

> "According to reliable advices, the Fulton County meeting was attended by forty-seven persons. It is claimed, and with reason, that Fulton County has over 100,000 population. The Clarke County meeting was attended by thirty-two persons. Clarke County has a population of some 20,000. The Floyd County meeting was attended by forty persons. Floyd County has a population of more than 32,000. The Morgan County meeting was attended by three men (two in favor of sound money and one free silverite). Morgan County has a population of more than 20,000. It is needless to pile up such facts with regard to the selection of delegates."

The change that has taken place in Georgia is showing itself in North Carolina, Florida, Mississippi, and Texas. Under these circumstances the Democratic silver conference called by Senators Jones, Harris, and Turpie to meet in Washington next month, if it takes place at all, will be a tristful gathering.

The subsidence of the silver craze is equally pronounced on the other side of the water. It has been evident all along that the German Government was extremely reluctant to take the initiative in calling a new international conference—not that the Chancellor and his entourage had any prejudices against bimetallism, not that they had any well-settled ideas on the subject. It was perhaps because they had no fixed ideas that they were slow to

move. The first step taken after the vote in the Reichstag was to submit the question to the Staatsrath, which, being composed chiefly of the Agrarian element, agreed to the conference. Only twelve members were of the contrary opinion. The Staatsrath, a kind of privy council, has no real power, and only gives advice to the Prussian monarch. The Emperor is said to be for the gold standard, but not disposed to take an active part in deciding the question. Notwithstanding the presence of some active bimetallists in the Government councils, it is evident that the majority would be glad to meet some insurmountable obstacle to the calling of a conference, first, because they have a dark feeling that it is all labor lost, and that Germany's prestige would suffer if a conference called by her should end in failure; and, second, because they do not possess sufficient knowledge of the special subject to feel entirely sure of their footing.

Meanwhile, the opposition among the commercial classes has been gaining strength. The Handelstag, the body which represents all the chambers of commerce in Germany, has followed up its first protest against bimetallism with a series of mass-meetings in the large commercial cities, at which resolutions have been passed protesting solemnly against any tampering with the monetary standard. A league for the preservation of the gold standard (*Verein zum Schutz der Deutschen Goldwaehrung*) has been formed, and is now prosecuting a vigorous campaign of education.

It is understood that a majority of the Federal Council has voted against calling a conference. It is certain that Bavaria and Würtemberg have pronounced against it strongly, and that even the Prussian Diet has voted that nothing should be done in the line of bimetallism without the coöperation of England. That the bimetallists consider the Government less favorably disposed than it was a few months ago, is evident from the fact that they are calling for help from France and England. In the latter country, where a general election is taking place and all the political forces are in motion, bimetallism is about the only issue that is not heard of. There is plenty of talk about home rule, about disestablishing the Welsh church, disestablishing the House of Lords, and about the cotton duties in India. The last-mentioned issue was the one on which Manchester and its outlying territory was lost by the Liberals. Yet the question of reopening the Indian mints to silver has not been mentioned on the hustings, still less that of opening the English mint to that abused and downtrodden metal.

It is probable that the silver craze will disappear from the world altogether in the course of two or three years, leaving the United States to deal with the problem of getting rid of fiat money and of amending their banking laws so as to give the people an elastic currency. Meanwhile, Bland and Bryan have passed out of public life, the former for ever and the latter until he learns some new lessons in politics.

NAVY-YARD REGENERATION.

Secretary Herbert's order directing the removal from the Brooklyn to the Norfolk Navy-yard of two officials who had violated the civil-service regulations in regard to the employment of men, will probbably mark the final uprooting of the old spoils system in the former yard. The Secretary's letter gives striking evidence of the tenacity of the system by showing that, four years after Secretary Tracy's memorable act in putting the laboring force of the navy-yards under civil-service rules, there still remained among the officials of the Brooklyn yard a conviction that the rules were not serious, and that there was no harm in "getting around" them in the interest of politics. Men were continued in the service indefinitely by suspending them or by transferring them from one kind of work to another, instead of discharging them when there was no work for them to do. Large numbers of them were carried on the pay-rolls under assumed names, either to conceal their bad records or to cover fraudulent conduct of some kind. When the officials responsible were called to account for their practices, they explained some of them by saying that they had been committed in accordance with the request of a naval official at Washington, and others by saying that their motives had been good and that no harm had been done. To these excuses the Secretary replied: "Officers must understand that the rules governing labor at the navy-yards are as inviolable as any other regulations issued by the department"; and this declaration, coupled with the transfer of two officials and the discharge of several subordinates, is likely to establish the conviction in the yard that the rules are serious and must be observed.

It is not surprising that it has been more difficult to establish this conviction in the Brooklyn yard than in any other. Secretary Herbert says that "in no other navy-yard has there been so inadequate a compliance with and so total a misconstruction of these regulations as at Brooklyn." This is because the spoils system was established on a more scientific basis in that yard than in any other. All the navy-yards, as everybody knows, were till within a very few years used openly for spoils. They were stuffed to overflowing with laborers on the eve of every election, and nearly every appointment to a place in their service was made for political reasons. During the seven years between 1871 and 1878, when Mr. Arthur was Collector of the Port of New York, the Brooklyn yard was "worked for politics" with a precision and effectiveness which made it a powerful aid to the Republican machine, of which Mr. Arthur was then the head. Regular books were kept of the employees of the navy-yard, with a certain number of "men" allotted to each Republican district association. No district was permitted to have more than its share, but when there was an increase in the number of employees as election day approached, each district could put in its claims for "riggers," "calkers," "plumbers," "carpenters," etc., and get its proportion of the new men. Few of these "riggers" had ever rigged anything more than a primary, or ever "calked" anything nearer to a ship than a beer-barrel, but they were enrolled on the books of the yard, and their records were closely watched. The standard of merit was not usefulness in the work of the yard, but in politics. Any man who was lax in his political work, or who failed to do his part in "keeping his district in line," was dropped, and a more competent man "put on" in his place.

This system was maintained in more or less perfect condition down to the time when Secretary Tracy issued his order placing the laboring force of the navy-yards under rules providing that laborers wanted in any trade must be taken from a list of applicants made up by a board of labor employment. In explaining these rules now Secretary Herbert says:

> "The rules were intended to make merit the sole test for employment and continuance in employment at navy-yards, and especial care was taken to exclude all opportunities for favoritism on the part of any person, and particularly on the part of leading men, foremen, or heads of departments at the yards. Lists of trades were furnished in which men could be employed; lists were made out for each yard suitable for its wants, and these lists, it was provided, could be added to upon application to the department. A board of registration was formed, and rules made to govern its proceedings. Methods by which labor was to be obtained in any department or in any branch of a department at a yard were carefully and clearly mapped out, and so also were the rules by which laborers were to be rerated, promoted, dropped, or discharged."

When this order reached the Brooklyn Navy-yard, it was received by many of the politicians in and out of the service as a huge joke. They did not believe for a moment that Secretary Tracy meant it to be enforced. They went to work accordingly to "get around" it, but one by one they have found out that it was a real and not a play law, that a new era had been ushered in, that the hated reformers had "downed" the old system, and that the navy-yard as an inexhaustible orchard of political "plums" had been blasted for ever. A few, down to the present moment, have clung to the hope that something might still be saved from the ruin, but they have now discovered their mistake. They either leave the dear old yard for another in which the hated rules hold unquestioned sway, or they depart from the service entirely, taking with them the final traces of the spoils system. Small wonder that as they go they fill the air with lamentations about "reform hum-

bug" and "ingratitude towards the men who saved the nation in its hour of peril." They must rig and calk exclusively in politics henceforward.

POLITICAL SYMBOLISM.

THERE seems to be springing up in America a peculiar development of half-educated love of country, to which it is not quite easy to give a name. Perhaps fetishism would come nearest—a kind of object-worship, which leads to setting up a purely material object and regarding it, or its mere representation in miniature, or possibly even its name alone, as something which ought to enlist our hearts in a species of crusade, with the difference that the Crusades were expeditions to rescue an actual city, somewhere within whose precincts Jesus of Nazareth certainly had been buried. This object-worship, however, is directed in many cases to a mere picture or abstraction.

A great deal of the talk about the national flag has run over into speeches that mean just nothing at all. The idea that any enterprise, however rapacious or treacherous, is consecrated if only the stars and stripes are hoisted by its perpetrators, and that to "haul that flag down" when once it is up is cowardice and treason, are absurdities that inspired many a speech in Congress on Hawaii, to say nothing of less important assemblies. So, we are told, English jurists attach a mystical importance to the great seal, and plead that it gives validity to any instrument to which it is put, although appended by a thief, a tyrant, or an assassin. Those who thus regard the flag as the visible symbol of divine favor are fond of bestowing on it the fantastic appellation of "Old Glory," a name, it is safe to say, unknown to hundreds of thousands who did their utmost to maintain its honor during the civil war.

At present the fashion is to dance a species of carmagnole round the "Little Red Schoolhouse"; as if the tremendous problem of national education, and its connection with religion or severance from it, were going to be solved by putting up small structures of wood painted scarlet. Thousands of those who make it their war-cry never saw a "little red schoolhouse" at all; to thousands more it was a place where they were at once half stifled and half frozen, made to drudge through antiquated manuals under the charge of an under-fed teacher who knew but little more than the pupils. In such places, what education was imparted to such as had the brain and the will to acquire it in spite of all its faults and drawbacks, awakened in them, if they were true to even such training, a determination that their children should not have to put up with such a wretched substitute for schooling, but be trained in proper buildings, with proper courses and proper teachers. Whatever the "little red schoolhouse" did eighty, forty, or even twenty years ago, to parade it now as the symbol of a force which shall defend American liberty of thought and speech against ecclesiastical tyranny is like symbolizing our public opinion by Franklin's hand-press, or the potential military force of the nation by

> "The old Queen's arm that Gran'ther Young
> Fetched back from Concord, busted."

The intensest of all these pathetic fallacies, erecting an inanimate object into a sentient being, is in the eternal talk about friendship to silver. We have so often laughed at this in our columns that there would be no object in slaying the slain, if it were not that Senator Morrill, in some recent utterances full of common sense as to the "crime of 1873," thinks it necessary to declare that the Republican party is not "hostile to silver." In the name of common sense, wherein Senator Morrill, for all his eighty-five years, far exceeds most of his colleagues, how can anybody be a friend or an enemy to a metal? How does he set to work to be one? How does he cultivate it? How does he demonstrate his affection to his intangible friend? For, be it observed, the friendship is not to any particular coins. A child, a miser, a coin-collector, may conceivably break into ecstatic baby-talk over his beloved pieces. But your sixteen-to-one man is a friend to all the silver, coined or uncoined, that the world contains, the vast mass of which he never saw and never can see. How is his love to be reciprocated? Or, alas! shall it die unrequited? Will the beloved metal appear responsive at his call in his hour of impecuniosity, in return for all he has borne and suffered for it at the hands of the hostile gold-bug? Just now silver hides itself in the Treasury vaults, and charges a great deal for its safe keeping, and will not come out to rejoice its friends with its company.

It is sad to see such a man as Senator Morrill, who has been the object of touching confidence at the hands of one of the soberest communities on earth, thus giving in to one of the silliest pieces of fiction that ever filled a demagogue's trumpet. It ought in justice to him to be remembered that Mr. Cleveland, in his great message of August, 1893, recommending the repeal of the purchasing clauses of the Sherman act, talked of silver and "its friends."

Such leaders of the people, to whom millions of thoughtful men are looking for direction of their thoughts, should avoid such language. They should concede nothing, even in phraseology, to the juggling arguments of false prophets, who seek to import sentiment into matters which rest wholly on reason, and abuse the lofty name of friendship to influence our action in matters where the coolest and most unemotional temper is needed. American sentiment is a grand thing when aroused for some truly noble cause; it may be a terrible thing when swept away by some fancied demand of the hour, which the next hour may prove a delusion; but it is neither noble nor terrible, but simply silly, when it turns things into persons, when it worships unreal abstractions, and gushes over empty names.

ANTONIO RAIMONDI, THE SAVANT OF PERU.

SCHOOL OF MINES,
ROLLA, MO., June 10, 1895.

THE honor which has fallen upon the name of Antonio Raimondi, exalting him as much as he has distinguished the country in whose service the labors of his life were given, is an example of the just reward of self-sacrificing devotion to a high ideal, notable because the merits of his services were recognized before their fruit had fully matured in the sight of the world, and because he had done his work with heroic courage in the face of innumerable difficulties and perils, with no prospect of fortune, and uncertain of success and fame.

Considered on the side of his visible works, Raimondi stands before us as a scientist, as a certain type of scientist, bringing down into our own times the spirit of those past generations of *savants* and philosophers who challenged Nature in all her moods, having not yet developed into specialists content with mathematics, or chemistry, or botany. He was, in fact, such a man as we should suspect of charlatanism if he were to arise to-day, and for this reason many who have not known much of Raimondi and his contributions to science have not hesitated to express this suspicion concerning him. But he was born at a time when the old *savant* was still the highest type of scientist, when Humboldt, perhaps the crowning genius of them all, was in the zenith of his glory; and he early emigrated to Peru, where conditions were ripe for a man of this peculiar character.

It matters not what rank we may assign him in the galaxy of scientists, whether we admit or not that he imitated Humboldt, or whether we measure him by the rule of originality, since he has become the chief scientific luminary of South America; and it may pass as an evidence of greatness that so many think it worth while to question whether he was great or not. Certain it is that Raimondi possessed the spirit of unremitting toil in an extraordinary degree, and that he collected a vast store of knowledge concerning the natural history, geography, and ethnology of one of the most interesting countries in the world, for which students of all nations owe to him a lasting debt of gratitude. It is a debt, moreover, upon which some payment can and should be made, not only by way of tribute to Raimondi, but in the interest of science itself, for the larger part of his accumulated data remains still unpublished and even unedited.

Antonio Raimondi was born in Milan, September 26, 1826. From his earliest years he manifested a strong predilection for natural history, devoting himself with assiduity to his studies, and haunting the Botanical Garden of Milan like a devotee before his shrine. The marvellous beauty of the tropical flora which he saw there chiefly excited his childish admiration, and largely determined the direction of his future career. This naturally encouraged an interest in travel, so that while yet a boy he had read the reports of all the important scientific expeditions which had been sent out

from Europe to South America, following their itineraries upon the map, and familiarizing himself with every detail of the countries visited. His boyhood embraced a period which was peculiarly rich in scientific exploration, serving to turn the attention of learned men in Europe strongly toward South America. The famous expeditions sent by Charles III. of Spain during the latter part of the eighteenth century had performed a valuable work, supplemented immediately after by the immortal labors of Humboldt, which fairly electrified the scientific world, seeming to open up endless realms for original investigation. In quick succession followed Alcide d'Orbigny (1826), Henry Lister Maw (1827), Pöppig (1827-32), Claudio Gay (1829-42), Darwin in the voyage of the *Beagle* (1835), Von Tschudi (1837-42), Dana in the Wilkes expedition (1840), and Castelnau (1843-47). This is a most extraordinary list, and it embraces only a part of the scientific exploration in and around South America undertaken during the early half of the present century. It was part of the spirit of the time in learned circles to expend intellectual energy, to say nothing of the attendant costs, in the study of the natural history and ethnology of Latin America. The infection was in the air, and Raimondi was one upon whom it exerted its full effect, fixing the destiny of his life.

At the age of twenty-one he had matured his plans for a journey to Peru, intending to devote ten years to the acquisition of material for a work on the natural history of that country. He purposed spending two years in special preparation for this enterprise, but fortune ordered differently. The ferment of revolution was disturbing Italy, and the young naturalist entered with zeal into the common cause against Austria, temporarily abandoning his scientific ambitions in the struggle for political freedom. Thus it was that when Marshal Radetsky scattered the Lombard patriots at Custozza, on July 25, 1848, Raimondi found himself rudely thrust forth, an exile from his native land, wholly unprepared in all save spirit and intellectual ability for the cherished aim of his early life. Undaunted he set out for South America, reaching Lima in July, 1849. If not actually penniless, he was at least dependent now upon his own efforts for support, and he enjoyed the good fortune to win immediately the friendship of Dr. Heredia, Director of the College of the Independence at Lima, now known as the School of Medicine, who engaged him to classify and arrange the cabinet of physics and natural history in this institution. Two years later he was promoted to the professorship of natural history, including in his chair the subject of analytical chemistry. Thus situated, he was enabled to commence the studies for his *magnum opus*, and his enthusiasm so won the favor of his patrons that an arrangement was made in 1852 whereby he might undertake explorations, his duties in the college being fulfilled by a substitute during his absences. The confidence of his friends was soon repaid by the fruits of his labors. In the beginning these consisted of monographs and memoirs, contributed to the transactions of learned societies in France and Italy, and they at once acquired for Raimondi honorable recognition in Europe, while they reflected high credit upon the country and the institution which favored and assisted efforts of such a character. Among these monographs were a careful study of the guano deposits on the Peruvian coast, and of the birds which produce it; a new method for the determination of specific gravity; and a cleverly constructed mercurial barometer adapted to the vicissitudes of mountain travel in such a region as the Sierra of Peru. Whoever has attempted to transport such delicate instruments through the highlands of South America can appreciate the importance of even an approximately accurate mercurial barometer, which can be packed in small compass and be easily renewed if broken; for no one having had experience of the freaks of the aneroid would trust to one of them for serious work at high altitudes.

In his ready inventive genius, and in his ability to utilize even the crudest means available at the moment, Raimondi possessed a rare adaptability for exploration. By careful observations, for example, he was able to use as a valuable check upon his determinations of distance the simple Indian measurement known as the *cocada*. This is the distance that an Indian cargo-bearer can walk under the stimulating effect of the coca-leaf (*Erythroxylon coca*). He found that the nervous excitation began in eight to ten minutes after introducing a fresh quid of leaves into the mouth, and lasted from thirty-five to forty minutes. In this time the Indian would pass over three kilometres on a level road, and two kilometres on ascending ground. At the end of each *cocada* the Indian stops to rest and regale himself with a fresh chew of coca. Along the Peruvian highways are definite resting-places, established by this custom, also called *cocadas*, so that it was an easy matter to obtain an average of these stations. These, taken in conjunction with careful measurements over important courses, with determinations by triangulation, by latitude and longitude of prominent points, and by elevations ascertained barometrically, constituted the basis of the great map of Peru which has been partially completed as an accompaniment of his work, 'El Perú.'

The first book of Raimondi's which appeared was on the Department of Ancachs and its mineral riches, published through the munificence of Henry Meiggs, in 1873. In the succeeding year the first volume of 'El Perú' appeared, bearing the imprint of the national Government, and this was followed by the second and third volumes in 1876 and 1879, respectively. Another work, entitled 'The Minerals of Peru,' was also published by the Government in 1878. These, with sixteen sheets out of thirty-four of the map of Peru, constitute the entire list of his important publications. But these were only the beginning of the compendious work which he contemplated. As he proceeded with his studies, accumulating such rich and diversified stores of material, his original project broadened until it embraced geography, geology, mineralogy, botany, zoölogy, and ethnology.

This is the circumstance most open to criticism in Raimondi's plan. His own friends in Peru, in the midst of their praise, do not hesitate to point out that he set for himself a task that would tax the powers almost of a whole academy of *savants* to complete in a single generation. Making due deductions from this exaggeration, it is nevertheless true that Raimondi projected more than one man could possibly finish in his lifetime, but it does not appear that he seriously expected to finish it. It is one mark of his greatness that, rather than content himself with a completed work narrow in its scope, he preferred to lay deep and broad the foundation of a monumental structure, and to provide the crude materials which others should afterward take and fit and fashion into a perfected whole.

The first three volumes of 'El Perú' were published by a special arrangement with the Government. It was not until 1886 that the expense of editing as well as publishing was undertaken by the state. Raimondi was placed in charge of it, but the funds were so inadequate, Peru being crippled by the war of 1879, and harassed also by an overwhelming foreign debt, that Raimondi was unable to call to his assistance the scholarly aid which he needed. How much has been lost to the world because of this can scarcely be estimated. The results from the working up of his collections and data by a corps of trained students under his direct guidance would have been invaluable. Raimondi felt this keenly, and it required moral courage of a high order to refuse the offer of the Italian Government, made during the war between Peru and Chili, to return with his collections to Italy and produce his work there, with every facility of money and talent freely at his disposal. But these temptations of fame and pecuniary ease were set aside by his feeling of obligation to the country which had so long sustained him in his chosen sphere, and, as he said, it would be still more ungrateful to desert Peru in this hour of her misfortunes.

No further volumes appeared as a result of his arrangement with the Government. He continued collecting new and collating old material, until his death at San Pedro, near Pacasmayo, on October 26, 1890. He was interred with imposing obsequies, such as have rarely occurred in the history of Peru. His is the name which stands forth preëminently honored, revered, unsullied by calumny, a name which calls up no memories of division in politics or faith among his adopted countrymen.

In September, 1891, the task of proceeding with the preparation of 'El Perú' for publication was placed in charge of the Geographical Society of Lima, in consequence of the favorable report upon the Raimondi archives submitted by a special examining committee, of which Ernesto Malinowski was chairman. According to this report, the materials fully warranted the publication of the work in six grand divisions as planned by Raimondi. In addition to the matter contained in the introductory volume, and the two volumes relating to the geography of Peru already published, there is ample material for the completion of this section. The separate sheets for the great map of Peru are well under way, sixteen having so far been printed by the house of Erhard Frères of Paris. These have been drawn by Baluarte of Lima, and it is doubtful if more exquisite examples of the cartographer's art have ever been produced. Their accuracy, of course, leaves much to be desired, but they are so nearly correct that there is no occasion for a competing map of Peru until a painstaking geodetic survey shall have been made.

In the department of geology some maps and cross-sections have been drawn, and the notes are ample for the rest. There are folios in the Raimondi archives describing 708 samples of rocks, with many analyses, and, in spite of the well-known paucity of the Andean rocks in fossils, Raimondi has gathered 2,000 specimens. A considerable number of these have been described and illustrated by William M. Gabb, in an article forming Part 3 of vol. viii. of the Journal of the Academy of Natural Sciences of Philadelphia.

In the section of mineralogy much has appeared in print in the volumes on Ancachs and the Minerals of Peru. In addition five folio volumes are written, describing 2,994

specimens. A number of boxes of unclassified specimens still remain unopened in the Museum of the School of Medicine. The botanical department is especially rich. The herbarium contains 149 folios, with 20,000 specimens, besides which there are 160 boxes full, of unknown value, and 500 specimens of seeds, barks, gums, resins, etc. This is the portion of the work nearest ready for publication, a large number of colored sketches for illustration being also prepared. The zoölogical collection comprises 1,500 examples of birds, reptiles, and mammals, 4,000 insects, and 500 molluscs. Some of the birds have been figured and described in Ladislao Tavzanowski's work on '1,349 Birds of Peru,' but Raimondi's collection includes many species still unknown to science.

The ethnological department may appear somewhat scanty in materials, containing only 300 objects, but it is peculiarly interesting, and includes 72 skulls which are representative of almost as many different types and epochs. The difficulty of securing craneological specimens, by no means small in any part of the world, is extremely great in Peru, where the Indians regard the sepulchres of their ancestors with a superstitious veneration, and also with a sort of superstitious horror, which extends itself to the persons of those who have been known to enter the caves which, in the Andes, have frequently been selected as repositories for the dead. They will seriously tell of the baleful influences of the "vapores de los difuntos," describing the rheumatic pains and gradual drying up of the body of the desecrator of tombs, ending in death. But it is interesting to note how the greed for gold can assuage even the superstitious Indians' fears, for they will often search these old caves for buried treasure, at the same time seeking to pacify the anger of the "difuntos" by placing fresh quids of coca-leaves between their grinning jaws. They will, however, remain steadfast against explorations, even in the face of liberal offers of pay, and the scientific investigator will often require a guard of soldiers to protect him from the rage of the populace.

The Raimondi archives also contain seventy copious volumes of notes — jottings taken throughout the course of his studies, and written to a large extent in a most abbreviated form. The editing committee of the Geographical Society of Lima, with Dr. Francisco Rosas at the head, began very properly with the work of classifying and writing out in full this chaos of notes, and by the end of 1892 sixteen of these volumes had been thus classified. A systematic plan for continuing the work had also been reached, according to which 'El Perú,' when complete, would consist of twenty volumes.

Unfortunately, the bright prospects which had been encouraged by the arrangement of the national debt with the Peruvian Corporation, Limited, in 1889, began to darken as the financial depression of 1891 spread over the world, and the Government of Peru was forced to withdraw its support of a purely scientific enterprise such as the publication of the works of Raimondi, and the outlook for halcyon days when Government bounty may flow again for the advancement of knowledge is certainly not encouraging. It is a fair question to put before the scientific world, whether the labors of Raimondi, the most exhaustive that have been made within the equatorial belt of South America, shall lapse into a mere record of fruitless effort, or whether they shall be rescued before time has swallowed them up in oblivion. It is matter of history, which should not be repeated, how the studies of a decade by Jussieu, the naturalist of the classic company of Academicians which visited the equatorial Andes near the middle of the eighteenth century, were swept away in a single night by a pilfering wretch in Buenos Ayres; and again how the noble efforts of Charles III. (who found time in the midst of putting down Jesuits, and bridling inquisitorial courts, and striving to undo the mischief of centuries of war and adventurous voyaging after enchanted isles and El Dorados by encouraging habits of industry, to send a scientific expedition to Peru) were frustrated, leaving nothing but four quarto volumes and a mass of moldering material in the Botanical Garden of Madrid to show for it all, in spite of the fact that the people of Spanish America had generously contributed 50,000 ducats towards the completion of the work.

It must be admitted that a like fate seems to threaten the labors of Raimondi, unless aid shall be extended from beyond Peru. Rather than encourage some new enterprise, would it not be a more fitting thing for one or more of our great scientific associations to join hands with the Geographical Society of Lima and the Peruvian people, and secure for the good of the world the fruits of a great life-work, which only needs to receive the finishing touches to render it available? It would surely be an appropriate act of that universal brotherhood of science of which we are wont to hear so much, and which needs to be quickened ever and anon by such deeds of generosity.

COURTENAY DE KALB.

BARRAS'S MEMOIRS.—IV.*

PARIS, July 4, 1895.

THE second volume of Barras's Memoirs is full of details respecting what may be called the domestic life of the government of the Directory; its gossip makes one think at times of the conversations and stories of the servants in some great house. It is instructive, however. The Minister of Police insists on knowing what is said at the most private dinners: "Minister Cochon, whose zeal is never wanting, informs us that Gen. Brune, Talleyrand, Bishop of Autun, his former vicar Desrenaudes, Maret, Semonville, and others have had a mysterious dinner. The guests deplored the severity shown to the émigrés. . . . Talleyrand pronounced himself against the émigrés, and said that they must be shadowed; that examples must be made of them. Maret and Semonville spoke in the same spirit. These three men think of creating for themselves a national title, and of getting indemnities and offices from all the succeeding governments." These words explain Talleyrand's attitude at the time of the tragic event of the arrest and execution of the Duke d'Enghein. Barras and Carnot were not as hard on Talleyrand as Rewbell, who said of him, Maret, and Semonville: "They are three miserable intriguers, enraged liars. . . . I don't believe much in the reports of the police, but there is nothing so bad that I do not think them capable of it."

The police of the Directory were as active in Italy as in France. One of their agents was Clarke, a nephew of Shée, an Irishman who had been secretary of the Duke d'Orleans, and who became minister under the Empire. "Instead of remembering that he was the agent of the Directory, Clarke began by making himself the agent of Bonaparte; he showed him his secret instructions. He addressed to the Directory a list of the generals employed in the army of Italy, with his notes. The observations which accompanied this list represented Augereau, Masséna, and Lannes as robbers capable of all possible exactions." Bonaparte was very careful of the press. "He was, through the intermediary of Regnaud de St.-Jean-d'Angély and other agents whom he had in the army, in relation with all the papers of Paris, as he was the master of all the papers of Italy." Some police reports sent to the Directory by Cochon, the Minister of the General Police, are given at great length in the Memoirs. They show how preoccupied the Directory was with the movements of the royalist agents and partisans.

The Minister of Justice was Merlin de Douai, a former member of the Convention.

"It must be confessed," says Barras, "that he was a very valuable minister of justice, and a wonderful help in the difficult times when it is necessary to give to the judiciary all the resources of its forms and even of its subtleties. This homage was more than once rendered to him by Bonaparte, when he was Commander of Paris, after the 13th Vendémiaire. Bonaparte had already no scruple about proclaiming that the laws were only an embarrassment, and that it was impossible to govern without arbitrary measures. He once said at my table as a pleasantry of the dessert: 'Whenever I do something arbitrary by night or by day in my command, and when I am obliged to overstep my authority, I go and see Merlin; I ask him to find me some law, ancient or modern, to cover me; he reflects a moment, and in less than no time he finds an answer in his head or he puts his hand on the volume and the page. This excellent Merlin never leaves me embarrassed; he is Merlin the Magician.'"

Bonaparte did not forget this extraordinary merit of Merlin when, later, he had to build up his despotism.

After the battle of Rivoli a new campaign was prepared against Prince Charles of Austria. The Directory sent to Italy a division of the army of the Rhine, which, under Bernadotte, crossed the Alps. Bernadotte's troops had the severe aspect of the army of the Rhine, "while," says Barras, "the soldiers of Bonaparte had the aspect of enriched banditti, living in luxury. One of the noisy chiefs of this army, who became afterwards King of Italy, did not content himself with the *sans-culottisme* of manners and of dress; he wished to bear honorific Jacobin names; he added to his own name of Murat the name of Marat." This curious detail has lately been confirmed by the publication in a French paper of a letter found in the archives of the ministry of war, a letter in which Murat asked permission, after the death of Marat, to change his name to that of Marat. He was obliged to content himself with the addition of it. Bonaparte's soldiers called Bernadotte's *messieurs*, which was then an insult. "Gens. Masséna and Augereau proclaimed, in their orders of the day, that whoever in their divisions used orally or in writing the term *monsieur*, should lose his grade and be declared incapable of serving in the armies of the Republic. These orders were read at the head of each company."

The army crossed the Tagliamento, and Barras will have it that this passage, one of the decisive feats of the campaign, was the work of Bernadotte. It is a little childish to try constantly to minimize the merits of Bonaparte as a general. History has a crushing answer to make to Barras; his spite reminds one of the serpent gnawing the file. At Venice, Bonaparte seized the correspondence of a royalist agent, D'Antraigues, and sent it to the Directory. D'Antraigues, whose life has recently been published, served in Venice

* 'Memoirs of Barras, Member of the Directorate.' Volumes i. and ii. Harper & Bros., 1895.

at the same moment Louis XVIII., the King of Spain, the English Cabinet, and the Russian Government. Barras seems to believe that his arrest was not quite involuntary, as he thought more money was to be got from the French commander in Italy. "Conducted to Milan, he was treated there with marked politeness; he had several interviews with General Berthier, and was afterwards received by the General-in-chief. Bonaparte at once saw in this intriguer an excellent instrument for the execution of his satanic combinations against his personal enemies. It was under the dictation of Bonaparte that D'Antraigues wrote the memoirs which Berthier had copied, and which Bonaparte afterwards flaunted as having been found in the portfolio of D'Antraigues." It is, alas! the misfortune of exiles to use unworthy instruments; D'Antraigues was not the worst of those men who, consciously or unconsciously, paved the way for the misfortunes of Pichegru, Moreau, the young Duke d'Enghien.

When the Directory received the portfolio of D'Antraigues, great alarm was felt; in one of the reports was read the conversation of two royalist agents, Fauche-Borel and Courant, with Pichegru, at his headquarters at Altenkirchen. Fauche was said to have offered to the commander-in-chief of the Republican army the grade of marshal of France, the two cordons, red and blue, the governorship of Alsace, the castle of Chambord, a million in cash, 200,000 francs income, a hotel in Paris, without counting many minor favors. It was said in the report that Pichegru had patiently listened to all these offers, and had finally said: "I will cross the Rhine, raise the white flag, unite my troops to the Imperial army and that of Condé. I will march on Paris. But if you want my men to scream 'Vive le Roi!' you must give them wine and money." Barras does not believe that Pichegru meditated treason; he sees in that report only the assertions of subordinate agents; no paper has been produced bearing the signature of Pichegru. "Shall we believe," he asks, "in accordance with the version of Fauche-Borel, that the Prince de Condé, in negotiations of this importance, refused from the beginning to qualify Pichegru as general? It is not proved any more than the rest, though the incapacity, one might say without exaggeration, the political stupidity, of the Prince de Condé would allow us to credit many traits of this sort, exhibited by men living with their heads in a bag, ignorant of human affairs, following only their fixed idea, which is the idea of their own inviolability and of the world's respect for their august station."

The Directory was divided as well as the two councils. A change of ministers was imminent, and Talleyrand was watching for his opportunity. He had been elected to the Academy, he had founded a so-called Constitutional Club. "He told the Constitutionals that he had always been one of them, the Bishop of Autun, the friend of Mirabeau; to the Girondists he professed to have been a Girondist, to the Dantonists to have owed his life to Danton at the time of the 10th of August; to the partisans of Robespierre he said also, but in a low voice and in their ear, that there was something good, even excellent, in Robespierre, that he was, after all, a part of what was most estimable in the Revolution." Talleyrand always had active lieutenants; he had then Desrenaudes, who took care of his private affairs; he had, for the press and the general public, a very gifted man, Benjamin Constant, who was ambitious to rise in the political world; he had Madame de Staël, the most ardent and active of friends, who had given Constant to him. It had become the dream of Madame de Staël to make a new ministry. She had often seen Barras between the 9th Thermidor and the 13th Vendémiaire. Her first care had been to have the name of Necker, her father, effaced from the lists of the émigrés. "So far it was all filial; nothing more legitimate and sacred. Now Madame de Staël wished to make a minister." She was sent to Barras by Talleyrand; she had often spoken to him of Talleyrand, and finally she asked leave to present him to him. "They were introduced together. Madame de Staël came forward, followed by the limping Talleyrand. I had never seen this personage, already famous under two régimes, and who was to be so under many others." Barras was not happy, it would seem, in finding resemblances. We have said that the first time he saw Bonaparte, he thought of Marat. Talleyrand's face made him think of Robespierre—"a sharp-boned, short face, an up-turned nose, a wicked and dry mouth, and, with these natural features, the like accompaniments of art—the powdered hair, the stiff and motionless attitude."

Mme. de Staël, after this first interview, with her usual ardor, pressed Barras to employ the gifted Talleyrand, describing him as particularly devoted to him. In a moment of enthusiasm, she said, "He has all the vices of the old and of the new régime; he will always have a footing in all parties; you could not have a more useful agent. As for you, Citizen Director, he has for you an affection, an esteem, a regard, which makes him look upon you as something 'superhuman.' Who is there better and greater than you? You are a great politician without pretending to be one; you are a great soldier—you proved it at Toulon and in Paris, in battles more terrible than those of the frontiers, and which would have terrified Turenne and Condé; . . . you are a true statesman, and, above all, you are a simple and modest man, who does not vaunt himself. Barras, you are not only great, you are handsome, you are like the Apollo Belvedere, from head to foot." The rest of the conversation must be read in the text; it is almost nauseating. How much truth there is mixed up with voluntary error, it is difficult to say or even to imagine. Mme. de Staël made several such attempts. One day she told Barras that Talleyrand was going to throw himself into the Seine if he was not made Minister of Foreign Affairs, that he had only ten louis left, no house of his own, was forced to seek the hospitality of his friends. "Talleyrand will drown himself if you don't make him Minister." Talleyrand did not drown himself, and was made Minister. The student of history will do well to compare with Barras's account what Talleyrand says himself in his Memoirs. "While Mme. de Staël was crying and stamping her feet, I knew," says Barras, "that the phlegmatic and motionless Talleyrand was waiting in her carriage."

Mme. de Staël has suffered much of late from various publications; but nothing has hitherto appeared more detrimental to her character as a woman. Fortunately for her, Barras is an enemy whose utterances must always remain more or less suspicious. His Memoirs will be a perpetual riddle to historians of the documentary school.

Correspondence.

NORDAU'S INACCURACIES.

To the Editor of the Nation:

Sir: While denying that I am worth answering, Dr. Max Nordau devotes nearly nine pages of the current *North American Review* to an answer to my five-page criticism of him in the June number of that periodical. My original characterization of him was that he is violent, arrogant, inaccurate, and inconsistent, and that he is deficient in humor, and unable to comprehend art. His answer is in itself an exemplification of most of these defects, and I shall not trouble myself to say anything further about them. As, however, he has tried to show that it is I that am inaccurate (ignorant and untruthful is his way of putting it), a few words more from me may be excusable.

The instances of his inaccuracy which I cited were seven in number. As regards only one of these does he make out any case. He quotes, from a poem of Rossetti's, lines which imply that Rossetti was baptized by the name of Dante. W. Bell Scott states in plain prose that Rossetti signed himself in 1847 Gabriel Chas., and that he adopted the Dante later. In this instance there is a conflict of authorities, and the question is one of the credibility of testimony. Let us see what Dr. Nordau's defence amounts to in the other instances.

"In the year 1843 . . . Ruskin *began to publish the feverish studies* on art which *were subsequently* collected under the title of 'Modern Painters'" ('Degeneration,' p. 78).

This has now become a statement that the book "grew out of individual studies," which is very different. The first volume of 'Modern Painters' was published in 1843. When was the "subsequent" collection?

"The Pre-Raphaelites . . . got all their leading principles from Ruskin" (p. 81).

The proof of this, now given, is that Holman Hunt read 'Modern Painters,' and was much impressed by it. Who denies that? But it is well to remember that Ford Madox Brown was the master of Rossetti and the first Pre-Paphaelite, although he never accepted the name, and that his first great picture, "William the Conqueror," was exhibited in London in 1843, the year that 'Modern Painters' appeared.

"They, however, raised it to the position of a fundamental principle that in order to express devotion and noble feeling the artist must be defective in form" (p. 81).

Here the proof offered becomes truly amazing. In the book itself Nordau quotes certain passages from Ruskin, and says: "The Pre-Raphaelites . . . *went further*. They misunderstood his misunderstandings. He had simply said that defectiveness in form can be counterbalanced by devotion and noble feeling in the artist." And then follows the passage I have already quoted. In the face of this accurate statement of what Ruskin did say, he now has the assurance to quote these identical passages from Ruskin as proof of his own assertion that the Pre-Raphaelites believed something else.

His statement that Rossetti "soon exchanged the brush for the pen" he defends by the new statement, almost equally inaccurate, that in his later days that artist "scarcely ever painted and never exhibited." Surely every one but Dr. Nordau knows that Rossetti painted to the end of his life, and sold his pictures as fast as they were painted, not needing

to exhibit them. Nordau also maintains the accuracy of his description of Hunt's "Shadow of the Cross." I am accustomed to judge of pictures by looking at them and not by reading of them, and hence our difference. If Dr. Nordau will look at the picture, he will see that the Christ is palpably *stretching himself* as a rest from his labor, and that the shadow, cast by a nearly level sun, is not on the floor, but on the wall. Will he kindly quote the passage in which "the painter . . . maintained that Christ was painted in an Oriental attitude of prayer"?

Dr. Nordau denies that he spoke "of the 'P. R. B. Exhibition' of 1849 as if it were a separate exhibition of the brotherhood alone." Let us see. His account is as follows:

"In the spring of 1849 they exhibited in London a number of pictures and statues, all of which, in addition to the signature of the artist, bore the common mark P. R. B. The result was crushing. Hitherto no hysterical fanatic had tyranically forced on the public a belief in the beauty of these works, nor was it as yet under the domination of the fashion, invented by æsthetic snobs, of considering their admiration as a mark of distinction, and of membership of a narrow and exclusive circle of the aristocrats of taste. Hence it confronted them without prepossession, and found them incomprehensible and funny. The contemplation of them aroused inextinguishable laughter among the good-humored, and wrath among the morose, who are nettled when they think themselves made fools of. The Brotherhood did not renew their attempt; the *P. R. B. exhibition* was never repeated; the league broke up of itself. Its members no longer added the shibboleth of initials after their names."

I submit that the words I italicize imply that there was a distinctive "P. R. B. exhibition" in 1849. That, however, is a question of little importance. What is more important is, that the paragraph given above is a tissue of misstatements from one end to the other. Since Dr. Nordau has accused me of being ignorant, among other things, of M. de la Sizeranne's recent volume on 'La Peinture Anglaise Contemporaine,' I will take from that book some authentic facts about the Pre-Raphaelite movement. In the spring of 1849 Millais and Hunt sent to the Royal Academy their pictures of "Isabella" and "Rienzi," and Rossetti exhibited his "Childhood of Mary Virgin" at the Chinese Gallery. So far from arousing "inextinguishable laughter" or "wrath," the pictures of Millias and Hunt were well placed, the artists "received many felicitations," and the *Times* "était bienveillant." "Leur réalisme ne choquait nullement le public," and they found buyers. "Personne n'avait remarqué . . . les mystérieuses lettres P. R. B." It is so far from true that "the experiment was never repeated" that it was repeated the very next year, and it was apropos of the pictures exhibited in 1850 that the paroxysm of execration really broke forth. The art which had been admired when "confronted without prepossession" was now damned when the existence and name of the Brotherhood were revealed. In 1851 the Pre-Raphaelites again exhibited (always with the exception of Rossetti) at the Royal Academy, and "le déchaînement ne connut plus de bornes." It was then that Ruskin came to their defence and turned the tide effectually in their favor. The artists of the Brotherhood soon took and retained their place among the most successful of British artists. It was in 1856 that a real "P. R. B. exhibition" was held, "une exposition exclusivement préraphaélite qui venait de rassembler les principales œuvres de la confrérie," and at this exhibition Rossetti reappeared before the public and "fut salué d'enthousiastes applaudissements."

The first sentence of Dr. Nordau's account of Pre-Raphaelism is absolutely all that remains of it as a statement of fact.

Dr. Nordau concludes his answer to me by saying that my "arguments" are "hair-splitting" and "do not even touch his thesis." I made no arguments and did not combat his thesis. Personally, I am inclined to share his ill opinion of many of the "new movements" in art. My effort was to show that a person so ignorant or so reckless has no right to express any opinion whatever on matters of art, and in this effort I think I have succeeded.

KENYON COX.

JULY 10, 1895.

DAVIS'S EGYPTIAN BOOK OF THE DEAD.

TO THE EDITOR OF THE NATION:

SIR: Late last year there appeared from the press of G. P. Putnam's Sons a large work entitled 'The Egyptian Book of the Dead,' by Charles H. S. Davis, M.D., Ph.D. The only portion of this book which lays claim to being original consists of the first four chapters, containing a treatise on Egyptian religion. A large portion of these ostensibly original chapters is a flagrant plagiarism, taken chiefly from Renouf's Hibbert Lectures of 1879, but also from Maspero's 'Études de Mythologie et Archéologie Égyptienne,' Paris, 1893. The following is an example:

(Davis, p. 20.)	(Renouf (2d ed.1,884), pp. 113–114.)
Horus also is one of the names of the sun, and had his myths quite independently of Râ or Osiris. An ancient text speaks of him as "sitting solitary in the darkness and blindness." He is introduced in the royal ritual of Abydos, saying, "I am Horus, and I come to search for mine eyes." According to the 64th chapter of *The Book of the Dead*, "his eye is restored to him at the dawn of day."	But Horus also is one of the names of the sun, and had his myths quite independently of Rā or Osiris. . . . An ancient text speaks of him as "sitting solitary in the darkness and blindness." He is introduced in the royal Ritual at Abydos, saying, "I am Horus, and I come to search for mine eyes." According to the 64th chapter of the Book of the Dead, "his eye is restored to him at the dawn of day."

Many columns of equally convincing examples could be added if space permitted and the book were worth the trouble. Any one who is not convinced may compare the following parallel passages, which are not less striking than the above. (D.—Davis, R.—Renouf). D. p. 24—R. pp. 110-111; D. p. 15—R. p. 109; D. pp. 23-24—R. pp. 116-117; D. p. 57—R. p. 176; D. p. 46—R. p. 148; D. p. 47, foot-note—R. p. 149, foot-note (in this foot-note, Davis mistakes Renouf's ii—*i. e.*, Roman 2—for 11, and thus makes Lepsius's 'Denkmaeler' contain eleven parts. The veriest tyro knows that it contains only six, but Mr. Davis makes the same mistake in the very next note, showing that it was not an oversight). This is not the only instance in which foot-notes have been adopted bodily from Renouf, *e. g.*, D. p. 61, foot-note—R. p. 173-174. I have a copious supply of further references, but the above will suffice.

In conclusion, these chapters are simply a compilation from various hastily and carelessly consulted sources—a compilation which for lack of critical judgment, for inaccuracy, and superficiality, has never been equalled. It swarms with blunders so incredibly numerous on every page as to beggar description; even the hieroglyphic title of the Book of the Dead on the cover, though it contains but three words, has one of them written incorrectly; and the name of Pierret, from whom Davis's version of the 'Book of the Dead' is taken, is many times spelled Pierrot.

Very truly yours,

JAMES HENRY BREASTED.

THE UNIVERSITY OF CHICAGO, July 4, 1895.

A "CHARACTER" OF THOMAS PAINE.

TO THE EDITOR OF THE NATION:

SIR: In the extensive series of facsimile documents now in course of publication by Mr. B. F. Stevens, appears a paper of characterizations of prominent Americans, prepared quite possibly in 1778 for the guidance of the British Commissioners of Conciliation. The "revival" of Paine gives interest to following, although there relegated to a vertical position in the margin:

"Mr. Payne—The Editor & part author of Common Sense, should not be forgot. He is an English man, was a School-master in Philad[a] must be driven to work—naturally indolent —& led by His passions."

H. A. CUSHING.

COLUMBIA COLLEGE.

Notes.

E. & J. B. YOUNG will shortly bring out 'The Bible and the Monuments: The Primitive Hebrew Records in the Light of Modern Research,' by W. St. Chad Boscawen.

D. Appleton & Co. publish this month 'Gustave Flaubert, as seen in his Works and Correspondence,' by John Charles Tarver.

From Henry Holt & Co. we may presently expect 'Kafir Stories,' by William Charles Scully.

S. C. Griggs & Co., Chicago, will soon publish 'Twenty-five Letters on English Authors,' an unconventional text-book, by Mary Fisher.

The fifth volume of the Works of Edgar Allan Poe, edited for Stone & Kimball, Chicago, by Edmund C. Stedman and Prof. Woodberry, is composed of tales of adventure and exploration. The frontispiece is a photograph of the portrait of Poe by Oscar Halling.

From Macmillan we have a new volume in the delightful Defoe series edited by George A. Aitken, being 'The Life, Adventures, and Piracies of the Famous Captain Singleton'; and a reprint of James Morier's 'Adventures of Hajji Baba of Ispahan,' a novel of Persian manners dating back to 1824, and called by Mr. Curzon, who supplies an introduction, an "immortal book." Mr. Curzon furnishes a key to some of the contemporary historic personages of these pages.

We gladly note the appearance of that admirable book of reference, 'Burdett's Hospital and Charities Annual for 1895' (Scribners). It has been thoroughly revised, as usual, and one turns to it not only for statistics, including the personnel, of the various foundations all over the world, but also for valuable information regarding hospital and charities economy.

The value of Foster's 'Physiology' and the convenience of a single volume are attested by the existence of unauthorized American reprints of the work in that form. Macmillan & Co. have recently issued a volume revised by the author, and containing in its 1183 pages the illustrations and the text of the five-part edition, omitting, as stated in the preface, "all the histological matter and all discussions of a

too theoretical nature." There is also omitted the Appendix, constituting Part V., on the "Chemical Basis of the Animal Body," by A. Sheridan Lea. It is interesting to compare this portly volume with its prototype of 1876. That the physiologist is affected, perhaps unconsciously, by the present tendency toward improvement of anatomical terminology appears in the chapter on the spinal cord, where the ambiguous *anterior* and *posterior* are replaced by *ventral* and *dorsal*, and the latter itself by *thoracic* as designating the intermediate region of the organ. The index is less complete than is desirable for a text-book. A search therein for the half-dozen pages in which are admirably discussed the behavior of a decerebrized frog, commonly known as the "Goltz balancing frog," was vain so far as concerned those three words and several others that would naturally be employed.

The curators of the Taylor Institution at Oxford have recently responded to a memorial asking that the University afford opportunity for a systematic study of the works of Dante, by appointing, as lecturer on Dante, Dr. Edward Moore, Principal of Saint Edmund Hall.

The first instalment of an exceedingly important work, 'Il Codice Diplomatico Dantesco,' is about to be issued under the auspices of the Italian Dante Society. The entire work, which will appear in about twenty parts, at the price of fifteen lire each, will consist of photographic facsimiles of all documents bearing on the life of Dante and his family, together with critical notes by Guido Biagi and G. L. Passerini, and reproductions of various works of art that have close relations to the same subject. The larger part of the first instalment is taken up with the much discussed document relating to Dante's embassy to San Gemignano. Subscriptions for the series should be sent in care of E. Loescher & Co., Corso 307, Rome.

'The Influence of Dante on Modern Thought' is the attractive title of an essay by H. Oelsner, which took the Le Bas Prize in 1894, and is now published by T. Fisher Unwin. Interesting as the subject is, however, and capable as it is of brilliant treatment by one versed in the history of literature and alive to the vital points of Dante's influence, it becomes in Mr. Oelsner's hands a mere opportunity for the display of the scattering results obtained from industrious but desultory reading. The subject should still recommend itself to thoughtful students.

Two parts have already been issued of the first volume of a 'Bibliografia Universale del Teatro Drammatico Italiano, con particolare riguardo alla storia della Musica Drammatica,' compiled by Carlo Salvioli, on the basis of a large body of notes left by his father, supplementing and correcting the 'Drammaturgia' (1755) of Leone Allacci. The work, which is to be completed in four or five volumes, aims to give full bibliographical information (alphabetically, by titles) of all plays printed in Italian from the earliest times to the present day, including the opera and similar musical productions. A supplementary volume will contain the necessary indexes and other important matter. The price of the first volume is twenty-five lire. The paper and printing are not particularly good, and the work is not sufficiently advanced to be judged in detail; but an examination of the parts already published shows it to be of value to libraries and to students and collectors of dramatic and musical literature.

The 'Jahrbuch der französischen Litteratur' (Zittau: A. Haase), which is the work of Prof. M. Mayr, consists of brief notices of the various novels, volumes of poetry, and plays which have appeared during the year in France. It is a useful little work within its range.

'La Nouvelle Sorbonne' (Paris: Armand Colin & Cie.) is a detailed account of the planning and building of the new edifices required by the increased needs of the famous old institution. The book is written by the architect himself, M. H. P. Nénot, and is of great interest to others than professional men. It is plentifully illustrated with plans and cuts.

The third volume of M. Gustave Larroumet's 'Études de littérature et d'art' (Paris: Hachette) opens with an article on the now famous theatre at Orange and the superb performances of "Œdipus Rex" and "Antigone" given there last summer. M. Larroumet, like all true artists, wants the theatre restored and consecrated to the performance of the immortal Greek tragedies and also of the finest of the French classical tragedies. The article on Victor Hugo is interesting in its exposition of the poet's influence on decorative art, and is based on a full description of Hauteville House. The chapter on Dumas *fils* treats of the continued interest of the master's work, and places him above all other dramatic writers in France in the nineteenth century. There is also a careful study of Paul Bourget, fuller and more satisfactory than most of those which have as yet appeared. The critical appreciation of the work of Puvis de Chavannes has an immediate interest for American readers in view of the share about to be taken by the painter in the decoration of the new Public Library of Boston.

We have already commented on Mr. Samuel A. Green's list of early American imprints in the library of the Massachusetts Historical Society. This list may now be studied in the new volume of Proceedings of that society, of which it fills 130 pages. Other salient matter is in the nature of obituaries of a large group of eminent deceased members—Dr. O. W. Holmes, Prof. H. W. Torrey, Robert C. Winthrop, Rev. George E. Ellis, Judge E. R. Hoar, Henry Wheatland, Edwin L. Bynner, and Edward J. Lowell. Portraits of most of these are given; and the likeness of Mr. Lowell to the poet can hardly fail to be remarked.

Mr. John T. Hassam, a member of the same society, has reprinted from its Proceedings for May a paper on "The Confiscated Estates of Boston Loyalists" (the Society's building stands on one of these). Mr. Hassam has compiled and tabulated his data from the records in the Suffolk Registry of Deeds. His alphabetical lists of the absentees in 1778, and of the despoiled Loyalists, accompanied by descriptions of the property, the names of the purchasers, and the Liber and folio of the record, are certain to be much consulted.

The Quinquennial Catalogue of the officers and graduates of Harvard University, 1636–1895, marks by its bulk the steady growth of the university, and this increased size compels a higher charge—for a paper copy $1.50 (or $1.65 postpaid); for a bound copy $2.00 (or $2.20 postpaid). The Catalogue can be had of the Publication Agent of Harvard University. The asterisk is so cautiously applied to those alumni whose death cannot certainly be established, that it is refreshing to find a member of the class of 1842 resuscitated in an inserted correction.

In the *New England Historical and Genealogical Register* for July, Judge Richardson discusses the question of the proper title of the presiding Justice of the Supreme Court. He concludes, as between Chief Justice of the United States and Chief Justice of the Supreme Court of the United States, "that both titles are correct, or that neither is wrong. They are synonymous." But Chief Justice Fuller was the first person to be nominated, confirmed, and commissioned as "Chief Justice of the United States." The investigation throws a curious light on Chief Justice Chase's sense of his own importance, as "always a watchful guardian of the dignity and powers of any office which he held." An obituary notice of the late Daniel Ravenel of South Carolina, member of a Huguenot family for six generations in that State, recalls Mr. De Forest's lively war-story, 'Miss Ravenel's Conversion from Secession to Loyalty.'

The annual address of Mr. C. R. Markham before the Royal Geographical Society, which is published in the *Geographical Journal* for July, is mainly devoted to showing the intimate relations between history and geography. Incidentally he suggests the adoption of a scheme of geographical education, England being still behind other countries in teaching this science, and he closes with an urgent appeal for the despatch of an Antarctic expedition, "a necessity from the point of view of terrestrial magnetism alone." There are also in the *Journal* the usual records of the Admiralty and Indian Surveys for the past year, and a report of the interesting addresses at the Franklin commemoration, to which we have already directed attention. Pure science is represented by Dr. H. R. Mill's paper descriptive of his bathymetrical survey of the English lakes, which is illustrated by maps and pictures.

—Mr. Andrew Clark of Lincoln College, who has just abandoned Oxford for the rural quiet of a college living, has uttered his "swan's song" as an antiquary in the form of a volume of "Addenda" to his 'Wood's Life and Times, 1632–1695,' issued by the Oxford Historical Society (New York : Macmillan). It opens with a more complete set than has hitherto seen the light of the documents connected with the suit for libel in which Antony Wood managed to involve himself by his free comments on the conduct of the first Earl of Clarendon ; and as this, curiously enough, seems to be the only suit of any importance in the Chancellor's Court for which the papers have been preserved, it has some general interest as indicating the form of procedure in academic tribunals. Next follows a heavy sheaf of "additional notes," taken from the yearly accounts of the Vice-Chancellors and Proctors, up to this time unutilized for historical purposes. And then the greater part of the volume is occupied by a systematic catalogue of Wood's MS. authorities, which it must have cost infinite patience to disentangle from his very imperfect references. The book is a fitting conclusion—we hope not a final conclusion, after all—to labors which have given us not only the three volumes of 'Wood's Life' collected from his diaries, and the new edition in two fat volumes of Wood's 'History of the City of Oxford,' but also the four "Parts" of the University Register for 1571–1622—the only trustworthy authority for Elizabethan Oxford. Mr. Clark deserves a place as an Oxford antiquary—and to him there can scarcely be higher praise—by the side of and on a level with Antony Wood and Brian Twyne.

—Another Oxford book of much the same character is lying upon our table. For many years past every one who has engaged in palæographical work in the Bodleian Library has been in the habit of falling back in any difficulty of deciphering upon the kindly courtesy

and learning of the "Special Assistant in the MS. Department." Mr. Macray represents a type now almost extinct in Oxford—the scholar who from boyhood to advanced age has worked within academic walls. Speaking of Magdalen College chapel, he tells us it was his "delight as a clerk to take part in its inspiring services, his honor as a chaplain to lead them." A few years ago his college did him the proper honor of election to a fellowship, and he has now undertaken the congenial task of preparing (upon the basis of material gathered by Dr. Bloxam) a register of the members of Magdalen College from its foundation in 1458. The first volume (London: Frowde; New York: Macmillan) begins with the Fellows, and brings the list down to 1520. It is really a collection of biographical notes, gathered chiefly from the college records; and as the list happens to include few men of mark, except Wolsey and Starkey, this part of the work appeals but little to the outside world. It is preceded, however, by an abstract of the proceedings in the Visitations of the college in 1506 and 1520, which gives one an insight into the internal life of a great clerico-academic foundation just before the Reformation. The charges of gross immorality which we here find so freely made seem to have had little or no basis; but we cannot help feeling that even under the shadow of Magdalen's wonderful tower there was a great deal of petty spite and simmering irritation. That this would not be an uncommon case with little societies of celibates, thrown together half-a-dozen times a day, may be guessed by any one who knows anything of human nature; and that it did not cease with the sixteenth century will occur to every reader of Mark Pattison's 'Memoirs.'

—Despite the fine scorn of the Levites of culture for "Greek through English," there is really no reason why those who are compelled to admit with Mr. Spencer that they know nothing of the Greek and Latin classics in the original should reëcho his boast, "and very little in translation." Reading Homer or Plato in Butcher and Lang or Jowett is not the same thing as reading them in the text, but it is far better than not reading them at all—better, perhaps, as some of us are finding courage to say, than reading the original without intelligent enjoyment, and using it only as an exercise ground for grammatical pedantry. But the student of translations is liable to be baffled by allusions and puzzled by turns of phrase which the scholar takes for granted, and for the elucidation of which he has no learned apparatus at hand to consult. A good translation, moreover, necessarily sacrifices something of the meaning of the original to the exigencies of English idiom. In such cases the frigid stream of the commentary may act as a sort of condenser to recollect a portion of the evaporated sense. Mr. Walter Leaf's 'Companion to the Iliad,' published a year or two ago, was designed to meet these needs in the case of students of Homer, and the success of that work has induced Mr. Bernard Bosanquet, favorably known as the author of a 'History of Æsthetics,' to prepare a similar 'Companion to Plato's Republic' (Macmillan). The best judges of such a book would be the readers for whom it is intended, or some teacher who has actually worked through the 'Republic' in translation with a class unacquainted with Greek. The work appears to have been judiciously and conscientiously done; the commentary is free from pedantry and irrelevant metaphysical subtlety, and presents, in the language of the preface, about "the sort of interpretation which a tutor at Oxford or Cambridge would probably lay before his pupils."

—Mr. W. H. Forbes's edition of Thucydides, of which parts i. and ii. have lately been issued by the Clarendon Press (Macmillan), will furnish, within certain limits, a very complete and satisfactory apparatus for the study of the great historian in the original. It is meant for the use of "readers in the universities and the upper forms of schools"; but it promises to turn out a highly serviceable and convenient edition for the library of any gentleman and scholar who is more interested in the interpretation and illustration of the author than in questions of textual criticism. Mr. Forbes does not pretend to offer a new text, adopting Bekker's with few changes; but in all questions as to the meaning of his author, the style and construction, the antiquities, topography, and history, he has availed himself with judgment and thoroughness of the latest and most valuable sources of information. For example, the discussions of the topography of Platæa and of the fortifications of the Peiræus are based upon personal inquiries and the reports of the most recent explorations by the British and American schools. Notwithstanding the praiseworthy endeavor to sift and condense as much as possible, the scale of the illustrations in these earlier parts is certainly a generous one: the notes and apparatus to book i. occupy 169 pages, the introductory essays, 132. These latter treat, in a sober and judicial spirit, of the life and mind of Thucydides, his trustworthiness as an historian, and the characteristics of Greek prose literature previous to and contemporary with his era. The last of these contains specimens of the early chroniclers, as well as of Gorgias, Hippocrates, and Democritus, which reveal to a certain extent the contrast and resemblances between Thucydides and the writers of his own epoch. Mr. Forbes does not bring out the strong probability that the contortions of Thucydides's periods must sometimes be referred to a perverted rhetorical taste deliberately and painfully piling up oddities of expression. If Dionysius were not our witness for this, we might negatively infer as much from such transparent narrative as the episode on Pausanias and Themistocles "where the lion smiled." The excellent maps that accompany this volume complete the usefulness of an edition which offers more than its modest pretensions, and which is worthy of a collaborator and pupil of the late Master of Balliol.

—The stately volume of nearly 750 pages in largest octavo, 'Le Centenaire de l'École Normale' (Paris: Hachette), has reached us. M. Paul Dupuy's 'L'École Normale de l'An III.' (recently mentioned in these Notes) and 'Précis Historique' cover one-third of the whole work. M. Georges Perrot, the present director of the School, furnishes an introductory chapter of forty-five pages. The administrations of the seven former directors, from Guigniaut to Fustel de Coulanges, are commemorated in brief essays by Jules Simon (Guigniaut), E. Vacherot (V. Cousin), Th. Froment (Nisard), and others, about eighty pages in all. Nearly twice as much space is devoted to famous teachers, Michelet, Caro, Riemann, Pasteur, etc., etc.—delightful reading, these sketches by former pupils or associates, evincing warm sympathy as well as keen appreciation. Excepting the same author's 'Les Maîtres de l'Histoire' (Paris, 1894), we know of nothing heretofore published on Michelet that gives such a true and complete picture of the man and scholar as Gabriel Monod's monograph of twenty pages, fascinating as a novel, interspersed with specimens of notes from the lectures, or rather "causeries géniales," of that remarkable teacher "qui inspirait à ses élèves la passion d'un amant pour sa maîtresse." As might be expected, the sciences are given their full share in this memorial volume; there are articles on "The Laboratory of M. Pasteur," by M. E. Duclaux; on "The Teaching of Mathematics at the School," by M. Jules Tannery; on "The Scientific Annals of the School," by M. D. Gernez, etc. Among the *Variétés* (200 pp.), contributed by a score of eminent graduates, Pasteur's few notes on his humble origin and early life in Paris are charming by reason of their unaffected modesty. Francisque Vial's "L'École en 1893" and Jules Lemaître's "L'Esprit Normalien" may be recommended as initiatory reading to those not already deeply interested in the institution which Nisard, in conversation with the Empress Eugénie, once defined as "l'école de précision de l'esprit français." Lemaître, in his usual bright way, denies almost totally the existence of a peculiar Normal spirit, and effectually combats Zola's brutal characterization of the graduates of the school as "pions! tous des pions! rien que des pions!" The book is of the highest interest, and replete with suggestions especially to all in any way connected with higher education. The illustrations, some thirty in number, mostly plate pictures, are all of a high grade, the delicate etchings of Nisard and Michelet and the fine photogravures of V. Cousin and E. Bersot being especially striking and attractive.

EDWARD A. FREEMAN.

The Life and Letters of Edward A. Freeman. By W. R. W. Stephens, Dean of Winchester. 2 vols. Macmillan & Co. 1895.

Dean Stephens has performed his task in a workmanlike fashion, and Freeman was a considerable figure in the intellectual and political history of the last half-century; yet we put down the two volumes of the 'Life and Letters'—*Letters and Life* they should rather be named, since the letters form their larger and more interesting half—with a certain unreasonable disappointment. Recent biographies have accustomed us to expect, in works of that kind, some revelation of men's private lives—of those feelings, too sacred or too petty, which most of them in their lifetime have instinctively withheld from exhibition to the world. Whether it be the wise judgment of Mr. Freeman's family, or the good taste of Mr. Stephens, or a singular unity in Mr. Freeman's public and private life, or all three, to which it is owing, it is certainly the case that these volumes reveal no privacies and tell us scarcely anything of their hero as a son, a husband, or a father. And we are bound to acknowledge that we have no right to look for more. Interest is a good thing, but it may be purchased at too high a cost.

Then, again, Mr. Freeman's life was what people call "uneventful." He failed in his efforts to enter Parliament: a welcome and stalwart ally in more than one public movement—as in the agitation occasioned by the Bulgarian atrocities—he was not exactly a leader in any: his professorship he obtained only when he was too old and too set in character and opinions greatly to influence academic thought. Even the promise of the preface, that the reader will find herein "a re-

cord of the growth of his opinions," is hardly realized. Some opinions, it is true, he came to hold a trifle more loosely, as the years went on, and he certainly became aware of the existence of fields of thought outside his own and yet bordering upon them; but in the main he arrived at his opinions in early life, and pretty quickly, and held to them to the end.

In these volumes, then, we have the Freeman of the printed books which had already come from his pen. He is here looking around for his materials, rather than presenting results; he is indulging freely in playful exaggeration; he is giving never-ceasing expression to the affection he felt for some of his fellow-workers, like "Johnny" Green, and the respect in which he held others; still, it is everywhere the Freeman (though with his coat off, so to speak) that we knew already. The "unity of history," the "Eternal City," the "unspeakable Turk," the never-to-be-allowed Austrian "Empire," Earl Godwin and Harold and the battle of "Senlac," the *Landesgemeinden*, and primitive Aryan institutions—they are all here—only in a briefer and usually a more jocular form; for the letters are very commonly articles in brief. And so, though these volumes may, perhaps, soften some hearts that have been hard to him, by making them realize how intensely conscientious he was and how desperately hard he worked, they are likely to leave unaffected the attitude the world is inclined to take towards his work as a scholar.

This is not the place, and indeed it were much too early, to attempt to estimate Freeman's career as a whole, to add to the many essays thereat by Mr. Bryce and others which appeared at the time of his death. But it may be worth while to take this opportunity to set down some of the causes which tended, especially in his earlier years, to secure public attention for his work, and some of those, especially in his later years, that diminished that attention; and to seek our illustrations from these new letters rather than from the books already in our possession. Of course the main reasons why Freeman has deservedly won a considerable reputation are that he possessed learning and talent and style; while the reasons why he will doubtless not be reckoned in the future among the great historians are, that he was devoid of genius, and that his style was not of the first order. But there is a harmony or want of harmony between a scholar's work and the *Zeitgeist*, which, to no slight degree, adds to or detracts from the applause of contemporaries. Taken at the flood, the tide leads on to fortune in the world of ideas as well as the world of affairs.

Freeman began his serious study of history in 1848; the last volume of the work which has done most to give him fame, the 'Norman Conquest,' appeared in 1876. This was the period during which "the movement of nationality" reached its high-water mark and changed the face of Europe; and Freeman was both touched by, and gave expression to, the enthusiasm of the time. A fervid belief in the rights of nationalities to govern themselves gave purpose to much of his writing. With Liberals all over the world the principle had won its most glorious recognition in the resurrection of Italy; Freeman insisted upon applying it to the less evidently attractive cases of Greece and Servia, and supported the bare assertion by a profusion of historical reminiscences. Nothing could more delight those who were inclined to shout for freedom, nothing more irritate "practical" politicians. Unfortunately, however, for Freeman's hold upon men of a later generation, the problem of nationality where it now presents itself is hardly so simple as it used to be. Nationalities are so inconveniently mixed! And in such cases even Freeman was inclined to give it up as a bad job. As he writes to Prof. Ihne in 1880, when working at his 'Historical Geography': "The Czechs are a nuisance. I think I could draw a map as I should like to see things, but for them" (ii., 209).

Freeman's nationalist enthusiasm was both deepened and banked-in by the intellectual influences that just then no English historical scholar could escape. It was a time when almost the only solid work in the field of history was being done by German investigators. It is not so now: Freeman wrote very justly in 1891 that "the French of Paris have been lately doing work much better than they had ever done for some ages." He hits the point of time, if not of cause, when he jokingly adds: "I always fancy that in the war the Germans knocked some of their *Geist* into the Frenchmen's heads, and so lost some of their own" (ii., 437). And he had long been alive to one of the weaknesses of the German professorial historian: "Don't be angry if I say," he writes to Prof. Ihne, "that so many of your German scholars write as if history was a matter of theory, as if they never saw any of it going" (ii., 262). Nevertheless, he could not escape from the wave of Teutonist enthusiasm; and, as every one knows, it reached its height in his treatment of Old English history. Even a Welshman would smile at his raptures at Anderida. Referring to the oft-cited entry in the English chronicle under the year 491, he writes to Prof. W. Boyd Dawkins in 1868: "At Anderida to-day I well-nigh forgot William, and thought mainly of Ælla and Cissa, and *that jolly smiting of Brets*, leaving not one remaining" (i., 415). With so incorrigible a boy we cannot be cross; but it was hardly a judicial frame of mind.

His Teutonism happened to fit in well with another tendency of public thought. The period was one in which parliamentary government was making headway in western Europe generally, and in which parliamentary reform was seldom out of the public mind in England. Now, Freeman was to all intents and purposes a good Liberal, but he gave much more to the Liberal cause than his personal adhesion. He satisfied that deep-rooted craving of the English mind for precedent—for some assurance that the claims of reformers are only for the restoration of ancient rights. "We have made changes from time to time," he wrote in 1872 in his 'English Constitution'; "but they have been changes which have been at once conservative and progressive. . . . They have been the application of ancient principles to new circumstances; they have been the careful repairs of an old building." This may or may not be true; it was undoubtedly comforting. We will not quote again the well-known *Landesgemeinde* passage; but there is a reference to it here that sounds a little pathetically now. "To stand," he writes, "with the clear heaven above and the snowy mountains on either side, and see the descendants of the men of Sempach and Morgarten discharge the immemorial rights of Teutonic freemen, is a sight which may well make us doubt whether we are in the common world or in some historical paradise of our own imagination" (i., 296). Unluckily, the recent investigation of the sources seems to show that the popular assembly of Uri has grown out of, and cannot be traced earlier than, the manorial courts of the middle ages. As an example of "immemorial democracy" it is only too likely to be relegated to the "paradise of imagination."

To large learning and a vigorous style, then, add enthusiasm for nationality and for "immemorial" democracy, and Freeman's earlier reputation is in large measure explained. In noticing the more recent currents of thought that have dealt hardly, too hardly, with that reputation, we shall be more brief.

By the two great intellectual movements, conveniently indicated by the terms Evolution and Socialism, that have in these latter days, for good or for ill, shaped and colored men's thoughts, Freeman was entirely untouched. Take the latter first. We now concern ourselves far more than we ever did before with the economic condition of the masses of the people, and this necessarily reflects itself in historical literature. Freeman used to quote with amusement the remark of Green, "Freeman, you are neither religious, literary, nor social"—meaning that he gave little space in his writings to the history of religion, of literature, or of society; but he hardly realized how enormously this limitation of range lessened his interest for men at large. Freeman always maintained (i., 108), following his master Arnold, that "history was the biography of a political society," and, putting external relations and wars on one side, that it was "primarily concerned with forms of government, institutions, and laws." "History is past politics." This was a view natural enough and interesting enough in Arnold's time, when all the world was bent on constitution-making, but it has to be very liberally interpreted indeed to make it equally interesting now. An easy illustration may make this clear. Freeman maintained as a young man—and seems to have held much the same view to the end—that the story of ancient Greece was of "incomparable" value because its "institutions developed and decayed" with "astonishing rapidity." "Thus the history of a few generations became an epitome of the history of political society, and was *a sufficient school for instruction* in all the principles of an historical philosophy" (i., 122). But when once the fact of ancient slavery is driven well into our heads, this incomparable value of Greek history insensibly disappears. With almost all the manual labor of society done by slaves, the freest Greek democracy was a narrow oligarchy. With the manual laborers *within* the citizen body, as to-day, the problem of government is fundamentally changed.

And then as to Evolution. It is a word we are perhaps getting a little tired of; but whether we use that word or not, there can be little doubt that the thought of slow but never-ceasing change, of the appearance of new conditions out of the bosom of the old, a thought set before us in different forms by Hegel, Darwin, and Comte, is dominating the most typical historical work of the day. But Freeman was contentedly ignorant alike of philosophy and of biology, and was never possessed by the idea of development. And this it is which, added to the limitation of his view to "politics," makes his application of the idea of the "unity of history" seem sometimes so mechanical. One large fragment of the drama of history he saw clearly enough, in some of its aspects—the rise and long-abiding influence of the Roman Empire. But, for the rest, the continuity of history was very apt to be with him only geographical. Such and such things had happened centuries ago in such a place, and accordingly—so the argument might seem to run—we ought to regard with such and such views events happening there now. "The

enslavement of Greece," says his biographer, "by the alien and infidel Turk was to him the most melancholy and distressing event in all history" (i., 107). How it came about that Greece was enslaved, he made no serious attempt to answer. History to him was full of the irrational or the unrational; and to a generation that sees, or thinks it sees, more and more meaning in the world outside man, his utterances concerning mankind could not but be unsatisfying.

And yet we would not leave the matter thus. Freeman was moved too greatly by the intellectual fashions of his early manhood, he was moved too little by the intellectual fashions of the present day, to obtain many eager readers just now. He wrote so very much that his style inevitably suffered—Mr. Stephens's vindication of him from the charge of "diffuseness" rests on an odd confusion between diffuseness and minuteness (ii., 473)—and he has probably left nothing that will live as literature. He produced, however, a vast amount of solid work; and a future generation, not quite so *blasé* as our own and not quite so familiar with his catch-words, will find that it can hardly take up a bit of it anywhere without being instructed and stimulated. And, after all, his everlasting insistence on the great external facts of the history of the western world erred chiefly in going no further. To have a firm grasp upon them is, indeed, the beginning of wisdom; and if some of us have grumbled in the past because he kept us at the "vile rudiments," we cannot help seeing that only too many people nowadays are ready to skip the necessary preliminaries. We are inclined to say that, if we had our way, we would set every student who was about to take "a course in Sociology," through a pretty stiff examination in Freeman's 'General Sketch of European History.'

CLASSICAL ANTI-SEMITISM.

Fontes Rerum Judaicarum. I. Textes d'auteurs Grecs et Romains relatifs au Judaïsme, réunis, traduits et annotés par Théodore Reinach. Paris: Leroux. 1895.

In the history of prejudices, not one, perhaps, will be found to be wider spread and stronger than the prejudice against the Jews. We meet with it in the early and the recent literature of every modern nation, we look back upon it in the daily life of the past, and we see it still surviving even in this liberal country and in these free-thinking days. There is an explanation of it ready for every man who goes no deeper than the surface—an explanation "much received by Christians" (as old Sir Thomas Browne said when exploding that "vulgar error" about the unsavoriness of the whole nation)—"that it is the badg or brand of a Generation that Crucified their Salvator." But when one searches further, one finds that this explanation no more explains the origin of the prejudice against the Jews in general than it accounts for the said "error." In fact, "it is a conceit without all warrant, and an easie way to take off dispute in what point of obscurity soever." The truth is, that the prejudice began long before Christianity was heard of, and that anti-Semitism is to a great extent an inheritance twenty-two centuries old.

Such, at least, is the conclusion to which M. Théodore Reinach comes after a study of all the passages in the Greek and Latin pagan writers in whom allusion is made to the Jews. He has gathered over two hundred extracts from more than a hundred authors, and this without including legal texts or inscriptions, all of which he reserves for other volumes. Each extract is printed in full, and in a parallel column we have a French translation, while brief but excellent foot-notes complete the page. Such a collection is valuable from two very different points of view. In the first place, as M. Reinach remarks, ancient Jewish history, as written by the Jews themselves, stops with Nehemiah. It proceeds again, in an intermittent fashion, with the books of the Maccabees, the 'Embassy' of Philo, and the 'Wars of the Jews' by Josephus. For the rest of the four centuries, from Alexander to the great uprising against Rome, Josephus in his 'Antiquities of the Jews' was for the most part a mere transcriber from pagan authors of general histories or of monographs. After the death of Josephus, and down into the fifth century, the investigator of Jewish history must have recourse to the pagans or to the Christian chroniclers who utilized them. The actual remains, therefore, of the pagan writers, sought out from all sides and brought together in this book, form the best, because they are the earliest original, sources of study for this period of Jewish political history.

But it is to the other point of view that M. Reinach in his notes and introduction chiefly turns. The main interest in his book lies not so much in any new discovery which his collection makes possible in the field of political history, as in the opportunity which it gives us to watch the variations in Greek and Roman and Greco-Roman opinion about the Jews themselves. We can here trace that opinion step by step for six centuries, and see how attraction changed to repulsion, and how repulsion developed into an antipathy which found expression in many of the same terms that are familiar in Europe to-day. 'Telle phrase méprisante de Tacite, telle accusation de Posidonius ou de Molon, trouve encore aujourd'hui son écho dans la polémique courante; Apion ressuscité écrit de gros pamphlets et de petits journaux, et le préjugé, mis en circulation il y a deux mille ans, suggère encore des lois d'exception dans tel pays et fait des victimes dans tel autre."

Though the Greeks of the Attic age must have known something of the Jews, as we can see from one or two allusions in Herodotus, yet they have left us nothing about them in their works. In Greek, as we know Greek, the Jews begin to attract important notice in the writings of the philosophers of the Alexandrine age. At first, no hostility was felt towards them. Nearly all the philosophers were free-thinkers, led by their philosophic reflection to a sort of vague monotheism which tended to make them respect a race that, merely by the effect of religious evolution, had arrived at a conception of divinity so elevated and so like that of Hellenic philosophy. "La simplicité et la pureté morale des croyances des Juifs, l'austère grandeur de leur culte spiritualiste, leur étude constante et passionnée de la Loi, qui, à un examen superficiel, se confondait avec la spéculation métaphysique, tout cela excita d'abord au plus haut degré la curiosité, l'admiration des philosophes grecs." Theophrastus calls the Jews a race of philosophers; Clearchus traced them back to the gymnosophists of India; later writers said that Pythagoras and other Greek philosophers had borrowed much from them; Strabo eulogizes Moses and his earliest successors; Varro compared their horror of graven images to the Roman worship in its early and purer days. Even Tacitus, in the midst of his passionate invective against Judaism, admits: "Judaei mente solum unumque numen intellegunt . . . summum illud et aeternum neque imitabile neque interiturum." The curious inquiries of the philosophers into the particulars of the Hebrew religion, its sacrifices and its sabbaths and its taboos, prove that the Greeks, always hospitable to foreign divinities, felt a longing that this new god also should be added to their pantheon. Under the early Roman Empire, when, in the abandonment of the old faith, all sorts of superstitions were eagerly adopted, there was evidently a flood of converts at least to the outward observances of Judaism; and the allusions of Horace, Tibullus, Ovid, Persius, Seneca, and Juvenal, sarcastic and sneering as they are, would show, even without the persecutions under Domitian, how widely the Jewish religious movement had spread in Rome.

But, on the other hand, there was that in the character and institutions of the Jews which repelled the pagan world as strongly as the broad principles of their religion won them respect and esteem. The charge of heathendom against Judaism was laid in two counts, which M. Reinach calls *Religious Exclusiveness* and *Social Exclusiveness.* For the first, the very fact that the Greeks and Romans were so hospitable themselves to foreign divinities made it well-nigh impossible for them to see how any nation could be so presuming as to believe that it, and it alone, worshipped the one true God. That a nation should have its peculiar national god, preferred to all others, they could easily understand, for such they had themselves. But to deny absolutely the existence of other divinities; to refuse to bow down in the House of Rimmon, whether before the statue of an Olympian or of an apotheosized Roman Emperor; to throw down the images of the gods of the State or city, thus refusing to let Greeks and Romans enjoy the worship of their own divinities while forbidding them even to enter the temple of the Most High—that any nation should venture upon such a policy passed the comprehension of Greek and Roman alike. Even the philosophers revolted at the pretension that their own highest conceptions were but the successors of a revelation given centuries before and exclusively to the little tribe in Palestine. As a result, wounded vanity joined outraged patriotism and loyalty to pour upon the self-devoted heads of the *gens contumelia numinum insignis* every sort of insult that mankind knows for those who dissent from established religions; and if the Jews were called atheists and worshippers of false gods in one breath, it only shows the blind rage into which their accusers had fallen. Moses is now an Egyptian priest, now even a woman. The god of the Jews was the sky, the clouds; again he was Sabazius or Bacchus. The Jews never, their slanderers said, had a graven image; they said also that their chief idol was a golden ass in the Holy of Holies. The customs of the Hebrew religion, among which the pagans knew best circumcision, the observance of the Sabbath, and the taboo of pork, became the subject of a hundred jokes. Sometimes wholly gratuitous and imaginary rites were attributed to them. Such, for instance, was ass-worship. Here the pagans, as M. Reinach seems not to know, were on pretty ticklish ground; for the Jews might have pointed to the sacrifice of the ass to the winds in Tarentum, to Apollo of the Hyperboreans; or, coming closer home, to the prescription of such a victim in more than one amphictyonic decree of Delphi. But the most outrageous charge of all was that of the septennial sacrifice of a Greek, kept and fattened up for the purpose, at the altar of the Jewish God—a charge

well known in its mediæval form to students of the "murder ritual."

As for "social exclusiveness," the Greeks, who applied the term βάρβαροι to every nation, however civilized, that was not Hellenic, were the last people in the world that could with consistency object to the Jew's struggle to maintain his individuality. For when Hellenists preached social unity, they meant unity which should conform to an Hellenic pattern. There was very little of their own which they were ready to give up for the sake of universal agreement. The Jews, of course, had the same ambition that their ways should become the ways of all the world; but, as they stood in the merest minority against the propaganda of Hellenism, they were obliged to insist the more strongly upon uniformity among themselves with their own institutions and to surround themselves the more closely with jealous barriers, if they were not to be utterly overwhelmed and their individuality effaced by the rising tide. As Haman said to Ahasuerus: "There is a certain people scattered abroad and dispersed among thy people in all the provinces of thy kingdom; and their laws are diverse from all people; neither keep they the King's laws; therefore it is not for the King's profit to suffer them." "The Jews," said Philostratus, "set themselves apart not only from the Romans, but from all mankind. Their manner of life is unsocial—they will meet us neither at the table nor in libations, nor prayers, nor sacrifices. In fact, Susa, Bactria, and even the dwellers in Ind are nearer to us than they."

Here was a kind of exclusiveness which pagan antiquity found it harder, perhaps, to understand and to forgive than even the refusal to commune in religion. The social life of the Greeks and Romans was, paradoxical as it may seem, mainly a public life, and it was lived in the open air. Festivals, banquets, games, theatres, state gatherings of every sort, were essentials of it. From all such the Jew held himself aloof; and as for private functions, he would neither eat nor sleep under a pagan's roof, nor receive a pagan into his own dwelling; his daughters might not marry with the leaders of the social world. This systematic exclusiveness, which would have been abhorrent to the ancients even in a nation of conquerors, was all the more hateful because it was displayed by a mere handful of men coming from a corner of the earth that had never had any political importance whatsoever. But there was another thought that rankled in the heart of the Greek *bourgeois*, and that made him hate the Jews bitterly enough to satisfy the most orthodox Christian merchant. There was one department of life in which Jews came out of their shells, as it were, and mingled with other men. This was commerce, and herein they actually had the impudence to be the rivals of the Greeks themselves! Commercial privileges were granted them everywhere, by Macedonian kings and Roman emperors; they received the Roman citizenship at Rome and became Greek citizens at Antioch, Ephesus, and Alexandria. It was in this last city, which had become the Greek mart of the East, that the first important Jewish colony grew up; it was here that Greek rancor against the Jews found its most savage and unjust expression; here are to be discovered the germs of almost all the slanderous accusations which the Jewish race has had to bear. Libels of every sort, slanders of every variety, on individuals, on the whole race, its institutes, its manners and customs, its physique, and its morals, *quidquid Græcia mendax audet in historia*—all these found here skilful inventors and eager retailers. The spot could not have been better chosen for the purpose. Alexandria was in Egypt, and the Egyptians, easily fraternizing with the Greeks, had nothing but hate for the Jewish despiser of their superstitions, who boasted of a time when his ancestors under Moses had gone out of Egypt with a mighty hand.

And the first systematic attack of Greek literature against the Jews was the work of Manetho, an Egyptian priest who had accepted Hellenic civilization. It is true that in Hecatæus we find the earliest of the Egyptian versions of the Exodus, but it is also the most impartial of them all. The story that they were expelled from Egypt for leprosy is not to be found in Hecatæus (on the contrary, the Egyptians themselves are sufferers from pestilence and the Jews are expelled as unbelievers in the Egyptian gods), and he has no bitterness against the Jews, but only praise for their lawgiver and their institutions, save for their ξενηλασία and μισοξενία. This earlier version seems to have been set aside purposely and never really lost, for we find it cropping out in Trogus Pompeius in the Augustan age. But with Manetho, in the third century B. C., begins the long list of professional detractors, taking up and amplifying the tale until it grows savage enough to satisfy the veriest Jew-baiter that ever lived. The whole race of the Jews was leprous and mangy; the very word sabbath meant ulcer; the Jews were dirty, of a foul savor, stupid, over-clever, brutish, never producing a man of intelligence nor a useful invention; their civilization was of the lowest order, or it was high but recent and borrowed; they were servile and always in revolution, obstinate and yielding, cowardly and rash even to enthusiasm; they were pirates, wreckers, avaricious hoarders of gold (see Cicero for Flaccus, where it looks as if there was a "Jewish vote" in Rome which had to be dealt with gingerly), fakirs, beggars, magicians, fortune-tellers. In fact, they were an accursed race, the scum and dregs of the nations.

Such a wholesale onslaught and such contradictory accusations were probably never made against any other people. We have attempted little in this notice save to sum up the conclusions and the inferences which M. Reinach draws from his study of the extracts. He has a thesis to defend, of course, the honor of Israel, and so far forth one must be on his guard. But the cool observer cannot but grant that under all this excessive virulence of invective and insolent disregard for rejoinders (not wanting), there lay an individual and national jealousy and a wilful misunderstanding, fostered for selfish ends. It was time that some scholar like M. Reinach should put together the evidence upon which the prejudice of the ancients rested, and, having in a few brief words indicated its flimsy, contradictory nature, should vindicate thus the fame of the Jews in pagan times. We shall look with interest for the promised volumes which are to contain the inscriptional and legal texts which bear upon this topic.

A Vagabond in Spain. By C. Bogue Luffmann. Scribners. Pp. 360.

THE author of this book accomplished the feat of walking across Spain, a distance of 1,500 miles, in 145 days, crossing, on his way from Biarritz to Malaga, as many as ten mountain barriers. He started in midsummer, and consequently had to suffer a great deal from the scorching noonday sun, while in the elevated regions the nights were often uncomfortably cold. He carried a bundle weighing twenty pounds, and once walked thirty-five miles in a day. He went deliberately as a tramp, begging his food and lodging wherever he could, except in the large cities, where he played the gentleman for a while. He had a special pass which, in case of difficulty, always insured attention from the alcalde of the place he happened to be in, but he did not like to make use of it, as it betrayed the fact that he was not a vagabond, and, by making a newspaper hero of him in some places, frustrated his intention of being a genuine tramp for the time being. His object was to come into close contact with the people, as one of them, and it appears that he was also making agricultural studies, of which, however, few details are given in this volume.

Nine persons in ten—such is the force of tradition—will, on hearing of such a trip, think first of all of the risk involved. Mr. Luffmann was, indeed, duly impressed, at the French border-town of Biarritz, with the idea that every other Spaniard he should meet on the road would prove to be a villain or a cut-throat. He did see many of the stone mounds, surmounted by a cross, which it is customary to erect at spots where a murder has been committed; and once, near the end of his trip, he had an adventure in a roadside inn near a river, which cost him a sleepless night of suspicion; but, apart from this, he tramped for nearly five months "alone and unarmed, without a single interruption or insult." He declares that the Spanish blade is a bogey, adding:

"It is a big pocket-knife, nothing more. Rest assured, the Spaniard dreads the knife more than we do! I have lived with my fellow-countrymen on more than one continent, and I am ready to maintain that the Spaniard fears strife and is far slower to enter into it than the average Englishman. True, the blade is his weapon of defence as much to-day as ever it was, but he is not led to take action without cause, and the best of all proofs of his harmlessness is the extreme orderliness of every Spanish crowd."

A tramp is not treated with much ceremony, even in Spain, where begging is not considered disgraceful. The lodgings Mr. Luffmann had to put up with, night after night, tested his endurance and courage more than anything else. He admits that his nose soon became an "insentient excrescence," but the filth and parasites were sometimes unendurable, and once he fled from an infested den to a hole by the roadside, although he had been warned that there were wolves in the neighboring hills. Once he slept among mules, expecting every moment to be stamped on; pigs were his roommates at other times; in some places the alcalde sent him to the hospital; once in a while a soaking wet floor was his mattress; and at Toledo he fell asleep on his bundle at the city gate and lay there till morning. Such trifles do not disturb a born traveller like Mr. Luffmann, and he found consolation in the fact that the midsummer nights were always cool and balmy.

His gastronomic experiences were even more varied than his lodgings. But inasmuch as "the greatest thing in the world" is, in his opinion, "a tramp's appetite," he did not suffer as much as might have been expected. Indeed, he, an Englishman, admits that a midday meal such as he had at Zaragoza—half a dozen courses, hot and cold by turns—though an odd mixture, "results in far less indigestion than the heavy, lumpy dishes of England." The bread he always found hard, heavy, and vil-

lanous, but in soup it is as delicious as the finest biscuit. One of the oddest dishes he tasted was a couple of eggs whipped up with tomatoes, vinegar, and oil, all fried together, which, he declares, was "not bad." At Calatayud he bought a meal for himself in the shops; it included cooked fish, bread, cucumbers, a pear, chocolate, and white wine—all for nine cents. He saw schoolboys eating raw potatoes with brown bread and tomatoes for lunch, and beggars greedily devouring decayed fruit thrown out of the stalls. One of his meals consisted of the fried spines of beet-leaves, served in the pan on a small stool, "the only dining-table known to the Spanish peasantry." His English ideas as to table manners were frequently shocked, especially by the Oriental custom, still widely prevalent, of fishing a choice morsel from the plate with the fingers and putting it into your neighbor's mouth, as a special compliment and mark of attention.

As regards the natural attractions of Spain for a traveller, our author's statements are somewhat inconsistent. Thus, on page 212 he tells us that "Spain, as a whole, is ungenerous, ugly, churlish, brutalizing; and he who sees it in its fulness, remembers few natural glories"; yet in the preface he remarks that "the road across Spain is long to him who takes it on foot, but it repays the toil. It reveals wonders in nature and in art which will with difficulty be rivalled elsewhere." Probably the explanation of this inconsistency lies in the fact that the first of these opinions was written before he had seen Andalusia, the second after. All Spaniards swear by Andalusia; not only is it scenically the most interesting part of their country, but Mr. Luffmann found that south of Madrid cleanliness becomes more general, the home instinct keener; and the farther he journeyed south the more apparent this became to him. Yet, all in all, he holds that Spain is far from being "the most magnificent country in the world." Of her seventeen millions two-thirds are shamefully underfed, and fuel is so scarce that few can afford to keep comfortably warm in winter. Coal and water are as scarce as timber. But he admits that, great as are the natural disadvantages of Spain, much more could be done for the comfort of the inhabitants if they would cease to consider labor degrading and imitate the Moors, under whom Spain was a fertile garden. Some amusing illustrations are given of the laziness and unpracticalness of the laboring men—on page 100 the case of a contractor who first swore at his men for being so late and then treated them to cigarettes all round; on page 116 the case of some masons who carried an enormous stone up a ladder forty feet high and then squared it down to the weight of a few pounds, throwing over the chips. Yet when one reads (p. 54) of a man receiving only $1 for a week's hard labor, one hardly wonders at such lack of energy and common sense.

Mr. Luffmann is not a literary artist in the higher sense of the word: he does not arrange his facts with a view to perspective and light and shade; but he jots down his observations in such a straightforward, epistolary manner that one often gets a vivid impression of what he attempts to describe. Though not of the æsthetic persuasion, he has an eye for female beauty, and notes its occurrence with satisfaction, its absence with sorrow. The finest women he saw were in Zaragoza, Madrid, and Andujar; of the cigar-girls in Seville, he says that "a plainer or more unkempt lot it would be hard to find." On the way to Granada he found many women dressed in male attire. They were not specimens of the "New Woman," but simply olive-pickers, who chose that garb to facilitate the climbing of trees. At Andujar, however, Mr. Luffmann found evidence of modernity in the fact that prizes were awarded by fair women to knights contending, not on steeds, but on bicycles.

Papers and Addresses. By Lord Brassey, K.C.B., D.C.L.: Imperial Federation and Colonization, from 1880 to 1894. Arranged and edited by Arthur H. Loring and R. J. Beadon, A.M. Longmans, Green & Co. 1895. 8vo, pp. x, 322.

It may be taken as evidence to indicate that the Imperial Federation movement is still alive, notwithstanding the dissolution of the League, that men are anxious to put on record for the benefit of posterity some account of the services which they have rendered to the good cause. Mr. F. P. de Labilliere's 'Federal Britain,' which was published last summer, and this book of Lord Brassey's seem both of them to have this as the main reason for their existence, though incidentally they record something of the history of the movement. The claim advanced for Lord Brassey's share in Imperial Federation before the organization of the League is far more shadowy than that which Mr. Labilliere makes for himself. His one recorded effort, a speech in 1880 before the Bradford Chamber of Commerce on "Our Colonial Empire," is really a speech on Imperial Defence, and not on Imperial Federation, though the editors indicate very well the spirit of the book by saying of it that "neither Lord Brassey himself nor others who have been taking part in the same movement ever since, have added very much to the knowledge of facts or recognition of principles to be seen in this paper." But in the case of neither book is the justice of the claim of as much importance as the fact that the claim is made.

For the early history of the movement, before 1884, the date of the formation of the League, the book is of no value. It is incomplete and inaccurate. It says, for example, that Mr. Edward Jenkins's article in the *Contemporary* of January, 1871, had "the actual title of 'Imperial Federation.'" It does, however, give much of the history since that date, and it performs the still more important service of bringing together in easily accessible form a considerable amount of the most valuable documentary material of history. Besides Lord Brassey's speeches, there are those of other leaders of the League, like the Earl of Rosebery, and, most important of all, perhaps, we have in full Lord Salisbury's answer to the deputation to request the calling of a second colonial conference, in which he suggested that the League ought to formulate a plan of federation, and the actual plan proposed by the committee which the League appointed in consequence of this suggestion.

It is surprising that the experience of the American colonies in striving for union, say from 1750 to 1789, has not been more carefully studied by those interested in advancing the cause of Imperial Federation. In spite of the difference of time, the American conditions were in many ways similar to those now existing in the British Empire, especially in the matter of difficulties to be overcome, and the history of that period has many suggestions to make to the leaders of the later movement. For example, the most serious specific criticism to be made upon the plan of federation proposed by the committee of the League is in regard to its method of raising revenue. This is by requisitions upon the States—exactly the plan adopted in the American Articles of Confederation, and the failure of that plan should not be forgotten. There is no reason to suppose that it would work any better now in the British Empire; indeed, if we may judge by what seems to be the disposition in the colonies in this matter, we can hardly doubt that it would lead to the same failure. This is not the place, however, to criticise the plan itself, and Lord Brassey has conferred a favor upon students of the movement by republishing these documents and his own speeches.

The Golden Pomp: A Procession of English Lyrics, from Surrey to Shirley. Arranged by A. T. Quiller Couch. London: Methuen; Philadelphia: Lippincott.

From Herrick's splendid line, "The golden pomp is come," an echo of Ovid's *aurea pompa venit*, Mr. Quiller Couch has taken a title for an attractive volume. He has confined his selections to short lyrics, somewhat arbitrarily excluding the ode. This exclusion appears to have come rather from a wish to avoid long poems than from any theoretical scruples regarding the essential nature of a lyric or the "sustained and progressive" treatment which, according to the preface, distinguishes the ode and the ballad. In a few instances the editor has presented as a lyric a passage torn from its context in a longer poem. We do not quite like this, nor does Mr. Couch himself feel quite easy in his mind about it; at least, he always apologizes or deprecates. The arrangement of the book is ingenious. From spring and youth at the beginning to winter and death at the end, the object has been to conduct, as it were, a continuous procession of the year and the life of man. Pretty and fanciful as this arrangement is, and ingeniously as it has been carried out, the idea was hardly felicitous. The natural order of time would be less confusing, and would have afforded greater variety as one passed on from page to page. Besides, if pretty fancies were to determine the succession, this variety might be held to relate itself more closely than Mr. Couch's regular procession to the real *pompa* of man's existence as well as to the shifting year. "Now it shineth, now it raineth fast."

Though Mr. Couch's aim, as he tells us in his preface, "was not to instruct, but only to amuse," still he has written a considerable number of notes, and these, we presume, are meant to be instructive. We should like to praise the editor's scholarship as unreservedly as we can commend his taste, but the truth must be told. Though most of the notes are good enough, and some are excellent, some of them are mere blunder. How could Mr. Couch define "the clear in highest sphere" to which Lodge likens Rosalind's hair, as "the extreme, surrounding crystalline ether of the old cosmography"? Even if he knew nothing of the matter, poetic feeling should have kept him from this dreadful slip. Again, what shall we say to "imberbis Apollo" as a gloss on "the god unshorn"? Mere carelessness, of course. (*Sic tibi sint intonsi, Phoebe, capilli.*) A perverse comment is that on Wyatt's request to his lady to have done with her nonsense, or, as the poet puts it, to "leave her bourdes" (p. 146). Mr. Couch prints *boards* (!), and explains the word as "tackings to and fro." Is it possible he does not know so common a word as bourd? Worse than all is a fantastic piece of misinformation at p. 356. Commenting on "The Character of a Happy Life," Mr. Couch remarks that the lines "are said to be almost identical with a German poem of the same

age," and adds that Sir Henry Wotton "may have seen the original in one of his several embassies to Bohemia on behalf of Elizabeth of Bohemia." It is hard to forgive an editor for such a note as this. The facts are well enough known. The poem Mr. Couch is thinking of is by Weckherlin, and no one doubts that it is a translation of Wotton's verses.

Au Pays Russe. Par Jules Legras. Paris: Armand Colin & Cie.

M. LEGRAS is an observant and open-minded Frenchman who has made, he states, three prolonged sojourns in Russia since 1892, with the object of learning the language in order to teach it. His book consists chiefly of detached sketches, often not exceeding a paragraph in length. Many of them are no more than impressionist pastels of a bit of scenery, a winter's night, a birch forest. Others narrate an illustrative incident, a conversation, sometimes without comment, often with judicious remarks which compare French manners and customs or explain the Russian point of view. Most of his experience was gained in Moscow, and he frequented the bourgeoisie and the lower classes, regarding them as more representative for his purpose than the aristocratic and official classes. He pays very brief attention to Count Tolstoy, St. Petersburg, Odessa, Archangel, Warsaw, and to Kieff. In this last town he found the monks very inquisitive, and amusingly ignorant of geography, as noted by Miss Hapgood in her recent volume. He gives an interesting and comparatively long account of his stay in one of the most notorious of the famine districts, in the Nizhni-Novgorod Government. The outlines are dim, so far as the famine, pestilence, and peasants are concerned, but clear and suggestive in what touches the characteristics of land-owners, governor, doctors, and the country.

The author avoids politics, and confesses to cherishing a tender love for "this land of Russia, formless, colorless"; and of Moscow he speaks with enthusiasm as well as with tenderness. Very rarely are his observations, or his deductions therefrom, erroneous, except on matters pertaining to religion, where his Roman Catholic sentiments, hereditary rather than personal, if we may judge from his tone, lead him into a lack of appreciation. To a Protestant observer the comments which he offers on the services and the effect produced thereby, would seem more applicable to the Roman Catholic service. His aversion to the long hair and beards of the priests leads him into the injustice of calling them all, without distinction, dirty. On the other hand, he does full justice to the self-sacrificing toil and zeal of an army of Russian philanthropists, who not only erect enormous institutions and maintain them without expectation or desire of public notice, but give their own services and lives in modest simplicity. This simplicity, one of the striking characteristics of Russians, is repeatedly referred to with enthusiasm. Our author expresses his surprise at the manner in which intelligent Russians keep abreast of all scientific and literary interests abroad as well as at home. He seizes the nature of the peasants almost equally well, and gives rational explanations of many things which are apt to confuse temporary visitors—such as the difference between the peasant of the manufacturing towns and the peasant of the fields, pure and simple.

Some of his experiences were amusing, some rather alarming and annoying. One of his best anecdotes narrates how the peasants of a certain village came to the priest of their village, and asked him to pray for rain, that their harvest for the next year might be saved from utter destruction. "I am very sorry for you, my lads," said the priest, "but I haven't got my oats in yet, and rain would ruin them." The peasants offered money for his prayers. "How much will you give?" After consultation the peasants mentioned a sum. The priest argued and bargained, and, at last, a price was agreed upon. "Very good. I will have the prayers; but I will ask for only a little rain, so that my oats may not be completely spoiled," said the priest. The prayers were said. On the following day rain descended for several hours, just enough to wet the soil and not to injure the priest's oats, which were standing in sheafs in the fields. The amusing sequel was that the peasants, instead of being angry at the priest and cutting off his financial supplies for the future, drew the conclusion that "he gets everything he wants, does our priest!" Therefore, they gave him larger contributions than ever when he made his periodical rounds.

It is impossible to quote the many charming and sympathetic passages, both impressionist and realistic, which we should like to bring to our readers' notice. But the justness of several remarks on the subject of Count Tolstoy calls for their reproduction. In speaking of those disciples of the great writer who obey, to the letter, his precepts, he says that

"they become as intolerant, as harsh, in their new humanitarian faith as the worst inquisitors of the middle ages. Many sectaries of the great Mystic act only from demonstrative reason (not from the heart), and in the name of a *principle*. Tolstoy's celebrity has, perhaps, injured the cause of charity in Russia far more than it has served it; too many hearts, moved by his great voice, have not comprehended that he was not preaching a gospel, and that he has no idea of prescribing either formulæ or rules of conduct; they have copied him externally, and have thus merely dried up his doctrine, instead of fertilizing it by action. Russia naturally produces, in all ranks of society, many of those souls who are attracted by suffering, and who thirst for self-devotion; they would have followed their bent without Tolstoy's pamphlets; the sole effect of these pamphlets probably will be to render some of them repulsive fanatics. . . . Tolstoy energetically denies that he desires to play the part of an apostle. 'If I write,' he said to me, 'it is not for the purpose of preaching charity, non-resistance of evil, manual labor, vegetarianism; it is simply for the purpose of saying to my brethren: "Behold! these things have done me good; if your heart impels you, make a trial of them in your turn."'"

It is rather surprising to learn that during the brief Archangel summer a dramatic troupe plays translations of all the pieces in fashion in western Europe—those of Sudermann, Dumas, Ibsen, Sardou, Blumenthal, with "Orphée aux Enfers" for their greatest success. In the winter the troupe disperses, to Astrakhan, and to Omsk, in Siberia, which is the leading-lady's ideal of a theatrical paradise, for balls, promenades, showers of flowers, and the like.

For those readers who are already familiar with the general traits and the history of Russia and her life, this book furnishes a multitude of dainty and valuable details, and the style is, throughout, extremely sympathetic and charming.

BOOKS OF THE WEEK.

Appletons' Dictionary of New York and its Vicinity. 18th year. Appletons. 30 cents.
Balzac, H. de. The Chouans. London: Dent; New York: Macmillan. $1.50.

HOUGHTON, MIFFLIN & CO.,
BOSTON AND NEW YORK.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y

The Nation.

NEW YORK, THURSDAY, JULY 25, 1895.

The Week.

AMONG the many striking consequences of the Government bond-syndicate experiment one seems to have quite escaped notice. This is the precedent which a successful conclusion of the operation in exchange will set for the future. So far as their sales of sterling are concerned, it is probable that the syndicate bankers will lose nothing, and it is possible that they may make an actual profit. The foreign exchange drafts, through the sale of which they have supplied the regular demand, have been sold at the very top notch. The problem of the future is now, as it was at the beginning of May, whether the regular market for exchange will decline between now and October sufficiently to enable the syndicate to buy exchange, and thus repay its own drafts on London without forcing rates back above the gold-shipping point. How this problem worked itself out last May is known to everybody. Under the heavy sales of sterling bills against Europe's purchase of American securities, demand exchange broke in a fortnight from 489 to 486⅝. Presumably the syndicate, which had been selling "short exchange" through April, was able in the ensuing month to buy back an equal quantity. What profit it made, if any, is of course doubtful. It had at least an opportunity. It may happen that a similar and perhaps larger opportunity will offer itself next month, when heavy foreign drafts to pay for American grain exports will depress the sterling market. If the result should be that the syndicate makes a handsome profit on its mere operation in exchange, a precedent will have been established which may be followed, independently and without connection with the Government, by other banking houses in other years.

Meantime, however, the "grain bills" still remain a question of the future. It would be wholly erroneous to suppose that the bankers of the syndicate had in advance a "sure thing" in their operation. When their contract was signed, the corn had not been planted. Nobody could be sure that another harvest disaster such as that of 1894 would not intervene. In such event, neither the foreign grain purchases now expected nor the foreign security purchases which were realized in May would have been heard of. And while the syndicate might have guarded itself from loss, exchange bankers are well aware of the risk incurred of "saturating" the London market with American bills drawn by a single firm or combination. This was the hazardous possibility, for facing which the syndicate was properly paid by the Government. And since the danger will not be wholly past until the crops are safe, the bankers cannot be criticised for maintaining maximum rates, even though special facilities enable one or two remitters to ship gold in spite of them. Indeed, there is sometimes almost a comic aspect in the hysterics over a moderate export of gold. Great Britain exported in May $7,900,000 gold. It has been shipping gold to France for two weeks past. A large part of the gold placed by the syndicate in our Treasury was taken from the Bank of England, and indeed there is nothing to prevent withdrawal of gold at any time against Bank of England notes, any more than gold withdrawals here against legal-tenders. Such withdrawals happen every week. The London papers say, "the Bank has been selling gold"—meaning for notes—and pass it with indifference. If any one asks the explanation, it is ready. England has the single gold standard. Its bankers know that the gold which leaves their country will return in the regular course of trade—as it would do here but for our currency inflation and silver talk; as it did do here before the ill-fated silver-purchase act of 1890. Who ever heard of alarm over gold exports from New York in 1889, in 1888, in 1887, in 1886? The gold went in the spring; it returned in the fall; and so it will do again when common sense once more prevails in our currency deliberations.

No one will question the honesty of the London *Economist*, but its reiterated attacks upon the credit of our Government are no longer justifiable, and they cannot fail to be mischievous. They are as injurious to English investors as they are to American investments. Owing to a variety of circumstances, our greatest borrowers, the railroad corporations, have for years been unable to get their accustomed revenues. In so far as these circumstances consisted in their unbridled and crazy competition with one another, and the pitiful cheating which marked their "agreements" to charge their published rates, there has not been so much reformation as could be desired. But in so far as the trouble arose from doubts whether the money lent upon the gold standard would not be repaid in silver, there has been very substantial reformation. These doubts are no longer justifiable. The Government has gold enough in hand to insure confidence, it has an increasing revenue in sight, if not in hand, and it has the power and the will to buy more gold if any more is needed. The hundreds, or even thousands, of millions of loanable capital in London which now commands perhaps a half of one per cent., can safely come to this country at four or five per cent., so far as any danger from the silver craze is concerned. It will be a good deal safer here on the whole than in African diamond mines or in Chinese loans.

The arguments of the *Economist* do not bear examination. It says that the revenue of the Government is insufficient, and that Congress will refuse to supply any more. This may be true or not. But it goes on to say that although the time of year is at hand when gold generally flows to the United States, imports are increasing, and with rising prices are likely to increase still more, so that, after all, the movement of gold may be checked. The *Economist* here involves itself in a dilemma. If imports increase, the revenue of the Government increases, and it can thus maintain its reserve. If they do not increase, then gold will flow into the country, and this will help the Government to maintain its reserve. Hence it does not follow, as the *Economist* concludes, that "there may not improbably be as serious troubles before the Treasury as those it has already had to face." The London *Statist* equally fails to appreciate the change in the situation of affairs in this country. It denounces a despatch recently sent by Mr. Smalley to the London *Times* in which that correspondent declared that this country was prosperous, that confidence was restored, and that before long the silver agitation would collapse. The *Statist* lays it down that predictions are worth nothing, and that no one can tell how the voters will decide at the next elections. But there are predictions and predictions. He is a very poor investor or guide to investors who does not act with reference to the future, and no one can so act without trusting to predictions. The only question is whether the evidence justifies the predictions. The *Statist* says that it is "absurd to say that in the course of four or five months the country has passed from a state of extreme alarm to one of full confidence." If it is true, it is absurd to deny it, and investors who wait until all critics are agreed that confidence is restored are likely to buy at dangerously high prices. To American observers the evidence is overwhelming that the silver craze has all but spent itself. The Kentucky campaign was nearly conclusive of itself.

It is necessary for a leader of Labor to keep himself in evidence. For this reason, doubtless, Mr. Sovereign has issued a circular boycotting the national banks. He says that these banks are responsible for the destruction of the greenbacks (which have not been destroyed, although they ought to be). For this and other reasons equally conclusive, he commands all loyal Knights of Labor to refuse to receive national bank-notes. If they are forced on the workingmen, "as they are by law

made a legal tender," then he says, "We will establish a redemption bureau and through existing laws force the Secretary of the Treasury to unload the locked-up greenbacks for the benefit of the people." Mr. Powderly, who was displaced as Master Workman in favor of Sovereign, said and did many foolish things in his time, but nothing so foolish as this. National bank-notes are not legal tender, and a redemption bureau already exists, having been established by law expressly to secure the prompt redemption of those notes. So Mr. Sovereign's labors are needless on this score. It is only necessary for the Knights to refuse national bank-notes. Perhaps a better way to get revenge on the banks would be the one suggested by an Irish patriot to get revenge on the Government, and that was to burn every Bank of England note that could be found in the country.

There is matter both amusing and instructive in the confidential letter sent out by the silver Senators of the West inviting their friends to help them buy a newspaper organ in this city to convert the East to their views. The signers of this letter, it will be noted, all come from silver-producing States. Not one of the Eastern Senators, like Cameron and the Southern contingent, whose zeal in behalf of free silver is so intense, joins the invitation to "chip in" in this deal. The explanation of this is found in the letter itself. The persons addressed, it is stated, are those "who are pecuniarily interested in the restoration of silver." The subtle minds of these statesmen have grasped the idea that while a Cameron or a Blackburn may be willing to fight for silver in Congress or the lobby, and to die (politically) for it in a convention, a man must be not only patriotically but "pecuniarily" interested (in a silver mine) before he will come down with the cold cash to purchase an organ. The business calibre of these Western financiers is shown in the very idea that the publication of an obscure daily newspaper in New York with a silver tone to its editorial columns would have any influence on Eastern opinion, and that the money invested in such an enterprise would in their "best and deliberate judgment be paid back with interest within three years." This little incident will be of some value as showing how the silver-mine owners are trying to work off their property on the country at large, just as the owners of any other kind of mines might try to sell their property to investors. The opportunity for this little game has passed.

Gov. Hastings of Pennsylvania, like Gov. Greenhalge of Massachusetts, vetoed a bill giving public offices to soldiers without competitive examination. For this he has been censured by the Union Veterans' League of Philadelphia, but he seems to bear up under it very well. In fact, the public are getting tired of old-soldiery in politics. The war ended thirty years ago. While the ravages of time have done nothing to mar the honors or dim the glory of any man who faced bullets in order to preserve the Union, they have done much to detract from the physical and mental powers of the veterans. The state is entitled to the best service that can be had, and if a man of thirty can do better service than a man of sixty, as is generally the case, the man of thirty should be chosen. This is one of the commonplaces of the civil-service reformers. The vetoing of the veteran-preference bills by Greenhalge and Hastings is conclusive evidence that the public have at last accepted these views, for if there were not a strong body of public opinion back of them, no aspiring politician would expose himself to the censure of the G. A. R.

The Grand Army of the Republic has another case for discipline before it which appears to be more aggravated than that of Col. Waring. According to report the Superintendent of the Soldiers' Home at Quincy, Ill., has issued orders that any veteran under the care of the Home who shall marry shall be dishonorably discharged. The ground of this extraordinary order is a still more extraordinary law, which makes veterans and their families a county charge, on the order of any Grand Army post. With the aid of this statute the veteran presented a combination of attractions which made him irresistible in matrimonial competition. What with the United States pension, with its possibilities of future increase, the advantages of the Soldiers' Home, which relieves the wife from the care of her husband, and free rations from the county, the old soldier, it must be admitted, becomes a good deal of a prize. Very few young men can offer such inducements as these, and the Superintendent of the Quincy Home found that its inmates were arousing the tender passion in the breasts of the surrounding female population at such a rate as to be alarming. "Wholesale matrimony" was going on, and the Superintendent undertook to arrest it. Whatever his motives may be, it is evident that he is opposed to the policy of the statute, and as the statute was undoubtedly passed through the influence of the Grand Army, he must be hostile to the Grand Army, and is probably a copperhead and traitor. Judging from Col. Waring's experience, he is at all events likely to be characterized with much freedom of speech, if not to be driven from his position. The incident is especially noteworthy in connection with the law passed in Massachusetts giving the veterans a first lien on public office. When the pension debauchery is checked at Washington, it breaks out with all the more violence in the State legislatures.

No student of the conflict between law and law-breaking which our Police Board is waging will arrive at its true nature unless he gets down to its fundamental financial aspect. The hue and cry against the action of the Police Commissioners finds its most practical explanation in such sentences as these: "How the brewers are affected; loss each Sunday over $165,000." The most strenuous effort is making to give the impression that the Police Commissioners, by enforcing the law, are imperilling the cause of reform, endangering the election—we were going to say of any President next year; driving the Germans almost out of politics, etc., etc. When it comes down to a question of evidence to support all these allegations, what do we find? People interested in reform in this city have held a great many mass-meetings during the last year to express their views. Are New Yorkers holding any mass-meetings to denounce the Police Board? The most influential and respected German citizens of this city have met and extended their heartiest support to the men who are upholding the law and discouraging blackmail. The editor of the *Wine and Spirit Gazette* bears his testimony to the fact that the half-hearted enforcement of the law under Tammany rule meant a constant trade of monetary blackmail and political support, and testifies that Gov. Hill told him when in office that, if he should recommend the passage of a law opening the saloons on Sunday, *it would ruin the Democratic party* in this State. Even the bartenders have found their voices, and are asking why they should be compelled to work seven days in the week when other people make a living by working six. The longer this subject is discussed, the plainer will it become that the real opposition to the enforcement of the law is incited by the men whose income this enforcement lessens, and by the journals whose columns they can control.

Conan Doyle has been giving interviews to English newspapers about his recent lecturing tour in this country. He frankly admits that, in a pecuniary sense, the business is not what it is cracked up to be. Those huge bags of good American gold which Dickens and Thackeray waved so jauntily over the rail to their welcoming friends on their return from wandering on this foreign strand, are no more to be picked up at the bottom of the American lecture-rainbow. Of the kind words of the people in this country Dr. Doyle speaks with much appreciation, but the non-buttered parsnips seem a real disappointment to him. Yet we should have thought the astuteness of Sherlock Holmes would have prevented his creator from cherishing illusions on this subject, even if his self-love had not restrained him from publicly mourning over the fact that his net returns amount to a less sum than he could easily have earned in his own study at home. With us, at least, it is a matter of common knowledge that the rich harvests of lecturers,

native or foreign, are gone never to return. Matthew Arnold's second lecturing tour in the United States was a distinct failure financially. He told his friends that his object in coming back was the apostolic one of confirming the churches in the faith; but he found the faithful very well content with their first visitation, and at any rate not at all anxious for confirmation at one dollar per head.

Why lecturing, either as a domestic or imported article, should have suffered such a depreciation in price in the past forty years, is an inquiry not easy to answer satisfactorily. Despite done to silver can scarcely account for this depressed industry, though we know it is cause sufficient for every other. The spread of the reading habit, the building up of the great magazines, the disappearance of the slavery question with its galaxy of brilliant lyceum lecturers, the growth of the people in fixity of character and habit, so that they do not now so easily run agape after every new curiosity—these are doubtless some of the reasons, if not entirely adequate reasons, why Phillips, and Beecher, and Chapin, and Gough, as well as Dickens, and Thackeray, and Tyndall, have no successors to-day on the lecture platform. Conan Doyle is much read and well liked in this country, but the day has gone by when any author, except the very greatest, can get people to go to hear him read from his own works. Sweet charity still leads some faithful souls to go, in true martyr spirit, to those authors' readings where the little great ones become inarticulate over their own poetry or prose; but this form of torture cannot much longer survive in these humane days.

Lord Rosebery, in his speech at Albert Hall on July 5, made an important announcement respecting the policy of the British Government towards Afghanistan. Referring particularly to the recent occupation of Chitral, he said that his Ministry had never had an opportunity of making public officially the decision at which they had unanimously arrived. This was involved in instructions given to the Governor-General of India, that at the earliest possible moment consistent with safety and dignity the British should withdraw from Chitral. The ex-Premier spoke of this decision in order to express the hope that Lord Salisbury would, in that respect as well as in the case of the Armenian difficulty, preserve through a change in the Ministry that continuity of foreign policy which alone could make England respected and secure abroad. Lord Salisbury will doubtless feel free to do pretty much as he pleases, and will have little difficulty, provided he wants to remain in Chitral, in finding an excuse in Lord Rosebery's phrase, "consistent with safety and dignity." How many years is it since England was going to withdraw from Egypt? All this time her obstinate safety and dignity have compelled her to remain. Still, it is something to have got on record the decision of the Government to withdraw from Chitral. It will distinctly repress the zeal of those army officers who have been so ably proving that it would never do to give up such a strategic point in the face of Russian aggressions.

The believers in bimetallism have always referred to the condition of the finances of British India as showing the destructive effects of demonetizing silver. There was a country, they said, having to meet heavy obligations in gold, and collecting all its revenue in silver. So long as silver was sustained by international agreement, no difficulty was experienced, but when silver was discarded, trouble for India began. In order to make this out it was boldly asserted that in India the prices of commodities, measured in silver, had not increased, and that the Indian Government therefore got no more revenue than before, while it was obliged to convert its silver into gold exchange at a terrible discount. Evidence has been from time to time offered showing that prices had advanced in India, but the whole question was so technical and recondite that almost the only fact apprehended by the public was that the revenue of the Indian Government was insufficient, and that it had constantly to sell silver at a ruinous loss in order to meet its European obligations. But at last a return has been presented to Parliament which conclusively disposes of the assertion that the financial difficulties of India are due solely to the fall in exchange. This return shows the income and expenditure of the Government for the decade ending in 1894. Without going into details, we may say that during that period the net revenue, exclusive of that from opium, has increased by 22 per cent., or from RX 46,800,000 to nearly RX 57,000,000. During the same period the expenditure has also increased from RX 47,180,000 to RX 58,540,000, or 24 per cent. Of this increase RX 6,800,000 took place in the department of military services. On a careful scrutiny of the items the London *Economist* computes that the actual expenditure has increased during the decade to the extent of RX 6,360,000, while the fall in exchange has entailed an additional outlay of about RX 5,000,000. The whole outcry of the bimetallists, therefore, is over an annual loss considerably less than the increased military expenditure, and less than double the increased cost of the civil service. Considering the scandalous charge for entertaining the Afghan Prince now in England, to which we recently referred, it is highly probable that a severe investigation of the financial mysteries of the Indian Government would disclose the possibility of economies amply sufficient to offset the loss in exchange. The gold standard is a very convenient scapegoat not only for individuals who do not want to pay their debts, but also for governments that do not want to restrict their expenditures.

The murder of Stambuloff is an event of far more than local or temporary importance. Horrible as it seems in its present details, its future results promise to be fraught with the direst evils to his country. So long as Stambuloff lived, it is not too much to say that the independence of Bulgaria was protected by a mighty bulwark. It is true that his influence was broken last year by the desertion of his prince and his own political downfall. But, like Bismarck, he was not overshadowed by the interposition of diminutive figures, and, unlike him, he was in the prime of life when he was displaced. It is possible that his murder was the result of a blood-feud. Civilization in eastern Europe has not yet passed out of the stage when private warfare is tolerated, and Stambuloff had not spared his enemies. But Russian diplomacy in Bulgaria has been such as to make it difficult for the Russophil party entirely to escape responsibility for this assassination. It is in line with their previous measures, and it was necessary in order to defend their position. With Stambuloff alive there was no telling what might happen. They did not dare to let him leave the country, and they did not dare to let him live in the country. There was but one solution for such a problem—the solution resorted to by King Henry in the case of à Becket, by the Commonwealth in the case of Charles, by Richard III. in the case of the children in the Tower, and by hundreds of other rulers at all periods in the world's history, who have felt that while their rivals had life their own power was insecure.

Stambuloff had played in Bulgaria the part that Cavour played in Italy. Russia had set Bulgaria free, but it was the intention of the Russians to free Bulgaria from Turkish rule in order to subject it to their own. It was the policy of Stambuloff to accept the gift of freedom without the subsequent condition of dependence. Bulgaria was rescued from the outrage of the Turk, but she was not, therefore, to submit herself to the lust of her rescuer. To pursue this course was necessarily to incur the charge of ingratitude. As the French hate the Italians as ingrates, so the Russians were bitterly incensed against the Bulgarians, and against Stambuloff as the arch-ingrate. They have steadily plotted against him. They have exhausted fair means, and, after repeated attempts, they have at last succeeded by foul. On a superficial view they have now the game in their own hands.

SECRETARY CARLISLE AND CONGRESSMAN BLACK.

CONGRESSMAN BLACK of Georgia has written a brief letter of eleven columns to the Augusta *Chronicle* in reply to Secretary Carlisle's speech at Memphis on the silver question. He begins by defining the position of Mr. Carlisle and of all who stand on the same platform with him. "If I correctly understand the theory," he says, "of those who insist on the single gold standard, it involves the *expulsion* from our system of everything but gold as real money." This is the present condition of our monetary system, and it has been so legally for twenty-two years and practically for sixty years. There are some people (a diminishing number, however) who hesitate to avow themselves in favor of the single gold standard, although they are opposed to any change from the present system. There are others (also a diminishing number) who think that because a certain limited number of silver dollars are in circulation, we have bimetallism or the double standard in this country. This is a totally false conception, as false as it would be to assume that we have a paper standard because a limited number of greenbacks are afloat.

Of course, Mr. Black does not entertain any such false notion, yet he charges Mr. Carlisle, and those who agree with him, with the fell purpose to bring about a new condition of things in the United States—namely, the single gold standard; whereas that condition exists now. We have to assure him and all others like-minded that the "gold-bugs" have no changes of standard in contemplation. They are satisfied with the present posture of affairs, so far as that goes. The "expulsion" of everything but gold as real money took place in 1873, and continues unabated. Mr. Black might have learned this from 'Coin's Financial School.' The author of that book says that after the passage of the coinage act of 1873 silver "had changed its position from redemption money to token money." So when Mr. Black charges Mr. Carlisle and others with an intention to expel silver from the position of real money he comes in direct conflict with "Coin" on a question of fact, where, let us say, Coin is right and Black is wrong.

Mr. Black's next point is that silver is constitutional money, and he quotes a long list of authorities, including several judges of the Supreme Court and Daniel Webster, to prove his thesis. If this means that Congress has the constitutional right and power to make money of silver, nobody will dispute him; but if he means that Congress has no right to desist from making money of silver, he advances an argument that never was heard before in this country. We acquit him of anything so foolish, and assume that he makes his long series of citations from lawyers and judges in order to show that Secretary Carlisle is wrong in holding the opinion that the attempt to have money of both gold and silver at the same time is a physical and metaphysical absurdity.

If this is what Mr. Black means by his quotations from Webster, Clifford, and others, we must say that the mere fact that silver is constitutional money when Congress chooses to have it, does not militate in the least against Mr. Carlisle's contention. Mr. Carlisle merely expressed the opinion he entertained on a question of fact, against which laws and constitutions are as unavailing as the fables of Æsop. What Mr. Carlisle said was true, and although he was slow in perceiving it himself, it was true all the time—true from the days of King Solomon or King Rameses to the present, namely, that when two kinds of money of different value are equally current, the one of less value will drive the one of greater value out of circulation. This is merely saying that when a man can discharge an obligation with two things of different value, he will pay the less valuable thing and keep the one of greater value in his pocket. This is what happened to gold and to silver alternately for hundreds of years during the historical period, and to silver and copper also. It was precisely in order to get rid of these mutations and inconveniences that the nations one by one dropped silver out of their currencies except for subsidiary coins. It was merely a recognition of this fact that led Mr. Carlisle to make the remark which Mr. Black batters with such an array of legal lore.

Mr. Black next considers the platforms of the Democratic party from 1880 to the present time in order to confound and confute Mr. Carlisle. These platforms, he shows, call for the use of both gold and silver as money, while Mr. Carlisle says that this is a physical and a metaphysical impossibility. This looks like a poser for the Secretary, and would be so but for the fact that the platforms are a lot of rubbish and humbug devised to catch votes. Mr. Carlisle has apparently concluded that the time has come to put aside false pretences and utter a few words of plain truth. When these platforms spoke of using gold and silver as money, the men who prepared them meant to catch the votes of one side by coining dollars on Government account, and pretending that that was the remonetization of silver, and to hold the votes of the other side by not coining silver for private persons, and not coining enough to depreciate the whole mass. The Republican politicians played the same game for the same reason and with the same purpose. It is much to Mr. Carlisle's credit that he refuses to be a party to such deception any longer. It is equally to his credit that he acknowledges that his earlier opinions on this subject were wrong and that he has gained something by time and experience. Perhaps the time will come when his critics can say the same thing.

TRUSTS AND OTHER CORPORATIONS.

THE *Journal of Commerce*, a newspaper whose opinions are always entitled to respect, has lately published articles denouncing Trusts, with the warning that these combinations are distinctly un-American and are leading us straight into socialism. Readers of our columns will acquit us of any intention to defend trade combinations as such if we say that the arguments of the *Journal of Commerce* do not seem to cover the whole situation. Many of its assertions need definition. That paper, for example, says: "If a few great monopolistic combinations can arrogate to themselves the right to tax the great body of consumers for their own benefit, it will become easier to convince people that the business so conducted should be done for the profit of the commonwealth." It immediately occurs to the reader to ask, first, Are these Trusts committing commercial robbery after this fashion? and next, if they are, Would the state get the same profits if the business were made over to it?

The question of the profitableness of huge Trusts or corporations and its equity is one fiercely disputed and not capable of exact settlement as yet. Mere denunciation helps but little. Is the Standard Oil making too much money? It is a grasping monopoly with an unsavory history, but under its control the price of refined oil to consumers has been reduced to but a fifth of the old quotations, and meanwhile the cost of refining (the difference between crude and commercial oil) has declined from seventeen cents in 1870 to less than five cents in recent years. Could individual refiners have accomplished so much? and if not, should our complaint be against the combination as a business enterprise or against its legal form and old methods?

A further question involved is the commercial right of a corporation to a large profit in any case. Upon this point many of us are still in bondage to the old idea that what is equitable for a partnership is unlawful for a company doing the same work, and that the profits of the latter should not be allowed to exceed the usual rate of interest on loans secured by safe collateral. This right of a company or combination of companies to a profit is the more readily granted as the public is proportionately benefited, and this is one of the main tests of the soundness of what the *Journal of Commerce* denounces as commercial un-Americanism. Let us suppose that all the shoe-manufacturers of New England form a Trust; if done under legitimate conditions, and if thereby we all could buy shoes at $1 less per pair, should we be warranted in denouncing that combination as commercially unjustifiable? We are asking the question, and not at the moment trying to answer it, merely to indicate that there is another side to this perplexing corporation problem which many writers overlook. We would remind our readers of the English gas companies,

whose charters allow of larger dividends only as the price of gas to consumers is reduced. While we cannot formulate an arithmetical ratio which shall constitute a standard in such cases, it is a question whether the principle is not at the bottom of much of our industrial progress.

"Four-fifths of the capital stock," continues the *Journal of Commerce*, speaking of huge corporations, "usually represents their ability to crush out competition, and has no other value whatever." If our supposed combination of shoemakers, while reducing the price of shoes, makes a good profit, it is foreign to the argument whether that profit takes the form of high dividends or small dividends on watered capital. We much prefer the former plan, but that need not blind an observer to the fact that a large part of the "water" in corporations is due to the wish to pay to shareholders a profit which the owners believe to be but commensurate to the risks. The "crushing out of competition" is also a matter to be settled by the evidence in each case, as, for illustration, whether the crushing as done by the large corporation is worse in its effects than would have been the relentless competition between individuals in their strife for the survival of the fittest. Then, again, the question is always proper whether competition is really crushed or merely made so severe that only those with exceptional capital and skill can enter into it. If the latter, then there is evidence that the combination has really cheapened cost and in so far has offered a good excuse for its existence.

The case of the American Cotton Oil Company is an example. Without entering into any examination of this company's affairs—once a Trust, now a corporation—it is but fair to say that it is in no proper sense a monopoly. So long as we grow 9,000,000 bales of cotton yearly, so long will it be impossible to "corner" cotton seed. Anybody can buy the seed, crush it, refine the oil and sell it; nor could the Cotton Oil Company stop him except by underselling him. The United States courts have decided that no monopoly exists where nothing prevents the establishment of a rival plant; and the decision has some worth as a commercial as well as a legal opinion.

But, it will be said, these huge corporations tend to suppress individualism, and are, therefore, opposed to the theories for which our country stands. There is something in this as things are now, and yet it may be that the evolution of the corporation will in time distinctly favor individualism. The greater the company, the more diverse its operations, the more dependent its success upon popular favor, the more sensitive it may grow to individual merit among its officers and employees, and the more amenable its huge interests to the demands of the people at large. Upon the whole, the proper attitude of thinking men towards our corporation problem should not be one of denunciation or of flattery, but rather of expectancy, a waiting for developments, with a readiness to act when action seems beyond a doubt to be necessary, but with a refusal to attack on insufficient evidence or on narrow grounds.

LORD SALISBURY'S SOCIAL PROGRAMME.

THE only real programme of the Conservatives in the English election was to get a smashing majority. That they are now assured of, with a free hand to do what they please with it. But there has been vaguely lurking in the background something that was called a "social programme." What it was, nobody seemed exactly to know or to be able to explain. It was there, like an article of faith, to be the more devoutly received the less it was understood. On certain occasions, when ribald doubters like Mr. Asquith and Lord Rosebery had questioned the very existence of the sacred mystery, it was angrily reasserted by the Conservative orators. They *had* a social programme. It was big with blessings for the country. In due time it would be enunciated in detail. Just now the important thing was to see that none but good men and true were returned to Parliament.

Lord Salisbury's most explicit statements were made in a speech in the House of Lords on July 6. After banging the Liberals in noble style for a column and a half, he devoted a quarter of a column to explanation of the problems which a wise and truly able government would set about solving. One of these was agricultural depression. It was not for him to say how much this was due to natural causes. Let no man suspect him of having a panacea for the evil concealed about his clothes. All he asserted, in the teeth of his opponents and in the face of the world, was that the subject deserved "the deep attention of Parliament" (loud cries of "Hear, hear!"). Then there were the questions of industrial competition, the homes of the poor, accidents to workingmen, and old-age insurance—all of them "worthy of the most careful study." But let not the country expect too much. Great and wise as a Conservative Government would be certain to be, it could not pretend to destroy or withstand "the action of great economic laws." Above all, said the noble Marquis, no "panaceas" for him. Thought as deep as you please, attention as strained, the time of Parliament taken up as fully as you like, but no panaceas if you loved him.

This is really as amusing as Lord Rosebery found it at the time, and puts the Prime Minister of England on the same level with our own late Secretary of Agriculture, "Uncle Jerry" Rusk. He was the first man to advance the theory that the way to improve the condition of the farmer was for the whole country to sit down and "think" intently about it. Pure thought, he maintained, thus anticipating Lord Salisbury by several years, was what agriculture needed. Fertilizers, diversified crops, better tax laws were all very fine, but the thing that was really keeping the farmer down was lack of reflection. This is the remedy the Conservative chieftain now commends to the distressed agriculturists of England. Their crops are fearfully bad this year again, but by taking thought, especially by getting Parliament to give "deep attention" to the matter, they can easily add ten bushels to the acre and five shillings to the quarter. As to the remaining features of Lord Salisbury's social programme, they mean whatever you please—or nothing. Lord Rosebery asked the noble Marquis if he really proposed old-age pensions. The *Times's* report says: "The Marquis of Salisbury made no audible reply." He was doubtless looking out of the window and admiring the view.

But if Salisbury is cautious and noncommittal, surely the bold Chamberlain can be relied upon to speak, whether men will hear or forbear. He is the real author of the social programme. He has forced the Conservatives to take it up, albeit with the air of men handling a dynamite cartridge which may go off at any moment. From him we shall get something explicit. But alas! the responsibilities of office, the difficulties of an alliance with the Tories, the uncertainties of politics, have suddenly hushed the resounding Joseph in a remarkable way. In a speech at Lambeth he outlined his idea of the social programme, which was clearly modelled after the most expert methods of American platform-building. He was for temperance, let there be no doubt on that point; but it was for the kind of temperance which would not "ruin the publican." He was going to do great things for the working classes: give them "the protection they are entitled to," "better their conditions in life," "generally elevate their situation"; but he was going to do it "without destroying the industries upon which their livelihood depends." In fact, the abounding benevolence and power of Chamberlain were to be devoted from that day on to "raising and elevating all classes in the community," while at the same time he would not tolerate an "injury or injustice to any class, or even to any individual." "Slippery Joe" must have winked to himself, at least with the eye protected by his famous monocle, when he got this off. Never was there such a devout longing for the millennium, mixed with a delicate consideration for the feelings of the devil, who must be duly consulted about the chaining-up process.

It is clear, in short, that the Conservatives are committed to no social programme at all, except such as they may see fit or find it necessary to take up in the future. They will doubtless at-

tempt something. The very goadings of the Opposition, who have a pretty considerable social record of their own to point to in the last three years, will compel them to make a show of doing something. But it is likely to be little but a show, and a dumb show at that. Even Sir John Gorst's ante-election exposition of the Conservative social programme, in the July *Nineteenth Century*, really promises nothing, when carefully read. "It is hoped" that this, that, and the other scheme might do good, though it is admitted that "the cost" might be "an objection" to almost every scheme. The cost will be, in fact, the rock on which socialistic schemes, Conservative or other, will go to wreck. With a vast plan for naval expansion already under way, with the increased expense attendant on a vigorous foreign policy—almost certain to be Salisbury's chief "lay"—the millions needed to carry out social legislation will have to be whistled for. Moreover, Salisbury's thumping majority, and his assured independence of the Liberal-Unionist alliance, will make him very niggardly in sending water to Chamberlain's mill. If there is any Conservative social programme, Chamberlain is the author of it, and his would be the glory of its enactment. The Tory Prime Minister will have other kinds of glory to think of than that of the man who was once his bitterest and most unscrupulous Radical opponent, and who has for nine years been holding the cold steel of the Liberal-Unionist vote to his throat.

THE LEIBNIZ DAY OF THE BERLIN ACADEMY OF SCIENCES.

BERLIN, July 6, 1895.

IT is eminently fitting that the Berlin Academy should annually celebrate the memory of Leibniz—not only because Leibniz was the virtual founder of this, the foremost of Germany's learned institutions, but chiefly because he was the first great representative among the Germans of what is implied in the somewhat unfortunate term, modern culture. Leibniz stands midway between Luther and Goethe. He first reduced to philosophic reasoning the individualistic view of the universe which had been at the bottom of the Reformation movement, and which was to find its fullest artistic expression in the classic epoch of eighteenth-century literature. At a time when the Thirty Years' War and its disastrous consequences had crushed all national hopes, his philosophy formed a rallying-point for higher-striving minds, and opened up the prospect of an ultimate, though distant, resurrection of the German people.

If Descartes, Locke, and even Spinoza look at the world as a huge mechanism in which there is little room left for spontaneous activity and self-assertion, Leibniz considers it as an aggregate of an infinite multitude of independent intellectual forces. There is mind in everything. The body is nothing but mind contracted into form: "Omne corpus est mens momentanea." Between plant, animal, and man there is a difference of degree only, not of quality. The whole world is engaged in a process of continual change, transition, perfection. There is an unbroken line of development from the sleeping life of a seed corn to the free consciousness of a full-grown man; from the gloomy egotism of the savage to the broad, enlightened charity of the sage. God is the supreme wisdom and the supreme love. From an infinite number of possible worlds he has chosen the actual world as the best. He has created it, and is therefore outside of it: but he has constituted it in such a manner that it needs no guidance except through its own intrinsic laws. He has so arranged it that all individual forces work together harmoniously and for a common end. Evil itself is only a less perfect good. An admiring insight into this harmony of the universe is man's highest happiness and virtue. It is happiness, because it gives us trust in the reasonableness of things and makes us accept all that may befall us, pain no less than pleasure, as the dispensation of a divine providence. It is virtue, because it helps us to overcome all littleness, puts before us the ideal of a complete existence, and teaches us through self-perfection to take part in the betterment of the race.

Strange and enigmatic as this curious mixture of scientific ideas and mythological images must appear to an age which has accustomed itself to approach all questions without the bias of the supernatural, it is none the less clear that the leading thought of the nineteenth century, the idea of organic evolution, is here at least foreshadowed. And however well deserved the fame of Leibniz the antiquarian, the linguist, the mathematician, the exact investigator, may be, his true significance lies in this divinatory conception of the world as a living whole.

Both the environment and the spirit of the assemblage which, the day before yesterday, gathered in the modest hall of the Berlin Academy of Sciences to do homage to this great man, were thoroughly characteristic of the prevailing tendencies—patent or hidden—in modern German life. Perhaps the most conspicuous thing about it was the complete absence of anything even approaching public interest in the matter. Suppose there were some stated day on which the memory of Locke or Hume was celebrated at Sanders Theatre—a day on which men like William James, John Fiske, Brinton, Gildersleeve, Child (to take at random a few names suggested by the thought of a possible American Academy) could be heard or seen—a day, moreover, which would lend itself naturally to the most delightful afternoon teas and receptions—a day on which the latest spring gown could be worn to the best advantage; then all the elements necessary for a most emphatically social time in the electric cars between Boston and Cambridge would be given. The Berlin public evidently are so saturated with intelligence and culture that they are above the vulgar desire to see and hear distinguished men. And thus it happened that the Leibniz day of the Royal Academy, an occasion in which men of world-wide fame, like Mommsen, Curtius, Virchow, Harnack, DuBois-Reymond, were sure to participate, attracted, apart from the friends and guests of the Academicians themselves, not more than a little group of students and foreign visitors—all told, an audience of some three hundred people; while in the daily press it was hardly mentioned, either before or after.

Another characteristic feature of the meeting—and a most agreeable one—was its absolute simplicity and freedom from formality. The only official representative of the Government present was Dr. Bosse, the Minister of Public Instruction, and he was a few minutes late. That Mommsen, the presiding officer, did not wait for him in opening the proceedings, seemed to me an incident of almost symbolical significance. Bureaucracy and militarism have not yet penetrated into the sanctuary of science, thank God! Not a single uniform was to be seen in the audience; not a single lady whom one would have felt tempted to address with "Gnädige Frau." The predominant types were earnest, unpretentious, and determined-looking men, and simple and benevolent-looking housewives. Even boys and girls were there, sitting quietly and modestly with their parents. It was altogether a family affair of Berlin's best men.

To me the most interesting figure was Mommsen. He sat by the side of Curtius, and the two together appeared an almost perfect embodiment of the ideal scholar. Curtius, though he has rallied from his recent accident with wonderful elasticity, yet gives the impression of one whose thoughts do not dwell any longer on this earth. The far-away look of his eye and the melancholy smile that plays around his lips—these characteristic expressions of his essentially lyric temper have been accentuated by the approach of the end, and surround him more than ever with a curious dreamy charm. Mommsen, on the other hand, seems to have been only steeled and invigorated by old age. His voice is as keen and penetrating as ever, his eye has still the same inexorable, sibylline glance as of old; and the sarcastic lines that run from nose to chin are perhaps even more marked than they used to be. But, at the same time, there is spread over his face a certain softness which was formerly absent, and the nervousness of his manner has entirely disappeared.

The exercises of the day consisted in an opening address by Mommsen, in the initiation, also by Mommsen, of some newly elected members, among them Erich Schmidt and Adolf Erman; and in a memorial address on Helmholtz by Du Bois-Reymond. While the latter was in the main biographical, and offered little that was either new or of universal interest, there was a terseness, a poignancy, a freedom in all that Mommsen said, which was simply irresistible. The central subject of his remarks was the relation of the specialist to the whole system of human knowledge. "Are we truly assembled here in the spirit of Leibniz?" he asked. "Can we truly call ourselves his disciples?" The answer to this question seems at first sight to be a negative one. To Leibniz the individual fact had no significance except as a link in the whole of a well-rounded and complete view of the world; and he himself mastered all the details of a systematic view of the world which was the fruit of his own thought and his own researches in nearly every domain of science. To us the isolated fact is only too often the final goal of investigation; and as for mastering the system of knowledge as a whole, none of us is a master, we are all journeymen. "*Unser* Werk lobt keinen Meister; nicht wir beherrschen die Wissenschaft, die Wissenschaft beherrscht uns." If, then, through specialization of work we have lost the universal culture and true humanity which for Leibniz was still attainable, it would yet be a grave mistake to condemn on that account the tendency of specialization. On the contrary, it is the specialist—*i. e.*, the specialist who looks beyond the isolated fact—who is to lead us back to culture and humanity. Only from him can we expect the elucidation of the organic unity of all knowledge; only he can penetrate to the one source of all life. It is, therefore, he, and not the compiler, who truly represents the conception of science as an or-

ganic whole; and of him more truly than of any one else can it be said that he walks in the footsteps of Leibniz.

While this was the general trend of Mommsen's discourse, it was perfectly apparent that through it all there ran an undercurrent of protest against recent political developments, against the autocratic rule of the present Emperor and the constantly growing overbearance of Prussian officialdom. It was undoubtedly intended for the ears of the Minister of Public Instruction, who, by the way, sat directly opposite him when Mommsen remarked that the time seemed for ever gone when a distinguished scholar like Wilhelm von Humboldt could at the same time be a Prussian Minister of State. It was an unmistakable reproof of the Emperor's scandalous treatment of the venerable Von Sybel when Mommsen spoke of the relation of Frederick the Great—"Friedrichs des *Einzigen*"—to the members of the Academy as something which would be simply impossible at present. It was a direct condemnation of modern Byzantinism and a plea for a freer and nobler view of life than that held by Bismarckian worshippers of might, when, in the words of welcome addressed to Erich Schmidt, he called it the task of the historian of German literature "to lead the age of William back to the age of Schiller and Goethe." And thus there was heard even in this peaceful gathering an echo of the conflict which is dividing modern Germany into two hostile camps—a conflict of which we thus far have witnessed only the beginning. KUNO FRANCKE.

Correspondence.

THE FRENCH REVOLUTION AND JEFFERSON.

TO THE EDITOR OF THE NATION:

SIR: The influence upon Jefferson of the social and economic condition of France, as seen by him during his sojourn in that country between 1784 and 1789, is a matter of general acceptance, and is observable in much that he wrote in those years, as well as in his subsequent writings. But the most marked expression of the extreme to which his opinions tended, under the direct pressure of what he saw about him while in France, has just come to my attention, being a letter addressed by him to his friend, Rev. James Madison, never yet printed; and as it is received too late for publication in its proper place in my edition of Jefferson's Writings, it deserves publication in your columns. Jefferson made a curious slip in the date, for he evidently wrote 1795 while intending 1785 (as he was never in France after 1789), an error that would seem almost impossible for a man to make had he not made the same slip in other letters of his, and constantly misdated his letters at the beginning of each year. PAUL LEICESTER FORD.

BROOKLYN, July, 1895.

FONTAINEBLEAU, Oct. 28, 1795.

DEAR SIR: Seven o'clock, and retired to my fireside, I have determined to enter into conversation with you. This is a village of about 5,000 inhabitants, when the court is not here, & 20,000 when they are, occupying a valley thro' which runs a brook and on each side of it a ridge of small mountains most of which are naked rock. The King comes here, in the fall always, to hunt. His court attend him, as do also the foreign diplomatic corps, but as this is not indispensably required & my finances do not admit the expense of a continued residence here, I propose to come occasionally to attend the King's levees, returning again to Paris, distant forty miles. This being the first trip I set out yesterday Morning to take a view of the place. For this purpose I shaped my course towards the highest of the mountains in sight, to the top of which was about a league. As soon as I had got clear of the town I fell in with a poor woman walking at the same rate with myself & going the same course. Wishing to know the condition of the laboring poor I entered into conversation with her, which I began by enquiries for the path which would lead me into the mountain: & thence proceeded to enquiries into her vocation, condition & circumstances. She told me she was a day laborer at 8 sous or 4d. sterling the day: that she had two children to maintain, & to pay a rent of 30 livres for her house (which would consume the hire of 75 days), that often she could get no emploiment, and of course was without bread. As we had walked together near a mile & she had so far served me as a guide, I gave her, on parting, 24 sous. She burst into tears of a gratitude which I could perceive was unfeigned because she was unable to utter a word. She had probably never before received so great an aid. This little attendrissement, with the solitude of my walk led me into a train of reflections on that unequal division of property which occasions the numberless instances of wretchedness which I had observed in this country & is to be observed all over Europe. The property of this Country is absolutely concentred in a very few hands, having revenues of from half a million of guineas a year downwards. These employ the flower of the country as servants, some of them having as many as 200 domestics, not labouring. They employ also a great number of manufacturers & tradesmen, & lastly the class of labouring husbandmen. But after all there comes the most numerous of all classes, that is, the poor who cannot find work. I asked myself what could be the reason so many should be permitted to beg who are willing to work, in a country where there is a very Considerable proportion of uncultivated lands? These lands are undisturbed only for the sake of game. It should seem then that it must be because of the enormous wealth of the proprietors which places them above attention to the increase of their revenues by permitting these lands to be laboured. I am conscious that an equal division of property is impracticable, but the consequences of this enormous inequality producing so much misery to the bulk of Mankind, legislators cannot invent too many devices for subdividing property, only taking care to let their subdivisions go hand in hand with the natural affections of the human mind. The descent of property of every kind therefore to all the children, or to all the brothers & sisters, or other relations in equal degree is a politic measure, and a practicable one. Another means of silently lessening the inequality of property is to exempt all from taxation below a certain point, & to tax the higher portions or property in geometrical progression as they rise. Whenever there is in any Country uncultivated lands and unemployed poor, it is clear that the laws of property have been so far extended as to violate natural right. The earth is given as a common stock for man to labour & live on. If for the encouragement of industry we allow it to be appropriated, we must take care that other employment be provided to those excluded from the appropriation. If we do not, the fundamental right to labour the earth returns to the unemployed. It is too soon yet in our country to say that every Man who cannot find employment, but who can find uncultivated land shall be at liberty to cultivate it, paying a moderate rent. But it is not too soon to provide by every possible means that as few as possible shall be without a little portion of land. The small landholders are the most precious part of a state.—The next object which struck my attention in my walk was the deer with which the wood abounded. They were of the kind called "Cerfs," and not exactly of the same species with ours. They are blackish indeed under the belly, & not white as ours, & they are more of the chestnut red, but these are such small differences as would be sure to happen in two races from the same stock breeding separately a number of ages. Their hares are totally different from the animal we call by that name; but their rabbet is almost exactly like him. The only difference is in their manners; the land on which I walked for some time being absolutely reduced to a honeycomb by their burrowing. I think there is no instance of ours burrowing. After descending the hill again I saw a man cutting fern. I went to him under pretence of asking the shortest road to town, and afterwards asked for what use he was cutting fern. He told me that this part of the country furnished a great deal of fruit to Paris. That when packed in straw it acquired an ill taste, but that dry fern preserved it perfectly without communicating any taste at all. I treasured this observation for the preservation of my apples on my return to my own country. They have no apples here to compare with our Rentown pipping. They have nothing which deserves the name of a peach; there being not sun enough to ripen the Plumb peach & the best of their soft peaches being like our autumn peaches. Their cherries & strawberries are fair, but I think less flavour. Their plums I think are better; so also the gooseberries, and the pears infinitely beyond any thing we possess. They have nothing better than our sweet-water; but they have a succession of as good from very early in the summer till frost. I am tomorrow to get [to] M. Malsherbes (an uncle of the chevalr Luzerne's) about 7 leagues from hence, who is the most curious man in France as to his trees. He is making for me a collection of the vines from which the Burgundy, Champagne, Bourdeaux, Frontignac, and other the most valuable wines of this country are made. Another gentleman is collecting for me the best eating grapes, including what we call the raisin. I propose also to endeavor to colonize their hare, rabbet, red & grey partridge, pheasants of different kinds, & some other birds. But I find that I am wandering beyond the limits of my walk & will therefore bid you Adieu.

Yours affectionately TH. JEFFERSON.

THE REARRANGEMENT OF THE VENICE ACADEMY.

TO THE EDITOR OF THE NATION:

SIR: When, in Venice three months ago, I went to the Academy, I found it resounding to the hammer; on a subsequent day it was closed, not for a week to be open to visitors, and, my stay in Venice being short, I was forced to postpone my examination of its contents. Upon my return I found everything in order, which it is to be hoped is the order that is destined to remain. Of recent years no gallery has so constantly changed as the Venetian Academy; for the connoisseur this is no great hardship, but for the ordinary traveller, who must depend upon his guide-book, it is a serious trouble. Ruskin's Academy guide has long been out of date; Hare and the 1889 Baedeker were only less useless, and since this recent change even the 1895 Baedeker is of no help.

The gallery has suffered a most complete shaking up. With the exception of the removal of two portraits, the Sala dell' Assunta has all its pictures in place, though the numbers are changed. Besides these pictures, Basaiti's "Agony in the Garden," Veronese's "Christ in the House of Levi," and Bordone's "Fisherman" occupy the same places as two years ago. All the other pictures have been changed, if not from room to room, at least from wall to wall.

It does not, however, follow that this house-cleaning was unnecessary. Its effects are in many cases beneficial. Important pictures have been put in better lights, and the historical arrangement is much improved. Moreover, certain changes are important and noteworthy. Gentile Bellini's "Miracles of the Cross," with pictures by Carpaccio, Mansueti, and Diana, of similar subjects similarly treated, have been collected in an octagonal room specially constructed for their reception, and in another are isolated the St. Ursula pictures

by Carpaccio. This arrangement of the St. Ursula series is especially pleasing. It is true that in their present order the present pictures present no historical sequence, but we have them in one room together, hung at the best height for the eye, and in good light.

The remaining noteworthy change is in the old Albergo, where are now placed two pictures only, the Vivarini "Madonna with the Fathers of the Church" and the Titian "Presentation of the Virgin," both of which are supposed originally to have been painted for this room. Passing over the questions of authorship, which ascribe the one picture to Giovanni d'Allemagna and Antonio da Murano, to Antonello da Murano, and even to Jacobello da Fiore, and the other to a pupil of Titian, it is interesting to see these pictures finally restored to their old places. The Academy occupies the buildings of the Convent of the Carità, converted, like many another convent in Italy, to Government purposes. Its collection is made up principally of pictures confiscated at the time of the secularization of the monasteries, and among them were these two pictures. They are, as I have said, finally restored to their old room, the Titian receiving exactly its old position over the two doors. For this purpose the two patches put in so long ago have been removed, and with its recent cleaning and fresh coat of varnish, which seem to have done it no harm whatever, the picture looks extremely well.

In this room, with its pictures of such different periods in this interesting juxtaposition, and the Sala dell' Assunta, with its collection of masterpieces, the remaining rooms of the Academy have been given up to a rearrangement in historical order. One room contains pictures from Jacobello to the early Vivarini; another, pictures from the late Vivarini to Basaiti and Carpaccio. The two octagonal rooms, with one other, contain the pictures of the school of Gentile Bellini and Carpaccio, and another room is given up principally to Giovanni Bellini and Cima. In this room, as if to remind one of Giovanni's indebtedness to other masters, are Mantegna's little "St. George" and Antonello da Messina's "Madonna Annunciata," with a most Flemish looking Antonello portrait. Two large rooms and one smaller contain works of the High Renaissance, while two more show the course of later art down to Tiepolo. The corridors contain a miscellaneous assortment of inferior pictures. A room is given up to the scanty collection of drawings, which, it is interesting to notice, are mostly of other schools than the Venetian. In this room, advantageously arranged for study, is the Venetian sketch-book, still ascribed to Raphael.

A word about photographs in Venice. After some time Alinari and Anderson have succeeded in getting out a large number of works of characteristic excellence. Their work has been done principally in Venice, but they have photographed in parts of Lombardy (notably Verona) and Venetia. Giorgione's Castelfranco altar-piece has been photographed in all sizes, in detail and as a whole. It is true that in the Venetian pictures there is still much to be desired, as in the photographs of the school of San Rocco, which has been unaccountably slurred, but by going from one publisher to the other a careful buyer can get good photographs of most of the best pictures in Venice. Both publishers are still at work enlarging their catalogues, Alinari has at last set up a depot in Venice, the little shops carry full lines of the new publications, and Naya, spurred to do something, with characteristic indolence, has taken to selling the photographs of Anderson.

ALLEN FRENCH.

KLOBENSTEIN, TIROL, July 7, 1895.

ANTONIO RAIMONDI AND PERU.

TO THE EDITOR OF THE NATION:

SIR: I have read with much pleasure and profit Prof. DeKalb's article on Antonio Raimondi, which appeared in your issue of July 18. It is refreshing to find a clear and truthful statement concerning a country which has been the subject of so many imaginative stories. Peru is a wonderful land in all respects, and not the least wonderful feature about it is the lack of real knowledge of this region on the part of foreign nations. Every one who goes thither meets with surprising features of man and nature, hears astonishing stories about the country, its inhabitants, and its products, and, if he abides any length of time and journeys into the interior, finds flat contradictions of most of what he has previously read. The tales of tourists, after a brief visit, rushing into print with sensational accounts and hasty generalizations are not the only sources of mistakes concerning this republic and its neighbors; savants also have wandered from strict facts. Even Humboldt dreamed, as Whymper has discovered.

Notwithstanding the length of time during which it has been inhabited by whites, Peru is still a *terra incognita*. Its mineral regions are still practically virgin, and its agricultural regions have merely been scratched, except on the narrow coast-belt. It is easy to say that its geological formations are generally Jurassic and Cretaceous, but when it comes to details, there is absolute ignorance in literature. Books fresh from the press still assure us that the two veins of Cerro de Pasco meet and cross in a little market-place of the town; as a matter of fact the metal-bearing deposit is half a mile wide. In the province of Aymaraes there are gold deposits of curious nature, an adequate description of which is yet to be published. The country here is a seeming jumble of volcanic and sedimentary rocks. Spheralites of true glassy magma abound, as large as a man's head and larger. Millions of cubic yards of volcanic gravel (I use "gravel" merely as a convenient mining term) contain throughout their mass particles of gold which all have sharp (not rounded) edges; as if volcanic gold-bearing rock had been disintegrated *in situ* to a depth of several hundred feet.

Scattered pamphlets on some of the plants of Peru have appeared, but no adequate botany has been printed. Yet through the extent of the vast interior one hears the most astonishing accounts of the plants and the herb-decoctions made by the Indian women, especially of the aphrodisiacal effects of certain of the decoctions. Although I have never been able to obtain authentic information, I cannot doubt that there is some basis of truth for these stories.

Were there time and space, hundreds of strange and interesting facts about Peru and many cases of scientific (?) misstatements might be cited. I adduce the above few instances simply to emphasize the value of Raimondi's work, and the desirability of editing and publishing his data accumulated during a laborious residence of some twenty years in the interior, amid hardships and privations which would have crushed a less determined and enthusiastic devotee of science.

I hope that one or more of our great scientific institutions may adopt Prof. DeKalb's suggestion, and aid in securing the fruits of Raimondi's great life work. Peru unaided has not the finances needed to carry out what it has undertaken. Such men as Ernesto Malinowski, at one time Chief Engineer of the Oroya Railroad, and at all times an earnest supporter of science; Eduardo Abich, the efficient Director of the School of Civil and Mining Engineers; Leonardo Pflücker, successful mining engineer and distinguished savant; the able officers and members of the Geographical Society of Lima, who have done much excellent work and have charge now of the preparation of Raimondi's material—these and other gentlemen of Lima have displayed great interest in the subject, and through their influence money has been obtained heretofore from the Government; but, in the present condition of Peru, no more public money can be counted on, unless the national pride be roused to unexpected efforts.

Two Americans, now both dead, have given Raimondi efficient assistance. One was Henry Meiggs, of whom Prof. DeKalb has written. The other was William H. Cilley, the greatest railroad builder of the world, who won the love and esteem of South America by his genius, generosity, and high standard of honor, and made the name of the United States respected throughout the West Coast. His countrymen would do well to continue his acts of useful liberality.

A. D. HODGES, JR.

BOSTON, July 21, 1895.

Notes.

A CENTENARY edition of the Poems of Robert Burns is about to be taken in hand by T. C. and E. C. Jack, Edinburgh, under the editorship of W. E. Henley and T. F. Henderson, in four volumes. A pure text will be especially sought after, and dates of publication will take precedence of dates of composition. The fourth volume will consist of "Songs, Doubtful Pieces, Addenda, Glossarial Index, and General Index," and an essay on the life and genius of Burns, by Mr. Henley. The publishers will esteem it a favor to be put in communication with all owners of original Burns MSS., with a view to comparison and collation.

Preston & Rounds, Providence, R. I., invite subscriptions to 'Early Rhode Island Houses: An Historical and Architectural Study,' by Norman M. Isham, Instructor in Architecture, Brown University, and Albert F. Brown, architect, with a map and more than fifty full-page plates. Fourteen important and characteristic houses have been selected, of date well ascertained, and these will be illustrated with plans, sections, and restorations based on actual measurements. The volume will be an octavo, and the edition will be limited.

Henry Holt & Co. will publish immediately an authorized translation of Paulsen's 'Introduction to Philosophy,' by Prof. Frank Thilly of the University of Missouri, with a preface by Prof. William James of Harvard.

F. Warne & Co. have reprinted in a pretty and inexpensive volume Mr. James Knowles's 'Legends of King Arthur and his Knights,' formerly published under the initials "J. T. K." The book has been too long before the public to need more than a word of commendation. It is precisely what it professes to be: an abridgment, in a clear and popular style, of Malory's 'Morte Darthur,' with a few additions and some changes in arrangement. We

have more than once expressed our regret that the late and frequently debased forms afforded by Malory's compilation should continue to stand between English readers and all knowledge of more genuine and more estimable versions of the Arthur story. However, it is greater popularity for Chrétien de Troyes that is desirable, not less popularity for Sir Thomas, and accordingly we welcome Mr. Knowles's little book in its fresh attire.

Even Alison must be impressed into the prevailing Napoleonic craze, and A. S. Barnes & Co. have had the more or less happy thought to resort to the old plates of Edward S. Gould's abridgment of his 'History of Europe from the French Revolution to the Fall of Napoleon,' and launch them anew after fifty years of storage. This is now called a "Student's Edition," but who would recommend the student to begin with Alison?

We have received from Macmillan & Co. the fifth and sixth volumes of Mr. Charles Booth's great work on the people of London ('Life and Labor of the People'). In these volumes the classification of the population by trades is undertaken, with the aid of the occupation returns of the census of 1891. It should be somewhat consoling to those who are disquieted by the inequalities of fortune to learn that out of 4,000,000 people in the rich city of London only 60,000 all told—men, women, and children—enjoy the luxury of an establishment with as many as four servants. "With less than half of these is the number of servants greater than that of those they serve." Like the other volumes of this magnificent statistical work, these are full of interesting details, and contain an enormous amount of technical information.

The Massachusetts Military Historical Society has published a new volume of papers read before it, entitled 'Critical Sketches of Some of the Federal and Confederate Commanders.' The series makes an interesting group of well-drawn characters, including Grant, McClellan, Sherman, Thomas, Beauregard, Stuart, Hancock, and Humphreys. Some of the papers have already appeared in periodicals, but others are for the first time made public, and all are worthy to be thus collected in a permanent volume. Great freedom is allowed the writers, who strongly but candidly make their estimates, each from his own standpoint, sometimes with strong contrasts of view and of conclusion. The society has material for some ten volumes or more, and proposes to classify the papers according to campaigns, and to continue the publication. With a strong list of contributors headed by Mr. John C. Ropes, it hardly needs saying that the war literature will thus be enriched in a noteworthy manner.

J. E. A. Smith's 'The Poet among the Hills: Oliver Wendell Holmes in Berkshire' (Pittsfield, Mass.: George Blatchford) is a rambling little book whose chief aim is to exhibit Dr. Holmes's poetic products during his seven summers in Pittsfield. A portion of this has never before been published; but the whole of it hardly serves to establish Dr. Holmes's title to be a poet of nature. The matter is eked out with Longfellow and Mrs. Kemble, and there are portraits, views, and facsimiles of old prints

Three of the four stories which make up Henry James's 'Terminations' (Harpers) have been printed before; the last one, "The Altar of the Dead," is new, and in originality of conception as well as in delicacy of imagination outranks the others. It is a theme after Hawthorne's own heart, and though he would have put more chill and creepiness into its treatment, he could hardly have made characters essentially elusive and ghost-like more real than has Mr. James by his flashes of light thrown upon flitting figures. Nowhere has he more shown himself, to use one of his own phrases, "a fingerer of style," with a fatal eye for the exact word required. Two of the other stories deal with certain aspects of the literary life, their apparent burden being the unsatisfactoriness of success, when not the highest. If some detect an autobiographic smart in this, more will be left wondering why so exquisite a literary art has not yet found a subject great enough to make its exercise seem less like sheer waste.

Señor Enrique Dupuy de Lôme, now Minister from Spain to this country, has had a varied diplomatic career, two years of which, 1873–1875, were passed in the Spanish Legation in Yokohama. Of the observations there made and the studies pursued, we now have the fruit in his 'Estudios sobre el Japón' (Madrid: Sucesores de Rivadeneyra). For the most part written twenty years ago, the volume has its timeliness in the chapters wherein Japan's leap from the middle ages into the modern world is described, and especially, from a Spanish point of view, in the pages which discuss and forecast the relations of Spain to Japan in the Orient. On this head Señor de Lôme writes: "Twenty-one years ago I said that Japan was an example and might come to be a peril; the example continues, and the peril has arrived, to become greater every day." Why Spanish influence and prestige in the East have so declined, the Spanish Minister explains with a frankness which must be melancholy reading for his countrymen. Something, he says, he does not know what, has eaten the enterprise and the moral fibre out of the Spaniard of the sixteenth century. Other races have taken the initiative in colonizing and commerce, and the Spaniard has sunk so low that he does not even care that his old sceptre has been given to another.

It would not be surprising if many persons, on reading Pierre Loti's 'Jérusalem' (Paris: Calmann Lévy), believed the author in a fair way of becoming a Christian, yet nothing would be further from the truth. Loti is emotional, acutely sensitive, but neither deep nor persistent, and, withal, a little bit of a *poseur*. The poetry of Jerusalem appeals to him through its picturesqueness, its (to him) new flavor of Judaism and Christianity, but in no more moving way than Constantinople or his Chinese kitten. He has an eye for certain colors and tints, for certain effects, and a remarkable power of describing them. The regretful tone, the would-be despair with which he seeks to impress the reader, and does impress many readers, are transient and will vanish like the mists and vapors that shadow at times the City of God. But neither his unbelief nor his pessimism ever prompts him to irony or contempt for the simple-hearted believers he meets in throngs up and down the narrow streets and around the sacred shrines. And this is a pleasant point to note. He may disagree, but he does not sneer. That there are numerous beautiful pages in the book is matter of course; it is an exquisite piece of writing, second only to 'Le Désert,' in which Loti was unconsciously more at home than in Jerusalem.

The War Department prints for army use 'The Autumn Manœuvres of 1894 in Austria-Hungary, France, and Germany.' This is part of the good fruit of the establishment of the "Military Information Division," and will give the opportunity for profitable study of the great schools of campaigning as now conducted by first-class military powers. The Austrian and German manœuvres are illustrated by large topographical maps, on which the positions are marked for each day of the mimic campaign that approaches as near to the proportions of actual war as is possible in time of peace. The Austrian manœuvres covered a region of some thirty miles square near Landskron in Eastern Bohemia. The German were in a region of similar extent south of Königsberg in Old Prussia. The French took place between Chartres and Orléans. The theatres of operation are characteristically different in topographical features, and the manœuvres possess the very highest degree of military interest.

In Part vii. of 'The Fishes of North America,' the editor, Mr. W. C. Harris, continues his notes upon the cat-fishes, a family most appreciated by juvenile anglers. The colored lithographs are of the small-mouthed black bass and the striped bass.

We have received from Dietrich Reimer, Berlin, the third of the twenty-nine plates of Richard Kiepert's map of German East Africa, on a scale of 1:300,000. This important work is issued under the patronage of the Colonial section of the Foreign Office, and may be trusted to embrace the minutest items of our present knowledge of a region extending from the sea to Lake Tanganyika, the Victoria Nyanza, Lake Nyasa, and the Rovuma River. Each sheet is accompanied by explanatory text. No better cartographer could have been employed than the compiler of the official 'Deutscher Colonial-Atlas.'

'*Figaro* Salon 1895' (New York: Boussod, Valadon & Co.) is concluded with Part 6, which is distinguished by a picture of Paul Dubois's equestrian statue of Jeanne d'Arc. The sculpture seems, indeed, to surpass the canvases in this season's exhibits, and we may single out in Part 5 A. Bartholomé's "Projet d'un Monument aux Morts" as containing the elements, at least, of a remarkably effective work.

D. C. Heath have become the American publishers of *Science Progress*, a periodical that stands quite apart in its class and holds no mean rank.

The seventeenth International Congress for the Protection of Literary and Artistic Property will be held in Dresden in September (21-28), and preparations are being energetically made by the local committee appointed by the Dresden Association of Authors. As the King of Saxony has accepted the patronate of the congress, and as there is an ample guarantee fund, the meeting will undoubtedly be a great success, especially since it takes place for the first time in a city of the German Empire, and its aims have a special interest for German authors and artists. Only two of the preceding congresses of the "Association Littéraire et Artistique Internationale" met in German cities—in Vienna in 1881, in Berne in 1883. Weighty questions will come up for discussion and possible solution in Dresden. Johannes Brahms, Eduard Brockhaus, Paul Heyse (in lieu of the late Gustav Freytag), Adolf Menzel, Johann Schilling, and Paul Wallot, the architect of the new Reichstag building in Berlin, will preside. After a solemn opening in the Gewerbehaus at Dresden and a gala operatic performance in the Court Theatre on September 21, the discussions will be carried on for a week, interrupted by excursions to Meissen for the inspection of the ceramic exposition prepared solely for the members of the

congress, and an excursion on September 28 to Leipzig, where the congress will be formally closed. It is to be hoped that many American authors and artists may be present.

—The current number of the *Journal of Hellenic Studies* (vol. xv., part i.) contains a very brief paper, by Mr. A. S. Murray, upon an Athenian lekythos in the British Museum. The paper is illustrated by a small woodcut in the text, and by a photographic plate in which the whole design painted on the vase is shown at once, and as if it had been painted on a tablet. From an explanatory note it appears that Mr. A. H. Smith has invented the machine which has effected this, the cyclograph, whose operation is as follows: "The vase . . . rotates while travelling along the circumference of a circle having its centre at the centre of the lens; and a narrow slit, which travels at the same time between the vase and the lens at right angles to the axis of the latter, insures that so much only of the vase shall be exposed at any moment as is without sensible motion, at the point where the movements of rotation and translation counteract one another." It is claimed that now for the first time is a painting on such a surface photographed without distortion. The phial in question, however, is nearly cylindrical. How will the machine work with the vases whose form approaches the spherical—with the œnochoe and the hydria? The painting represents a woman holding just such a lekythos in her right hand, other objects in her left hand, and evidently carrying offerings to the dead. It is evident, then, that such lekythoi were used in funereal rites. The inscription Mr. Murray gives as Πάτροκλ(ε) χαῖρε—"Hail to Patroclus." But, he explains, it is not the tomb of Patroclus of the 'Iliad,' nor of any other Patroclus, which she is to visit; here, rather, is an instance of the proverbial use of the passage from the 'Iliad,' where the slave-women weep their own private sorrows while seeming to mourn Patroclus. "The woman represented carries her own grief with her, while she laments ostensibly for some Patroclus or other."

—Most readers of the new German monthly, the *Geographische Zeitschrift* (Leipzig: B. G. Teubner; New York: Dyrsen & Pfeiffer and B. Westermann & Co.), will turn directly to the extremely suggestive article on the "Peace of Simonoseki in its Geographical Relations," by Baron von Richthofen, the well-known author of the standard work on China. He briefly indicates the strategical and material value of the Liautung Peninsula, Korea, and Formosa to Japan, and strongly commends the wisdom of her choice of places to be opened to trade. Three of these are situated at the centres of the silk districts, about one hundred miles from Shanghai. The manufacture of silk, it may be said, is growing with astonishing rapidity in Japan, the 13,000 spindles of four years ago having now become 600,000. Sha-shi, near the head of steam navigation on the Yang tse, is the port of a vast network of canals running north and south of the river through the cotton-growing provinces of central China. Siangtan in Hunan and Chung-king in Sze-chwan are similarly situated with respect to the great coal fields in these provinces. Comparing the influence of Western civilization on the three great Asiatic empires, India, China, and Japan, our author says that the two former would speedily return to their ancient condition on the withdrawal of the European, but that a permanent change has come over Japan, which will inevitably affect China. Japan has accomplished what England and France have failed to do: she has awakened China out of her sleep, and opened to Japanese enterprise the greatest store of cheap and intelligent labor which the world possesses. He holds, therefore, that the principal outcome of the war is the shifting not only of the world's political and military, but also, what is far more serious in its consequences, of her industrial centre of gravity. The other articles are one on geographical research by the editor, Prof. A. Hettner of Leipzig, which is accompanied by a chart showing the extent to which the earth has been surveyed, and one on the influence of climatic variations on the crops and prices of cereals in Europe. There is also an account of the Bremen Geographical Congress, the latest news from explorers and travellers, and notices of new books. From the editor's introduction we gather that the aim of the *Zeitschrift* is, not to publish purely scientific articles, but to present in a popular form the progress of our knowledge of the earth and its inhabitants, and also to treat of the methods of geographical education. A large number of writers, including some well-known names, have promised their coöperation. The form is a large octavo.

—*Die Frauenbewegung* was founded only six months ago by Frau von Gizycki, the gifted wife of the late Georg von Gizycki, professor of philosophy and ethics at the University of Berlin, himself a warm advocate of woman's rights. It is a semi-monthly journal edited by Lily von Gizycki and Minna Cauer, and receives contributions chiefly from the pens of leading German women writers and reformers, although articles by men not unfrequently find a place in its columns. While its aim is first and foremost the attainment of the rights now so freely extended to women in other countries, and of those still denied them the world over, it has also at heart the cause of temperance and of peace, and general social regeneration. A large percentage of both the men and the women interested in woman's advancement in Germany are more or less declared Socialists. Socialism is accordingly imputed as an opprobrium to the *Frauenbewegung*. This cannot be helped any more than could the early relation between the despised anti-slavery agitation in this country and the movement for the equal rights and duties of the two sexes. The *Frauenbewegung* is remarkable for its able editorials, but most of all for its unusually wide sources of information concerning what is accomplished for and by women in every part of the world. It does not cater to the feminine taste for fiction, and it absolutely ignores household affairs, so favorite a topic among the Germans.

—M. Paul Bourget was with us last year, and has recorded his impressions and his accumulation of facts with that delightful mixture of the one with the other which only a master of fiction can compound. But the review of his two volumes by M. M. E. de Mandat-Grancey, in the *Figaro* of June 1, reveals us to ourselves in several new lights. We are, according to the reviewer, a most notable example not of real progress, but of reversion to a more primitive type of society. He twits M. Bourget with having looked too exclusively at the five-o'clock-tea side of American manners and informs him that if he had gone West and studied the rougher phases of life, he would have understood better the real developments of Americanism. In the West, M. de Mandat-Grancey finds a state of things to which a parallel can be discovered only in the Middle Ages. While enormous wealth has accumulated in a few hands in the East, endangering, through corruption and through monopoly, the liberties of the people, in the West the land is held in vast tracts by great proprietors. These feed their flocks and herds over areas large enough to constitute respectable principalities. Like the barons of old, they arm their retainers, called "cowboys." They carry on petty warfare with neighboring barons, and, when not so engaged, keep their hands in by doing a little marauding on peaceable merchants and travellers. When an internecine strife overtaxes the reserves in men of one of these barons, he can hire mercenaries—"fighting men"—from a Col. Pinkerton, the same who supplied Mr. (Baron) Carnegie with soldiers in his war with his workmen. M. de Mandat-Grancey professes to speak from bitter personal observation and experience, as he says a company in Dakota, in which he is interested, expends 11 per cent. of its revenue in maintaining a force of fighting men to defend its property. While in the West the rough-and-ready manners of the Middle Ages are repeated on our ranches, in the luxurious society of our Eastern cities we are imitating the habits and vices of Rome in her decadence, and that so accurately that, as M. de Mandat-Grancey says, "ladies, after a public entertainment, will even visit the lodgings of a celebrated acrobat, who exhibits to their admiring gaze the muscular development of his torso under the pretext of giving them a lecture about his body." However ridiculous and extravagant such criticism may be, there is just suggestion enough of truth in the caricature to make it worthy of more than a sneer or a jest.

—Some months ago Mr. Lewis E. Gates edited for the Athenæum Press Series of Ginn & Co. a volume of 'Selections from the Essays of Francis Jeffrey.' This is now followed by 'Selections from the Prose Writings of John Henry Cardinal Newman' (Holt). The two volumes are in plan and purpose substantially identical. They furnish to the student or the amateur of literature or of the art of writing a compact body of material with a carefully adjusted apparatus of introduction and notes. Both books give evidence not merely of abundant knowledge and accurate scholarship on the editor's part, but of a somewhat remarkable power of constructive as well as analytic criticism. The introduction to 'Jeffrey' defines the dictator's position as a literary critic with an exactness hitherto unattempted, and puts his relation to the Romantic movement in a new light. Another novel point is the discussion of the *Edinburgh's* influence in converting "the old-fashioned review-article" into "a brief argumentative essay discussing some living topic, political or social, in the light of the very latest ideas." The introduction to 'Newman' is also a highly original piece of writing. Nowhere have Newman's style and method been so subtly analyzed before, nor do we believe that future analysts will find much that has escaped the editor's processes. Equally brilliant is the short chapter which defines the relation of the Oxford movement and the Roman Catholic revival to what is called Romanticism. We hope that these two introductory essays may be but the *prodromos* of a more elaborate and ambitious work on the literature of the nineteenth century. That Mr. Gates has a vocation to such a work there can be no doubt.

MUMMERY'S CLIMBS IN ALPS AND CAUCASUS.

My Climbs in the Alps and Caucasus. By A. F. Mummery. Illustrated. London: T. Fisher Unwin; New York: Charles Scribner's Sons. 1895.

JOHN BALL, the first President of the Alpine Club, was once asked his opinion about that matter of droll debate, "Is life worth living?" He said he felt "contemptuous pity for the man whose mind could be so profoundly diseased as even to ask such a question, as if a soldier with the trumpet-call sounding in his ear should stop to inquire whether the battle was worth fighting." Mr Mummery has been sealed of the tribe of Ball for twenty-four years, and the same freshness which the world welcomed in 'Peaks, Passes, and Glaciers,' in 'Hours of Exercise,' in 'Scrambles amongst the Alps,' and in the ever-to-be-cherished 'Playground,' is the quality of his book. Where so many climb with daring and acrobatic skill, it would be invidious to single him out as the most expert amateur of the last decade; but one can state that he is a typical *Gipfel-Stürmer*, and has had few peers in his craft. The Mummery tent is a masterpiece, and readers of the *Alpine Journal* know how its inventor can act in an emergency. Mr. Ellis Carr's 'Two Days on an Ice Slope' bears evidence to higher qualities than endurance and ingenuity. But till now the half of his deeds has been untold.

Considerable disproportion exists between the space allotted to the Alpine and Caucasian parts of this book. We have eleven chapters on the Alps, two on the Caucasus, and an important epilogue on the "Pleasures and Penalties of Mountaineering." The Alpine chapters, in turn, fall asunder into sections relating respectively to Visperthal and Chamonix peaks. The Teufelsgrat—the southwest ridge of the Täschhorn—is Mr. Mummery's eastern, the Aiguille du Plan his western, limit. Let us follow out the course of a single expedition. Which shall it be? None is without excitement, and it is hard to choose between Zermatt and Chamonix, between the Col du Lion and the Grépon. But the Matterhorn is "la belle dame sans merci" of the Alpine knight, so let us take the Col du Lion. What manner of pass this is can be seen by reference to Mr. Whymper's illustration of its summit, page 91 of his 'Scrambles' (ed. 1871). Both he and Prof. Tyndall, two of the most daring among older Alpinists, considered it impracticable, and it was hedged by the divinity of its danger till June, 1880. Mr. Mummery shall tell how he came to attack it. One day, towards the end of this month, he and Alexander Burgener, having crossed the Col Tournanche, were

> "basking on a warm rock, just above the level of the Tiefenmatten glacier. The pipe of peace was wreathing tiny clouds and threads of smoke amongst the overhanging rocks, whilst before us towered the grandest wall the Alps can boast, the huge western face of the Matterhorn. Gradually my attention was riveted by the Col du Lion, and it was brought home to my mind that no more difficult, circuitous, and inconvenient method of getting from Zermatt to Breuil could possibly be devised, than by using this same Col as a pass."

The chief danger of the Col du Lion is the cannonade of stones which sweeps its sole approach, a couloir 2,000 feet in height. This couloir, though set at a very erect angle, is not unassailable during the early hours of the morning. After the sun grows hot, it is an open conduit for every kind of projectile which the Matterhorn showers down its flanks. A party once committed to it is bound to advance. A single obstacle causing delay is almost certain to entail what mountaineering books style, with unanimity of euphemism, "the most serious results." The risk is great, and in the present instance was not underrated by either the amateur or his guide. They made the trial and won, but not by an ample margin. The couloir was in bad condition. "It looked scarcely possible to get up, and there was more than a touch of anxiety in Burgener's 'Wir müssen, Herr Momerie, sonst sind wir beide caput.'" A little later on their difficulties came to a climax with the breaking of Burgener's ice-axe. It is to be presumed, although he does not say so, that Mr. Mummery's sensations at this point were similar to those of Nelson in the battle of the Baltic. "It is warm work; and this day may be the last to any of us at a moment. But mark you! I would not be elsewhere for thousands." The crippled pair, from lack of an exit below, moved on up the cathedral roof of ice, and forced their way across a desperate traverse to some snow. The traverse was fifteen feet wide, and consisted of rock, nearly perpendicular, glazed with thin ice. Notches for hands and feet were scratched in the ice, and by a kind of shuffle the *mauvais pas* was crossed. Later on they froze their fingers, and in this state had to assault the final cliff below the Col. "The face of this final cliff consists of loose, disintegrated rock. It appeared, indeed, to be only held together by the snow and ice with which it was plastered." A friendly rent in the icicles gave Burgener his desired chance. "Once in this gap, he soon gets one hand on the hard-frozen Col, the other waves his hat, and, with a triumphant though breathless jodel, he draws himself over the edge of the grimmest wall it has ever been my luck to scale."

Sic itur ad astra. The descent to Breuil occupied, exclusive of halts, an hour and a quarter. It was a continuous and not too careful glissade. The couloir was full of fog, and they nearly slid into the Bergschrund. Pulling up just on its edge and traversing to the left, "we found a bridge, and, as it was much too rotten to crawl over, we trusted to luck and a sitting glissade." Thus ended an expedition compared with which the Höruli ascent of the Matterhorn is a quiet ramble. The pass has only been made twice since then: once by Dr. Güssfeldt and Burgener, who nearly lost their lives ('In den Hochalpen,' p. 269); and once by Herr Kuffner with Burgener and Kalbmatten.

It is no concern of the present notice to examine the ethics of such exploits. Readers who have never breathed Alpine air above the tree-line will hardly approve what seems a reckless risk of life and limb. But let such remember—for few will be tempted by Mr. Mummery to try the Col du Lion—that in this spirit of invincible pluck the Rütli compact was sealed, and English sailors of the sixteenth century manned twenty-ton pinnaces for the North Atlantic voyage. And then the *advocatus diaboli* may find another ground of defence. Perhaps we ought to consider that these deeds are so many silent protests against the Zahnradbahn and its concomitants. *Non ragioniam di lor.*

Mr. Mummery has visited the summit of the Matterhorn seven times, and in separate chapters of his book describes two ascents from unusual sides, viz., from the Zmutt ridge and the Furggen ridge. Mrs. Mummery contributes an article on an ascent of the Teufelsgrat, which she made in company with her husband and two guides in July, 1887. They were out twenty-eight hours, and there is no mention of excessive fatigue! The rest of the Alpine part deals with the Aiguilles of the Mont Blanc chain, and must be read by all who desire to know the character of up-to-date rock-scrambling.

In 1868 Elbruz, 18,526 feet, fell to three members of the Alpine Club, Messrs. Freshfield, Moore, and Tucker, with François Devouassond as guide. But Dych Tau, 17,054 feet, the second summit of the Caucasus, went unsubdued for twenty years longer. The conquest must have cost Mr. Mummery much discomfort and a great deal of vexation. His guide, Heinrich Zurfluh of Meiringen, had one eternal note: "Es gefällt mir nicht." The struggle with Dych Tau brought him up to the mark, but for the rest he was homesick and unfit. Mr. Mummery did his mountain handsomely, made some passes, and returned, successful in his main object, but without materials for any such book as that of Mr. Freshfield. At the best he could not have brought the Caucasus into serious competition with the Alps. Elbruz is higher than Mont Blanc; the azalea is more beautiful than the rhododendron; Uschba may be more awe-inspiring than the Matterhorn. But all other mountain districts lack the one great thing which the Alps have—human interest. "Keine Glocke ertönt auf den grünen Matten, und kein Senne jodelt dem Wanderer zu." So Emil Huber, of the Selkirks; so all explorers when they come to a final comparison.

The chapter on the "Pleasures and Penalties of Mountaineering" is important for its expert testimony on two points which many have held to be settled. The true faith of climbers—*vide* the Badminton and All England series—is that a party should consist of at least three persons, and that the rope should never be discarded till the day's work is done. Minatory clauses assert that whoever believes and acts otherwise, shall without doubt suffer "the most serious results." Mr. Mummery brings great fulness of illustration to bear on both these points, seeking to modify rather than dispute the received view. He also touches the question of climbing alone. He admits that in fine settled weather he has "strolled over the Trift Joch, the Weissthor, the Col du Géant, and other passes, without experiencing any symptom of danger." But his advice is conservative. He refrains from mentioning Mr. Whymper's hook and ring.

In conclusion, a few words about Mr. Mummery's work as a whole. It is open to a certain amount of minor criticism, but, after all deductions have been made, it remains a work which will find its home in every good library of adventure, and will be of permanent interest to every lover of the Alps. May one dare to suggest that in a future edition the author will subject himself to the "painful operation of self-mutilation" which Leslie Stephen performed before publishing the 'Playground'? The Alpine joke, especially when it deals with meat and drink, will never fail to receive cordial welcome from the elect, but should be preserved from a too sacrilegious protrusion upon the public ear. One point more. Col. Higginson's distinction between the American and the Englishman is often brought to mind in reading Alpine books of 1875–95 side by side with the books of 1855–75. A certain clear difference in tone can be detected—in despite, we are forced to believe, of Mr. Mummery's opinion. The older men had no lack of joy in their sport, or of vigor in its prosecution. Their books are full of the enthusiasm which is begotten of thin Alpine air. Is the drop

which has been superadded a drop of nervous fluid, or a drop of Bouvier?

The garb of the book is handsome, not to say sumptuous. Mr. Pennell—who, by the way, must be getting to know Europe as well as Herr J. Weber of 'Wanderbilder' fame—contributes eleven admirable drawings; the eight photogravures are equally admirable; the two lithographic plates lag a little behind. Several other illustrations occur in the text. Two misprints need to be rectified. The illustration of the Aiguille Verte is not a photogravure, as we are led to suppose from the list given on page xii. The other misprint is amusing. Mr. Mummery is made to state, p. 111: "Of these early pioneers Melchior, Anderegg, and a few others survive." Now Melchior Anderegg is a name familiar to climbers as Napoleon is to mankind. He is the most famous of guides. Three years ago Mr. C. G. Mathews said of him at the age of sixty-four, "It is inexpressibly sad even to think of the time when the eye will become dim and the natural force abated; but, living or dead, he will have an abiding-place in the hearts of many men, who owe him a debt of gratitude to repay which would be impossible." One does not like to see such a man cut in two even by a printer.

RICHARD OWEN AND THE EVOLUTION MOVEMENT.

The Life of Richard Owen. By the Rev. Richard Owen. 2 vols. Appletons.

We closed this Life of Richard Owen with the feeling that he was more than a great comparative anatomist. So far as the permanent forces of civilization are concerned, he was one of the leading Englishmen of the middle part of this century. Although he outlived Darwin by ten years, passing away in 1892 at the age of eighty-eight, we purposely emphasize his position in the mid-century, for after this he virtually lost his leadership. This loss of a commanding position among his colleagues in both thought and action is the most striking single feature of his life, because it illustrates most vividly the total change in English thought about nature, and the consequences to one who refused to conform to the change. A genuine and brilliant scientific career is almost invariably cumulative, honors and influence increasing rapidly as life goes on. Such good fortune, however, was not Owen's. In his latter years he continued active research, he saw his dream of a great museum realized, he enjoyed the beautiful Sheen Lodge in Richmond Park, provided for him as a home by the Queen, but he certainly felt none the less keenly that his intellectual supremacy had departed, and that the age had gone by him.

The truth is, Owen belonged to the older school, and Darwinism fairly cut his life in two while in its prime. Although only fifty-four when the 'Origin of Species' appeared, he could not or would not reconstruct the framework of his natural philosophy as Sir Charles Lyell did at a much more advanced age; and, so far as we know, Owen remained to the last sceptical as to natural selection and unreconciled to evolution. Amid a charming narrative of the personal and social experiences of a long and prominent life, this central fact is candidly brought out by the author, with the competent scientific advice and revision of Dr. Sherborn. Yet the omission of all reference to Owen's bitter controversies during the mid-century in numerous letters, papers, and public discussions is a serious defect, for we well know that it is these omitted passages of Owen's life which best explain his conservatism as well as his loss of prestige with younger men.

We must understand that at the climax of his career Owen held an almost unique position: he was highly honored in the scientific world, as well as by the marked confidence of the royal family and of the Government; all new and rare vertebrate specimens reaching England from every part of the world came to his hands; his scientific dictum was law. It was inevitable that he should begin to consider himself infallible, and to look upon his monopoly of material as part of the natural order of things. When Huxley, Flower, and other younger men entered the same field, claimed a share in the scientific spoils, and especially when they began to dispute some of his fundamental theories, he rose in wrath and replied with superior irony. Every such contest ended in a total defeat for Owen and in the further estrangement of his younger colleagues, with the final result that his whole philosophy of anatomy was undermined.

These volumes naturally dwell chiefly upon the brilliant side of Owen's career. Now that facilities for the study of natural science abound in all English cities, and every beginner is welcomed into biology, it is difficult to imagine the discouragements which faced a young anatomist in 1820. The manner in which Owen surmounted every obstacle finely illustrates Galton's view that mental predisposition is superior to the forces of nurture and education. While apprenticed to an apothecary in Lancaster, Owen cultivated the surgeon of the county jail. The ghastly surroundings of the morgue for executed criminals at first repelled him, but, with the rare opportunity of dissecting the head of a negro and examining for himself the prognathic and other racial characteristics, he says: "My anatomical passion returned, and all other resolves and scruples were soon forgotten." At twenty-three Owen had found his way into John Hunter's collection in the Royal College of Surgeons, and begun his famous studies on the anthropoid apes. There Cuvier called upon him, invited him to Paris, and drew his attention to the study of fossil vertebrates. Five years later the memoir upon the Pearly Nautilus gave Owen a world-wide reputation, and from this time forward he worked over the broad field of living and extinct fishes, reptiles, birds, and mammals with marvellous rapidity and accuracy, producing from fifteen to thirty memoirs or papers annually until he was over eighty. Dr. Sherborn deserves the credit for the complete bibliography. Owen laid the foundations of our modern work upon the fossil reptilia, especially the dinosaurs, and monographed the marsupials of Australia. From New Zealand he procured and finally restored the giant bird Dinornis, and one of his triumphs was the restoration of the great South American sloth, Mylodon. He was also an enthusiastic student of the microscope, discovering and tracing the life-history of the trichina as the cause of trichinosis, studying and speculating upon the phenomena of parthenogenesis, and being elected the first President of the Royal Microscopical Society. It is safe to say that no living naturalist is covering one-fourth the ground represented by these researches.

We can hardly overestimate Owen's public services in spreading natural science through his addresses and lectures to the people by skilfully stating technical facts and imparting his own enthusiasm. He labored for years in the cause of sanitation, and was largely instrumental in forcing Parliament to consider drainage and ventilation as matters of public welfare demanding legislation. It required years of enlightenment to secure the removal of the tax on windows, which fell most heavily upon the poor. But Owen's greatest parliamentary effort was his agitation through a period of nineteen years for a museum of natural history. Suffering from the overcrowded state of his collections in the British Museum in Bloomsbury, he conceived in 1846 the idea of a distinct national museum of fossil and recent anatomy upon a grand scale, to include a large lecture theatre, and to occupy ten acres of land in the heart of London. This costly project he forced upon several Prime Ministers successively until Gladstone, with his keen appreciation of public educational needs, made it a Government issue in 1861. Singularly enough, Huxley was quoted as one of the opponents of this scheme, considering it chimerical, and under a sharp attack by Disraeli the Government was defeated by a large vote. But in 1863 Gladstone carried the full measure through, the building was beautifully designed, by Waterhouse, and Owen held the directorship until 1884. It is now the most superb institution of its kind in the world.

The second volume of the Life closes with an essay upon "Owen's position in the history of anatomical science," which puts this side of his career clearly before us. This was appropriately contributed by the late Prof. Huxley, who was for years the chief opponent of Owen. Owen fell heir to the investigating spirit of Cuvier and to the fallacious anatomical philosophy of Oken, which he carried into great detail. As the head of the *École des faits* (in opposition to Geoffroy), Cuvier made the accumulation of facts and classification the chief end of science, considering that the search for underlying principles in nature was fruitless. Oken, on the other hand, borrowing mainly from the Greeks, ranked generalization first. Between these extremes, in his osteology, Owen pursued a fatal middle course, piling up facts like Cuvier, but forcing them into harmony with the Goethe-Oken "archetype," akin to Plato's "idea." Thus, in the culmination of his anatomical studies, he fell into a mystical and fallacious circle of reasoning about the skull and skeleton as fashioned by the Creator after a certain ideal pattern, and believed that all vertebrates presented variations of this pattern. This was evidently not the path leading to evolution.

In 1844, when Robert Chambers excited all England over the development hypothesis in his anonymous 'Vestiges of Creation,' Whewell and the geologists Murchison and Sedgwick (who referred to the 'Vestiges' as that "beastly book") appealed to Owen as "a real man in armor, from whom a reply would do infinite service to *true* science." But Owen remained entirely non-committal. In 1848 he told the author of the 'Vestiges' that there were five more likely ways of introducing a new species than those advanced by Lamarck, but declined to explain them. His only direct statement was that no satisfactory proof of evolution, and certainly no internal perfecting tendencies in animals or plants, were apparent, but there might be other "secondary causes," as yet hypothetical and requiring much additional observation and experiment. Subsequently (in 1858), he looked equally askance at natural selection, and his early friendship with Darwin terminated after a long correspondence, in which Owen seems both overbearing and disingenuous. These letters are not reproduced here, but should ultimately be published, together with

those of Darwin, which have also been suppressed from the 'Life and Letters.'

When this biography of Owen is placed beside Darwin's and compared with the life work of Huxley, we have before us the three men who, with widest contrasts of character and endowments, have made England preëminent in natural history during the present century, taking from France the leadership won by Cuvier, Buffon, and Lamarck. Owen's constructive power is seen in his building up comparative anatomy and projecting the great museum. His failures in controversy and in biology are in strong contrast with Huxley's achievements in philosophy as well as in his battles for free thought and the Darwinian theory. Yet Huxley's success was largely of a destructive character. Owen's observations in anatomy are far more numerous, while Huxley's principles of anatomy are far more useful to the modern student because they embrace both embryonic development (which Owen disregarded) and evolution. The decline of Owen's influence and interpretation of nature attended step by step the rise of Darwin's, and he has fallen for a while below his actual level. But as time softens the memory of his errors, Owen will be recognized as preparing the way for English biology in the latter half-century. A beautiful statue of his noble figure will soon stand near that of Darwin in the natural-history museum which he founded, and before long England, America, and Germany will place the lamented Huxley in the marble group.

The Mississippi Basin: The Struggle in America between England and France, 1697–1763. With full cartographical illustrations from contemporary sources. By Justin Winsor. Houghton, Mifflin & Co. 8vo, pp. x, 484.

THE tale that was told from Cartier to Frontenac is continued by the same author in this welcome volume. The two works are uniform in externals, identical in plan, method, and scope, and bear the same relation to the more extensive "Narrative and Critical History of America" which the eminent writer has so ably conducted. Nearly all that we said on the former occasion is equally pertinent to the present, *mutatis mutandis*. The period of time covered by these continuous relations is more than two hundred years, of which a century and two-thirds extended from Cartier to Frontenac, and two-thirds of a century witnessed the consequent French-English struggle in America; historical continuity being thus unbroken from the initial date of 1534 to the pivotal year of 1763. But with the opening of the present treatise the scene is shifted from what might be named Laurentia—*i. e.*, the whole drainage-area of the Great Lakes and the River St. Lawrence—to what was for a while called Colbertia, this being all that was then known of the Mississippi Basin, whose main artery had been named in honor of the French statesman by Louis Hennepin in 1680.

We have already commented on the wealth of cartographical material which is brought to bear upon Mr. Winsor's work; and this most marked feature in the case becomes still more impressive and significant as the story develops into its fuller proportions. The keynote is struck by the author's high appreciation of the bearing of physical geography upon human history; and he elaborates this thesis with such firm insistence upon the main point, with such happy results, that he almost seems to have created a science for which as yet we have no name. This may be called, in a word, histogeography. We will let Mr. Winsor himself supply the definition, by citing a portion of his dedication of this volume to the President of the Royal Geographical Society:

"Such an observer as you are knows how the physiography of a continent influences its history; how it opens avenues of discovery, directs lines of settlement, and gives to the natural rulers of the earth their coign of vantage. I would not say that there are not other compelling influences; but no other control is so steady. If we appreciate such a dominating power in subjecting the earth to man's uses, we cannot be far from discerning the pith of history, particularly of those periods which show the work of pioneers."

The pith of history thus indicated is something that not all—perhaps we should say not many—historians have fully extracted, however diligently or successfully they may have scraped the bark to get at heart-wood facts, or even tapped the trunk of time for a flow of dates. We may know to an hour when La Salle was killed, who fired the fatal shot, and even hear some of the words that passed, without being able to fix the spot where this tragedy was enacted. We were long left almost as much at sea concerning the transcontinental route of Alvar Nuñez Cabeza de Vaca and his companions as these were before the author of the 'Naufragios' had touched Florida under Adelantado Pámfilo de Narvaez. In these two cases, as in uncounted others we could cite, precision is possible only by histogeographical methods, in the application of which many writers of great reliability in other respects have shown themselves singularly obtuse. The trailing of pioneers and explorers has often been a neglected or slighted portion of the historian's work, and this is specially liable to be the case with the very class of writers to which Mr. Winsor distinctively belongs—namely, scholars who live in the world of books, and explore the rich recesses of the library. Our author is the signal exception to the rule; for his work shows that he can "cover the ground" better than many travellers.

Almost all the great continental thoroughfares along which human tides have borne their living freight are reducible to one or the other of two main classes—waterways and mountain-gaps. The lie of the land determines avenues of approach and occupation so infallibly that histogeography becomes a true science, capable of development even to the predictive stage—so far removed is it from mere empiricism. We have a fine illustration of its main principles in the well-known facts of our history, from Columbus to Winsor, throughout which period the course of empire has been that the buffalo followed the water, the Indian followed the buffalo, the white man followed the Indian, and the locomotive followed the white man. Another interesting point in this connection is the occurrence of conditions which infallibly make some places key-situations, like the Sault Ste. Marie on the Great Lakes, El Paso on the Rio Grande, or the South Pass in the Rocky Mountains. Many who have admired the wisdom and goodness of God in making rivers flow so conveniently past cities might less devoutly and more reasonably account for even some of the more anomalous coincidences by applying sound principles of histogeography.

The numerous maps which illustrate Mr. Winsor's text constitute in themselves no small portion of the history of the Mississippi Basin, in their graphic delineation of the progress of geographical discovery and acquisition. In their mechanical execution, we are sorry to say, they are far from being all that is desirable. Some of the objectionable features to which we referred on a former occasion are perhaps inseparable from the process of reproducing them from the originals, in pursuance of what seems the author's plan of reducing the sheets to page size; but even where only small sections of large sheets are thus represented the lettering is often obscure, and sometimes illegible. We remember reading lately a series of humorous "Don'ts" which the American Library Association printed for mutual entertainment and edification, one of which was, "Don't try to find any convenient way to keep maps—there is none." Mr. Winsor may be so well aware of this that he has forsworn folding inserts; but what he gives us instead is so trying to the eyes, and so vexatious, that we hope he may effect some compromise with impossibility, in the event of succeeding volumes of this series. We also venture to think that better maps to illustrate modern geography could be found than such as those of Humphreys and Abbot (1861), which are already out of date, though they answer a certain purpose Mr. Winsor had in view.

The volume opens with the Mississippi Basin of the end of the seventeenth century—the date of Iberville's expedition, 1697-1700, which is the first to be treated in detail. Progress throughout the valley is traced in the next few chapters, which include accounts of Crozat and trade, and of the celebrated Mississippi Bubble of John Law, 1700–20. We are accustomed to the soldier, the trader, and the priest as the more or less unholy trinity of forces in the vanguard of discovery and occupation, but in this case the speculator or peculator was at their heels. Other chapter-heads will indicate, as clearly as can be done in equally few words, the author's further development of his theme. These are: The barriers of Louisiana, 1710-20; Charlevoix and his observations, 1720-29; the Appalachians, 1720-27; French, English, and Spanish rivalries, 1730-40; the search for the Sea of the West, 1727-53; war and truce, 1741-48; portals of the Ohio valley, 1740-49; Louisiana and its Indians, 1743-57; undeclared war, 1750 54; rival claimants for North America during the whole period from 1497 to 1755; anxieties and plans, 1754; the Alleghany portals, 1755; the two dismal years of 1756-57; the Ohio and St. Lawrence won, 1758-59; the transition from war to war, 1760-63; and the treaty of peace, 1763. While the movement of the narrative as a whole is thus historically consecutive, the several chapters overlap somewhat in dates, and are really in the nature of distinct though duly correlated essays upon various aspects or episodes of the whole subject. If these were not masterly, they would not be Mr. Winsor's. Furthermore, the work is protracted beyond the ostensible date of 1763, to point out the effect of the treaty upon the Indians in 1763-65; and concludes with completion of the occupation in 1764-65. The whole is carefully indexed with sufficient analysis of the contents to satisfy most readers, though this could easily, and perhaps with advantage, have been still more minutely elaborated.

Mr. Winsor's habitual precision of statement, as well as his direct and forcible style, is too well known to call for comment here. We find him working in his own best vein in this volume; and that best gives us the very pith of history, as we have already pointed out. If we miss some of those qualities which shine to great advantage in the works of other historians or histogeographers, we may remember that it is not given to all men to do all things; and that every human occasion,

even of seemingly unlimited possibilities, has its natural and necessary limitations.

The Life of the Spirit in the Modern English Poets. By Vida D. Scudder. Boston: Houghton, Mifflin & Co. 1895.

THE most general impression made by this book is of a theory, mainly preconceived, fortifying itself by whatever suits its purpose, with a blind eye for whatever is likely to prove intractable. With many good perceptions, often well expressed, the book as a whole is extremely piecemeal and diffuse, with fine words used with so little aptness that, were we to accept Max Nordau's tests of the insane degenerate, we should have to set Miss Scudder down as one. "Serene," for example, is a fine word, but it does not describe Robert Browning. A certain physical intensity of word and phrase is a conspicuous defect. Another and more serious is the drawing out or lopping off the poets to fit them to the general plan, whereby we lose all sense of their coherent personality. In one place we have an exposure of Clough's and Arnold's most sceptical negations, and in another their demand for action is set forth; but in neither place do we get the impression they give us in the mass. This is particularly true of Clough, whose scepticism affected the traditional Christianity very much more than the fundamentals of religion. The negative part of his great Easter poem is liberally quoted without a hint of the positive antiphony, and of the joyous courage of his "New Sinai" there is not a word. And why the long quotation from Browning's "Saul" in proof of his robust assurance of a future life, and no reference to "La Saisiaz," a much later poem, of which the essence is that a robust assurance of a future life is not what we want, seeing that "dead certainties" are not the meat on which religion feeds? There is some atonement, however, for this perversity in the frank allowance of the unquestionable immorality of "Fifine at the Fair": "The boyish animalism of the earlier Don Juan is almost innocent beside the specious, intellectualized sensuality of Fifine." Certainly some allowance should be made for the dramatic quality of the poem, but Browning is always treated here as if he were speaking deliberately for himself. There is a chapter on Browning as a humorist, but when Miss Scudder would show how he was one, her habitual fulness of quotation suddenly runs dry. Her claim that Browning's verse is jog-trot or a splendid pace, according to the informing thought, is manifestly absurd, and equally so what is meant—not what is said—of Browning on p. 232: "The whole of Byron and of Clough might be comprehended in his vast product, and the world would miss no element contributed to human thought."

Miss Scudder finds in Democracy and Science and the Historic Past the forces that have done most to mould the English poetry of the century. Many of her illustrations are valuable, but some have no solidity; the things quoted might have been written just as well in the last century as in this. This is particularly true of the feeling for the past, except in so far as it has been affected by the romantic reaction from the Revolution. It has been unscientific, anti-scientific; and of the evolutionary conception of the past taken up into the present the signs in poetry have been few and far between. That Wordsworth should be assigned a chapter as a representative of the New Democracy will strike the reader as an amusing paradox; but Miss Scudder contends that his early democracy persisted through the formal Toryism of his later years, the truth behind her statement being that he never ceased to be humane. "Ideals of Redemption, Mediæval and Modern," is an elaborate but not very fruitful comparison of Dante's epic with Spenser's 'Faerie Queen' and Shelley's 'Prometheus Unbound.' Shelley is better understood by studying the politics and religion he revolted from than by comparing him with poets three and six centuries away.

Arnold and Clough, having served their turn as Neo-Pagans, are called back as Poets of Doubt. As for Rossetti, Miss Scudder finds in him "a spirituality more fervent and more absolute than is to be found elsewhere in our modern poets," and then it occurs to her that he wrote the "House of Life." On the other hand, a lovely sonnet convinces her that he was one of the faithful, especially as "on his deathbed he called for a priest to absolve him from his sins." She thinks "the instability of religion founded not on conviction but on emotion could not be more clearly shown" than by the sequence of Rossetti, Swinburne, and Morris. By "conviction," rational conviction is no doubt intended. But she reserves Tennyson and Browning for the climax of her argument, and these were much more emotional than rational in the quality of their conviction. The fine phrases with which she concludes have no sufficient justification in the course of her discussion. "From pantheism towards Christianity, this is the spiritual pilgrimage of our modern English poets." This is immoral rhetoric, "Christianity" meaning for the writer something very different from what it means in common speech and something less positive than Wordsworth explicitly, and Shelley implicitly, affirmed. Of course the separation of English from American poets in a study of this sort is purely arbitrary, but it is evident that but for this separation the working out of the preconceived idea would have been hardly possible.

Progress in Language, with special reference to English. By Otto Jespersen. Macmillan & Co.

THIS notable volume consists of a series of essays on certain general linguistic problems and on certain specifically English matters. The thread that loosely binds them is the fact that the developments of the English constructions are regarded by the author as illustrations of his chief contention, namely, that the general tendency of linguistic development is in the line of progress and not of degeneration. The author is professor of English in the University of Copenhagen; he is perhaps best known as the deviser of an ingenious system of sound-notation, but is active in various fields of linguistic research. He has enjoyed the thorough training of the modern philologist, but does not limit himself to the beaten track. He finds fresher fields—for example, the development of modern English—still unworked and yet full of lessons for the philologist. To him philology is not all in all, but simply one of the phases of human development and at times best studied by a general view of the whole; he is therefore ready to make use of the methods and results of kindred sciences. Moreover, he is an independent and able thinker, and the reading of the book impresses one like a fresh breeze through a musty lecture-room.

Jespersen recognizes the fact that some elements of language may be due to the phenomena upon which the "bow-wow," the "pooh-pooh," and other theories are based; but he believes that the larger part of human speech is a development of a playful utterance of meaningless sounds like the ceaseless humming and crooning of a baby. "Thoughts were not the first things to press forward and crave expression; emotions and instincts were both much more primitive and far more powerful. . . . As is the art of writing to primitive painting, so is the art of speaking to primitive singing. In primitive picture-writing, each sign meant a whole sentence or even more—the image of a situation or of an incident being given as a whole; this developed into an ideographic writing of each word by itself," and this into syllabic and later alphabetic writing. Similarly "the history of language shows us a progressive tendency towards analyzing into smaller and smaller units that which in the earlier stages was taken as an inseparable whole." This turns current conceptions upside down, and with such force and logic as to rouse those who have settled down comfortably on the root theory to a thorough reconsideration of the subject. Still, after all, one has the feeling that Jespersen, like his predecessors, has supplied a theory that will account for but a portion of human speech. The problem is still far off in the misty past; and we should not forget that speech must have begun before man was really man.

In harmony with his theory as to the origin of speech is his conception of its later development:

> "The evolution of language shows a progressive tendency from inseparable irregular conglomerations to freely and regularly combinable short elements. . . . The so-called full and rich forms of the ancient languages are not a beauty but a deformity. The fewer and shorter the forms, the better; the analytic structure of modern European languages is so far from being a drawback to them that it gives them an unimpeachable superiority over the earlier stages of the same languages."

Granting the truth of this statement, we may still reasonably ask whether it should be put in this absolute form. While modern English, with its simple forms and its relations largely to be inferred, is best for a highly developed race, may not the elaborate inflectional system of the Bantus, which supplies each word with a grammatical reminder of its relation to other words, be a more perfect one for minds that cannot easily remember details or forecast relations between them?

The chapters on the development of English constitute a scholarly and largely original treatment of an exceedingly interesting, but much neglected, subject. Like all modern scholars, Jespersen scorns to use the Norman Conquest as an all-sufficient explanation of the changes that English underwent between the Old and the Middle English periods, and perceives that the general tendency of the language would have been the same even if William the Conqueror had never crossed the Channel. Dr. Murray's statement that "the total loss of grammatical gender in English and the almost complete disappearance of cases are purely phonetic phenomena," he would, however, modify so as to recognize the activity of analogy; but in this and some related matters his reasoning is not quite as satisfactory as usual.

The chapters on the group genitive (the Queen of England's power, etc.) and on case-shifting are excellent. The author over-emphasizes, however, the influence of *he*, *she*, *we*, etc., in encouraging the use of *me* and *thee* (among the Quakers, etc.) for *I* and *thou*. "It's us" is surely not less common than "It's me," except as the expression is less often

called for; and "It's ye" yielded entirely to "It's you." Nor is the confusion of weak (unstressed) forms of *you* and *ye*, *thou* and *thee*, admissible as an element in the displacement of the nominative by the accusative; for in the two cases the exactly opposite phonetic change took place. The explanation lies wholly in the tendency to use the objective after the verb, no matter whether object or predicate; and this is proved by the fact that the *you* drove out *ye* after the verb before it did so before the verb. In the 'Royster Doyster' it supplants *ye* after the verb more than one-fourth of the time, but before it only one-nineteenth. To the new plurals (*you folks*, *you chaps*, etc.) of singular *you*, might be added "you all," which has become one word in parts of the South—*you'll* and *y'all*.

Harvard Stories. By Waldron Kintzing Post. G. P. Putnam's Sons. 1895.

The Ways of Yale. By Henry A. Beers. Henry Holt & Co. 1895.

Yale Yarns. By John Seymour Wood. G. P. Putnam's Sons. 1895.

Princeton Stories. By Jesse Lynch Williams. Charles Scribner's Sons. 1895.

THIS college literature seems to be written under a considerable sense of difficulty and responsibility. In some form or other each of these collectors of college legends apologizes for the inevitable shortcomings of his work, points out insuperable obstacles, or shuts the mouth of criticism by appealing to the judgment of those who have been part of the life described, and may be trusted to read with partial eyes. The plain reader who never went to college, or who went to some other college, is pretty frankly warned that his judgment is of no account. And yet, whenever these stories fail to please the plain man or the other "grad," they fail outright. It is only when they escape from the bonds of the local and particular that they really succeed, and this is shown by the fact that the story from the Harvard collection, "In the Early Sixties," is easily the best of that set, and in tone and temper strongly resembles "Chums Over in Old South," from 'Yale Yarns.' Both deal with the experiences of the "old grad." during the civil war, and claim for their colleges essentially the same qualities of simple affection and devotion to duty that make heroism—or college spirit, as you choose to name it or the occasion demands. The same tone is struck in the best of the 'Princeton Stories,' "The Winning of the Cane," although here the setting is all undergraduate and the local color vivid. All the stories seem to be written, too, with a feeling that there is danger of making too much of athletics, and that other phases of college life exist at once interesting and remunerative.

Comparison between the collections is in the nature of the case unavoidable. As far as subject-matter goes, all except 'The Ways of Yale' are strongly representative. Professor Beers has not rid himself enough of his cap and gown. There is a winnowed, sifted quality in his work that puts it in a class by itself as literature about college instead of college literature. The Harvard stories present very distinct types of men. The touch is much more certain in their portrayal, the pitch much more even. The 'Yale Yarns' occasionally strike a note of affectation. The types described are curiously tentative, and seem to the impartial reader both romantic and fictitious. The most vital interest of Yale life that lends itself to description is a joke. It would doubtless be well if "With the Dwight Hall Heelers" and "The 'Dwarf's' Prom," with their just and admirable sentiment, rang as true as "In the Toils of the Enemy" and "A Violent Remedy." But they do not.

The writer of 'Princeton Stories' has profited much by the literary example of Rudyard Kipling. His constructive method is throughout high. The sentiments expressed are often surprising, and the life described curiously crude and unorganized; but the stories are remarkably well told, and apparently with less fear of the public than are the others. It is undoubtedly true, too, that they touch more aspects of college life. The three called "Hero Worship," "The Responsibility of Lawrence," and "Fixing that Freshman," deal, among other things, with the enthusiastic devotion of younger men for older ones. It may be remarked in passing that here is a valuable contribution to the psychology of the subject; for it is often insisted that no such relation exists among college men, but is peculiar to women in girls' boarding-schools, colleges, and nunneries. The results are lacking in conclusiveness, and the relation is throughout vague and indecisive. It is an atmosphere hovering around a group of young men whose minds are plastic and impressible about all sorts of things, from neckties to creeds. In this they are probably not different from young men out of college, and this the narrator recognizes; but the element he tries to supply, and the one that undoubtedly exists, is a combination of tradition and impulse, of irrational college etiquette and equally irrational personal impulse, without which there would be very few stories in the college or any other world.

And on the whole this college world has been very fairly represented. It is, after all, a world of shreds and patches, like the bigger one it is supposed to preface, only the shreds and patches are open to wider and easier combination than they are later. Sudden conversions are always part of the programme here. The Prince of Darkness is a gentleman, and low profanity is supposed to be dropped with freshman year. And here, apparently, has been one of the awkward responsibilities imposed by circumstances on the writers of these stories. As Mr. Wood puts it in his preface: "Aside from the cheek of the young maiden which may not be incarnadined under any consideration, and the maiden aunt who sees an utter lack of refinement in the daily student life, there is the old grad., who says it isn't as it was in *his* days, and the undergrad., who maintains it isn't as it is in *his!*"

How much profanity, slang, and indecency must be suggested or reported to give a satisfactory picture of the college man in his college world? The general impression left by all these stories is that the college man is an amazingly good fellow, but that there is a certain toughening of his moral fibre to be gained by a system of social athletics like the physical training and accompanying experience of football and crew. The betting, swearing, drunken tough who has still at bottom the possibilities of an honorable gentleman—or, more accurately, the honorable gentleman who temporarily assumes the manners of a tough—is indubitably fascinating to the college imagination. His good qualities seem more resplendent after their temporary eclipse, perhaps; his character richer and more complex; his control of a vocabulary even more defined. But it is all a mistake. The best athletic stories are not those most generously peppered with "blankety blanks"; the men of greatest originality in slang and profanity are not the most interesting. They are not most interesting even after the prestidigitator has removed the hat and handkerchief and shown you the honest heart beating warmly there all the time.

The conscious effort to keep athletics out of the stories is unavailing—as all such forethought must be. The real question is: "Shall the true or the false ideal of athletics prevail?" Shall the law of theatrical contrast or of sane development govern expression and life? And these stories, marred as they undoubtedly are now and then by the acceptance of the false ideal, after all witness by their successful appeal to the old manly virtues of truth, sobriety, and self-control, to the abiding worth of the true ideal. The Harvard stories present types, to the Yale man belong his jokes, the Princetonian goes with his section, but there are the same old cardinal virtues, and a dog-story or a prize-fight is more interesting from a gentleman's point of view and in our mother tongue.

Lees of Virginia. 1642–1892. Biographical and Genealogical Sketches of the Descendants of Col. Richard Lee, with brief notices of the related families of Allerton, Armistead, Ashton, Aylett, Bedinger, Beverley, Bland, Bolling, Carroll, Carter, Chambers, Corbin, Custis, Digges, Fairfax, Fitzhugh, Gardner, Grymes, Hanson, Jennings, Jones, Ludwell, Marshall, Mason, Page, Randolph, Shepherd, Shippen, Tabb, Taylor, Turberville, Washington, and others. Edited and published by Edmund Jenning Lee, M.D. Philadelphia. 1895. Large 8vo, pp. 586.

THE dimensions of this book, as well as its title page, indicate that it is almost a compendium of Virginian genealogy. In the preface Dr. Lee gives the credit of collecting the material to his brother, the late Cassius F. Lee, who, in connection with Joseph Packard, jr., published a brief record of the family in 1870. The bibliography of Virginian families, notably in the case of the Washington and Lee families, shows that the family traditions of the South are not more exact than those of New England. It is only within the past five years that the true pedigree of the American Washingtons has been put on a sound basis. In regard to the Lee family, various claims have been made, only to be disproved. In 1868 Mr. E. C. Mead published a genealogy of the Lees which was deservedly criticised in these columns and its evident errors exposed. This led to the serious examination made by Messrs. C. F. Lee and J. Packard, printed in the *New England Historical and Genealogical Register*. At this time, both in this country and in England, investigators were misled by the name "Ditchley," given to one of the Lee plantations in Virginia. The emigrant, Col. Richard Lee, was identified with a younger brother of Sir Henry Lee of Ditchley. Moreover, Sir Robert Lee (father of Sir Henry) was of Stratford Langton, and the emigrant termed himself in his will as "lately of Strafford Langton." Such coincidences seemed conclusive. But, in 1890, Mr. J. Henry Lea of Fairhaven, Mass., an American genealogist, visited England in order to trace all possible emigrants of the name, and he soon proved that Sir Robert's son's birth was too early for him to be the emigrant, and furthermore, by the strongest evidence of family papers, entails of estates, etc., that this Richard died young. Mr.

J. H. Lea also found various Lees of that period at Strafford Langton and the adjoining parish of Stepney.

At this point consideration was given again to family traditions and records, which resulted in the following data. In 1682, John Gibbon, an officer of Heralds' College, printed a book on heraldry, in which he stated that in 1659 he lived in Virginia with Col. Richard Lee, and adds: "Neither will I omit his arms, being Gules, a fesse chequy *or*, between eight billets argent, being descended from the Lees of Shropshire, etc." This evidence is of the greatest force.

John Lee, oldest son of the emigrant, was of Queen's College, Oxford, in 1658–1662; and in the former year he presented to his college a silver cup, still preserved, with an inscription terming himself "filius primogenitus Richardi Lee Chiliarchæ, oriundi de Morton Regis in Agro Salopiensi." It bears the Lee arms, as above, and the arms of the college.

Richard Lee, second son of the emigrant, was buried in Virginia, A.D. 1714, aged sixty-eight years. Bishop Meade ('Old Churches,' ii., 152) prints the Latin inscription on his tomb which terms him, "Filii Richardi Lee, generosi et antiqua familia, in Morton-Regis in comitatu Salopiensi oriundi."

With this early and positive evidence in view, it is useless to add the opinions of later generations to the same effect, the authority lessening with each descent. It is strong enough to justify family claims. But though the general claim of descent may be good, no one has yet identified the father of the emigrant. The younger sons of the gentry are rarely traced by the heralds, and the Lees of Virginia must wait until some fortunate chance shall supply the necessary evidence.

Col. Richard Lee, the emigrant, was evidently a strong and successful adventurer, leaving large estates to his children. He had two daughters and six sons, but of the latter only three left male issue. These were Richard of the Stratford line, Hancock of the Ditchley line, and Charles of the Cobbs' Hall line. All of the more distinguished bearers of the name have been of the eldest or Stratford line, from President Thomas Lee of the colony to the patriots of the Revolution and the leaders in the late rebellion. The junior branches seem to have remained in the rank of planters, and not to have become especially prominent. Hence the evident difficulty of tracing these lines, which, besides, do not seem to have been prolific.

The plan of this volume is not very systematic, but is sufficiently clear. In every generation the wife's family is considered in greater or less detail, and in this way the promise of the title-page is made good. The daughters and their descendants are treated with varying liberality, but doubtless to the satisfaction of many Virginians, who will herein trace endless cousinships. There are many copies of old deeds and wills, and the volume is very creditable to the compilers. A few tabular pedigrees of the male lines would be useful. It is to be hoped that the example set in this book and in Hayden's 'Virginia Genealogies' will be copied by other Southern families. The precision of dates and the sobriety of the biographies are features which call for our warmest recognition.

Plutarch's Lives of the Noble Grecians and Romans. Englished by Sir Thomas North, anno 1579, with an introduction by George Wyndham. Vols. I. and II. [Vols. VII. and VIII. of the Tudor Translations.] London: D. Nutt. 1895.

BACON, in his celebrated classification of books, has omitted one class, and that the chief—the books that are to be loved. And if ever a book has been loved by men, and taken to their hearts, it is this incomparable gallery of living portraits, written by an otherwise obscure scholar, in a little Theban town, when the glory of Greece had departed. We say "otherwise obscure," not forgetting that the 'Lives' compose only one-half of Plutarch's work that has descended to our time; but who thinks of Plutarch except as the author of the 'Lives'? Modern critics may complain of a lack of historical perspective; but in what modern historian of Greece and Rome do we see the two great dramas of their national life stand out so vividly as in these pictures of the chief actors? Both Greece and Rome have produced masterpieces of many kinds, but of this particular kind nothing to equal the 'Lives' of Plutarch.

And the book has had a singular measure of good fortune. Early in the classical revival, Plutarch fell into the hands of one of the world's greatest translators, Jacques Amyot, who, besides possessing a wonderful natural gift of style, lived at a time when his language had a raciness, simplicity, strength, and color which were partly lost in the more polished age that followed. More accurate versions—perhaps; for Amyot is wonderfully accurate—and more elegant ones, according to the canons of taste that rate Johnes's Froissart more elegant than Lord Berners's, have been made since; but it was Amyot who gave Plutarch to the modern world and made it a household book.

The second good fortune of the book was that Amyot's version fell into the hands of Sir Thomas North, who had the gift of Elizabethan prose as Amyot had that of the prose of Montaigne. What gives a peculiar charm to North's translation is his conception of a translator's duty. It is not his business, he thinks, to turn Plutarch's Greek, or Amyot's French, into English, but to tell in his own English a story that Plutarch has told in Greek. Plutarch, speaking of the satisfaction of a Veientian at the overflow of Lake Albanus, which bid fair to raise the Roman siege, says, "He was overjoyed and mocked at the siege." North says: "He was as mery as a pye at the matter." Plutarch says of Brennus, when Camillus refused to pay the ransom, "He was exasperated at this and recommenced hostilities." North: "These words made Brennus madde as a March hare, that out wente his blade." But indeed North was a man who wrote such prose that Shakspere embodied whole sentences and periods of it in his noblest poetry, and we do not perceive the seam. For it was to this noble translator of a noble translation that Shakspere turned to revive in his imagination the life of Greece, and especially Rome, and not merely for facts, as he turned to Hall or Holinshed. As Mr. Wyndham, the editor, says, "Shakspere is saturated with North's language, and possessed by its passion." He "not only copies North's picture, but he uses North's palette." His "Timon," "Julius Cæsar," "Coriolanus," and "Antony and Cleopatra" are taken from North, often in his very words. No other book has he so honored. So we have here Plutarch's third and crowning felicity, in being revived and re-immortalized in the soul of Shakspere.

We cannot close this too brief notice without a word of praise for the most admirable, full, and luminous introduction by the editor. Of the excellent series to which it belongs—the "Tudor Translations"—we have already spoken.

BOOKS OF THE WEEK.

Across the Common after Wild Flowers. T. Nelson & Sons.
Alden, Mrs. G. R. What They Couldn't: A Home Story. Boston: Lothrop Publishing Co.
Allen, Grant. The Story of the Plants. Appletons. 40 cents.
Alison, A. Europe from the French Revolution to the Fall of Napoleon, 1785–1815. Arranged by Edward S. Gould. Students' ed. A. S. Barnes & Co.
Appletons' General Guide to the United States and Canada. 1895. Appletons. $2.50.
Around a Cornfield in a Ramble after Wild Flowers. T. Nelson & Sons.
A Stroll on a Marsh in Search of Wild Flowers. T. Nelson & Sons.
Bonjean, Georges. Enfants Révoltés et Parents Coupables. Paris: A. Colin & Cie.
Bourinot, J. G. How Canada is Governed. Toronto: The Copp, Clark Co., Limited.
Bradley, A. G. Wolfe. Macmillan. 60 cents.
Brooke, Rev. S. A. The Golden Book of Coleridge. London: Dent; New York: Macmillan. $1.50.
Brown, Alice. Meadow-Grass: Tales of New England Life. Boston: Copeland & Day. $1.50.
Buchheim, Prof. C. A. Schiller's Maria Stuart. Oxford: Clarendon Press; New York: Macmillan. $1.
Burdeau, Auguste. Une Evasion (Souvenirs de 1871). Paris: Colin & Cie.
Burgess, Gilbert. The Love-Letters of Mr. H. and Miss R. 1775—1779. Chicago: Stone & Kimball.
Cargill, J. F. A Freak in Finance: Answer to 'Coin's Financial School.' Chicago: Rand, McNally & Co.
Carus, P. The Gospel of Buddha. Chicago: *Open Court* Publishing Co.
Coleridge, S. T. Rime of the Ancient Mariner, etc. Boston: Houghton, Mifflin & Co. 15 cents.
Collar, W. C. The New Gradatim. Boston: Ginn & Co. 55 cents.
Cornish, C. J. The Isle of Wight. [*Portfolio* Monographs.] Macmillan.
Daudet, Alphonse. Fromont, Jr., and Risler, Sr. Rand, McNally & Co.
Davis, Ethel. Dishonesty and Caste. Home Science Publishing Co. 60 cents.
Dole, N. H. On the Point: A Summer Idyl. Boston: Joseph Knight Co. $1.
Douglas, Prof. R. K. Li Hung Chang. F. Warne & Co. $1.25.
Easton, Prof. M. W. Readings in Gower. Boston: Ginn & Co.
Gagnon, Philéas. Essai de Bibliographie Canadienne. Quebec: The Author.
Gissing, George. In the Year of Jubilee. Appletons. $1.00.
Grindon, L. H. The Sexuality of Nature. Boston: Massachusetts New-Church Union. 75 cents.
Gruelle, R. B. Notes, Critical and Biographical. Collection of W. T. Walters. Boston: J. M. Bowles.
Guerber, H. A. Legends of the Rhine. A. S. Barnes & Co.
Hall, H. S., and Knight, S. R. Algebra for Beginners. Macmillan. 60 cents.
Kittredge, Prof. G. L. Observations on the Language of Chaucer's Troilus. Boston: Ginn & Co. $4.
Lamb, Prof. Horace. Hydrodynamics. Cambridge: University Press; New York: Macmillan. $6.25.
Martell, Comtesse de. A Gallic Girl. Brentanos.
Master Wilberforce: The Study of a Boy. Putnams. $1.
Maupassant, G. de. Messalina's Daughter. Chicago: Jewett & Buchanan.
Meirion, Ellinor. Cause and Effect. Putnams. 75 cents.
Nixon, O. N. How Marcus Whitman Saved Oregon. Chicago: Star Publishing Co. $1.75.
Oldroyd, O. H. Words of Lincoln. Washington, D. C.: The Author. $1.
Otis, James. How Tommy Saved the Barn. T. Y. Crowell & Co. 50 cents.
Palmer, Gen. H. S. Letters from the Land of the Rising Sun. Yokohama: *Japan Mail*.
Peterson, W. The Speech of Cicero in Defence of Cluentius. Macmillan. $1 50.
Rhys, Ernest. The Lyric Poems of Shelley. London: Dent; New York: Macmillan. $1.
Roberts, Prof. W. R. The Ancient Bœotians. Cambridge: University Press; New York: Macmillan. $1.40.
Rozane, Jeanne. Maldonne. Paris: Colin & Cie.
Sampson, C. A. Strength. Rand McNally & Co.
Scripture, E. W. Thinking, Feeling, Doing. Meadville, Pa.: Flood & Vincent. $1.50.
Scully, W. C. Kafir Stories. Henry Holt & Co. 75 cents.
Sergeant, Adeline. The Mistress of Quest. Appletons. $1.00.
Sharp, Evelyn. At the Relton Arms. Boston: Roberts Bros. $1.
Smith, J. E. A. The Poet among the Hills: Oliver Wendell Holmes in Berkshire. Pittsfield, Mass.: George Blatchford.
Strange Secrets. R. F. Fenno & Co.
Swettenham, F. A. Malay Sketches. London: John Lane; New York: Macmillan. $2.

Zangwill, I. The Old Maids' Club. Lovell, Coryell & Co.

The Nation.

NEW YORK, THURSDAY, AUGUST 1, 1895.

The Week.

SECRETARY SMITH is fighting for honest money as sturdily in Georgia as Secretary Carlisle fought in Kentucky, and his campaign promises to be equally successful. His closing reference to President Cleveland in his speech on Tuesday week was received with "tumultuous applause," and he himself was honored by a rising vote of thanks, in which every auditor joined. It is not improbable that the former attitude of both Secretaries towards the silver question increases the force of their present arguments. As a mere matter of curiosity, people are interested in hearing a man explain his changed convictions. Undoubtedly there is a certain prejudice to be overcome by any statesman when he shifts his ground. But this prejudice, like other presumptions, may be rebutted by evidence. No one can claim to be always right, and the "doubtful virtue of consistency" needs to be supported by arguments. The consistent man needs only to say that he is of the same opinion still; but the man who changes must give his reasons. One of the most remarkable instances of the enthusiasm aroused and the power exerted by a change so justified was that of Gladstone when he came out in favor of home rule for Ireland. He went perhaps too far in denouncing those of his former companions who did not so clearly see the error of their ways, but he unquestionably satisfied the mass of the English people that he was conscientious in his course, if he did not altogether convince them of its wisdom. It is common to attribute such alterations in the opinions of public men to low motives, and there are not wanting those who assert that Secretaries Carlisle and Smith preferred their offices to their convictions. The proper answer to such charges is to be found in the reasons by which these men defend their course. As in the case of Gladstone, these reasons are sufficiently cogent to satisfy the public of the honesty of those who present them, and they appear to be as effective in changing the minds of the auditors as they have been in the case of the speakers.

In his treatment of the act of 1873, Secretary Smith displayed excellent judgment. For nearly a week Horr and Harvey had been banging and whacking each other at Chicago with this act and the literature that has grown up about it, until it really looked as if their debate would close before they began to discuss the silver question. Secretary Smith was too wise to lead his audience away into an inquiry as to the probity of Congress and Congressmen a quarter of a century ago. He dismissed the subject with a word. "It would be folly," he said, "to bring on disastrous consequences for the simple satisfaction of repealing a law improperly passed." Nothing could be more sensible than to take this course, and to confine the attention of his hearers, as the Secretary did, to the undisputed facts of history, and especially to the failure of the panacea of cheap money. Every panic, he observed, has developed a party in favor of bad money, but with returning prosperity the party has died. Relief from panics has always come through restoration of confidence, not through bad money. We trust that Secretary Smith will make a thorough canvass of the State of Georgia, and have little doubt that, if he will do so, that State will follow the example of Kentucky. The country is to be congratulated upon the revival of the excellent political custom of having the leaders of the Administration address the people on great questions of public policy. This practice gives the political campaigns in England their universal interest, and tends to improve the character and the policy of any administration that adopts it.

The political bosses of New York on the Republican side appear to be quite unanimous in favor of Gov. Morton for the Presidency. Even the head boss is quoted as saying that he is for Morton if Morton is a candidate. All this is very easily understood. If Gov. Morton is in the list of candidates, and they are not for him, they will soon cease to be bosses in New York. They have not been able to control him, and therefore they do not like him. They intended that he should belong to them; but when he asserted his independence, presto! they belonged to him. They supposed that they had bagged him, but the reverse process took place. It is in this way that their unanimity is accounted for. The situation is very much as it was when Cleveland was Governor in 1883. As soon as it was clearly perceived that his office was exercised for the public interest, regardless of Tammany Hall, or any other hall, or clique, or "magnate," he became the master, and all the rest became his unwilling servants. Gov. Morton's hold on the rank and file of the Republican party in the State is greater than Platt's ever was, and it is due mainly to the fact that he has been his own man, and not Platt's man, since he has been in office. This is an easy way to arrive at leadership in one's party. The wonder is that so few are able to see it.

The Republican canvass in this State opens in a most encouraging way. The first contests over seats in the next Senate occur in two districts which have been represented by tools of Platt, and in each case the defeat of boss rule is assured. The nominations have not yet been made in the Utica and Saratoga districts, but the local committee of Oneida County and the county convention for Saratoga County met on Monday and Tuesday week respectively, and proved to be overwhelmingly against the renomination of Coggeshall and Donaldson. Wire-pulling and pipe-laying were found to be of no avail when the people took interest enough in the matter to turn out to the primaries. The truth is, as the *Tribune* says, that the State machine "is nothing but a shell and a sham," and that the Republican voters can crush it whenever they feel so disposed. If the spirit manifested in Oneida and Saratoga prevails throughout the State, Platt can be unloaded and Republicans elected to the Legislature who will take their orders from the people, instead of from the boss.

Deacon Richard Smith waves a large alarm flag about Ohio in the *Tribune*. Whoever may be elected Governor, he seems to think it more than likely that the Democrats will carry the Legislature and elect a United States Senator. Of course, the Republican is the truly virtuous party in Ohio, but, not to put too fine a point upon it, it sent a precious lot of rascals to the last Legislature. They violated their pledges, ran up the local indebtedness of the State by $8,000,000, and made the taxes so high that "there is a great deal of unrest and party lukewarmness." Then, Senator Brice is pursuing a most nefarious policy to beat them. He actually proposes to get a "strong man" to run for Governor, and, worse and worse, is going to insist that strong men shall be nominated for the Legislature, "especially in districts that may be considered debatable." Against such underhand tactics it would be hard for the purest party in the world to stand up—especially when its own scoundrels demand a renomination, strong men or no strong men. Mr. Smith thinks the prejudice of Hamilton County voters in favor of Mr. Brice's candidates, who are to be "business men in touch with the industries of the State," may be such as to elect a solid Democratic delegation. The city of Cleveland may go the same way. But he cheers us at the end with the prediction that "whatever may happen in Ohio this year," the electoral vote of the State will be cast in 1897 for the Republican candidate, "whoever he may be." A strong man may carry Ohio for the Democracy in an off year, but in Presidential elections the Republican label is enough.

The latest advices from the Bannock country indicate that the sensational

despatches printed in Saturday morning's newspapers were the joint product of an overburdened conscience and an elastic imagination. The Indians were simply accused of doing what everybody in and about Jackson's Hole regarded as the most natural thing for them to do in retaliation for the brutal killing of their unarmed companions last week. It may be set down as evidence of a forbearance most amiable and praiseworthy, but new to the Indian character, if the beleaguered settlers are relieved by Gen. Coppinger's command before any more bloodshed occurs. The attempt to becloud public judgment in the East by an outcry about the violation of the game laws of the State of Wyoming by the Indians is quite consistent with the general policy of the frontiersman toward the Indian. The game laws of the State of Wyoming are very sacred ordinances when an Indian is the transgressor; but the white cowboy, trapper, or guide may play football with them to his heart's content, and nobody ventures to shoot him down for it. Yet the white man is bound by those laws, whereas the Indian enjoys treaty privileges outside of them, granted to him by the United States Government long before Wyoming became a State or had taken the first step towards becoming one. The whole miserable business of the last three weeks, viewed strictly by the light of the statements which the settlers themselves and their friends have published, shows a deliberate purpose on their part to stir up a strife which would either cause the removal of their red neighbors to a distance, or induce the War Department to plant a military post "where it will do the most good"—to the Jackson's Hole gentry who have something to sell. It would be wise for the Government, before lending itself to either of these schemes, to inquire when and how the residents of the Hole acquired such an interest in the unsurveyed public lands of the United States as gives them any better right than the Indians to seek subsistence there.

The organ of the Manufacturers' Club of Philadelphia notes the formation of a Tariff Commission League, whose object is to take the tariff out of politics and make it a business affair entirely. The organ says that this cannot be done, and here we are inclined to agree with it. Nevertheless, we think that the public mind is just now in a mood to try the plan which the Tariff Commission League has in view. The people have had rather too much of tariff argumentation dinned into their ears during the past decade, and would like to try something else for a change. Moreover, they feel the necessity of settling the money question, and since they cannot have two great questions at once, they will let the tariff take second place for two or three years at all events. When the money question is settled, however, it is very likely that the tariff will come up again, since nothing can prevent the people from voting upon anything which affects their pockets. What shape the next tariff debate will take and what interest will be uppermost, cannot be predicted now. The course of trade and industry during the ensuing two years will have the greatest influence in determining that question. If trade continues to revive and flourish, the McKinleyites will not have much chance in the next national Republican convention, and still less at the ensuing election.

The explanations of the present strike of the tailors in this city are very conflicting. Apparently they desire to extend the power of their trade-union, so that no one who does not belong to it shall be allowed to work, and the employers wish to prevent the establishment of such a tyranny. To accomplish their end the tailors demand that the "walking delegate" shall have access to the shops and be allowed to examine the employers' books, and the employers are naturally unwilling to concede this. The tailors demand that fifty-nine hours shall constitute the labor week, and that laborers shall be paid according to time and not according to product, while the employers insist that they must pay wages according to product, and not according to the time which may be consumed in production. There is nothing peculiar in these demands and counter-demands. The principles involved here come up in almost every trade dispute. But the contention is made that the abolition of the "sweat-shop" is involved. A "sweat-shop" is nothing but an apartment small in relation to the number of its occupants, who are engaged in making clothing. Now it is very evident that we cannot undertake to prohibit people from sewing in their own homes. No system of inspection could accomplish that, and no court would sanction it. All that can be attempted is the prevention of overcrowding, and even this is of very doubtful practicability. Our fathers sinned in tolerating the tenement-house system, which necessarily accumulates more human beings to the acre than can well live in such close quarters. But the tenements are here, and unless we are prepared to pull them down they will continue to be occupied and to be overcrowded.

The truth about the "sweating" system, both here and in London, is simply this: The barbarous policy of Russia towards her Jewish subjects resulted in the emigration of large numbers of very degraded and very helpless people to London and New York. These people were accustomed to very low wages, very poor fare, and very wretched shelter. They at once entered into competition with workmen accustomed to higher wages and better living, with the inevitable result of a lowering of the average standard. As a matter of fact, there is no doubt that these much-pitied workmen in the sweat-shops are a great deal better off than they ever were before. There is abundant testimony to the effect that they are steadily and rapidly improving their condition. But so long as their standard remains as low as it is, it will be a scandal in American eyes, and give rise to incessant agitation. If we had to deal only with the present supply of degraded foreign immigrants, the problem would not be insoluble. They would presently become Americanized and insist successfully on getting as good wages as the market justified. But the trouble is, that there is nothing to hinder the influx of another wave of "the pauper labor of Europe," and then the same difficulty will recur. It is a mistake to suppose that the "sweat shop" is anything more than a symptom. It might be extinguished without affecting the course of the disease. Nevertheless, our country has somehow done an almost incredible work in elevating the poor and oppressed of other lands—a work so far surpassing all reasonable expectations that we may well hesitate to suspend our hospitality.

The Missouri Legislature passed an act in 1893 which forbade any employer to make an agreement with any workman that the latter should withdraw from any lawful organization, or refrain from joining such organization. Employers were also prohibited from coercing workmen into withdrawing from such organizations or requiring them to abstain from attending any meeting of people held for lawful purposes. A violation of this act was made a criminal offence, punishable with fine or imprisonment or both. This statute has been declared unconstitutional by the unanimous opinion of the Supreme Court. The court holds that the Legislature undertook to make a crime of the exercise of the constitutional right of terminating a contract—one of the essential attributes of property. It holds the statute unconstitutional also on the ground that it attempts to limit the right to make or to terminate a contract with particular persons of a class, and is therefore a special and not a general law. As Judge Cooley has observed, "every one has a right to demand that he be governed by general rules, and a special statute which, without his consent, singles his case out as one to be regulated by a different law from that which is applied in all similar cases, would not be legitimate legislation, but would be such an arbitrary mandate as is not within the province of free government." Doubtless the fanatical believers in trade-unions will bewail this decision, but it is unquestionably a necessary one. The statute which it nullifies would make it impossible for a railroad to prevent its trainmen from quitting work in a body to attend a circus or a Sunday-school picnic. It would prevent corporations from

objecting to membership in organizations such as that controlled by the miserable Debs, which avow principles subversive of all order and discipline. It might even prevent a mistress from restraining a giddy maid-servant from attending Sunday excursions or midnight dances of a legal but demoralizing character. Such legislation as this is for the best interest neither of employers nor of laborers, and it is opposed to the true interests of trade-unions themselves. The permanent welfare of these organizations depends on their abandoning all claim to legal discrimination in their favor.

Of all the good things Secretary Morton has done since he took charge of the Department of Agriculture none will commend him to the gratitude of sensible people more than the death-blow he has dealt the notorious "seed division." Apart wholly from the technical question of the legality of the annual seed distribution conducted for so many years, the use made of the seeds was scandalous. Members of Congress employed them, not for the promotion of scientific experiments, but to buy votes or allay hostility in their home constituencies. The division where the seeds were prepared for mailing was kept from under the civil-service rules so that it could be used as a sort of "emergency hospital" for the temporary relief of those poor victims of the patronage habit who were too inefficient to get employment in private life and too ignorant to pass the simplest of the examinations. It has been, for a generation past, a stench in the nostrils of every lover of good government, and it would have remained unchanged for an indefinite period longer but for the fact that we have for once a Secretary of Agriculture with the courage of his convictions. A most unusual incident of this abolition of a Government division is the warm approval of the step given by its chief, Mr. M. E. Fagan, who loses his position through the Secretary's action. Instead of raising a hue and cry over his decapitation, he has written the Secretary congratulating him on what he has done, and saying that his own experience has shown him that "no reasonable excuse could be offered in behalf of the continuance of the division."

The "scramble for gold" is one of the stock phrases of the 16-to-1 silverites. It implies that the nations of the world are down on their hands and knees in the dirt, grabbing furiously for the yellow metal. The contrast presented by the calm and serene behavior of a bimetallic world or silver-using world is obvious without special mention. But there seems to be a scramble of another kind going on at the present time between the Bank of England and the Bank of France, each of which is trying to get rid of gold and to force it upon the other. The immediate occasion of this scramble is the new Chinese loan. Friday's cable from London said that there had been a sharp rise in Paris exchange due to remittances from that city to London for account of the Chinese loan, the proceeds of which were to be lodged in the Bank of England. Paris exchange is quoted both in London and in Paris in terms of francs, 25.25 francs being the par value of a pound sterling. When there is an excess of remittances from Paris to London, as in the present case, the price of a pound sterling in terms of francs rises. In the United States, sterling exchange is quoted in terms of dollars and cents, so that a rising exchange in our case points to gold exports. The telegram went on to say:

> "Exchange receded this afternoon because the Bank of England has just announced a reduction in the purchasing price of French and Russian gold coin to 76s. 3¼d. per ounce. *This was done to check gold shipments from France here.* It will probably be powerless to do so, as the Bank of France is selling gold freely, and it is feared here that the accumulation of gold is likely to be immensely increased during the next few months. Others urge that the money market may be tightened by a lock-up of cash in the Bank of England, but this view is not supported by present indications."

In the phraseology of London, the Bank is "buying gold" when it receives gold at the issue department and gives its notes in exchange for it, as the law requires. For gold generally it must give its notes at the rate of £3 17s. 9d. per ounce; for foreign gold coin it exercises some discretion, paying a little more or a little less, according as it wants to attract or repel the metal. It now desires to repel it, so it reduces the price at which French and Russian coin is received. The Bank of France desires to reduce its stock. So it "sells gold freely," as the phrase is, which means that it pays gold for its own notes without exercising the choice, which it has, to pay them in silver, or part silver and part gold.

When one remembers how many of the strongholds of English Liberalism have been in metropolitan constituencies, the rout of the Liberals in the great cities, in the general election just past, becomes perhaps the most notable feature of the whole contest. In the last Parliament, the Liberals, in spite of their unexpected losses in the great cities, held 68 urban seats; this year they have lost 25 of the 68. In London alone they have lost 15 members. The last Parliament contained 39 Unionists from London and 23 Liberals; in the next the figures will be 54 Unionists and 8 Liberals. In 1892 the total London vote was Unionist, 211,547, Liberal, 185,463; this year it is Unionist, 250,706, Liberal, 168,505. That is to say, on a vote 22,000 larger the Liberals actually lose 17,000 votes from their total of 1892. In the other great English boroughs the Liberal disaster is almost as complete. Liverpool is eight to one against them, Manchester five to one, Birmingham seven to nothing, and so on. Leeds is the only great English town where they retain their old predominance.

Of course, the general causes which led to the general Liberal smash were operative in the cities, but there seem to have been particular reasons why the old familiar friends of the Liberals in the metropolitan districts should have lifted up the heel against them. Especially is this the case in London, where the consensus of the best opinion is that the work of the meddling and socialistic London County Council was what cooked the Liberal goose. The fussiness, the inquisitorial measures, the extravagance of this body, with its constant weakness for labor legislation and subservience to trades unions, appear to have aroused deep disgust in the bosoms of London rate-payers, thousands of whom, evidently, turned out to the polls for the first time. Even in the East End, where the socialistic performances of the Council were going to make so much happiness and so many votes, the Liberal *culbute* is almost as general as in the richer constituencies. Ratepayers in Whitechapel and Limehouse are but mortal; and when they find the lauded equalization-of-rates act having no real effect in lowering their taxes, which are actually increased by lavish appropriations, they vote to put an end to the folly. Many doubting taxpayers must have been pushed over into the Conservative ranks by the fatuous course of the Council, on the very eve of the election, in driving ahead vast schemes for municipalizing water companies and getting up great plans for housing the poor at city expense.

The Cuban situation appears to be growing more acute, yet it is clear folly to lend any credence to the tales about dissatisfaction on the part of the Spanish Government with Gen. Campos. He has "been there before." If any man knows how to handle a Cuban rebellion, he does, and if he fails to put it down, Spain has no officer who can do the job. It must not be forgotten, either, that active campaigning is madness at this time of year. As Gen. Février used to be the finest strategist of the Russians in the Crimean War, so Gens. July, August, and September are the chief antagonists of Campos just at present. Heat and yellow fever are more to be dreaded than insurgent bullets. At the same time, the necessarily cramped operations of the Spanish troops no doubt give the rebellion a fine chance to spread and strengthen itself. That it is doing this appears certain. That the guerilla bands are ravaging the interior and levying forced contributions on the planters is also plain. This is the gloomiest part of the business, and, whichever side wins when the more decisive operations of cooler weather are brought on, the outlook for the impoverished and over-taxed island is black enough.

STATE MONOPOLY OF ALCOHOL.

THE difficulty of applying the parliamentary system of government in France has received a fresh illustration in the passage of the bill taxing alcoholic drinks which has so long occupied the attention of the Chamber. As finally adopted, the bill is entirely different from what was contemplated by the Government, which has washed its hands of all responsibility in the matter. The diversity of views and interests revealed by the debate was most extraordinary. The Government was in search of more revenue, which it proposed to get by prohibiting fruit-growers from distilling their produce for their own consumption. This, it was supposed, would increase the revenue from the larger distilleries, especially as the tax was to be raised from 156 francs per hectolitre to 175 francs. But the Deputies were mindful of the fact that between 500,000 and 600,000 persons were benefited by the privilege of distilling at home, and they would only go so far as to limit the quantity to be produced under this privilege, while they raised the tax on alcohol to 275 francs. At the same time they struck off all taxes from wine, beer, and cider. They also insisted that the Government should monopolize the spirit trade, as it does that in tobacco, although the Government protested against this.

The project is, briefly speaking, for the Government to buy raw spirits of the distillers, rectify them, and sell them to retailers at 400 francs per hectolitre. The revenue which is anticipated from this business is 325,000,000 francs, which would not only extinguish the deficit, but leave a comfortable surplus. The most interesting feature of the debate over these proposals, apart from their financial aspect, was the appearance of the teetotaler and the prohibitionist in French political life. Some Deputies claimed that alcohol was a poisonous drink any way, and had no difficulty in producing the highest medical authorities in support of this view. Others declared that it was not the alcohol, but its adulteration, that was pernicious, and that the Government refiners would deliver an article to the consumer which he could partake of with confidence. The bill finally became a compromise measure, its several articles being carried by majorities different in their composition. It must be said, however, that if the quality of the spirits furnished by the Government is to be no better than that of their tobacco, no great improvement in the public health can reasonably be anticipated from the state monopoly.

There seems to be no doubt that the consumption of distilled liquors has much increased of recent years in France. It is very positively asserted by many physicians that there is an alarming increase of diseases caused by the abuse of these liquors, and it is alleged that there is more crime due to the same cause. Inferences of this kind are always to be scrutinized with great caution. Statistics concerning the prevalence of disease are frequently misleading, because more care is now taken in reporting cases than formerly, and classifications of disease are altered. So in the reports of crimes, as we know very well from our experience with liquor legislation in this country, it is easy to figure out changes that have really not taken place. What is positively known is that the death-rate varies very little in France, and even those who claim that drinking spirits leads to crime do not supply any evidence showing that crime has upon the whole increased. Nevertheless, as there is substantial unanimity in the opinion that fermented drinks are more wholesome than those which are distilled, so there is pretty general agreement among economists and statesmen that the latter class of liquors should be much more heavily taxed than the former.

The financial results of the Government monopoly, however, may be very disappointing. In the first place, the abolition of the duties, including the octrois, upon fermented liquors, will cause a loss of revenue amounting to nearly 500,000,000 francs. This exemption from taxation will, as has been learned by experience, cause an increased consumption of these drinks, and a decreased consumption of spirits. The increased tax upon spirits will tend in the same direction. Calculations of revenue based upon the present consumption of spirits are therefore altogether untrustworthy. The example of Switzerland is of great importance on this point. Eight years ago that government undertook the monopoly of alcohol. It was estimated that the revenue from this source would be nearly 9,000,000 francs; but the first year the net result was less than 5,000,000. It has since risen to over 6,600,000 francs, but is now little over 5,000,000. The Swiss tax, however, is very low and the proposed French tax is very high. Should the French estimates be falsified to the same extent as the Swiss, the new monopoly would not bring in sufficient additional revenue to counterbalance the loss from remitting the taxes on wine and beer.

No country has afforded more instructive lessons in excise legislation than our own. Our experience has hitherto been that a very high tax on spirits was not productive of so much revenue as a moderate one. The experiment of increasing the tax which was made last year has so far proved an utter failure. Even if we allow for the enormous withdrawals from bond in anticipation of the increased tax, and for the general depression in business, there is an unexplained deficiency in consumption. It is too soon to determine whether this deficiency is to be permanent or not, and it is impossible to say to what extent fraud upon the excise has been stimulated. It may be that after a time the higher tax will produce a larger return than the old rate, although we believe that the tax is now higher than that imposed in any other country. But it scarcely admits of question that the French scheme, which will double the cost of spirits to the consumer, will falsify the calculations of its advocates. It may be a hygienic measure, but it will not make the budget balance.

FREE TRADE IN AUSTRALIA.

STUDENTS of political development have always found abundant material in the history of the Australian colonies. Nowhere has there been a greater abundance of experimental legislation, nor a better opportunity to compare its results. The colonies afford a sufficient basis of comparison in the substantial homogeneity of their population and in the common origin of their institutions and their law. Their differences are, it is true, so great as to make caution necessary in reasoning from the example of one to the case of another; but they are not so great as to invalidate such reasoning, as happens in most international comparisons. The neighboring colonies of Victoria and New South Wales have especially furnished material for economic parallels, and the contests between protectionists and free-traders have nowhere been more spirited or more continuous. Up to a recent date New South Wales stood upon the whole for free trade, Victoria for protection. At present Victoria is reducing protective duties in a drastic manner, while the situation in New South Wales has become interesting in the highest degree.

Owing to a combination of circumstances which it is not necessary to particularize, the cause of protection has of late years made considerable progress in that colony. But this progress was of an artificial nature, and its chief result appears to have been to cause such a reaction in favor of free trade as promises to extend that principle farther than it is carried in any country in the world. The budget offered by Mr. G. H. Reid, the Premier and Treasurer of New South Wales, proposed to abolish at once the protective duties imposed by the late government of Sir George Dibbs, and to abolish gradually, but within six years, all other customs duties except those on stimulants and narcotics. This involved an immediate loss of revenue amounting to £555,000, which was to be made good by reducing expenditure by £200,000, by a land-tax of a penny in the pound, estimated to produce £400,000, and an income-tax of sixpence in the pound, which was to bring in £108,000. The bills embodying this scheme were carried triumphantly through the Legislative Assembly; but the upper house threw out the land and income tax by an overwhelming majority. Upon the issue thus raised Mr. Reid has appealed to the country, and as it is intimated that the income tax will not be insisted on, the only objection to the scheme as an enlightened fiscal measure is removed. It

is encouraging to hear that Mr. Reid has just defeated Sir Henry Parkes in Sydney, and there is good reason to believe that he will resume office with a substantial majority behind him.

Like the House of Lords in England, the upper house, or Legislative Council, in New South Wales is not an elected body. It consists of members nominated by the Governor of the colony and holding office for life. The lower house, however, has always claimed the right to control revenue measures, and the contest now going on involves the question whether the upper house can refuse to accept them. Mr. Reid has declared that if "the parliamentary machinery will not act in accordance with the rights of the electors and taxpayers of this country, then that machinery must be altered." This is taken to mean that Government nominees will be added to the Legislative Council in sufficient numbers to insure the passage of Government bills. Whether the new Governor, Lord Hampden, will consent to make the necessary nominations remains to be determined.

The opposition to Mr. Reid's policy comes from several sources. Just as we found it in this country, the sugar industry causes the most trouble. The production of sugar has hitherto been protected by a high import duty, and the producers have enjoyed very great profits. They are united under the leadership of a great refining company, and their influence appears to be nearly as formidable as that encountered by our revenue reformers in last year's struggle in the Senate. There is opposition, too, on the part of the extreme advocates of land taxation, who think that Mr. Reid's scheme does not go far enough, as well as on the part of the landowners, who think it goes too far. In fact, the tax is a very moderate one, amounting to as much as £40 only in the case of about 1,600 estates; and if the land-owners were enlightened enough, they would consider that the value of their property would increase under free trade as it did in England.

Opposition has also appeared from another quarter. The federation of the Australian colonies has for some time engaged the attention of a number of ambitious politicians, among whom are to be found some leading protectionists like Sir George Dibbs. But it seems to be understood, and is, in fact, openly declared, that if free trade is to prevail in New South Wales, it will put an end to the federation schemes. It is very frankly admitted in Victoria, where Mr. Reid's budget has been studied with as much interest as in New South Wales, that if its proposals are adopted Sydney will become one of the great ports of the British Empire. It will be the great central market of Australia, and will draw to itself the commerce of the ports that are hampered with protective duties. It is true that the manufactures of Victoria would obtain free admission into New South Wales, but only in competition with the free-trade prices of the manufactures of the world. Under the baneful influences of such increased commerce as free trade will cause, it appears to be felt that the cause of protection must decline throughout Australia. The other colonies will be compelled to throw down their customs barriers unless they wish to see themselves distanced, and, when confronted with the alternative of protection or prosperity, will, however reluctantly, choose the latter. This may delay the federation of the Australian colonies, but it will hasten their admission to the federation of the world.

ATTORNEY-GENERAL HOAR AND PRESIDENT GRANT.

A most interesting and needed contribution to the political history of 1870 is made by Gen. J. D. Cox in the August *Atlantic*. It gives for the first time the truth about Judge Hoar's retirement from Grant's cabinet. His resignation was much speculated about at the time it was offered, but the public never knew the real reasons for it. Gen. Cox, himself a colleague of Hoar's in the cabinet, now shows that the resignation was not voluntary, as was supposed, but was curtly demanded by Grant, and that the reason the President demanded it was that he wanted to barter the attorney-generalship for some Southern votes in favor of the annexation of San Domingo.

Judge Hoar himself, with his native high-mindedness and dignity, never made public the circumstances of his retirement. He was content to let pass unchallenged the current version of it, which was that the President was embarrassed by having two secretaries from Massachusetts (Boutwell at the time being in the Treasury), and after the Senate had refused to confirm the Attorney-General's nomination to the Supreme Court, found himself compelled, much to his regret, to accept his resignation, frequently offered. But, as Gen. Cox observes, the reasons for reticence on the subject have now lost their force. No political party will at present be hurt by having the whole story set forth, and anything which can throw light upon President Grant's administration of his office, either for reproof or instruction in righteousness, is now legitimate matter for the historian. When the historian is an eye-witness and contemporary of the standing and literary power of Gen. Cox, no element of authenticity or of interest is wanting.

All that the public was permitted to know at the time was, that on June 15, 1870, the Attorney-General offered his resignation, without any assigned reason, and that on the same day the President accepted it with the customary words of appreciation of his service and personal character. That service had, indeed, been great. The new judiciary act called for the nomination of the whole class of circuit judges; and in fighting for the purity and competence of the nominees, Judge Hoar did more, perhaps, than any other man to elevate the federal bench. It was his open and vigorous warfare with senatorial spoilsmen over this very question of putting unfit men in judicial office which, no doubt, through the enemies he made in the Senate, rendered his own elevation to the Supreme Court impossible. But the tribute of hate from such a quarter was one to have had more value in Judge Hoar's eyes than the office itself. Why President Grant should have been in the first place attracted to such a man is perhaps even more mysterious than why he should have precipitately dismissed him from office.

Very little mystery remains about the dismissal, however, in the light of Gen. Cox's revelations. It takes its place in that "curious chapter in American administration," the intrigue to annex San Domingo. Gen. Cox sets forth the inner history of that intrigue with new point and force. The scandal was not simply that Grant kept his secretaries in ignorance of his schemes; it was that he deliberately overrode and deceived them. It was with a positive gasp of astonishment that Secretary Fish told Gen. Cox of Babcock's return from his tour of "inspection" with a treaty of annexation; "yet I pledge you my word that he had no more diplomatic authority than any other casual visitor to that island!" No wonder that Mr. Fish, in view of such ignominious treatment, especially in view of the way Babcock was practically made Secretary of State over his head, again and again pressed his resignation upon the President. But Grant, with his innate lack of delicate perception, saw nothing unusual in his own procedure, and prevailed upon Mr. Fish to stay in office, allowing him, however, to wash his hands of the whole San Domingo affair. When the irregularity of Babcock's treaty was mentioned at a cabinet meeting, and the President suggested a way in which "we can easily cure that," Gen. Cox himself was the man to break the awkward silence by asking: "But, Mr. President, has it been settled, then, that we *want* to annex San Domingo?" Grant colored and smoked hard, but made no reply.

How he went stubbornly and secretly ahead with his pet scheme everybody knows. Where Judge Hoar's resignation came into the intrigue, however, is now first told. The time for the ratification of the treaty was getting short; by July 1 it would lapse, by its own terms, unless ratified. Grant learned that he would be short of votes unless he could pick up a number among the Southern carpet-bag Senators. They learned of their power, and characteristically built a "deal" upon it.

"Grant was told," says Gen. Cox, "that they desired to please him and to support his plans, but, considering Mr. Sumner's controlling influence with their colored constituents, it would be at no small political peril to themselves if they opposed that Senator on the San Domingo question. Instead of

receiving the help of the Administration, in matters of patronage, which might smooth over home opposition, they found themselves less influential than they had a right to expect. Reciprocity was necessary if the President required their aid. When asked in what departments they found a lack of consideration, the Attorney-General's was named, and it was strongly urged that Judge Hoar should be displaced by a Southern man acceptable to them."

The result was apparent on June 15, when the Attorney-General received a "curt and direct letter" from the President, demanding his resignation, "without explanation of any kind or reason assigned." As speedily as possible "a Southern man acceptable" was found in the wonderful Akerman. But, luckily, even the votes won by that malodorous arrangement were not enough to save the malodorous treaty.

Gen. Cox is guarded and considerate in all his references to President Grant, but is unable, of course, even if he desired, to dissipate the bad impression which the whole transaction leaves behind it. The only excuses he can find for Grant are in his blunt and mistaken transfer of military methods into civil administration, his woful lack of ability to read character, and the habitual reticence and self-confidence which brought it about so often that "those who were supposed to be consulted on all important matters found themselves shorn of their power to help their chief, and had to look on and see the gradual increase of mischievous influences." What those mischievous influences finally led to, what a stain they brought upon the Republican party, and what a blot on Gen. Grant's reputation, one needs only to turn to Senator, then Representative, Hoar's speech in the Belknap impeachment proceedings, to discover.

THE BIBLE AS LITERATURE.

THERE seems to have been of late something almost like a concerted effort to draw attention to the literary aspects of the Bible. Of books recently published on the subject we may mention 'The Literary Study of the Bible,' by Prof. R. G. Moulton, and the selection of passages from the Bible, with special reference to their literary beauty and interest, made by Mr. Frazer, one of the Fellows of Trinity College, Cambridge. It is significant also that, in the series of "English Lyrics" now publishing, no less than two volumes are devoted to 'Lyrics from the Bible.' No one can say that too much space is thus given to the book, which, if nothing else, is a great glory of English literature, and in which the "lyrical cry" is so sustained and haunting.

Nor can any one say that the Bible, both as literature and in literature, does not need far more attention than it is receiving in current educational methods, whether of the family, the Sunday-school, or the college. That is to say, it surely needs it if its beauties and grandeurs are to remain a part of our common literary tradition, and if the aroma of it and allusions to it which pervade our literature are not to become meaningless to readers. A striking, almost appalling, article on "Ignorance respecting the Bible," by a college president, was published in the *Independent* last November. In it he gave the results of a test he had made of the Biblical knowledge of a freshman class of thirty-four men. They came from the best homes of New York, Ohio, and Pennsylvania; yet, when confronted with twenty-two allusions to the Bible in Tennyson's poems, betrayed astounding ignorance. Less than one-half the allusions, nearly all of which were perfectly obvious, were correctly explained in their answers. The line, "For I have flung thee pearls and found thee swine," was commented upon by one sagacious youth, "The Devil was adjured into swine." Another explained the phrase, "marked me even as Cain," by informing the examiner that Cain was a farmer and had to work hard, hence his "mark." These are but specimens of the grotesque misunderstanding of Biblical phraseology and story displayed by what must be considered an exceptionally intelligent body of young men. How long will it be before learned scholiasts will have to interpret to our generation the Biblical allusions with which our literature is saturated, and which, to the minds of fifty years ago, saturated with the Bible, appealed with swift illumination and suggestiveness?

One difficulty, it must be confessed, lies in general conditions as much as in anything peculiar to the Bible. That book we do not carry in our minds any more as a familiar friend, but neither do we carry any book. We have no memories any more; we have indexes. If the comparison were made between an intimate knowledge of the Bible and an intimate knowledge of the classics, the latter would be found to have lamentably decayed as much as the other. The wonderful Renaissance memory, wax to receive and marble to retain, could safely challenge the doubter to put a dagger to the owner's heart and strike home if a verbal slip could be detected in any given passage of Tacitus or Horace. There are no such giants in these days of *Jahrbuch* and *Zeitschrift*. The Bible is thus suffering in good company. If you have a good concordance, what more do you need in an age that does not care to know a thing, but only to know where you can find it?

But there are, of course, special reasons why the Bible has ceased to be the essential part of mental furniture that it once was to all English-speaking men and women. One of them, and a most powerful one, is the almost complete turning over of Biblical instruction to the Sunday-school, and its almost complete disappearance, even in Christian families, from the old place in daily reading and regular memorizing. We know, of course, that the scheme of Sunday-school lessons contemplates covering the whole Bible—or those parts of it fit to be taught to children—in seven years. We know as well of the scheme for daily readings meant to go with the Sunday recitations. But we know also that, as a rule, these projected readings and this comprehensive plan of study are not carried out at all, with the result that children obtain a most chaotic and fragmentary idea of the Bible. We say nothing here of the failure to teach the body of well-ascertained truth about the Bible, its history and manner of composition. That is a scandalous thing, morally, but it has little to do with the literary appreciation of the Bible. What we do say, however, is that the broken, haphazard, come-and-go methods of Bible teaching in Sunday-schools are as successful as if they were designed with deadly ingenuity for that very purpose, in destroying all rational appreciation of the Bible as literature, and in making it a happy-go-lucky collection of "golden texts" and strange and disconnected promises and threatenings and moralities, without form and void. Probably nine-tenths of the college students referred to above had gone through at least two seven-year cycles in Sunday-school lessons. What profit did they get, except to give their ignorance the special charm of confusion and grotesquesness? Jacob served seven years for a wife, and at least got a wife, if not the one he wanted; but most of our seven-year Sunday-school scholars emerge from the period with little or nothing to show for their time.

The question arises, how much better will the purely literary method of Bible study succeed—succeed, we mean, in storing the mind with the felicities and piquancies and majesty of Biblical phraseology, and in fascinating the attention with the details of Biblical narrative and allegory and pastoral and drama? We confess to gravely doubting if it will succeed any better. The charm and power of the Bible, as literature, seem to evade the mature and preoccupied mind that approaches it late and purely on the literary side. The accumulated associations of childhood, the familiarity with sounding phrases before they are understood, the play of young imagination and even of superstition about the sacred page—all these things, joined with daily repetition and use of the rich English of King James's version and a sustained acquaintance with Oriental trope and metaphor, parable and vision, seem necessary to the strongest and most enduring grasp of the Bible merely as literature. One cannot imagine Ruskin, for example, with his later ideas about the Bible, getting from it in maturity what he got at his mother's knee. There is a certain disillusionment, which is a literary loss even if it is a critical gain, that comes from studying the Bible in too dry a light of reason. The rugged old Hebraisms lose something of their craggy grandeur when we really come to see what they mean. If we have

learned to love them, even ignorantly, in our youth, we resent their being made too intelligible and unimaginative to our manhood. Thus, Matthew Arnold was incensed at the Revised Version, indefensible as was his anger on critical grounds, largely because it made havoc with some of the impressive but puzzle-headed phrases of King James's and the Prayer-Book version that had the undying charm of youthful association about them. It is no doubt a fact that the surest literary appreciation and mastery of the Bible are to be seen in men in whom that book was a part of the heaven that lay about them in their infancy; and we see small reason to believe that later and colder studies can give what it almost seems to be necessary to draw in with mother's milk.

If the Bible, as literature and in literature, is destined, as it would seem, to lose more and more of its power over men's minds, the loss is most calamitous. Merely as a treasure-house of style, of racy expression, of apt illustration, of piercing metaphor, of poetry that exhausts language and leaves it quivering, there is but one book, as the dying Scott said. The advice of a famous professor of rhetoric still holds good. "Young gentlemen," he used to say to his classes, "if you want to be eloquent, all you need to know is your Bible and Shakspere. In them are the winged words of English." And as for the great literature, whether of England, Italy, Spain, or France, it can be said of the Bible that, in it, its line has gone out into all the earth and its words to the end of the world. It is needless to quote the tributes or the examples of the great masters of style. Whatever may be the cause and whatever may be the remedy, if there is any remedy at all, the neglect of the Bible as a great piece of literature is one of the most disheartening marks of our time.

MAZZINI'S LOVE STORY.

ITALY, July 14, 1895.

THE May number of the *Nineteenth Century* has an article entitled "A Love Episode in Mazzini's Life"—a sensational heading to the publication of some of the most beautiful letters that ever one man wrote to another. In the "episode" between Mazzini and Magdalen there was no love on Mazzini's side for the young sentimental Swiss girl who had known him for a few months, and was only seventeen when he was compelled to quit the country; but he was full of "anguish and remorse" when the mother and scarcely wise friend urged his return, lest the girl should break her heart and die of consumption. The friend urges him to write to Magdalen. His answer is worthy of that great, good, pure soul who in all his long, sad life never did an intentional wrong or willingly inflicted suffering on a fellow-creature. It was not his fault, but his misfortune, that women worshipped him and gave him love he could not return, save by making them better and turning their, to him, useless passion to useful work for their fellow-creatures.

"Why inflict useless tortures on me?" he asks Thomas Emery (the conspirator's name taken by L. A. Melegari, the one-time Vice-President of "Young Italy," afterwards a pillar of the Moderate party, Deputy, Senator, Minister of State, Minister for Foreign Affairs, etc., etc.). "Why propose my writing to Magdalen, and why do so with the words, 'What do you mean to do for this unfortunate child?' You ask me if my intentions are in accordance with the only possible ending to such a pure love, and other things of that sort. My God! can I in any way console her? Can I have any intentions? Am I free? God knows I am not. I am so in the eyes of society and of men, who recognize only the *de-facto* ties; but before my own heart and before God, who takes cognizance of promises, I am not. Do you not know that Giuditta loves me, that I love her, and that I have sworn to love her? Do you not know that she, too, poor woman, is alone in the world, constrained to wander about the gates of the town where her children live without being able to pass them, and that even from afar my love affords her some consolation? Do you not know that the passions of her soul are strong and vehement, and that were the only person by whom she considers herself really beloved to deal her such a blow it would be a cruel betrayal?"

Of this beloved and loving Giuditta, Signora Melegari, who makes public Mazzini's letters to her father, merely says that she was "an Italian lady celebrated for her patriotism," and, giving two letters, adds: "Mazzini was then bound to Giuditta not only by respect for his word; but his love for her, whether platonic or not, was at its height." There is no need to conceal the name of Giuditta Bellario Sidoli, as all Mazzini's friends knew of her and revered her for the love and reverence in which he held her. Many of these will remember that when all capacity for joy was ended, when he scarcely lived save for "feeling of the pain," one of his last sorrows was Giuditta's death in 1871, just one year before his own.

The particulars of her life sent to me by her grandchildren show her to have been the woman to have proved a fitting helpmate to Mazzini; perhaps she was the only woman for whose sake he inwardly revolted against the "mission" which forbade him to assume any human tie that might interfere with his vow to sacrifice himself, body, soul, and spirit, to the liberation of Italy from foreign yoke, the unification of her dismembered provinces into one nation. Giuditta was born in 1804 in Milan, where her father, Baron Bellario, held high office during the existence of the kingdom of Italy. At sixteen Giuditta was married to Giovanni Sidoli, an ardent patriot of Reggio, who, when their first daughter, Marietta, was a year old, had to escape into Switzerland for dear life. Giuditta accompanied him, and at St. Gall, where he obtained citizenship, he, with two other patriots, opened a store and was most successful. In 1824 Giuditta returned to Reggio, where she had left her child with her husband's mother, then rejoined her husband, and all looked bright, when her husband's two partners died, and, the climate threatening his life, they were obliged to close the store and go to Montpellier, where Giovanni Sidoli died in 1828.

Giuditta returned to Reggio with her three children, Achille, Elvira, and Corinna, born at St. Gall. Here her salon was the meeting-place for Italian patriots, who, especially after the French Revolution of 1830, were in high hopes. But the leader, Ciro Menotti, trusted in the Duke of Modena, one of the vilest satellites of Austria, who had pretended to aspire to the crown of Italy only in order to possess himself of the secrets of the conspirators. Giuditta at Reggio, with Zucchi and other patriots, headed the revolution there after Ciro Menotti had been carried off as hostage by the Duke of Modena to Mantua. The revolution became general, but the Italians, believing in Louis Philippe, trusting to non-intervention, did not combine their efforts—nay, each province, save Reggio and Modena, held aloof, one from the other. Austria, of course, intervened, the Duke of Modena was restored and Ciro Menotti hung. Giuditta, with Lamberti, Fabrizi, and a few others succeeded in reaching Marseilles, and here Giuditta and Mazzini first met, loved, hoped, and worked for the common cause, Italy.

Mazzini, exiled from Genoa after his imprisonment in the fortress of Savona in 1830, in 1831 wrote his letter to Charles Albert inciting him to exchange the Sardinian crown for that of Italy, and founded the Association of Young Italy, whose martyrs in 1833 sealed their faith with their blood. To avenge their fate the expedition to Savoy was planned. This followed and did not precede the legal murders by Charles Albert of thirteen youths, guilty only of having read the publications of Young Italy. Had the expedition taken place previously, the King might have had some excuse for the crime committed, and for the decoration of the executioners and their promotion to the highest offices of the state. It is strange that Signora Melegari should make such a mistake, seeing that her father was one of the Savoy invaders. After the failure, Mazzini, heartsick but resolute, did not abandon his work. Condemned to death October 26, 1833, he yet succeeded in converting many a noble youth to the cause—among them Giuseppe Garibaldi, who was to have won over and commanded the Sardinian fleet if the Savoy expedition had succeeded. This failing, he also was sentenced to death on June 14, 1834.

These public disasters were fatal to any hope of union between Mazzini and Giuditta. She had her four children, he his work in exile. They parted, Giuditta undertaking a mission to Rome, assisted by a friend, Mr. Cobb, consul for Würtemberg, who, with the help of a cardinal who of course knew nothing of her ardent propaganda, obtained permission for her to visit her children at Reggio, at their grandfather's house, but only for one day. The correspondence between Mazzini and Giuditta was continued, the letters intercepted and copied being sent to their destination—that being part of the system of Metternich, who ruled supreme in the counsels of Modena and Parma, and who had great weight perforce with the mild Duke of Tuscany.

"My beloved," writes Mazzini, "how many letters in a few days! I bless you not once but a thousand times, oh angel of consolation! and I also bless the chance that has led to the arrival of all your letters together. God! how I felt and still feel the need of them, for you are my life—all else is but sorrow and sadness. You write so lovingly, your letter of the 15th overflows with such tenderness, that I am filled with joy. Never doubt me; never doubt my love; never doubt about me at all; a doubt would make you guilty, guilty towards me, for during these last days I have been able fully to gauge the force of the love that binds me to you. I shower kisses on the lock of your hair—you know I always kept one close to my heart, but I had lost it."

Giuditta answers:

"I have received your letters of the 6th and the 8th sealed with black. I felt the strongest need of seeing your handwriting again, yet the black seal filled me with such terror that I stood trembling and stupefied for some minutes before opening them. The fact that you had written the address reassured me, yet still I trembled. Your letters are lying open before me, and I am weeping sorely, so intensely do I long to see you, if only for a moment, that I may let my tears fall on your brow and tell you how weary I am of living. Each day that passes proves to me that I am a slave. Yet my

thoughts, like my eyes, turn to but one object: Liberty."

Between 1834 and 1836 Mazzini wandered through Switzerland with the two Ruffinis, whose brother, Jacopo, had committed suicide in prison for fear of revealing the secrets of his friends, and Mazzini had promised their broken-hearted mother never to abandon the fugitives, Agostino and Giovanni. He founded the Young Europe in these years: struggling Italy, Poland, and Germany were to join hands for their common rescue. Even then Mazzini's name was a power, a terror to tyrants. France, Austria, insisted on his expulsion. Switzerland had to yield, and on January 3, 1837, the Austrian minister at Berne triumphantly informs the Governor of Lombardy, Count Hartig, that the *trop fameux* Mazzini and the two Ruffinis were on their way to England, passing through France. This compulsory departure precluded all hope of a meeting with Giuditta, who remained in Parma to be near her children. Those who have read his account in after life of those awful years will understand what a faith was his which could suffer such agony, make such mortal sacrifice, and yet be faithful—yet compel his frail flesh to act out his spiritual thought.

It is full two years after his "tempest of doubt"—in July, 1838—that he tells Melegari that "Giuditta loves him and that he loves her"; so she at least had not abandoned him in his bitter hour. She, poor soul, was hovering outside the gates of Reggio, and on August 28, 1838, we find her mother's heart triumphing over her patriotic hatred of the Duke of Modena: she supplicates him to allow her to embrace her children, and to allow her safe-conduct to extend over a single day, so that she may go into the country, where was her youngest child, and Achille, her only son, who had just passed his examinations. Poor Giuditta! it was heartrending for her, but she showed her unselfishness by leaving her children all with her husband's family, so that they need not undergo her privations and might receive a good education. On October 30 there is another entreaty; no safe conduct had reached her! Her granddaughter assures me that in utter despair she wrote to the Duke, telling him that at such an hour, on a certain day, she should present herself at such a gate. He did not arrest her, but her visit must have been of the briefest, for she returned to Parma and remained there till 1848, when she went to Florence, and there she and Mazzini again met, but without any attempt to unite their fates. When the Roman republic was proclaimed, she gave her only son, Achille, to Rome, and he fought well and faithfully under Medici, who defended the Vascello.

After the fall of Rome, Giuditta returned to Parma, and there continued her patriotic propaganda, happier than before because she had her two youngest daughters with her and could bring them up in the faith of the Italy of the future. But the Duke of Parma, brought back by the Austrians, objecting to this education, after two rigorous examinations, one of which lasted from six in the evening till seven in the morning but resulted in nothing, ordered her arrest. Her daughters, Corinna and Elvira, had been up all night, Elvira had seen and chewed up various compromising letters; and Corinna, assuring one of the officials that behind a screen some very important documents were hidden, caused the screen to fall, and dust and soot from the hidden chimney enraged the creature to such an extent that Giuditta was carried off to the common prison, and there treated in the matter of food and sleeping even as the women arrested for common crimes. Her letters to her two daughters are delightful; all she asks for is for some knitting-cotton and needles, and certain books, which we may be sure she did not get. As no documents or traces of conspiracy could be found, after a time she was "merely banished" from Parma with her son and two daughters. The wretched Duke of Parma had her consigned by his gendarmes to the Austrian authorities; but as she was legally a Swiss citizen, the Austrians only had her conveyed to the Swiss frontier, whence she passed to Turin. Giuditta could never have borne exile from Italy, and even Turin was to her a foreign country.

I think that the last time Judith and Mazzini can have met was in 1857, when, after the failure of the Genoese attempt to succor Pisacane, the Government which condemned Mazzini to death, enraged at not getting hold of him, affirmed that he had fled from the country, leaving his followers in the lurch. No! he lived in Italy from March till August to my certain knowledge—lived in Genoa, where thousands of the working people knew where he lodged, yet never betrayed him, and he went to Turin and for some days stayed in Giuditta's house. After that their correspondence flagged. Giuditta had fallen into a state of deep despondency after 1860. Neither she nor the great actor Modena could reconcile themselves to monarchical Italy and the yoke of the moderate party. Modena openly blamed Mazzini for helping the annexations and for approving of the *plebescito*. He who placed Italy above all forms of government, was saddened but did not alter his resolution. In March, 1871, he wrote to a friend: "I know from Minoli of the illness of good, saintly, constant Giuditta. Strangely sad is it that I am destined to see all those that I have loved depart while I remain—who knows why?" Here is his last letter to her sent me by her son:

"My friend, you suffer and are seriously ill. Nevertheless, the thought that an old friend's thoughts watch around your bed may gladden you and give you a moment of relief. If this be so, know, then, that I have never ceased to love and to esteem you as one of the purest souls that I have ever met during my life. You will live, I hope; but if you have to leave us, you need not fear what men call death and which is only transformation. You will one day see those who loved and love you. Trust in God, in his law, and in your own pure conscience. Give a thought to me also, and bless me. I dare not send you my blessing, but my soul is with you. Your friend, JOSEPH."

His letter was written on March 3, 1871. On the 28th Giuditta breathed her last.

J. W. M.

OMER PASHA.

PARIS, July 16, 1895.

IF we want to find the true type of the adventurer, we must go to Oriental countries. The name of Omer Pasha, which was so often pronounced during the Crimean war, is not yet forgotten, though very few people know much about the commander of the Turkish troops during this memorable period. He made his appearance in history surrounded by such names as those of Lord Raglan, of Marshal Saint-Arnaud, of Marshal Canrobert. His life before the great days of the Crimean war reads like a novel; it has just been written by M. Georges Gaulis, from notes furnished by the private doctor of the Turkish commander, a Swiss who entered the sanitary service of the Ottoman army, and who ended his life in Serayevo, before the entrance of the Austrians into Bosnia.

Omer's real name was Michael Lattas. He was born in the Christian orthodox faith, in 1806, in the village of Tanya-Gora, in Croatia. His father belonged to the Austrian administration. Michael Lattas entered a school of cadets, and was attached at the age of eighteen to the *chancellerie* of the staff at Gospich. Soon afterwards he deserted, for reasons which remain obscure or unknown. He sometimes alleged that a German officer, who hated the Slavs, ordered him, for a slight fault, to be beaten for three hours with a cord. It has been said that his father incurred a condemnation which brought dishonor on his name. The deserter entered Bosnia during the night, determined to enlist in the Turkish army and to go to Constantinople. He had not a penny, and knew nobody. The Bosnians, fortunately for him, had remained faithful to the patriarchal laws of hospitality; he was received by a bey named Michael, and worked on his farm. He went from place to place, working in a hundred different ways for his bread, but he soon perceived that there was no chance for him to rise from the obscurest station if he did not assume the turban; he became a neophyte, had himself converted by a hodja, and took the name of Omer Lufti.

Once a Mohammedan, he became the preceptor of the children of his master, and remained with them for two years at Banyaluka; he then left Bosnia, and at Widin he became the drawing-master of the sons of Ibrahim Pasha, the commander of the fortress. It was the beginning of his fortune, as Ibrahim was an *advanced* Turk, who adopted Occidental ideas. Omer became acquainted with old Chosreff, the Grand-Vizier, a Turk of the old school, who attached him to the topographic bureau of the army. There he remained from 1830 to 1834, engaged in technical works, and studying the French, Italian, Persian, and Arabic languages. He married in 1834 the daughter of a colonel, who got him appointed professor of technical drawing at the military school, with the rank of captain. One day, the Sultan Mahmoud visited the military school, saw the new professor and learned of his adventures, and the next day Omer, summoned to the imperial palace, was informed that he had become a major, and was to be the writing-master of the heir presumptive, Prince Abdul-Medjid. He was now on the road to honors; in 1836, he was lieutenant-colonel; two years after, colonel; in 1839, when his pupil ascended the throne, he was made brigadier-general and pasha.

He had never appeared before an army when he was thus made general at the age of thirty-three; nevertheless, we find him in 1842 taking part in a campaign in Syria; in 1843 commanding a brigade in Albania; in 1845, a division-general in the Lebanon, putting down an insurrection. He is employed in Kurdistan, and with 12,000 men makes a rapid campaign and obtains a victory; on his return he is made field marshal, and becomes the hero of the day, the hope of Turkey; he is looked upon as a *pacificador*, to use a Spanish expression. He is a favorite of the Sultan, who gives him a fine estate at Scutari. The foreign ambassadors forget his origin; the renegade and deserter is sunk in the commander of the Turkish forces. All the Polish and Hungarian refugees solicit and flatter him. He lives like a real Turk, and has preserved only the passion for wine.

In 1848 the spirit of Revolution blew all over Europe. Prince Bibesco was turned out of Bucharest; Russia and Turkey entered both the Principalities. Russia occupied Moldavia and Omer Pasha was sent to Wallachia. He entered Bucharest without fighting, and remained there for two years, leading the life of a sovereign, courted by the old boyars as well as by the Liberals, one of whom even wrote a pamphlet in which it was proved that Omer had as much right to the throne of Rumania as a Ghika or a Bibesco, as the Lattas were descended from Latus, a Roman centurion. It was in Bucharest that Omer became acquainted with a German governess, who was converted by him and changed her name to the Oriental name of Zobeidah. He took her with him to Constantinople, and their mutual affection was such that she accompanied him in 1850 in a two years' campaign in Bosnia. Omer had to fight there an old feudal aristocracy, very warlike and independent. The deserter of 1826 entered Sevayevo at the head of ten thousand men, and lived there surrounded with Asiatic pomp. During his expeditions, he once entered the house where he had been a domestic; he loaded with presents the son of his former master. He triumphed over superior forces with his irregular bashi-bazuks and Albanians; he gradually disarmed the population, Mussulman as well as Christians; he commenced an expedition against Montenegro, but was checked by Austrian mediation.

A larger field of action was preparing for him. In 1853 the Russian armies crossed the Pruth, and Omer had now an enemy worthy of him. He received the command of the whole Turkish army. From Shumla he sent word to Prince Gortchakoff to evacuate Turkish soil. On his refusal, he placed 100,000 men on the right bank of the Danube, in front of 70,000 Russians. The first important engagement took place at Oltenitza, between Rustchuk and Bucharest.

Impetuous in attack, Omer did not know how to follow up a victory; ten days after his success at Oltenitza, he retired to his former positions. He gained another undecisive success at Kalafat, on January 6, 1854. At that time the allied forces, French and English, arrived at Gallipoli. Omer entered into communication with the French generals. The first interview of the three chiefs of the armies took place at Varna; Omer left his camp at Shumla, while Saint-Arnaud and Lord Raglan came by sea. Omer insisted on the necessity of a common action in the Dobrudja; Saint-Arnaud wrote to Marshal Vaillant:

"Omer does not deserve all the good or the bad that is said of him. Among us he would not be a distinguished man; but he is all the more remarkable and useful among the Turks in that, I say it sorrowfully, they would find nobody to replace him. Omer has in the highest degree military intelligence; he is a true soldier; as a general he has a few sound ideas with impossible projects and incredible political views. I have," he adds, "fathomed the man. His great merit is that he is indispensable, and he knows it. I have been able to judge how vainglorious he is."

When Saint-Arnaud brought his army of 40,000 men to Varna, he held a great review in honor of Omer, who went through the French ranks gravely and hardly able to conceal his deep emotion. At the news of the establishment of the camp at Varna, the Russians abandoned the siege of Silistria, which had made a heroic defence.

Some time afterwards the scene changed; the ravages made by the cholera forced the Allies to transfer the seat of war to the Crimea. Omer was left behind on the Danube, and ceased to be in the centre of action. He became quite a secondary actor in the great drama which kept the world so long in suspense. After much hesitation he transported his army to the Crimea; he had about 20,000 men and gained a victory at Eupatoria. When the siege of Sebastopol began, he had nothing to do but to obey the orders of Canrobert. The French commander, Pélissier, who took command after Canrobert, showed little consideration for Omer, and treated him almost with contempt—so much so that Omer withdrew his forces from the Crimea and had himself sent by his Government to the relief of Kars. Once in Asia, he was alone, independent; instead of going from Batum to Kars, he made a diversion in Georgia and marched on Kulais; he had hardly approached this place when he received news of the surrender of Kars. His campaign had been a thorough failure, and his retreat was disastrous and executed in the greatest disorder.

On his return to Constantinople, Omer fell into apparent disgrace. He consoled himself with living in luxury, sometimes at his villa near Scutari, sometimes in his kiosk at Stambul. His domestic affairs, which were too complicated to be told in detail, occupied him much. On the death of a governor of Bagdad in 1857, he asked for the post, and it was given to him. He took a little army with him, and conducted it from Aleppo to the Euphrates. At Bagdad he administered his government in such a way that he was recalled. He returned by way of Mosul and Diarbekir, and learned on arriving at the latter place that the Sultan allowed him to live on his estates at Oltenitza. He lived there a while as in a prison, obliged to sell his horses and his wife's jewels. The Sultan was forced to give him a command again when insurrections broke out in Herzegovina, in Montenegro, and in Crete; but he was ill, and could not keep long in the field.

He went to Vichy in 1868 by the advice of his doctors. During his journey he saw Napoleon III., the Pope, and his old companions of the Crimea. In Vienna he was presented to the Empress and dined at the table of the Emperor. He died in 1871, on his return to the Golden Horn, and it is said that the Sultan had the body of the giaour who had fought so often for him sent in a lead coffin to the coast of Dalmatia.

Correspondence.

QUEER DOINGS.

To the Editor of The Nation:

Sir: Allow me once more to refer to Mr. Gonino's translations of the Perrot-Chipiez books. I ask the favor of you simply in order that M. Perrot's position may be understood by the large body of American archæologists. I am sure that many will read with satisfaction the enclosed letter from M. Perrot, and it may be with surprise at certain *singuliers procédés* therein mentioned.

Yours very truly, J. R. S. Sterrett.

Amherst, Mass., July 24, 1895.

Université de France,
École Normale Supérieure,
Paris, le 11 juillet, 1895.

Cher Monsieur: Si j'ai tant tardé à vous répondre, ce n'est pas que votre article m'ait causé le moindre mécontentement; c'est que j'avais égaré votre lettre, qui m'était arrivée au moment où, en vue de fêtes qui ont été données à l'École, on déménageait mon appartement. Je ne savais plus votre adresse. C'est hier seulement que j'ai retrouvé la lettre sous un tas de papiers, et je m'empresse d'y répondre.

Ce n'est pas ma faute si mon livre a été, comme vous le dites si bien, *butchered*. Je n'ai jamais été consulté, pour le choix du traducteur, par la maison Chapman; on n'a pas demandé à me soumettre les épreuves de la traduction que, très habitué à l'anglais, j'aurais pu relire avec profit. On ne m'a même plus, pour les deux derniers volumes français, envoyé la traduction; je ne la possède pas dans ma bibliothèque. C'est là de singuliers procédés.

J'étais dernièrement à Londres, pour une quinzaine, occupé à travailler au Musée Britannique, et je me promettais d'aller, avant mon départ, m'en expliquer avec les chefs de la maison Chapman; mais j'ai dû quitter Londres brusquement, sur une dépêche reçue, et je n'ai pu faire cette visite.

C'est à eux-mêmes, à ce qu'il me semble, que les éditeurs anglais font le plus de tort en commandant la traduction à quelqu'un qui, tous les articles publiés à ce sujet le disent, ne sait bien ni le français ni l'anglais. Pour ce qui est de moi, c'est mon texte français qui fait foi, et je ne suis responsable des sottises que me fait dire ce traître (*traduttore, traditore*). Quant à l'éditeur français, il n'a aucun intérêt à intervenir. Il ne voit dans l'affaire que la vente de ses clichés, et, si l'édition anglaise est mauvaise, on n'en achètera que plus l'édition française. Je suis donc, à mon grand regret, privé de tout moyen d'intervention efficace; mais je suis très reconnaissant à tous ceux qui avertissent Chapman, et qui finiront peut-être par le résoudre à se détacher de ce M. Gonino. Les premiers volumes avaient été bien traduits par M. Armstrong, avec qui j'étais entré en relation; je ne sais pourquoi on a renoncé à lui.

Il ne me reste qu'à vous dire combien, pour ce qui me regarde, je vous suis obligé de tout ce que, dans votre lettre et dans votre article, vous me dites d'aimable et d'encourageant. Je suis occupé à mon septième volume; j'espère qu'il obtiendra aussi votre approbation.

Adieu à vous,

G. Perrot.

Notes.

T. Y. Crowell & Co. announce 'The Insurance of Workingmen against Accidents, Sickness, and Old Age,' by Dr. W. F. Willoughby.

A triple authorship, and that Southern and Texan, has produced a school 'History of Our Country,' now in the press of Ginn & Co. Superintendents O. H. Cooper and Leonard Lemmon and Prof. Harry F. Estill have thus combined forces.

Henry Holt & Co. will shortly issue 'English Readings for Students: Specimens of Narration,' edited by W. T. Brewster of Columbia.

Stone & Kimball, Chicago, will publish in October the late Robert Louis Stevenson's correspondence with Sidney Colvin from Samoa (a sort of diary), under the title of 'The Vailima Letters.'

A new 'Webster's Academic Dictionary' has been issued by the American Book Co., in abridgment of the "International" Webster. It has a page of two columns in very clear typography, abundantly besprinkled with illustrations. In the appendices a marked improvement is the merging of proper names, personal and geographical, in a single vocabulary. The volume consists of 700 pages, convenient for the hand.

Eight years ago we had occasion to welcome Mr. Henry B. Nason's 'Biographical Record of the Officers and Graduates of the Rensselaer Polytechnic Institute' of Troy, N. Y. Mr. Palmer C. Ricketts, C.E, a graduate and one of the present directors, has lately issued through John Wiley & Sons a 'History of the Institute, 1824-1894,' in which will be found the

chief documents relating to the foundation and continuance of "the first School of Science and the first School of Civil Engineering . . . established in any English-speaking country." The aim has been to recover what was in danger of being lost. The volume concludes with a bibliography of publications and records, and lists of officers and graduates. The illustrations exhibit the buildings and the several branches of instruction.

In the week following the appearance of the article "Leconte de Lisle Intime" in the *Revue des Deux Mondes*, was published a posthumous volume of this poèt, 'Derniers Poèmes.' It contains, besides the latest poems, reprints of the author's less known works, such as the "Apollonide," "La Passion," two critical prefaces, and separate critical essays entitled "Poètes Contemporains," namely, Béranger, Lamartine, Hugo, Vigny, Auguste Barbier, Baudelaire, etc. With the judgments here meted out, the student of French literature would do well to compare the notes originally written by Leconte de Lisle for his disciples of the Parnassian school and printed in the *Revue des Deux Mondes* of May 15. Notable is the agreement respecting Béranger of Leconte de Lisle with M. Brunetière, and hardly less severe is the criticism of Lamartine. Alfred de Vigny, on the other hand, is given due, if at times qualified, praise. Victor Hugo is of course eulogized, while the merits of Auguste Barbier and of Baudelaire are interestingly pointed out. Among the poems a collection of "Hymnes Orphiques" is worth a comparison with the prose translations from the Greek which Leconte de Lisle made many years ago.

Late in time behold him come, a Voltairian of the eighteenth century, and of the rabid days of the nineteenth, a hater of the Middle Ages, as fierce, if not as grand, as Leconte de Lisle, an adversary of the clericals, a contemner of Christianity. Albert Collignon shows all this in his book, 'La Vie Littéraire: Notes et Réflexions d'un Lecteur' (Paris: Fischbacher). It is not a review of books or of writers, nor a criticism of literary forms, nor a history of the evolution of thought; it is one long, and soon wearisome, arraignment of the Church, of Christianity, of religion of any sort, and a proclamation of the true life, the literary life, which, says the author, "as I understand it, is a life devoted to the improving and perfecting of one's self, mind and heart, intellect and will, . . . the culture of the soul through letters." M. Collignon has read very many books, and he has observed, meditated and written, "like Montaigne, Bayle, Vauvenargues, Stendhal, and Sainte-Beuve," as he modestly remarks. This book is a first result; another is promised, 'L'Art et la Vie,' on which thirty years have already been spent, and which will contain, when completed, "all that a Frenchman of the close of the nineteenth century absolutely needs in order to be at once a philosopher, a dilettante, a refined and cultured amateur, an ardent patriot, and the active and earnest citizen of a free country." Good things abound in 'La Vie Littéraire,' as one would naturally expect from M. Collignon; but one cannot help feeling that his adoration of the eighteenth-century writers is hard to justify at the present day, and that if he has the fulness of a Voltaire, he has not also his clearness and precision.

A new edition of H. Breitinger's 'Les Unités d'Aristote avant le Cid de Corneille' (Paris: Fischbacher) is most welcome. It is an excellent booklet, very full of information hitherto very difficult to obtain on the particular subject treated by the author.

'La Rochefoucauld,' by M. J. Bourdeau, forms the latest volume of Hachette's "Les Grands Écrivains Français," and is quite up to the high standard set by the editors. The study of the moralist is sympathetic but not over-partial, and the chapter on his influence is decidedly interesting. A brief bibliography is appended.

The *Berlingske Tidende* of Copenhagen announces the publication of the first volume of a work by Prof. Ludv. F. A. Wimmer, which promises to be the most noteworthy contribution to runology of the century. Prof. Wimmer has been engaged since 1876 in collecting and arranging his material, and during that period he has carefully examined every runic monument in Denmark, including the present Swedish province of Skaane. On all his expeditions he has been accompanied by Prof. J. Magnus Petersen, who for over thirty years has devoted himself to archæological drawing, and who furnished the illustrations for Prof. Wimmer's study on the origin and development of runes, published in 1874. The reproductions in the present volume are for the most part one-eighth to one-tenth of the natural size, and every precaution has been taken to make them absolutely correct. This first of the four volumes of which the whole work is to consist, treats of the historical rune-stones in Skaane, Southern Jutland, Jutland and Bornholm, the date of which is fixed at 935–1010 A. D. Vol. ii. will include the non-historical monuments in Jutland and on the islands, with the exception of Bornholm; vol. iii., those in Skaane and on Bornholm; and vol. iv., the later runes found on grave-stones, fonts, etc., together with a general vocabulary. In pursuing his investigations the author has received generous support from the Northern Early Text Society at the suggestion of the former vice-president of which, J. Worsaae, the work was originally undertaken, as well as from the Government, and the cost of publication is borne by the Carlsbergfond. The publisher is Gyldendal, and the subscription price is $27 per volume.

An opportune and instructive autobiography is 'Erinnerungen aus dem Leben von Hans Viktor von Unruh,' edited by Heinrich von Poschinger (Stuttgart: Deutsche Verlags-Anstalt). Herr Unruh was born at Tilsit in 1806 and died at Dessau in 1886. He began his career as a civil engineer and architect, and, like so many other professional men, drifted into politics under the revolutionary excitement of 1848. As a member of the Prussian National Assembly of that year, and afterwards its President, he proved himself to be a man of discretion and moderation, yet showed, however, as his name implied, a marked "unrest" in his party affiliations by passing from the Left to the Right Centre. In fact, in later years, in the Prussian House of Deputies (1863-1866) and the Diets of the North German Confederation and of the Empire (1867-1879), he never hesitated to break away from party ties for the better maintenance of his political principles. In this respect he was as independent and incorrigible as any Mugwump. The most interesting portions of these reminiscences are the conversations with Bismarck, whose policy he at first opposed, but, after the war with Austria, cordially supported. In the difficult crisis of 1866, Bismarck complained of being hampered by the interference of the Prussian Queen Augusta in the conduct of public affairs. In the conferences with King William she was always putting in a word. To Unruh's remark that women ought not to have their say in such matters, he replied, "But they do, nevertheless."

A new era in the development of the study of meteorology is marked by the addition of a department of Terrestrial Physics to the University of Chicago. Dr. Bauer began, on July 1, a series of lectures upon terrestrial magnetism, thermodynamics of the atmosphere, and dynamic meteorology. We observe, by the way, that "The Two Hundred and Fiftieth Jubilee of the Barometer" is the suggestive and rather picturesque title of a paper read by Dr. Hellmann at a recent meeting of the Berlin branch of the German Meteorological Society.

At a late meeting of the Royal Meteorological Society in London, some interesting reports were made upon the weather conditions of the past winter in the British Isles. It seems that the temperature through January and February was from seven to ten degrees colder than the average during those months, with a distribution of atmospheric pressure almost entirely the reverse of normal. The effect of the intense cold upon public health, particularly that of children and old persons, was very great, the number of deaths from diseases of the respiratory organs during February being nearly one thousand above the weekly average. Water pipes froze all over the kingdom, and much suffering resulted for many weeks. From a comparison with past years, the cold is said to have been more severe than at any time since 1814.

The *North Carolina University Magazine* lately contained a "Sketch of the Life and Character of Wilson Caldwell," by Prof. Kemp P. Battle, LL.D., of which the significance lay in the fact that the subject of the sketch is still living, and that he is the long-faithful colored janitor of the university. The article has been reprinted separately. Few white janitors, we may be sure, have thus been honored. In line with this incident is the announced intention of Mr. White of Rock Hill, S. C., to commemorate with a monument the negro's loyalty to his master's family during the war.

The Labrador peninsula is admirably described, both geologically and topographically, in the *Scottish Geographical Magazine* for July, by Dr. Robert Bell of the Geological Survey of Canada. The account is in large part the result of his own observations made during several extended journeys, and gives a less forbidding impression of the climate, scenery, and resources of the country than other travellers have reported. He estimates the area of Labrador at 560,000 square miles, of which about a fourth is claimed by Newfoundland. The principal resources are still its extensive forests, which contain twenty-four different kinds of trees, but on the east coast of Hudson Bay there is a "practically inexhaustible" quantity of a "rich manganiferous spathic iron-ore." Copper, galena, "apparently in workable quantities," and traces of gold are also found. A puzzle to the zoölogists is the presence among the fur-bearing animals of the grizzly bear, as he does not live in the vast intervening country between the peninsula and his western home. Two hundred and nine species of birds have been noted, but, "with the exception of the two species of ptarmigan, game birds are not plentiful." Another question, still unsettled, is whether the common cod lives in Hudson Bay, where all the requirements of his existence appear to be present. The population numbers, whites, 13,379; Indians, 3,016; Eskimo,

2,100, which is increased in summer by about 10,000 seamen and their families, who come from Newfoundland to fish on the Atlantic coast. All along the coasts are raised beaches on which are stone fish traps and other shore works of the Eskimo, now high above the sea-level, showing an elevation of the land not yet checked.

A very readable account of an expedition for the exploration of the Kizil Irmak, by Lieut. von Flottwell, is published in a supplemental number of *Petermann's Mitteilungen*. This is the ancient Halys, the principal river of Asia Minor, which, rising near the centre of the peninsula, flows north and empties into the Black Sea. In July, 1893, the travellers, four German officers, started from Angora, the terminus of the railway, and for three months made as careful an examination of the basin of the river from this point to its mouth near Sinope as the jealousy of the Turkish officials would permit. They were strictly forbidden to take observations, to make sketches, or to excavate ruins, and a guard accompanied them to see that these orders were obeyed. There was apparently no other restriction put upon their freedom, and they were treated ordinarily with great courtesy. The country traversed is evidently one of great possibilities, undeveloped from want of enterprise and in consequence of bad government. The railroad has not opened a market to the farmer because there are no roads connecting with it. The cultivator cannot harvest his crops until the tax-gatherer has appraised them and taken his portion. The tobacco-grower must sell his crop to the Government or its appointed agents at their price, without the power of retaining a single leaf for his own use. The Circassians, who emigrated here from the Caucasus and from Bulgaria, are also a check upon the growth of the country through their raiding propensities. Several excellent maps accompany the account. The regular July number of this periodical contains the record of some observations on the flow of water at the sources of the Rhone, and a notice of a new geological map of Russia, with a reproduction of it.

—Mr. C. H. Grandgent, well known as one of the most expert of phoneticians, has long been collecting material on the subject of American pronunciation. He has distributed five sets of circulars containing test questions, and he has received replies representing almost every part of the United States. On the basis of these replies, which in each case "are supposed to describe the natural, unstudied speech of a cultivated American," Mr. Grandgent was able to construct a tentative scheme, which he has corrected or corroborated by his own observations and by a personal examination of the speech of typical Northerners, Westerners, and Southerners. Many of the results have been embodied in a series of interesting papers in *Modern Language Notes* and *Dialect Notes* (the latter the journal of the American Dialect Society). A brief but complete and rigidly scientific account of the most important conclusions has recently been published, under the title "English in America," in Vietor's journal, *Die Neueren Sprachen*. The author's mastery of clear and condensed exposition enables him to put a vast number of facts into twenty-five pages without that appearance of confusion which often characterizes linguistic monographs. Particularly interesting is the treatment of *a*, *u*, *o* (including the "New England short *o*" as in *whole*), *r*. The remarks on nasality will also attract attention. "American nasality," says Mr. Grandgent, "seems to me to be identical with that of Holland, northern Italy, and many parts of Germany," and he adds that the quality in question is "by no means unknown in England and France." In a second article in the same volume Mr. Grandgent gives in phonetic orthography specimens of several varieties of his own pronunciation, illustrating the differences between familiar talk and the more formal utterance of singing, public speaking, etc. The texts are noted down with much skill and are of considerable importance to the student of linguistics. Our readers hardly need to be informed that the point of view of this whole investigation is scientific, not didactic. The investigator's purpose has been to ascertain the facts of speech, not to tell people how to talk. It is to be hoped that Mr. Grandgent will go on with researches which he is peculiarly well fitted, both by natural endowments and by training, to conduct to a satisfactory conclusion.

—The *Gazette des Beaux-Arts* devotes a dozen pages and one full-page plate of its number for July, 1895, to the announcement and setting forth of the latest great gift to the Louvre Museum, viz., Mr. Ernest Grandidier's collection of Chinese porcelain. It appears from the article in question that the collection as transferred to the museum numbers 3,200 pieces, and that one condition only accompanies the gift, to wit, that Mr. Grandidier is to be its curator during his lifetime, to complete its classification, and, at his discretion, to add to it at his own expense. He has already made it easy for the world to appreciate his magnificent generosity, having published, through the house of Firmin-Didot a year ago, a quarto volume about his porcelains. This volume contains forty-two plates, containing about one hundred and twenty-five separate illustrations of vases, dishes, and figurines, in Dujardin's heliogravure. The text cannot but be considered tentative, preliminary to a more serious study. The writer shows himself no parrot like repeater of fantastic names and of western guesses at Oriental meanings and discriminations, but his own classification is only suggested. He tells the reader a great deal that should be arranged better than it stands arranged in these pages. This task, then, the world has a right to hope will be done by Grandidier *Conservateur du Musée;* but after all, the great news is that so very fine a collection is made public property, and that the common reproach of European museums, that they are regardless of decorative art, is in the way of being removed.

—One of the signs of our democratic age is that so much of what is done for the improvement of popular education is due to the initiative and intelligent efforts of large associations of teachers. Even in the most conservative countries, like Austria and Prussia, centralized clerical and secular authority cannot utterly ignore the patient and persistent demands of such bodies of thinking men and women. The Ligue Française de l'Enseignement is at present devoting its energy to the creation, over the whole territory of France, of so-called *patronages scolaires*—societies for the protection and improvement, especially during the period of minority, of young people who have gone through the obligatory school course. Such societies are already in existence in nearly every arrondissement of Paris, as shown by a recent investigation of M. Beurdeley, mayor of the eighth arrondissement. They also exist, under a variety of names and differing more or less in methods and special aims, in numerous other larger and smaller cities. But the object of the Ligue is to extend the blessing of these institutions to all parts of the republic, not excepting the villages and rural districts. On the other hand, the progressive spirit of the friends of the higher education is strikingly illustrated by M. Jacques Flach's earnest and enthusiastic article in the *Revue Internationale de l'Enseignement* for June, suggested by the second volume of M. Louis Liard's 'L'Enseignement Supérieur en France.' The reforms proposed aim at a close union of specialization and general culture, and a recognition of the claims both of purely scientific and of professional study. They involve no less radical changes than the suppression of the baccalaureate (rendered superfluous by the final examinations held at the *lycées*) and the transformation of the present *corps de facultés* into real universities, autonomous both pedagogically and financially. At Paris, the university would unite not only the six *facultés*, but also the Collège de France, the École des Hautes Études, the Muséum, and the École du Louvre.

—Since the discovery of Jupiter's fifth satellite, nearly three years ago, the labors of astronomers, although unceasing, have resulted in nothing so significant until very recently. Saturn's ring has always been popularly thought a sort of mystery, in spite of Clerke Maxwell's prize essay published in 1859, in which his mathematical proofs were conclusive that it consists of a multitude of small bodies revolving round the planet in circular orbits. Certainly there is nothing else like it in the solar system, if, indeed, in the universe, and Prof. Keeler of the Allegheny Observatory has just published a very interesting paper, in which he demonstrates by a widely different method, that of the spectroscope, the meteoric constitution of Saturn's rings. Mathematical investigation had shown that a solid or fluid ring could not exist under the circumstances in which the actual ring is placed. To distinguish between the two hypotheses, that the ring is a rigid body, and that it is a swarm of satellites, it is necessary to find a method of great delicacy by which to bring the question within the province of the spectroscope. The relative velocities of different parts of the ring would be essentially different under each condition. If the ring rotated as a whole, the velocity of the outer edge would exceed that of the inner; but if the ring is an aggregate of revolving satellites, the speed would be greatest at the inner edge. The inclination of lines in the spectra of the ansæ would be reversed in the respective cases. If, again, the ring rotates as a whole, the displacement of lines in its spectrum would follow the same laws as for a rotating sphere. But the lines now actually photographed by Prof. Keeler successfully in these experiments prove conclusively that the velocity of the inner edge of the ring exceeds that of the outer, and that the relative velocities at different parts satisfy Kepler's third law. Everything pertaining to the magnificent system of Saturn is of great interest, and the actual aspect of the lines in Prof. Keeler's photographs is in exact accordance with that required by the theory that the rings are composed of a swarm of meteoric bodies, or small satellites, revolving about the planet. These swiftly moving particles, then, in the outer edge of the ring travel round Saturn in 12h. 5m., a period slightly larger than that of Jupiter's fifth satellite; while the meteoric bodies composing the inner edge of the ring go

completely round the planet in the astonishingly short interval of 5h. 50m., nearly two hours less than the period of Phobos, the inner moon of Mars.

—Dr. Karl Breul, in his 'Handy Bibliographical Guide to the Study of the German Language and Literature for the Use of Teachers and Students of German' (London: Hachette), has published a meritorious summary of the various works in this department. He has included the general science of language, which, curiously enough, he places after the chapter on Germanic philology, the periodical publications, grammars, dictionaries, histories of literature, general collections, and works upon special periods and authors, poetry, popular songs, folk-lore, *Kulturgeschichte*, etc., etc. As preliminary works in the same field the author had Von Bahder's 'Deutsche Philologie im Grundriss' and Herrmann's 'Bibliotheca Germanica,' both of which are more complete, especially in dissertations and special monographs. Dr. Breul sought to avoid increasing the size of his work by omitting all mention of articles in periodicals and in collected works. This, naturally, especially in German philology, where the principal part of the investigations is contained in reviews, constitutes a serious, though possibly necessary, restriction in the scope of the work. If one were to characterize the defects in the execution of the editor's plan, they would be found mainly on the side of the later literature and the history of culture, and of popular poetry and folk lore. Of all students of German literature, the lesser number are engaged in the study of the older periods of the language, while the greater number seek guidance in modern German. Why should books be quoted with reasonable fulness for the study of separate authors of the Middle High German period, and the teacher or student be left helpless as regards the best editions of the modern classical writers? Of what help are the names of publishers' series of annotated texts when the contents of these lists are unknown? Many of the cheap German editions have no critical value. The editor has sought in many cases to characterize by letters and brief remarks works of especial merit as well as books presenting theories which lack as yet full acceptance. He has also purposely omitted works which have now been superseded, however great their historical importance may once have been. In his characterization he has been in the main successful. Among the proceedings of learned societies we miss mention of the Saxon Academy; among grammars, that of Blatz, the third edition of which has appeared the present year; in syntax, Sanders's 'Satzbau und Wortfolge'; in scientific German, the works by Gore and Dippold. Schrader's 'Bilderschmuck der deutschen Sprache' appeared in a second edition in 1894. The revival of interest in Uhland caused a new edition of his lectures on the history of German poetry to appear in 1893. Hosmer's 'Short History of German Literature' appeared first in 1878. In works on the religious drama there is no mention of the English edition of Karl Hase's work (1880), or of the similar edition of Freytag's 'Technik des Dramas' (1894). A new edition of Götzinger's 'Reallexikon' appeared in 1884. There is no mention of Gouin's new system contained in his 'Art of Teaching and Studying Languages' (1893). The editor's method of mentioning simply the titles of "libraries" proves an unsatisfactory guide in numerous cases, many valuable works being quite hidden, as, for example, Bartsch's 'Schweizer Minnesänger' (1886) in Baechtold and Vetter's "Bibliothek." In general we must praise the care and skill with which this work has been prepared.

JOWETT AND CAMPBELL'S 'REPUBLIC.'

Plato's Republic. The Greek Text, edited, with Notes and Essays, by the late Benjamin Jowett and Lewis Campbell. In three volumes. Oxford: Clarendon Press; New York: Macmillan.

AMERICAN students require no introduction to the translator of Plato nor to the editor of the 'Theætetus,' 'Sophist,' and 'Statesman.' Nor do they need to be told of the long-felt want of an adequate English edition of the 'Republic,' or of the expectations that were aroused by the announcement that the fine literary skill and genial philosophic culture of Jowett were to be supported by the sound and careful scholarship of Campbell in the production of a commentary that might worthily take its place beside the Lucretius of Munro, the Catullus of Ellis, and the Sophocles of Jebb. There are few classical texts the intelligent mastery of which profits the student's culture as much as this, and there is none which an editor, conceiving his task in the spirit of Grant's 'Ethics of Aristotle,' could fittingly make the centre of more interesting and comprehensive historical and philosophical studies—"if he had the mind." For the Platonic 'Republic' is perhaps the only prose composition that in significance for the history of the human spirit takes rank with the bibles and great epics of the world.

The thoughts of the few books that everybody reads acquire a tremendous cumulative moment from that very fact. From Zeno to Cicero, from Cicero to St. Augustine, from St. Augustine to Gemistus Pletho, from Pletho to Campanella, Sir Thomas More, and Bacon, and so on down to Rousseau and the nameless minor utopists and sociological speculators of our own day, every one who has undertaken to formulate new ideals of social organization, education, or religion has begun by reading the 'Republic.' The 'Ethics' and 'Politics' of Aristotle are little more than a codification of its suggestions, accompanied by a matter-of-fact criticism of its paradoxes. The 'Poetics' is in the main an elaboration of distinctions made in the course of the discussion on the moral influence of the poets, or an attempted justification of poetry against Plato's repudiation. It is not fanciful to see the first hint of the 'Characters' of Theophrastus, and so of all their successors down to Matthew Arnold's "Barbarians, Philistines, Populace," in the witty sketches of the evolution of the typical oligarchic, democratic, and tyrannical man. The founder of stoicism wrote a 'Republic' in imitation of Plato, and the essence of the Stoic ethical doctrine is a pedantic exaggeration of the ascetic, repressive side of Platonism. For eight centuries from Plato's immediate successors in the Academy down to the latest puny neo-Platonist and those Christian fathers who "mouthed grandly the last Greek," the imagery and turns of phrase of the 'Republic' were appropriated and copied by all writers of Greek who affected literary elegance, moral earnestness, or subtlety of philosophical disquisition. It was the arsenal from which the Christian apologists drew their most effective polemical weapons, and entire pages of its censure of the fables of the mythology are transcribed unchanged in the 'Evangelical Preparation' of the good Bishop Eusebius, while, on the other hand, it was at once the Bible and the *Summa Theologiæ* of the neo-Platonists, who opposed to the "new superstition" an allegorical interpretation of the old. In every age, that Platonic city of which a pattern is laid up in heaven for him who has eyes to behold it, has been the chosen refuge of the idealizing instincts of humanity. It is that invisible city of Zeus which Marcus Aurelius loved more than the "dear city of Cecrops," the city of God which St. Augustine's imagination saw subsisting unscathed in the ruin of the empire of Rome, the "better world" of which Kant said he was conscious of a call to constitute himself a citizen by his conduct in this, the antitype of the socialist's dream, the "completely evolved" society which the evolutionist postulates as the environment of the perfect man.

And in thus elevating Hellenic characters and situations to typical significance Plato's thought seems to transcend the limits of his age and country, and to attain to something like prophetic strain, identifying itself, as it were, with the soul of the wide world dreaming on things to come. Grave historians have seen in the 'Republic' a prefigurement of the constitution of the mediæval church and state. If, as Aristotle objects in his matter-of-fact way, Plato's account of the necessary order and transformation of forms of government cannot be made to square with the actual facts of Greek history, it applies to the politics of nineteenth-century France with startling verisimilitude. Cæsar, Tiberius, and Napoleon the Little have been thought to have sat for his portrait of the tyrant. Marcus Aurelius, Julian, Constantine, Theodosius, Louis XIV., James the First, and Napoleon the Great have been more or less plausibly compared by their flatterers to his ideal king. His description of the terrors of the slaveholder condemned to dwell in a lonely place with a large household of restive slaves, or surrounded by neighbors "who will not endure it if one man claims to hold another as his chattel," sweeps the historic imagination forward to the speech of Caius Cassius in the imperial Senate on the murder of Pedanius Secundus by his slaves, or to the sensations of the slaveholders of our own Southern States as the cordon of free States closed around them.

Nor is the interest of the 'Republic' purely erudite and historical. As Mr. Alfred Benn, in his 'History of Greek Philosophy,' well remarks:

> "The progressive specialization of political functions, the formation of a trained standing army, the admission of women to public employments, the elevation of a whole race by artificial selection, the radical reform of religion, the reconstitution of education, both literary and scientific, the redistribution of property, the enactment of a new code, the use of public opinion as an instrument of moralization—these are the ideas which still agitate the minds of men, and they are also the ideas of the 'Republic,' the 'Statesman,' and the 'Laws.'"

To this enumeration we might add the endowment of research, the application of mathematics to physics and astronomy, the relation of literature and the drama to public morals, the Wordsworthian idea of the influence of right æsthetic environment on character, the subordination of the physical and philosophical sciences to ethics and sociology, the conception of the body politic as an organism. It is scarcely an exaggeration, then, to affirm that no book of the last thirty years stands in more vital relation to the best thought of our time than the 'Republic' of Plato, in Jowett's or Davies and Vaughan's translation, in the interpretations of Whewell, Grote, Martineau,

and Pater, or in the influence which radiates from the lecture-rooms of Oxford, Cambridge, and Harvard Universities.

Such are some of the ideas that we looked to find developed in the volume of essays announced to accompany this edition. And this, or something like this, we should doubtless have had if Prof. Jowett's life had been continued for the completion of the task too long postponed, and if he had deigned to nourish his exquisite gifts of expression with a conscientious historic erudition. As it is, the Essays, though presenting much useful material, in a somewhat unsystematic form, need not detain us long. Prof. Jowett's introductory plea for retention of manuscript readings as against conjectural emendations abounds in plausible felicities and is very interesting reading, but contributes nothing to scientific criticism. Conjectural emendations are mere guesswork in ninety-nine cases out of a hundred; but scientific knowledge, not genial common sense, is needed to adjudicate on the hundredth case. The statement (p. xxvi) that the choruses of Greek plays have a rhythmical rather than a metrical character—that is to say, that the metre is hardly enough defined to be distinguishable from rhythm—intensifies a curiosity we have long felt as to how our English colleagues of the old school read Greek verse. Prof. Campbell contributes three essays. The first offers a sketchy résumé of the plot of the 'Republic,' a sensible defence of its unity against the disintegrating criticism of Krohn and others, and desultory remarks on its relation to the 'Gorgias,' 'Timæus,' 'Parmenides,' and 'Laws.' The second essay deals in detail with the constitution of the text of this edition. The essay on "Plato's Use of Language" falls into two parts, the first consisting of a useful, but not exhaustive nor very scientific, collection of Platonic idioms, syntactic usages, and peculiarities of diction, in the manner of the "Essay on Language" in Prof. Campbell's Sophocles; the second, of a classification and discussion of Plato's vocabulary, and more particularly of his philosophical terminology.

A commentary on the 'Republic' may be criticised in relation to the needs of the intelligent undergraduate, or in respect of its absolute contribution to the philological or philosophical interpretation of the work. From the first point of view these notes deserve all praise. The 'Republic' is one of the most profitable books, both for the acquisition of facility in reading Greek and for the general intellectual stimulus it provides, that can be read in the upper classes of our colleges. But hitherto the teacher has been obliged to put together his own commentary with the aid of Stallbaum and Schneider. Now the danger is that the ordinary instructor will feel that his occupation is gone, so completely is the work done for him in advance. The treatment of the particles, for example, is copious and exact to a degree that will surprise those who remember the laxness of Jowett's translation in this regard. In the earlier books the precise force of nearly every οὖν, γάρ, ἀλλά, καὶ δή καί, and γε is brought out by explicit paraphrase, and the editors seem to have taken special pains, in Browning's classic phrase, to "settle μέντοι's business," that most baffling of particles to the tyro. Plato's use of synonyms, too, his habit of charging his words, in addition to their positive logical extension, with insinuated suggestions of praise or disparagement, is everywhere recognized and elucidated. Prof. Jowett's gift of felicitous expression enables him to accomplish this in a manner beyond the reach of any merely technical scholarship. And the same faculty serves him admirably, as it did in his translation, in bringing out the dramatic by-play that accompanies the evolution of the thought—the touches of irony or of Aristophanic comedy, the side-lights, the affected embarrassments and surprises, the glances at other points of view, the toying with the order of the exposition, and other devices for stimulating the attention or relieving the strain of continuous dialectic.

Lesser linguistic matters are treated with almost painful conscientiousness. All the optatives are faithfully looked up in Goodwin and gravely explained, and the reasons for and against every minor variation of reading in the text are explicitly announced. The asyndeta, anacoloutha, and pendent constructions with which the conversational style of the 'Republic' abounds are carefully analyzed, and in all doubtful cases the student is given his choice of two or more possible renderings. This admission of alternative versions, so notable a feature of Prof. Campbell's Sophocles, is made still more prominent here by the fact that we have the work of two editors, and that Prof. Campbell has thought it best to preserve the record of the differences. These little debates, signed L. C. and B. J., make interesting reading, doubtless, but they produce an effect of lack of finish. A given combination of words penned by a Plato can as a rule mean but one thing, and the halting of the commentator between two opinions is a confession of our ignorance. The alternative possibility is a possibility only by the unreal scheme of some abstract grammatical formula. It is not really possible when context, emphasis, idiom, and linguistic associations are taken into consideration. Of what seem to us positive errors of interpretation we have noted very few, and those mostly relating to matters too trifling or too open to controversy to justify discussion in the space at our command.

The actual contribution of these three sumptuous volumes to the text-criticism, erudite exegesis, or philosophic interpretation of the 'Republic' is slight. Perhaps there was not much to be done. The text demands little except the courage to ignore uncalled-for emendations. Of the twelve passages which Prof. Campbell enumerates as still open to suspicion, none leaves the thought seriously in doubt. Of the twenty-nine passages in which the present text relies on conjecture, the majority are concerned only with insignificant changes in grammatical expression. None affect the sense seriously, and only four or five affect it at all. Prof. Campbell himself contributes to the text one emendation, διὰ τοῦ for διὰ τὸ bis 440 C, and suggests fifteen others, some of them plausible, but none of first-rate importance. The selected readings given in the foot-notes are taken from Paris A, which has been carefully reëxamined by Prof. Campbell, from Venetus II, and Cesenas M, which have also been recollated for this edition. The historical and antiquarian exegesis offers little or nothing not found in Stallbaum or Schneider. Platonic usage is aptly and adequately illustrated, but there is nothing that could not easily be got from Riddell's Digest or Ast's Lexicon. The editors have quoted a few of the more interesting imitations of the 'Republic' by later Greek writers from Stallbaum, but make no display of their own reading and research in these fields.

As regards the philosophic interpretation, a distinction is necessary. The details of the thought, its dialectic and dramatic movement, the links and interlacings of the argument, the allusions to the political and moral experience of the Greek race, the occasional *aperçus* and anticipations of great ideas, the isolated ethical and sociological truths or paradoxes—all these things are touched and illustrated with the utmost felicity and justness of expression. Nothing could be more admirable than the little sermons—"the general remarks on philosophy and life," as Prof. Campbell styles them in the Preface—which the Master has strewn here and there throughout the commentary, as, for example, the little essay on casuistry (p. 12), on the ambiguity of words (p. 33), on Plato as a political economist (p. 85), on the permission of evil (p. 102), on art and morality (p. 136), on class differences (p. 160), on wealth in ancient and modern times (p. 166), on psychology (p. 202), on ridicule as the test of truth (p. 217), on metaphysics (p. 268), on the few and the many (p. 281). Nothing, too, could be sounder or more discriminating than many of the occasional remarks concerning the Platonic philosophy which Prof. Campbell lets fall in his introductory essay on the structure of the 'Republic,' or in his final study of Plato's use of philosophic terms. But neither in the essays nor in the commentary do we find anywhere a clear, coördinating statement of the central ideas of the 'Republic' in their relation to each other, to Plato's life-work as a whole, and to modern speculation on the same topics.

To descend to particulars, it may be affirmed that the three dominant structural motives of the 'Republic' are approximately these: first, the felt necessity of transcending, by means of psychological and sociological analysis, the crude antinomies of the superficial dialectic of the 'Laches,' 'Charmides,' 'Lysis,' 'Meno,' and 'Protagoras.' Adequate and precise illustration of this point would make the first five books of the 'Republic' an incomparably stimulating and suggestive text-book of ethics. It is nowhere clearly brought out in the commentary. The second leading idea of the 'Republic,' and indeed the avowed motive of the whole composition, is the renewal on a higher plane of the debate between moral faith and moral scepticism begun in the 'Gorgias.' Given an intelligent, unscrupulous man who denies that the practice of the morality of common sense is for his interest, can you convict him of error? The 'Gorgias' showed only that a Socrates could baffle such a sceptic in debate by virtue of superior dialectical skill. The 'Republic' endeavors to produce genuine conviction. But we find in these volumes no adequate recognition of the predominance of this problem in Plato's thought from the 'Gorgias' to the 'Laws'; no indication of the way in which the entire plot of the 'Republic' is determined by it, no illuminating comparisons of the treatment of the same theme in the ethical controversies of the past thirty or forty years. The third great conception of the 'Republic' is that these ethical problems must find their solution in education and the intelligent scrutiny of social ideals. This is the thought that Plato expressed in his famous doctrine of the "Idea of Good," which has been so generally misapprehended that it is perhaps unfair to complain that our editors have missed its full significance.

By the "Idea of Good" Plato means that conception of the maximum compatible individual and general weal which will take shape in the finest minds of the age when they have supplemented prolonged and systematic scientific and philosophic culture by the practical discipline of affairs. Of this idea he speaks in

the language of transcendent poetic mysticism, but he wisely refuses to define it otherwise than by the enumeration of the indispensable educational conditions of its apprehension. The value of the idea is regulative. Upon it depend in the last resort the meaning and validity of all ethical and political conceptions. Even virtue is ultimately desirable because it promotes "good." The average citizen is not required to consider the matter so curiously. He may be a gosling and obey instinct. But the rulers and educators of mankind must possess this profounder insight if they are not to be blind leaders of the blind. It is impossible to defend this interpretation of Plato's teaching in our space. It will verify itself for any reader who will employ it as a key to the 'Republic.'

But if this is Plato's meaning, why has it so often been missed? Partly because of the veil of poetical mysticism—the image of the sun, the allegory of the cave—which his enthusiasm and his sense of the inadequacy of language for the expression of our highest conceptions induced him to cast over it, but chiefly because of his insistence, in connection with the "Idea of Good," on mathematical conceptions and on a pure dialectic that should be independent of sensuous images, and should soar above hypothesis to an ultimate first principle. These utterances have been interpreted ontologically, and numerous attempts have been made to relate them to the metaphysics of the 'Parmenides' and 'Sophist'; and undoubtedly here as elsewhere Plato personifies and hypostasizes his ideas. But the dominant thought, as he plainly tells us, is a comparatively simple ethical one. The first principle beyond hypothesis is not the "Absolute" or the "Unconditioned" of modern speculation; it is simply the regulative conception of the highest attainable social "good," which, whenever we can run our reasonings back to it, is an end of controversy in all ethical and political discussion. He insists on mathematics merely or chiefly as an awakener and propædeutic training of the powers of reasoning in abstractions. For Plato believed that no man is competent to deal with the elusive and complicated abstractions of ethical and social science who has not previously disciplined his faculties by study of the simpler conceptions of the less abstract sciences. How many of our improvised reformers and professors of social science would this hard condition rule out!

The deficiencies of the commentary on the philosophic side would perhaps have been remedied had Prof. Jowett lived to complete the series of essays which he contemplated. Yet we may be permitted to doubt whether he would have given us anything essentially different from the delightful but inconclusive introductions to his translations. The philosophic temper, the philosophic breadth of survey, were his in large measure; but he seems to have been constitutionally averse to the philosophic precision of thought. By a natural confusion of ideas, he appears to have held that, because metaphysics admit of no demonstrably certain conclusions, therefore there is no such thing as precision of thought and expression concerning the relations of philosophic doctrines to each other and to their constituent elements. For example, in 505 D, he tells us that Plato's statement that, while men will sometimes acquiesce in the semblance of justice and virtue, they desire the reality of "good," is in some degree like the argument of Anselm and Descartes that the highest perfection involves existence. The author of such a comparison obviously regards the history of philosophy merely as a field for the exercise of epigrammatic ingenuity. He has no intellectual interest in precision of statement for its own sake. And the pity of it is that these fantastic *rapprochements* prevent him from seeing, or at least from clearly stating, what Plato did mean.

But it is idle to dwell longer on the inevitable limitations of a work that brings us so much that is helpful. We will only express in conclusion the hope that Prof. Campbell will find leisure to prepare a smaller edition for the use of college students, to whom the cost of these three volumes will be practically prohibitory. The work could easily be reduced to the compass of Monro's little two-volume 'Iliad' by excision of nearly everything that relates to text-criticism, condensation of the essay on Plato's use of language, and compression of the larger notes.

THE VARIORUM MIDSUMMER NIGHT'S DREAM.

A Midsommer Nights Dreame. [Variorum Shakespeare, Vol. X.] Edited by Horace Howard Furness. Philadelphia: Lippincott. 1895.

WITH this publication, Dr. Furness completes the tenth volume of his New Variorum edition of Shakspere. The first volume appeared in 1874, and was received with acclamations, which each of its successors has called forth anew and in louder tones. Our readers are so well acquainted with the scope of the work and with the taste and learning of the editor, that any utterance on our part, beyond a mere announcement of the new volume and a gratulatory comment on the steady progress of the great enterprise, may seem superfluous. But we cannot rest content with so bare a mention. The very number *ten* tempts to a retrospect, and the richness of the volume forbids a mere passing notice.

In his sixth volume ("Othello") Dr. Furness abandoned his previous practice of constructing a critical text in modern spelling, and reproduced, as a basis for study, the text of the First Folio, printing it letter for letter with a high degree of accuracy. His reasons for this change of plan were eloquently set forth in the Preface.

"Who am I," he exclaimed, "that I should thrust myself in between the student and the text, as though in me resided the power to restore Shakespeare's own words? Even if a remedy be proposed which is by all acknowledged to be efficacious, it is not enough for the student that he should know the remedy; he must see the ailment. Let the ailment, therefore, appear in all its severity in the text, and let the remedies be exhibited in the notes."

This strong statement of opinion was, however, introduced by a hint that the change of plan was only experimental. Fortunately, the editor was satisfied with the success of his experiment, and has continued to reprint the Folio text in the plays that have since been issued. The advantages of the change are manifest, and it is hard to see any objection to it. The student has under his eye, in a marvellously condensed and legible arrangement, a collation of some forty texts, and he can choose for himself. The reading preferred by the editor is indicated in a note.

One result of this change of plan is interesting. Using the Folio in this way as a kind of standard, Dr. Furness has naturally come to have more and more respect for its readings. His respect in the present volume sometimes reaches the degree of an excessive reverence. Thus, in act i., scene 1, v. 149, he prefers "Or else it stood upon the choice of merit," to the Quarto reading "choice of friends," though the latter makes excellent sense and the former can with difficulty be harmonized with the context. To most editors the fact that the First Folio was printed from the Second Quarto has seemed an additional reason for preferring the Quarto reading in this passage. Dr. Furness argues differently. A stage copy of the Second Quarto having in all probability been sent to the printer by the editors of the Folio, it follows, he holds, "that the substitution of the word 'merit' for 'friends' . . . must have been made with authority." This seems to us a complete *non sequitur*. As Dr. Furness himself shows in his careful discussion of the three old texts (Preface, pp. xiv–xvii), the compositor of the Folio did some curious things in setting up this play. Besides, what is meant by "with authority"—a vague term, on the exacter definition of which the whole question hinges? When the variations between the Quartos and the Folio are in the aggregate so inconsiderable as in "A Midsummer Night's Dream," it is unsafe to make much of changes which are not corrections of obvious errors. Another instance of Dr. Furness's excessive regard for the Folio is his deciding for "His folly, Helena, is none of mine" in i., 1, 214. The mere fact that the Folio here follows the manifestly faulty reading of the Second Quarto when the First Quarto affords a better, is an argument against ascribing to the stage copy of the Second Quarto probably sent to the printer by Heminge and Condell any special superiority, in matters of detail, to uncorrected copies of the same impression.

For Heminge and Condell themselves Dr. Furness has abounding charity. His apology for them is pleasant to read; but "is not the truth the truth?" Be as grateful as we may for what they did for us, we cannot acquit them of disingenuousness almost amounting to falsehood in their account of the sources and the correctness of their edition. And it is the trustworthiness of Heminge and Condell, not their service to letters, that is of moment in textual questions.

Besides the ingenious apology for Heminge and Condell, which concludes a good discussion of the old editions, Dr. Furness's Preface contains interesting matter relating to the source of the plot and the duration of the action. The lost play "Huon of Bordeaux"—the illiterate Henslow's *hewen of burdokes*—is accepted as probably the immediate source of Shakspere's *Oberon*, and no importance is attached to Greene's "History of James IV.," in which Prof. A. W. (misprinted "W. A.") Ward finds Shakspere's hint for his fairy machinery. A strange error, which will no doubt be corrected in the next impression, is the ascription of "Otnit" in the 'Heldenbuch' to Wolfram von Eschenbach. The little excursus on the duration of the action is extremely clever and charming, whether meant in all seriousness or not.

The main value of a Variorum edition is, of course, in its notes, and the chief praise of the unselfish scholar who subjects himself to the toil of making such an edition is to have picked out from the mass of annotation such notes as are most significant, whether for their pertinency or because they throw light on the history of learning. To this task a mere accumulator, however laborious, and a mere compiler, however skilful in selection, are alike inadequate. What is needed is a rare combination of learning, enthusiasm, humor, industry, and

good taste. That Dr. Furness possesses these qualities and such other incidental gifts as are required of the Variorum editor was demonstrated by his first volume. With succeeding volumes the editing has grown steadily better, until now, in the tenth, we have the proportion between what is retained and what is omitted adjusted with much nicety. In his earlier volumes Dr. Furness, naturally less sure of his own judgment, sometimes, out of deference to an ideal of completeness, printed matter which he would now doubtless venture to omit. His ability to condense and otherwise to edit and arrange the work of his predecessors has constantly grown. The present volume, more than any of the others, gives one the impression of an easy management of an enormous collection of material. There is much nonsense in the notes, no doubt; but they would not correctly figure the course of Shaksperian editing if they were all rational. Occasionally one wishes we might have less of Warburton and his conjectures, but when it is remembered what a multitude of ineptitudes Dr. Furness has spared us, the rebellious wish subsides.

In his earliest volumes Dr. Furness was rather chary of giving his own opinion. He registered the utterances of others conscientiously and sifted them with skill, but he shrank from putting himself forward as a judge or arbitrator. As play after play has come out, however, "Ed." has appeared more and more frequently in the notes, and, in the volume before us, it is quite the rule to have a brief judgment from the editor at the end of a series of conflicting comments. This is as it should be. Not to speak of the mere convenience of a summing-up—though that is a consideration, too—the student wishes to know Dr. Furness's own views on controverted points. The original matter that the later volumes of the New Variorum contain is most of it well worthy of study. We find ourselves frequently in disagreement with Dr. Furness's interpretations, but we cannot help regarding them as among the most valuable parts of his work. They are marked not merely by an intimate knowledge of Shakspere, and by fine taste, but by a certain subtlety of poetic perception which few of his predecessors have possessed. The subtlety sometimes refines itself into super-subtlety, as in the attempt to explain the old reading in *Helena's* figure of the lodestone (ii. 1, 204).

In merely linguistic notes Dr. Furness is not quite so happy. He now and then lets the erroneous statements of others go unchallenged; and he occasionally ventures a philological suggestion of his own which will not pass muster. Thus the note on *as* (p. 163) betrays a temporary forgetfulness of the history of its meanings, and especially of its Elizabethan use. The suggestion (p. 215) that the accent of *certain* is misplaced, lacks exactness. The addition of *orange* to words which, like *auger* and *adder*, have lost an initial *n* by confusion with *n* of the indefinite article is ill advised. So of the remarks on *pert* (p. 7) and *jewel* (p. 10). In metrical doctrine the editor is a convert to Dr. Guest's theory of the "pause filling the place of an unaccented syllable"—a theory which, as usually stated, seems to ignore the essential difference between our metre and that of the Greeks. Whatever one may think of Guest's system, it can hardly be denied that Dr. Furness carries pause-substitution too far in his subtle discoursing on "Near this lack-love, this kill-courtesy" (p. 108). We are startled to observe (p. 98) that he scans "Quite over-canopied with luscious woodbine" as an Alexandrine—can our readers guess how?

The longest note in the volume concerns the vexed passage about the mermaid on the dolphin's back (ii. 1, 153–175). This note covers sixteen pages and a half—which will not surprise any one who remembers Halpin's 108-page essay on the same lines. As was to be expected, Dr. Furness rejects the wire-drawn allegory of Halpin; he is not even ready to accept Warburton's simpler explanation, but reverts to the opinion of Rowe. As a piece of editing, we regard this note as one of the best things in the ten volumes. Yet it is disheartening to think that the wheel has come full circle—that, on this particular point, the net result of Shaksperian scholarship from 1709 to 1895 has been exactly nothing. But there is one consolation: Dr. Furness's note should serve as Anticyra for mad allegorizers if they can be caught in time.

There are many other matters of detail on which we should like to comment, but space fails us. We will take a line, however, to wish Dr. Furness long life and "the wages of going on."

My Early Travels and Adventures in America and Asia. By Henry M. Stanley, D.C.L., etc. Charles Scribner's Sons. 2 vols., 12mo. With portraits. 1895.

BECAUSE they are part of Stanley's 'prentice work, these volumes by the great explorer will have a special value. They mark the progress of his powers of description, and the growth of his education as an observer of men and of nature. The second volume gives his earliest knowledge of the African continent, where he witnessed the opening of the Suez Canal in 1869, and made a voyage up the Nile to the First Cataract. Tours in Palestine, in the Caucasus, about the Caspian Sea, and in Persia followed, making eight or nine months of solid and pretty hard work in travel. Even in these early journeys we see the chief personal characteristics which marked his more mature work. His indefatigable industry, his nonchalance in new and strange situations, his faculty for getting on with men and making them serve his ends, his happy facility for falling on his feet in every sort of accident, his abounding self-confidence, his sturdy courage, all appear almost as strikingly as in his later adventures, and unmistakably show the stuff of which he is made.

For one so noted in his time, these volumes have a biographical interest which would fully justify their publication. They are a necessary part of the material for an adequate knowledge of Stanley himself and his career. And yet, besides this, they will be welcomed as contributions to the better knowledge of the world in some of its most interesting regions. The description of the opening of the Suez Canal not only is full of the local color which can never be quite the same as it was when the stream of European commerce first began to flow from Port Said to the Red Sea, but hits off the spirit of the time, the contrasts between French and English enterprise, the mercantile and political jealousies which were awakened, and which made it easy to see the Egyptian question looming up in the future. So, his observations on the progress of the Russian power in the great basin of the Caspian Sea, and his friendly hob nobbing with the Governor of Baku, touch up the spirit of the Russian officials in a way that is all the more instructive because of his manifest predilections in their favor. Such aids in understanding a great period of national development can hardly be overestimated, and it would have been a material loss to history if these letters had been suffered to be forgotten.

Of quite a different, but, as we think, a still higher value, are the chapters of the first volume which contain the letters that Stanley wrote from the Kansas and Nebraska plains in 1867. It was his fortune to be sent as a special correspondent to report upon the Indian outbreak of that year, and to accompany the military expedition under Gen. Hancock, as well as the Peace Commission of which Gen. Sherman was the head. This was the time when the railways to the Pacific were building, and when all the Indian tribes of the Missouri and Arkansas valleys were waking up to the fact that their great hunting grounds were being cut up into sections too small for the lasting existence of the great buffalo herds and of the timid antelope. It was therefore a crisis in the history of the American Indian. Such leading men as Satanta among the Kiowas and Red Cloud among the Sioux would gladly have played the part of Tecumseh and made a confederation of all the tribes east of the Rocky Mountains to resist the advance of the whites. But a vague conviction of the hopelessness of the struggle had penetrated the most remote of the aboriginal villages, and, although their inhabitants could be stirred to occasional outbreaks of war, it was a courage grounded on despair which they showed, more than a determined and hopeful resistance to the great wave of civilized migration.

Stanley's chapter descriptive of the councils held by Hancock at the head of his overpowering column of soldiers, and of those held by the mixed commission of peace-makers, is a contribution of capital importance to our knowledge of the red men and their history. The official reports in the War Department and in the Indian Bureau give the authentic record of the negotiations and their results; but we have here the descriptive picture of the Indians and their leaders, the unvarnished details of their modes of living and acting, the vivid presentation of their villages and their councils. We see their chief orators and braves, and get definite ideas of the qualities which constituted leadership among these simple and impulsive peoples. The special personal traits of the men who had gained and deserved the names of great chiefs are given by an eye-witness who was second to none in keenness of vision and quick appreciation of what he saw.

Stanley went to the frontier in fullest sympathy with the prejudices of the white pioneer. The squalor and the poverty of the red men caught his attention at first, and seemed destructive of the romantic associations connected with them. He felt the popular sentiment of the white community which assumed the spread of civilization to be the law of nature and of God. He was disposed to sneer at the idea of these wretched savages standing in the way of American progress. He caught the contagion of horror and of wrath when rumor spread the stories of cabins burned, men scalped, and women carried into a captivity which was worse than death. Little by little, however, a change is visible in his spirit, and the faithful record of the daily letter marks its progress. The earnest assertions of the red orators that God made them to roam the plains and chase the great game, that they should pine and die when penned up in the limits of a white man's farm, no longer seem fustian, but sound to him like heartfelt truths. He begins to feel that these men have clear in-

tellect, of a rude sort, and that they really see annihilation for them and theirs impending. He learns that their idea of home and country is as strong and as passionate as ours, though based on different impulses. He evidently feels the force of their appeal for a compromise upon one iron road across the continent, so that scope enough for the migratory pasturing of the buffalo may still be left. The wanton destruction of the vast herds which left millions of carcases to rot in the sun, in order that white men could have "sport" with their repeating rifles, or grow rich on the bales of buffalo robes, did not appear so much a matter of indifference when Spotted Tail, Swift Bear, or Big Mouth showed in vivid language how vitally it affected the Indian's life.

The whole Indian question comes out in startling clearness as we follow Stanley in his daily education in the subject through that long summer school upon the North Platte. He is much less dogmatic in October than he was in April. He is by no means so sure that he can solve the problem. The fruit of knowledge, in his case, as in that of other men before and after, is saddening rather than exhilarating in its effect. Whoever knew of the actual condition of the frontier in 1867, will bear witness to the absolute accuracy of Stanley's picture of it. The writer of this notice visited the "end of the road" when Gen. Casement and his force of trained men were pushing the Union Pacific Railroad up Lodge Pole Creek at the rate of six miles a day, and Julesburg was the canvas and shanty town where gamblers and bawds were the "residents" and lived by fleecing the frontiersmen who revelled in the rare chance of "seeing life." The Peace Commission was beginning its work, and the only news of interest was the story of some fresh Indian outrage. There is no feature of that strange episode which Stanley did not clearly see and fairly describe. The great reputation which he has since gained will make his narrative of that year's experience a leading authority as to the facts and an essential part of the history of the relations of the white and red men upon the continent.

That history cannot be pleasant reading to honest men. It is a long series of hollow treaties made only to be broken by the stronger party. It would have been better to boldly avow the rights of conquest, and to deal in a large way with the fate of the conquered, frankly dictating rules for their life, and enforcing them with full responsibility for the result. The resistless tide of migration would not be stayed by any bargain of the Government with the Indians; and when the Indians in exasperation broke out into hostility to the settlers, the warfare took on the character of a savage conflict, and its atrocities naturally excited the nation to destructive reprisals. Such veteran fighters of Indians as Generals Harney and Crook have unqualifiedly declared to the writer that they never knew of an Indian war in which the whites were not the aggressors and the first breakers of solemn treaties.

No one will argue that civilization must cease its progress, but every thoughtful person will feel what a deep reproach it is to our age that the irresistible power of a great nation could find no way of dealing with feeble nomadic tribes but by spasmodic and alternate resort to robbery and extermination, to fraud and to force, to cajolery and to war. Stanley has put a chapter of this continental history into permanent form which his reputation will save from oblivion, and will force all future historians of American progress to read with care, though with feelings the reverse of exultation.

The German Universities; their Character and Historical Development. By Friedrich Paulsen. Authorized translation by Edward A. Perry, with an introduction by Nicholas Murray Butler. Macmillan. 1895. Pp. xxxi, 254.

PAULSEN has earned for himself the title of an authority in matters of education. Every product of his pen, therefore, will be sure to reach a body of careful and sympathetic readers. The present volume forms, in the original text, the introduction to the work of the German Government in connection with the educational exhibit at Chicago in 1893. In its present shape it is by far the most readable treatise known to us, not merely upon the universities of Germany, but upon the general problems of higher education. For, in treating of the origin and growth of the German universities, one cannot help confronting such problems; and when the writer is a man of Paulsen's antecedents, he will of necessity infuse into his work the spirit of philosophic investigation.

The present treatise is free from the aggressiveness noticeable in some of the author's other writings. Being an official, at least a semi-official, publication, its tone is sober, and its plan is that of a comprehensive statement of facts and phenomena with the needed exposition of causal relations. As a result we are able to understand, better than ever before, how and why the universities of Germany arose, how they grew into their present system, what their training means to the nation at large. It does not enter into our purpose to recapitulate the author's positions. They are best learned from the book itself, which is admirably arranged, whether for continuous reading or for occasional consultation. We shall advert to one or two general topics only.

The author's mind is evidently not free from apprehensions for the future of the university system. We do not suggest that the temper of his book is in the least pessimistic; on the contrary, it is rather hopeful. Nevertheless, dangers exist, and the author is not blind to them. There is the spread of the money-making spirit, utilitarianism scornful of everything ideal; there is the all-pervading military spirit, the bureaucratic spirit, ready to subordinate learning to the so-called practical needs of the state; last, but not least, there is the ultramontane spirit, Protestant or Catholic, eager to subordinate learning to orthodoxy. Then there is the evil, inseparable from the good, of the *Lehrfreiheit* and *Lernfreiheit*; not to speak of the gulf between university life and the laboring classes. Paulsen is far from ignoring these tendencies and manifestations; but, surveying the university system throughout its entire past, his confidence in the deep-rooted attachment of the nation to learning as learning is unshaken.

It would be interesting to make, with the aid of Paulsen's book, some comparison between the German universities and our own. But it would scarcely be possible; some of our older and larger institutions give graduate instruction, even of the highest order, but as yet there is no system of higher liberal education. Yet the beginning has been made, and the progress is now both sure and rapid. Whoever looks back only twenty years, to the opening of the Johns Hopkins, may well shrink from setting limits to the progress of the coming twenty years. In wealth of endowment, in fulness of material equipment, above all in the zeal for research, we have abundant reason to be hopeful, even sanguine. But, whatever form the American university of the next century may evolve, it will assuredly not be identical with the German. On this point we commend to the reader Professor Butler's introduction, for its clearness and incisiveness. To our thinking, the form of our graduate instruction will be neither the American recitation nor the German lecture, but a *seminarium sui generis*, a free colloquium between instructor and student, a frank discussion of ways and means rather than a decision upon positive results. The relation between instructor and student will be more personal and intimate than it has ever yet been in Germany. Regular attendance at exercises will be a matter of course. But this personal intercourse will not, we believe, operate in the least as a drawback to independence and originality of research.

Of the translation we need only say that it reads smoothly and is an adequate rendering of the original. The index should have been fuller.

The Condition of Woman in the United States: A Traveller's Notes. By Mme. Blanc (Th. Bentzon). Translated by Abby Langdon Alger. Boston: Roberts Brothers. 1895.

THIS volume proves that still another has been added to the file of wandering journalists whose appropriate legend is "I came, saw, and wrote." The attitude of mind in which it has been composed is by no means hard to come at. The writer has simply to determine beforehand that it is an astonishing country he is about to visit, and then to be ready at every turn, after his arrival, with his *mirabile dictu* and his exclamation-points. At the same time, all that has previously been written about the peculiar customs and institutions of the country in question is left out of account, and the astonished journalist behaves as the first observer to set foot on its shores. Thus it can be made a matter of agitated surprise to find women engaged in acts of mercy and charity adapted to the needs of time and place; or to discover in society all sorts and degrees of local and class variation in habit and manner; a primrose need never, in short, be regarded as a simple primrose and nothing else besides. "It would be impossible," writes Mme. Blanc, in contortions of wonder at the President of a woman's club, "for me to describe the quiet assurance or the polite authority of the three little blows struck on the table with a mallet to request silence."

It is not often that a dread of wide generalizations hampers the literary itinerant who has once set out to find the startling. In the search for sweeping assertions, nice distinctions are pretty sure to be overlooked. A slap-dash observer of persons and things can scarcely be expected to trouble himself about prudently guarded opinions, or tentative estimates of complex and shifting circumstances. So long as a broad generality comes patly to hand, it makes no particular difference what its source may be; the perfunctory remark of a hostess, of a stranger presented at a heterogeneous assembly, of an overinterrogated official showing a hurrying visitor around an institution—each and all may serve as the basis of one more unqualified assertion. Hence the fearlessness of exaggeration that makes it entirely in tone for Mme. Blanc to find at a woman's college "every means, without a single exception, for developing moral as well as physical growth,"

and, at the same time, a woman officer of the college who has a "perfect knowledge of the French language, French literature, and of everything French."

M. Mario Bertaux, who writes an introductory biographical sketch of the author, goes even a point beyond her: "In the United States woman is everything"; "she represents the intellectual and artistic element, is at the head of all moral and charitable work." One of her lighter missions discovered by the author is to "skim the reviews, the books, and the news for the benefit of the men." To the men, in fact, modesty would seem to be about the only merit left. Mme. Blanc is, apparently, not altogether unaware of this, for the one apology she finds it necessary to make for the quotation of a person by name is to a gentleman—the United States Commissioner of Education.

That personalities and the names of individuals, public and private alike, bristle all over Mme. Blanc's pages, it is needless to remark. Neither fulsomeness nor absurdity will, however, be found a drawback to the enjoyment of the large class of woman readers who look upon personal publicity as the final attainment of the rights and privileges of the sex. This desire for notoriety has been fostered by the methods of newspapers and periodicals until it has spread to the dimensions of an epidemic. A Frenchwoman has presumably been quick to note this, and, however distasteful her use of her perception may be to the few, it will undoubtedly succeed to a nicety with the many. Among those who are unfortunate enough to admire it, good judgment and the appreciation of relative values can only be still further shaken from their foundations by writing of this description.

Chinese Central Asia. By Henry Lansdell. In two volumes. Scribners.

THE REV. DR. LANSDELL is already known to the public as a traveller and a writer. He has distributed religious literature in various parts of the world, has journeyed many miles, and been in countries remote, difficult of access, and even dangerous; and these exploits he narrates with a certain pardonable satisfaction. He can also claim to be an explorer, as portions of his route have been over roads previously untraversed by Europeans. His last trip was during the years 1888 to 1890, and he here gives us a readable account of the most important part of it, namely, his wanderings in the territories which he calls Chinese Central Asia. He terms it "a successful failure" because, though content with what he accomplished, he did not succeed in the far more difficult achievement of getting to Lassa or even into Tibet proper. The incidents related may not always have been of the first importance, nor the opinions expressed of great weight, but we can forgive a certain amount of gentle prattle to an author who has done so much and whose intentions are so good. It is not every one who could or would go on such an expedition. The book is full of information at first and second hand, for Dr. Lansdell, who was well versed in the literature about the region he visited, cites valuable remarks from other travellers as well as some interesting history. His Appendix B contains a useful bibliography of his subject.

BOOKS OF THE WEEK.

Bickford-Smith, R. A. H. Publii Syri Sententiae. London: University Press; New York: Macmillan. $1.40.
Bierce, Ambrose. Tales of Soldiers and Civilians. Lovell, Coryell & Co. 50 cents.
Black, J. S. The Christian Consciousness. Boston: Lee & Shepard. $1.25.
Cobbleigh, Tom. Gentleman Upcott's Daughter. Cassell. 25 cents.
Crackanthorpe, Hubert. Sentimental Studies, and A Set of Village Tales. Putnams. $1.
Davis, Varina A. J. The Veiled Doctor. Harpers. $1.25.
Dean, Mrs. Andrew. A Splendid Cousin. Cassell. 25 cents.
Deighton, K. Shakspere's King Henry the Eighth. Macmillan. 40 cents.
Dixon, Ella Hepworth. The Story of a Modern Woman. Cassell. 50 cents.
Dowden, Prof. Edward. New Studies in Literature. Boston: Houghton, Mifflin & Co. $3.
Forsyth, Jean. The Making of Mary. Cassell. 50 cents.
Freeman, Edward A. Geschichte Siciliens. Deutsche Aufgabe. Erster Band. Leipzig: B. G. Teubner.
Giles, P. A Short Manual of Comparative Philology for Classical Students. Macmillan. $3.
Glenn, Capt. E. F. Hand-book of International Law. St. Paul: West Publishing Co.
Guerber, H. A. Contes et Légendes. 1ère Partie. American Book Co. 60 cents.
Guerber, H. A. Myths of Northern Lands. American Book Co.
Guernsey, R. S. New York City and Vicinity during the War of 1812. 2 vols. C. L. Woodward. $10.
Hardy, Thomas. A Pair of Blue Eyes. Harpers. $1.50.
Hardy, Thomas. Desperate Remedies. Rand, McNally & Co.
Harris, W. C. The Fishes of North America. Part VII. Harris Publishing Co.
Hertwig, Prof. Oscar. The Cell: Outlines of General Anatomy and Physiology. London: Sonnenschein; New York: Macmillan. $3.
Hichens, R. S. An Imaginative Man. Appletons. $1.25.
Hodgkin, T. Italy and her Invaders 535—553. Vol. IV. The Imperial Restoration. Oxford: Clarendon Press; New York: Macmillan.
Holmes, Mrs Mary J. Dr. Hathern's Daughters. G. W. Dillingham. $1.50.
Hume, Fergus. The Island of Fantasy. United States Book Co. 50 cents.
Kelley-Hawkins, Emma D. Four Girls at Cottage City. Providence: Continental Printing Co.
Löher, F. von. Das Canarierbuch: Geschichte und Gesittung der Germanen auf den kanarischen Inseln. Munich: Jos. Eichbichler; New York: B. Westermann & Co.
Lomax, A. E. Sir Henry Layard. Whittaker. 50 cents.
Lucas, Rev. G. J. Agnosticism and Religion. Baltimore: John Murphy & Co.
Macdougal, D. T. Experimental Plant Physiology. Henry Holt & Co. $1.
Macmahon, Ella. A Modern Man. Macmillan. 75 cents.
Macnie, John. Elements of Geometry, Plane and Solid. American Book Co. $1 25.
Maartens, Maarten. My Lady Nobody. Harpers. $1.75.
Martel, Comtesse de. Chiffon's Marriage. Lovell, Coryell & Co. 50 cents. Also, Frederick A. Stokes Co.
Marryat, Florence. At Heart a Rake. Cassell. $1.
Menshutkin, Prof. N. Analytical Chemistry. Macmillan. $4.
Parker, Gilbert. When Valmond Came to Pontiac. Chicago: Stone & Kimball.
Paull, Mrs. George A. Little Lady Valentine. Whittaker. 50 cents.
Pendered, Mary L. A Pastoral Played Out. Cassell, 50 cents.
Remington, Frederic. Pony Tracks. Harpers. $3.
Ross, A. A Black Adonis. G. W. Dillingham. 50 cents.
Stanton, S. W. American Steam Vessels. Smith & Stanton. $5.
Stedman, E. C., and Woodberry, Prof. G. E. The Works of Edgar Allan Poe. Vol. V. Tales of Adventure and Exploration. Chicago: Stone & Kimball.
Stephen, L. The Life of Sir James Fitzjames Stephen, Bart. Putnams. $4.50.
Stevens, B. F. Facsimiles of Manuscripts in European Archives relating to America, 1773–83. Vol. XXIII. London: B. F. Stevens.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

"Hubert Crackanthorpe is pretty well known by this time. 'Wreckage' made his name a few years ago, and he has from time to time written in the Yellow Book and elsewhere. He is a very good writer for style, and his manner of constructing and telling a story is easy and ingenious. He imagines his succession of scenes, records them mainly by dialogue—much as you might deal with a brightly written story by cutting out all the tedious bits, long descriptions, connections, explanations, etc, leaving in only the vigorous and sparkling passages. It is a new 'genre' in its way, and very taking. . . . His subjects are thoroughly realistic. He deals with human nature, which he cuts to the quick, and shows it to you quivering and bleeding, without compromise, and with an artistic suggestion even more forcible than plain statement. . . . It is a strong method."

The above is a criticism from a well-known Englishman of **Hubert Crackanthorpe's**

The Nation.

NEW YORK, THURSDAY, AUGUST 8, 1895.

The Week.

THE *Tribune's* report of the meeting of the Republican State Committee contains interviews with the leading politicians, some of which were evidently published through inadvertence. If they had been properly edited, we should not have been made acquainted with the fact that the return of prosperity is having a distressing effect on politics by eliminating the tariff as an issue. Thus, Mr. John Sabine Smith has just returned from a journey to the Northwest, where he found every preparation making for a boom in business, which led him to doubt whether the Republican party could carry another election as easily as it carried the last one. "I do not think there is any room to question our success in next year's campaign," he said, "if we can only hold to our present chances." "What do you mean by that?" asked the reporter. To which Mr. Smith replied:

"I was in Indiana, Illinois, and Minnesota, and the crop outlook there is almost marvellous. Not in ten years has there been such a crop-showing for the farmer; and a large proportion of the crop has been already harvested. If nothing interferes to injure that which is yet outstanding, it will be a great year indeed, and the danger, if any should arise, to be guarded against will be that of an *overflowing prosperity*, wherein the issue born of the last two years may be forgotten."

Mr. Sabine Smith's frankness was matched by that of Senator Lexow, who said: "This matter of reported increase in wages in various directions is a temporary thing. *If it is otherwise, then we are all wrong, and have been in the wrong all the time.*" He felt sure, however, that, in spite of appearances to the contrary, the situation was really bad, and that a thorough investigation would prove it to be so. He made the suggestion that the Republican newspapers should bestir themselves and show how bad it is.

Senator Peffer has a certain value as a kind of stormy petrel of politics, and when he says the silver agitation is dying out in the West, mariners may take it as a favorable weather sign. Silver is still "the leading question of the hour," declares the Kansas Senator, but people do not talk about it any more. There are no more public meetings on the subject, and during the last six or eight weeks there has been a marked indifference to the leading question of the hour except in the newspapers. We fear it is a sign of criminal neglect on the part of farmers and workingmen. They are so busy about their crops and their factories that they really have no time to meet for the purpose of denouncing a financial system that robs them of bread and destroys all industry. That, at least, is the excuse the silver agitators give now for the waning condition of their agitation. Ex-Speaker Crisp explained the fizzle of the Georgia silver convention in that way. How could you expect busy and prosperous farmers and workingmen whose wages had just been advanced for the second time, to drop everything, even under the witchery of Morgan's eloquence? No, we shall have to wait till the dreary winter days plunge the farmer into appropriate melancholy again. The worst of it is, though, that, as Peffer admits, the fall elections will be over by that time, and the silver men will have been "swamped."

The recent decision of the Supreme Court of Ohio that a municipality has no power to issue bonds payable in gold without special authority, simply affirmed a decision of the Circuit Court on the subject. The view taken by the latter court is published in full. The decision turns upon the construction of a statute. The city of Cincinnati was authorized by law to issue its bonds to the amount of a certain number of "dollars" for the purpose of refunding street-improvement bonds. It undertook upon this authority to issue bonds payable in gold dollars, and the court held that a "dollar" was "the unit of value of money as enacted by the Congress of the United States, and at the time of the passage of the law in question, as well as at the present time, the dollar of the United States consisted of a legal-tender currency dollar redeemable in gold or silver coin of the United States, and the gold coin and silver coin of the United States." Hence a bond payable in gold dollars would be a limitation on the statutory dollar, as excluding the use of the paper and silver dollars. As the bonds could be sold if they conformed to the statute and omitted the word "gold," the court held that this condition was not essential, and, not being essential, could not be implied. This conclusion was fortified by the fact that the Legislature had in several cases authorized the city of Cincinnati to issue bonds payable in gold or lawful money, or in coin or lawful money. These statutes were held to indicate that where this option was not specifically granted it was intentionally withheld.

The situation of the city of Cincinnati, therefore, was much the same as that of the Treasury of the United States before the last issue of bonds. The law authorized the issue of bonds payable in coin, and the Secretary of the Treasury desired to issue bonds payable in gold coin, but was considered to have no authority to do so without further legislation. But there is a difference between the cases which the Ohio court seems to have overlooked. The United States statute prescribed the issue of bonds "redeemable in coin." It would be hazardous to lend money on a bond which did not follow the wording of such a statute. But the Ohio statute did nothing of this kind. It did not direct that the bonds should be made payable in "dollars." It was silent upon that point. It merely limited the amount of the bonds issued for certain purposes to "twenty-six millions of dollars." Hence the decision of the Ohio court really amounts to forbidding a municipality to select the kind of dollars which it will borrow and repay. There are three kinds of dollars provided by the Government of the United States for the use of its subjects, presumably in order that every one may choose the kind that suits him best. But the municipalities of Ohio are regarded by its courts as not at liberty to exercise this choice without specific consent of the Legislature. When they contract to borrow, they must receive either paper dollars, silver dollars, or gold dollars, at the option of the lender. When they repay their loan, the creditor must receive dollars of any of these kinds at the option of the city. It is quite significant that this interpretation of the law was accepted by but three judges out of five, and it is obvious that other courts might not find it difficult to reach a different conclusion from that adopted in Ohio. We presume that this will be hailed as a great victory for silver by the bimetallists. If they could only obtain such decisions in all the States, they might succeed in driving up the rate of interest upon municipal loans at least one per cent.

The "original package" question has again come up in a case arising under a West Virginia law. The last Legislature of that State, in order to check indulgence in what was considered the vice of smoking cigarettes, passed a statute requiring dealers in the article to pay what was thought to be the prohibitory tax of $500 for a license. A tobacco company of this city shipped fifty packages of cigarettes to a dealer in Martinsburg who had refused to secure a license, and upon his making a sale he was arrested. His counsel took the case on a writ of habeas corpus before Judge Goff of the United States Circuit Court, claiming that the act of the Legislature, so far as it affected this case, was in violation of that provision of the Constitution which gives Congress the sole power to regulate commerce among the several States, and was consequently void so far as it concerned the business of dealing in cigarettes imported from another State into West Virginia and sold in the form in which they were received. Judge Goff sustained this contention, saying:

"The law, so far as it applies to cigarettes

imported from another State into the State of West Virginia and sold by the importer within said last-named State in the original package, is a burden upon commerce among the States, and to this extent in violation of the commercial clauses of the Constitution of the United States; and also so far as it relates to cigarettes manufactured in another State and by the manufacturer sent into West Virginia in the original packages for sale by the agent of the manufacturers, and so sold in such packages by such agent, it is for the same reason inoperative and void."

But the question is at once raised by the local press as to what is an "original package" of cigarettes within the meaning of this decision? Is it the case in which the cigarettes are shipped? or is it the little paper box which holds ten cigarettes? If it be the latter, the retailer could hardly do a profitable business, as to keep within the law he must apparently bring in each of these little packages separately, at two or three times the cost of the package at retail. It is thought probable that the State will make a test case of its own and secure an authoritative ruling on this point, which is a vital one.

Maryland newspapers of both parties testify to the indignation with which the outcome of the Democratic State convention of July 31 is received by Maryland Democrats. The declarations of the platform in sympathy with tariff reform and the financial views of President Cleveland are not accepted as worthy of serious consideration. Every one recognizes that Senator Gorman got what he wanted—which was the ticket; and that he will use every effort to elect that ticket in order to present the result as a Gorman vindication. The Baltimore *News*, speaking for anti-Gorman Democrats, declares that the latter threw away their opportunity in the convention as soon as they began negotiating for a compromise candidate, and that in such a contest "there is no middle ground—the Democracy of Cleveland and that of Gorman and Rasin will not mix"; and it plainly advises a Democratic bolt in November as the only way to disconcert the State boss. The Baltimore *American* (Rep.) says that Democrats in the rural counties are already planning to save their local tickets in anticipation of a State defeat. To offset this gloomy outlook, the Gorman machine will depend on a big campaign fund. The Senator's relations with rich Trusts and other corporations are notorious, and this will be just the time for them to show their appreciation of his past fidelity. Cleveland carried Maryland in 1892 by over 20,000 plurality, and every Congressman elected was a Democrat. Last year, with no State ticket in the field, the Republicans divided the delegation equally. Maryland will be a very uncertain State this year.

We are glad to see that Mr. Whitney's friends are putting him right with the public in the matter of his Presidential candidacy. He is not a seeker after the nomination—let that be understood. To the thousands of people who have besieged him with a request to announce himself as a candidate, he has repeatedly said that political strife is distasteful to him. He is not the man to enter upon a struggle for the honor. But, "in the opinion of many prominent Democrats," we are to see in a short time "a formidable movement" to make Mr. Whitney President. It is a mistake to suppose that he and Mr. Cleveland are at odds. The President is at Gray Gables, Mr. Whitney is at Bar Harbor. Perpend the significance of that, as also of Secretary Lamont's passing suspiciously from one place to the other. If the Whitney boom becomes truly formidable, his friends say he will not too violently withstand it. If an irresistible movement to nominate him sweeps over the whole country, "it is said he will accept." There are, it must be admitted, some faint signs that he would. One of them is his famous long-distance blood-boiling over a supposed insult to the flag. Another is his acute attack of international bimetallism. A third is the evidence that the rural press has begun to enjoy the fructifying showers that always descend upon it when the grateful cloud of a rich man's literary bureau passes that way. But the great thing is to have Mr. Whitney's friends insist that his position "must not be misunderstood." He is not a candidate, he affirms. But surely nobody will misunderstand that.

A new witness as to the evils of the spoils system in politics is brought forward in President Polk, an inside view of whose political opinion is given in some extracts from his diary prepared for the *Atlantic Monthly* by James Schouler. A number of the Presidents of the earlier days confessed their abhorrence of that part of their duties which made them office-mongers, but President Polk has not been cited among them. His diary shows, however, that the office-seekers were the bane of his existence. "Will this pressure never cease?" he wrote in 1846. "I most sincerely wish that I had no offices to bestow. As it is, I have no offices to bestow without turning out better men than a large majority of those who seek their places." More than a year later he wrote: "Almost the whole of my embarrassment in administering the Government grows out of the public patronage." The diary gives a number of illustrations of the wretched character of the general run of office-seekers, high and low. One prominent member of Congress who, not satisfied with the mission to Russia, demanded the mission to France, and was rejected by the Senate when named for that position, made his rejection an excuse for growing cool toward the Administration. Two other members who did not obtain offices created by a bill which they pushed through, also became opponents of the Administration. No wonder that President Polk wrote, "The herd of office-seekers are the most unprincipled persons in the country"; and "Patronage is injurious to a President." The diary relates an amusing incident in this connection. A man who filed an application for a place with the Secretary of State was asked what office he wanted. "I am a good hand at making treaties," he replied; "and as some are to be made soon, I should like to serve as Minister abroad."

One of the best practical tests of the value of the competitive over the spoils system of civil-service appointments is afforded in the railway mail service. This service calls for an intelligent and skilled force, so that when the places are filled at the dictation of politicians the evil effect cannot help manifesting itself. From the nature of the service, too, it is possible to form an exact statistical comparison between the kind of work done under one system and another. Postmaster-General Bissell, in his last report, using this service as a demonstration of the value of what he called "civil-service protection," showed that in 1889, after the service had been disorganized to meet the demands of political place-seekers, the errors, which the year before had been in the proportion of 1 in 3,694 pieces, increased to 1 in 2,834. Soon after this the civil-service rules were applied to this branch of the postal business, with the result that by 1893 the record for efficiency had risen to 1 in 7,144, and for 1894 to 1 in 7,831. Now comes the report of Superintendent Jackson for the branch of this service comprising the States of New York, New Jersey, Pennsylvania, Delaware, and the peninsula of Maryland and Virginia, for the year ending June 30, 1895. The steady advance of efficiency under the competitive system is seen at a glance from the following table, showing the number of pieces correct to each error in the fiscal years named:

	Pieces.		Pieces.
1889	8,250	1893	13,887
1890	7,643	1894	15,972
1891	9,795	1895	16,433
1892	10,596		

This report also shows an increase of 42,000,000 in the number of pieces handled in the last year, and that 2,552,573 registered packages were handled with only 70 errors. Comment on these figures is unnecessary.

The industrial alliance, or combination, into which two great companies, the Westinghouse Electric Company of Pittsburgh and the Baldwin Locomotive Works of Philadelphia, are reported to have entered, is very significant of impending revolution in the methods of transportation and travel. It seems to indicate that economies long anticipated in theory have been realized in part, and that our existing railroads will presently enter upon the great work of substituting stationary for movable sources of power. For this, after all, is what is involved in what

is commonly spoken of as the substitution of electricity for steam. Really what is substituted is the stationary boiler and engine house for one that travels about on wheels. Instead of generating the power required to move every train of cars in immediate connection with that train, the power is to be generated at one spot, and drawn off where and when it is wanted. Perhaps the time may come when our magnificent locomotives, the pride of our ablest mechanicians, will be contemplated by posterity as curious instances of misapplication of power and waste of fuel. Already, when we compare the noiseless flow of energy through a slender wire with the terrific waste of hurling through space a locomotive weighing a hundred tons, we seem to feel that the old order must soon change. The possible economies in the wear of machinery and bridges and track are so great as to make it seem necessary that they should soon become practicable.

The Hawaiian newspapers, we observe, are greatly distressed over the July pilot chart of the North Pacific, issued by the Hydrographic Office at Washington. Upon this chart, at the request of the San Francisco Chamber of Commerce, the United States Naval Hydrographer, Commander C. D. Sigsbee, has traced the shortest steamer routes from this country and from the western terminus of the proposed Nicaragua Canal to Yokohama and Hong Kong. The result is horrible. Instead of Honolulu appearing in its well-known place as the key to the Pacific, the half-way house at which all commerce to and from the Orient must put up *en route*, it is left in a state of painful isolation. Commander Sigsbee shows that the shortest routes to the East pass hundreds of miles north of the Hawaiian Islands. The worst of it is that he figures it out, in a mean-spirited and un-American fashion, on the principles of great-circle sailing. In going from the Nicaragua Canal to Yokohama via Honolulu you would have to sail 374 knots more than via San Francisco, and to Hong Kong 367 knots further. No wonder the Hawaiian patriots, anxious to give away the country they have stolen, are alarmed and enraged by these figures. Commander Sigsbee ought to be removed at once. The San Francisco Chamber of Commerce brings itself under grave suspicion by even asking to have the steamer routes investigated in this way. Probably, if the truth were known, we should find the Sugar Trust or Claus Spreckels at the bottom of the nefarious business. As for the Washington Hydrographic Office, we should like to know what right it has to print such things on its pilot charts, anyhow. Pilot charts are legitimate only as they make forecasts of wind and weather, or indicate currents and prevailing winds. They are a scandal and a waste of public money when they undertake to upset long-standing and patriotic ideas about the true location of the cross-roads of the Pacific.

If we contrast some of the utterances of Mr. Chamberlain with those of Sir William Harcourt, we must admit that true Conservatism, as well as honesty, is better represented by the latter. Mr. Chamberlain undeniably resorts to the arts of the demagogue, and his speeches suggest those which we are unfortunately only too much accustomed to hear from our own party orators. Thus, at a meeting of miners in Staffordshire he promised his audience old-age pensions, assuring them that such schemes were much better than the abolition of the House of Lords. When one of his auditors called out, "We want enough to live on now, without pensions," Mr. Chamberlain replied that if the workingmen wanted their wages raised they must vote for the Unionist party, who would give them good trade by restoring confidence and developing enterprise. On the other hand, Sir William Harcourt told his hearers in West Monmouth that trade consisted in the demand which other countries made for the manufactures of England. The extent of this demand depended upon the condition of these foreign countries, and that condition was something with which the Government of England had nothing to do. The depression of business in America, in Australia, and in Argentina naturally affected business in England, but the English Government could exercise no control over such conditions. If the figures showing the movements of miners' wages in South Wales and Monmouth were examined, Sir William Harcourt pointed out, it would be found that under Liberal governments advances had taken place to the extent of 85 per cent., and under Tory governments to the extent of 60 per cent., while the reductions had been under the Tories 98 per cent., and under the Liberals 46 per cent. If it were true that governments had anything to do with wages, the Liberals had a fair percentage in their favor, but the fact was the governments had nothing at all to do with the matter, and to claim that they did was not an honest policy.

The difficulties experienced in having too great a majority have been recently illustrated in our own party history, and it is not improbable that they will be experienced by the English Tories. The depression of English agriculture has been most seriously aggravated by the disasters of the last two years, and the cry for protection is universally heard from farmers and land-owners. The reports of the Royal Commission on Agriculture contain the testimony of a large number of witnesses, and they concur in the opinion that the low prices of grain and meat are due chiefly to foreign competition, the remedy for which is to be found in protective duties. It will, of course, be impracticable to apply such a remedy as this in England, but the demand for it will under the present circumstances have so strong a backing as to be likely to prove embarrassing to the Government. The well-worn expedient of granting a Royal Commission to investigate can hardly be resorted to again. What the landed interest wants is not investigation but action. The results of investigation are already available, and show that in a number of the English counties rents have been reduced during the last fourteen years by one-third and in many cases one-half, to say nothing of losses from rents unpaid. In addition to this, the cost of keeping buildings in repair is now thrown altogether upon the landlord. On the other hand, the tenants complain that the embarrassments of the landlords react on them, making their tenure insecure and preventing them from obtaining necessary improvements. Under these influences the old system of long leases has been broken down, and agreements from year to year are now the rule. Altogether the situation is an extremely unfortunate one, for it appears to be beyond human power to ameliorate it. So long as the weather continues to be as adverse as during recent seasons, the condition of British agriculture must decline, and the new Government may well pray for favorable skies the coming year.

In one respect the Irish made a surprisingly good showing in the elections to the new Parliament. They captured some Unionist seats, and will have eighty-three Home-Rule members—almost up to Parnell's historic eighty-six. That they should have thus more than held their own in the face of the general Liberal slump, especially in the face of their own cruel and bitter dissensions, is certainly astonishing. It witnesses in a striking way to the depth and persistence of the national sentiment. But if we ask what it is all to amount to, what impression the Irish members will be able to make upon Parliament, by either appeal or obstruction, the immediate outlook cannot be said to be cheerful. The worst feature of the whole business is that the Irish are not at peace among themselves. It seems impossible to solidify their vote under a single leader. Mr. Healy's goings on are thought certain to lead to a movement to have him expelled from the Irish party as either a traitor or a man who has lost his wits. Yet he asserts, and appears to have, a following of 25 members. Then there are 11 Parnellites, sore and angry, and 47 of the old Nationalists. To combine them all into a compact and harmonious party seems impossible. The threatened reduction of Irish representation may do it; rough treatment of Ireland may do it; some now unknown leader of genius may arise to do it. But the most likely outcome, it must be confessed, is a continuance during the next Parliament of the wrangling and dissension which have wrought such discredit to the Irish cause the world over.

THE NEW GOSPEL OF PROTECTION.

THE learned pundits of protectionism have always assured us that their great principle of making people rich by taxing them was capable of infinite application and new developments. John Robinson was not more sure that new light would break from the Scriptures, to meet new needs, than they have been that protection, in the hands of its friends, is equal to every political problem that may present itself. If it is necessary to save the votes of the silver States, protection of silver at once becomes a logical extension of orthodox doctrine. The sugar bounty might be denounced by a fossilized old theologian of protection like Judge Kelley, as a heresy that would destroy the very foundations on which the righteous Pennsylvanians had builded and grown rich, but to the new lights of the protective system it was clear that a bounty was of the essence of the whole scheme, and hence the more bounties the better.

A new step forward is now to be taken, it would appear; a new article of faith added to the protectionist creed. Bounties on production, as for silver and sugar, are a part of the old orthodoxy; bounties on exports are to be added by progressive orthodoxy. The head doctor of this new theology is Lubin, David Lubin of California. A good deal of fun was poked at him by the Eastern press as long as he stuck to his native coasts. Even Republicans, not knowing that they were sneering at their future teacher and leader, spoke of him disrespectfully as a weak brother. But they are now learning that he is one of the weak things of the world chosen to confound the mighty. Lubin is on his travels. He has invaded the East, as ready as *Dogberry* to bestow all his tediousness upon any Chamber of Commerce that will hear him. And he seems to be carrying everything before him. Bath has capitulated, New York business men fled before him, Philadelphia has cast herself convulsively into his arms.

What is Lubin's doctrine? What are the weapons of his warfare? He has got hold of the great truth that the farmer is not and cannot be protected by import duties. The farmer is not in the importing business. He is our great exporter, sending abroad 75 per cent. of all we sell. What good does the sham tariff on corn or wheat do him? None at all, says Lubin, forcibly and truthfully. What shall he do, then? Refuse to be always the under dog in the tariff scramble, and insist that the tariff scramble shall cease? Not at all; that would be simply the wisdom of the children of this world. Lubin's doctrine is far deeper. Pay the farmer a bounty on all he sells, and the trick is done; the farmer is really protected, the political millennium is just around the corner.

Lubin's first great political success was won in the California Republican convention a year ago. His ideas were embodied in the platform, which demanded that "a limited portion of the receipts of the United States customs" should be applied to "reducing the cost of transporting staple agricultural products from American seaports to foreign seaports, to the end that the prices of these products should be advanced." There was the Lubin germ. If the Government would only pay the freight, the farmer would be so much to the good. But the germ has since expanded. Like other great pioneers of thought, Lubin did not at first fully get his bearings, did not fully understand his own principles. But his logical mind was at work, and the final result could not long be delayed. Why pay freight, which rascally monopolists might run off with, when payment might directly be made to the farmer? The very thing! Columbus's egg was balanced. An export bounty on agricultural products was the logical completion of protection, according to Lubin. With that faith in him he set out, a committee of one *de propaganda fide*.

But the propaganda did not propagate. Farmers are proverbially thick-headed and perennially busy, and did not take kindly to Lubin's new plan of salvation. He was puzzled for a time, but then went back to protectionist first principles. A bounty on agricultural exports must be log-rolled along with some other bounty. Why not try the ship-builders? No sooner said than done. The combination was made, Lubin's bounty was hitched to the star of a shipping bounty, and from that moment he went forth conquering and to conquer. The San Francisco Chamber of Commerce first surrendered to the inevitable. Portland, Oregon, and Seattle soon discovered how indissolubly agriculture and shipping were united, and how both must have bounties, or die on the spot. Eastward came Lubin's star of empire. The ship-builders of Bath, Me., hailed him as a deliverer, and passed his resolutions with enthusiasm. In New York, on July 15, fourteen men met with Lubin in a committee-room at the Produce Exchange, and adopted his resolutions "by a majority vote." This shows that the great business voice of the metropolis is for Lubin. But his completest triumph was at Philadelphia ten days ago. The shipping interests took him to their bosom and heartily agreed with him in "calling upon Congress to *equalize* the protection system by extending to agricultural staples and American shipping in the foreign trade that just measure of protection to which they are entitled, as long as protection is the controlling and public policy of this nation, and that this be done by an export bounty." In the "testimony meeting" for converted sinners that followed, Mr. Charles H. Cramp freely confessed his evil deeds "when we went to Congress and argued for a bounty for ourselves." That was a "grave error," and he was going to do the best he could to "repair it" by hereafter nobly arguing for a bounty to the farmers as well. So said all the other ship-builders.

This is no laughing matter. If protection is right, Lubin is right. If he is wrong, absurdly wrong, then it is time for the Republicans to say, as the confiding Lexow said about the relation of wages to a high tariff, "we are all wrong, and have been in the wrong all the time." Logic is logic, that's all we say, even protectionist logic. We have seen protection leave the "infant industry" stage for the "pauper labor" stage; seen it pass from hatred of foreign trade to glorying in it; seen it willing to wreck our finances and introduce the bounty system rather than abate a jot of its pretensions. Why not now go in, in a whole-hog way, as Benton used to say, for the bounty system, and make it universal? Down with the taxes and up with the bounties, and let the devil foot the bill, would be a popular campaign cry. We advise the *Tribune* to keep on being very tender of Lubin. Lubin is mighty and will prevail.

THE GROWTH OF CITIES.

IN the current number of the *Forum* Mr. H. J. Fletcher brings up once more the tendency of population to concentrate in the cities. This tendency prevails throughout the civilized world, and appears to be strongest in the most progressive communities. In our own country, Mr. Fletcher points out, the drift is from the farm to the village, from the village to the town, and from the town to the city. In other words, the communities of medium size experience both emigration and immigration. They both gain and lose population, and in many parts of the country they gain more than they lose. But in the older States, such as New York, and even Iowa, Illinois, Indiana, and Ohio, half the townships were less populous in 1890 than in 1880. In New York State more than two-thirds of the townships lost population in that decade. From this evidence Mr. Fletcher deduces the law that wherever the land is fully occupied, all the people not actually needed to cultivate the soil are being drawn into the towns, and he reaches the conclusion that the evils and the dangers of the excessive massing of the people in the cities far outweigh the benefits.

It must be admitted that few conclusions are more firmly embedded in tradition. The maxim, God made the country and man made the town, has much of the force of a scriptural text, and many moralists have expatiated on the superior morality of the rural districts. But when we come to examine the premises from which this conclusion is drawn, we find that they are for the most part pure assumptions. Mr. Fletcher declares that, in the country, homes are cheap, the air is pure, all men are equal, and extreme poverty is unknown, while in the city all these conditions are reversed. The growth of cities "swells the number of the classes

most exposed to agitation and discontent, intensifies the dangers to be apprehended from social upheavals, and widens the growing chasm between the classes." He says that the student of social science "realizes that in times of social disturbance the great cities are an ever-growing menace to the public authority and even to the existing social order." The massing of dense populations means impaired public health and morals, and adds to crime, which is "increasing, like the cities, out of all proportion to everything else." In short, Mr. Fletcher offers the resolution that the growth of cities has increased, is increasing, and ought to be diminished.

Hardly one of these statements endures scrutiny. As to the cheapness of country homes, that is disposed of by a reference to the old story of the Irish immigrant who complained that he had to pay a shilling here for what cost only a sixpence in the old country; but when asked why he did not stay where things were so cheap, replied that there were no sixpences to be had there. Considering the quality of the homes, the rate of wages, and the steadiness of employment, it is far from certain that city homes are not cheaper on the whole than country ones. Even in the city of New York, where the conditions of residence are least favorable for the poor, the list of advantages provided by the community is something that the isolated farmer may well contemplate with envy. It is a mistake to suppose that extreme poverty is unknown in the country. Cases of actual starvation seldom occur anywhere; but, even in the most prosperous rural districts, suffering from penury is far from unknown. The mere laborer, who owns no land, is frequently thrown out of work in the winter months, and agricultural employment in general is far more subject to interruption than is the work carried on in cities.

The evidence also fails to show that the growth of cities increases the dangers from agitation, discontent, and social upheavals. The country has suffered much of late from these causes; but the trouble has originated, not in the cities, but in the sparsely settled regions of the country. The prairies of the West, not the towns of the East, have been swept by the greenback craze, the silver craze, and the Populist craze. There have been riots at Chicago, but there have been riots at Cripple Creek. There have been riots at Pittsburgh, but there have been riots at Cœur d'Alene. There is at least as much violence in proportion to its size in a mining town as in any great city, and probably a good deal more. The most atrocious murders take place in the most peaceful hamlets, and there are probably ten times as many homicides in the Southern rural districts as in the urban communities having an equal population. The assertion that crime is increasing "out of all proportion to everything else" lacks proof. It is doubtful if it is increasing in any proportion, and it certainly does not increase in large cities in any markedly greater ratio than population.

Taking everything into consideration, the dweller in the city can make out a pretty fair case for himself. He does not subsist upon pork, potatoes, and pie to the same extent as the farmer. He has better and purer water, and more of it, than half the farmers in the country. Trinity Church recently fell under grave reproach because in some of its tenements there was no running water. But the occupants of these tenements suffered less incovenience in getting water than most farmers regularly undergo. The inhabitant of the city has better schools, better sidewalks and streets, better light, better and prompter medical attendance and postal communication, and more if not better society. The farmer has purer air—so long as he stays out of doors—more opportunity for enjoying natural scenery, and, frequently, greater independence. That he is more virtuous than other people is a proposition which experience does not support.

Mr. Fletcher does not fail to observe that in changing his residence every man undoubtedly acts on his best judgment of his own needs; but somehow, when all act on this principle, the result is detrimental to society. But it is impossible that society should suffer unless its members suffer. Society is a mere abstract term, and we have the paradoxical conclusion that what is individually beneficial is collectively injurious. It is far more rational to turn to the great changes wrought by science and invention. One man can now produce bread for hundreds, and even bring it to their doors. The wants of men have incredibly multiplied, and they can be satisfied only by processes of manufacturing and distribution which are possible only in towns and cities. The increased power of producing food not only enables more people to live in towns, but compels them to do so. They would have no occupation on the farms, and they must live where they can find employment. Before these mighty forces human law is impotent. Under present conditions population necessarily tends to aggregate. There are results of this aggregation that are disquieting, but we cannot tell what the ultimate results may be; and if we try to resist what appears to be a universal process of evolution, we may only spend our strength in vain. We may be very sure that there will continue to be farmers enough to furnish food for the rest of the inhabitants of the earth, and, so far as we can now judge, the rest of the inhabitants not only will but must live in towns. There are many dispersive agencies at work, and there may eventually be a reaction from the present tendency. But its objectionable results are not so clear that we need consider that the public welfare requires the interference of the Legislature. If the tendency is prejudicial, it will come to naught; but if it is a phase of progress, we cannot overthrow it.

CONSERVATISM OF THE ENGLISH DEMOCRACY.

In a speech at Doncaster on July 20, after the sweeping victory of his party had been placed beyond doubt, Mr. Balfour summed up the general significance of the result with a clearness and comprehensiveness that we have not seen elsewhere equalled. Asking for the real cause of the "vast change which has taken place in the representation of England," he said it would ultimately have to be found in the fact that "the people of this country are, and must be, a conservative people."

"By conservative," went on Mr. Balfour, "I mean that the people of this country is, and must be, a people enamoured of its Constitution, loyal to its Constitution, and that it is as impossible for us to live upon perpetual political revolution as it is for the individual to obtain a wholesome diet on blue pills. The Gladstonian party appear to think that a passionate life of revolutionary change is a characteristic of democracies. Nothing of the kind. All history and reason is against such a supposition. The most vehemently conservative population now existing in the whole universe is the American Republic, where change is not desired, and where change, if desired, would be almost impossible to effect under the safeguards, the multitudinous safeguards, which their Constitution provides; and the Anglo-Saxon does not differ on the two sides of the Atlantic. We are, and we always have been throughout the long and glorious growth of our constitutional liberties—in the sense in which I used the word—a conservative people; and a conservative people in that sense we must ever remain. As a conservative people we must oppose—and it will be found that the people of this country always, in my judgment, will oppose—senseless and stupid revolutionary projects, ill-considered, forced upon them by no national necessity, required by no social growth, not called for by any real pressing need of the time."

It would be hard to dispute the essential justice of Mr. Balfour's inference. Leaving wholly out of view the question of Irish home rule—and it certainly cut but a ridiculously small figure in the contests in English constituencies—the programme of the Liberals, so far as they had any programme, was a complex of constitutional and social change far too vast for any party ever to promise or to hope to carry out, and much too revolutionary in its implications to find a welcome in cautious English heads. A few years ago it did look as if England was on the verge of a great social revolution. With no written constitution to fetter an omnipotent House of Commons, with labor agitators coming rapidly and arrogantly to the front, with both parties on their knees to the socialists—it did look, we say, as if almost anything might happen in English politics. But the deep safeguards of English political character have now manifested themselves. Constitution written or unwritten, the salvation of Anglo-Saxon democracy lies in its love for reform and improvement, not by cyclonic methods, but in the old, orderly, experimental, tentative fashion. The English elections do not at all prove that the English electorate is against all

change; they only prove that it is against changing all things, and changing them in one day.

In this respect they cannot fail to be reassuring, all partisan questions aside, to those who hope for the permanence of English political institutions. Especially reassuring is the terrific slaughter of labor and socialistic candidates for Parliament. Never before did so many of them stand. Never were they so vainglorious about their being the party of the future. Never was the "jolly smash" they were going to make of the obsolete British Constitution given so prominent a place in their election addresses and speeches. But never were they so smitten hip and thigh. Keir Hardie is still wondering over the "strange combination" that beat him so ignominiously in what he thought was a sure district. Ben Tillett is down, Tom Mann is gone. Messrs. Cremer, Howell, Rowlands, and Steadman are all turned out in their London constituencies; John Burns alone being saved, and he so as by fire. The only labor members to be returned, outside of London, are men like Messrs. Burt and Arch, who have been noted for their independence, and who have refused to swallow blindly the dose prepared by the tyrannical labor leaders.

This great result we consider most wholesome, both in itself and in its effects. It shows that even workingmen electors find out their own demagogues and throw them over. It shows that intelligence and character and a decent respect for the past still count for something. It will be a long time, we suspect, before dignitaries of church and state will again be found sitting at the feet of Tom Mann for instruction in their social and political duties. Confident talk about what the English democracy wants and is bound to have will not be so much heard. That greatest of all political fallacies of supposing that democracy, which is the most effective instrument the world ever saw for the diffusion of property, is especially fond of attacking the rights and security of property, will not deceive so many men so readily. Finally, both great English parties will be slow to kneel again, so abjectly as both have knelt, to social agitators. Already the *Times* is in a standing posture, and, in Lord Salisbury's name, busy brushing off the dirt as follows:

"Poor-law reform and the far larger questions opened up by old-age pensions will have to be tentatively and experimentally treated. None of us can see very far into the working of gigantic schemes resting upon some dubious fundamental assumptions. Recognition of the excellence of the end in view must not hurry us into financial complications of unknown extent, or into the dislocation of existing and well-tried agencies for the promotion of thrift."

Mr. Balfour would be the last man to say that England had pronounced against political reform and progress. If Lord Salisbury should rise in the Lords, as the Duke of Wellington did in 1830, and boldly declare his purpose to resist all measures of reform, he would bring on his head a fate like the Duke's. When the latter observed the stir his remarks had made, and asked one of his colleagues what he could have said to cause such a sensation, he got the candid answer, "You have announced the fall of your Government, that is all." Doubtless "the great social forces which move onward in their might and majesty" have, as Mr. Gladstone said in 1866, the political future in their hands, and doubtless they have great changes in store for England. But it is clear now that they must work hereafter, as heretofore, through the medium of an essentially conservative democracy. Change will come, doubtless, in ways and forms that we dream not of, but it will come in the good old English style—through the give and take of discussion, after cautious beginnings, by fair experiment, subject to retracing of steps or complete recall, and never in the whirlwind fashion of the socialists.

Correspondence.

LIBRARY STATISTICS.

To the Editor of The Nation:

Sir: 'Johnson's Universal Cyclopædia' is an admirable work, in many respects, but there is a curious mistake or oversight in the fifth volume of the new edition. On page 223, second column, under "Library," we read:

"The following table exhibits all the libraries of the world known to contain 100,000 volumes or upward at the latest dates. The figures given are for years varying from 1888 to 1892, except for the libraries of the United States, which are corrected to January 1, 1894."

The reports of a number of libraries of the United States are at hand, and the following table shows the number of volumes given in the Cyclopædia and the number of volumes in the annual report of the library covering the year 1893, or a part of that year. In no case is any part of the year 1894 included:

LIBRARY.	No. of Vols. in Cyclopædia.	No. of Vols. in Annual Report.
State Library, Albany, N.Y...	157,114	172,154
Enoch Pratt Free Library, Baltimore.....	106,663	136,205
Peabody Institute, Baltimore.	110,000	115,750
Public Library, Boston.....	597,152	597,152
Brooklyn Library, Brooklyn, N.Y.....	113,251	117,669
Harvard University Library, Cambridge, Mass.....	400,332	421,872
Public Library, Chicago.....	175,874	189,350
Public Library, Cincinnati, O.	156,673	178,129
Public Library, Detroit, Mich.	108,720	123,828
Cornell University Library, Ithaca, N.Y.....	135,000	133,823
Astor Library, New York.....	238,946	250,422
Mercantile Library, New York.....	239,793	243,083
Columbia College Library, New York.....	135,000	160,000
Mercantile Library, Philadelphia.....	166,000	171,525

The figures for the Astor, Columbia College, and Cornell University Libraries are taken from the statistics of New York libraries for 1893, the reports for which closed, I believe, July 31, 1893. The reports of the Peabody Institute, Brooklyn, Chicago, and Cincinnati libraries include only part of 1893, from three to seven months. It may be worth noting that the Cyclopædia gives the Library of Congress 659,843 volumes, while the 'Official Congressional Directory' of the fifty-third Congress, second session, says that the Library of Congress contained "over 680,000 volumes." The Directory was corrected to February 1, 1894. It is evident that few libraries of the United States were "corrected to January 1, 1894." For a number of libraries the figures in the Cyclopædia are those of old reports, usually those of January 1, 1892; but in one instance the figures are at least five years old. The report of the Boston Public Library for 1893 is the only one at hand that contains the figures given in the Cyclopædia.

Very respectfully, Samuel H. Ranck.

Enoch Pratt Free Library,
Baltimore, July 23, 1895.

HISTOGEOGRAPHY.

To the Editor of The Nation:

Sir: Will you allow one who is neither philologist nor historian to enter a mild protest against the attempt, in your issue of July 25, to coin a new word with which to designate a "science" not yet in existence?

In your review of Prof. Winsor's new volume on the Mississippi Basin, you go to the length of saying that the author "almost seems to have created a new science, for which as yet we have no name," and then proceed to name the result of this almost seeming act of genesis with a compound word which, from its faulty construction and awkward sound, grates too harshly upon the sensibilities as well as on the ear of even the average and unlearned reader. The term "histogeography," if there were a chance of its surviving, would not carry to the mind the concept of the influences of the earth's surface upon the course of human events occurring there, but rather, if it could convey any idea at all, of the geography of a web or tissue, for ἱστός means this latter, and its English form has already been preëmpted for the name of a science in actual existence. W. W.

Cambridge, July 28, 1895.

[We set no great store by our coinage, and natural selection will treat it as it has done thousands of like ventures. The seeming confusion of roots may displease the scientist, who, however, has no monopoly of ἱστός (which, by the way, was the weaver's beam before it became the web), and need no more see it in "*histo*-geography" than *demi-* in "demiurge." —Ed. Nation.]

Notes.

An edition of Shakspere's plays for school and college, making "an attempt to present the greater plays in their literary aspect, and not merely as material for the study of philology or grammar," is in the press of D. C. Heath & Co., Boston.

'The Minute Man on the Border,' an account of home-missionary experience, by the Rev. William G. Puddefoot, will be published by T. Y. Crowell & Co.

We lately gave some account of the way in which Gibbon's autobiography was pieced by a lady's hand out of several left by the historian. These are now to be printed together by

John Murray in a volume, entitled 'The Unpublished Works of Edward Gibbon,' along with his journals, mainly in French, from 1762 to 1764, and his correspondence. Mr. Murray will also publish a fresh selection of letters by the late Dean Stanley, with specimens of his verse, edited by Mr. Prothero.

The Selden Society have just published 'The Mirror of Justices,' edited by W. G. Whittaker, with an introduction by Prof. F. W. Maitland; and those lawyers and historians who have wondered about the book have now before them a text fit to work on, with some suggestion of a key to the puzzling contradictions in Prof. Maitland's introduction. Those who do not take the serious interest of lawyers will be pleased by the fascinating list of the abuses which the writer of the end of the thirteenth century found in our law. The one hundred and fifty-five abuses of the common law contain complaints as various as may well be, ranging from the stanch Tory view, that it is an abuse to drive a good and lawful man into trial by jury when he demands trial by battle, to the orthodox Benthamic complaint "that the laws and usages of the realm with their occasions are not put in writing so that they might be published and known to all." To these one may add the abuses which have crept into statutory law; and to the special attention of those who would like a comparison with the early Puritan New England view that a sin is a breach of law and a breach of law is a sin, we may commend the author's deductions from that view. To his mind there are three kinds of sins—real, personal, and mixed (p. 49). 'Bracton and Azo,' the parallel texts which are to be the Selden Society's next volume, are in the binder's hands. The 'Coroner's Rolls' (Henry III. to Henry V.) are also in press, and tell a bloody and dramatic story.

Any editor who sends the present generation back to Coleridge has a meritorious claim upon us—all the more if the selection from the poems be judicious and if the printed volume be tasteful. All these conditions are fully met in 'The Golden Book of Coleridge' (London: Dent; New York: Macmillan), compiled by the Rev. Stopford A. Brooke, who supplies notes and a long introduction, perhaps over-long from a writer whose powers of compression are exhibited in the opening biographical sketch of two pages. However, it proceeds from a mind saturated with a knowledge of the poems and the man, and is very sane in its literary judgments. There is excessive heat, mixed with some risky moral distinctions, in the argument for a special exemption of genius from exposure of its human frailties. We miss from the collection "Limbo," and "Beareth all things" in particular; and "A Character" might well have been included, both for its humor and for its autobiographical value. In the occasional curtailing which Mr. Brooke has openly ventured upon, we could wish he had spared "A Christmas Carol." The punctuation of the poems too slavishly adheres to the old editions.

From the 'Philosophical Works' of the late T. H. Green a selection has been made of the lectures on the 'Principles of Political Obligation,' together with a chapter on the different senses of the term "Freedom," by Prof. Bosanquet. These lectures make a volume of 250 pages, which is published by Longmans, Green & Co. Prof. Green's influence upon English thought was a powerful one, and this reprint shows that it is not extinct. Whatever opinion may be entertained of the soundness of his political theories, they are of sufficient importance to justify their presentation in a separate volume.

We do not know why C. McFall's 'With the Zhob Field Force' (Macmillan) was written, why it was printed, or, still less, who will read it with interest, except, perhaps, some Indian officers who lack better employment. The expedition described was utterly insignificant: there were no battles nor even skirmishes. The average reader will be bewildered by the mass of Indian expressions and geographical names—there is no map—and tired by the monotony of the style, which is that of a tame diary, and is relieved by the quantity, though hardly by the quality, of the illustrations.

The letters from Japan of the late Maj.-Gen. H. S. Palmer, F.R.A.S., published in their new dress ('Letters from the Land of the Rising Sun,' Yokohama: *Japan Mail* Office), deserve to be classed with Mr. Conder's works on Gardening and on Flower-Arrangement, and Mr. Morse's 'Japanese Homes,' as a handsome and entertaining work. Capt. Brinkley's careful and friendly editing, and the large type and broad margins, are worthy of a text which, originating in the shape of correspondence for the London *Times*, is yet sufficiently painstaking and polished to deserve this permanent record. The descriptions have a wide range, from "Japanese Polo" and "Cormorant Fishing" to "Parliamentary Reporting in Japan," and, as the work of a trained and sympathetic observer, are among the best sketches of modern Japan. The illustrations represent a tasteful selection, and are for the most part novel.

The 'Life of Henry Lamp, M.D.,' written by himself in 1710-11, printed from a MS. in the possession of L. R. Ayre, M.A., with an introduction by Joseph J. Green (London: Headley Brothers), is an interesting little volume and a welcome addition to the somewhat restricted number of really racy "Friends' books." All who take it up will be certain to follow the good doctor's narrative with interest, from his birth "in a large city called Conisberg, in a province called Prussia, situated on the Baltick Sea, in the year 1660, the 19th of the month called July," to where, as a "convinced Friend," he comes to anchor at Ulverston, in Lancashire, and marries one Tabitha Gurnell. He died in unity and good esteem in 1711, and was buried at Swarthmore. He suffered with the Huguenots, preached alchemy, and lost several fortunes, having had, apparently, as great a faculty for being taken in by designing friends as Moses in the 'Vicar of Wakefield.' The power of early Quakerism is strikingly shown in its ability to assimilate a man of such varied experiences. The interests of this memoir are much increased by the conscientious editing it has received at the hands of Mr. Green.

The translation of Oscar Hertwig's 'The Cell: Outlines of General Anatomy and Physiology' (London: Swan Sonnenschein & Co.; New York: Macmillan) will certainly prove useful to students who do not read German readily. Americans will be impressed by the apparently complete ignorance of the author and English editor that any cellular researches have been published by C. S. Minot and C. O. Whitman. Some, also, who have found in *proton* a short, simple, significant, and unambiguous equivalent for *Anlage*, will feel mingled amusement and impatience that one-half of the editor's preface should be devoted to a discussion of the troublesome German word, with the result of adding to *blast* and *fundament* the confessedly cumbrous expression, *elemental germ*.

We spoke briefly, a few weeks ago, of the Clarendon Press edition of St. Adamnan's 'Vita S. Columbæ.' This work has now been closely translated into English by "J. T. F.," and issued by the same press, under the title 'Prophecies, Miracles, and Visions of St. Columba' (New York: Macmillan). It furnishes much entertaining reading. There are a few annotations and glosses from the hand of the translator.

'Schiller, dem deutschen Volke dargestellt,' by Dr. J. Wychgram, is a just-completed popular biography prepared with a view of making Schiller more than ever the favorite poet of the German people. The discussion of the poet's works is woven into the biography, but is made a subordinate part of the work. The particular feature that distinguishes this from other biographies is its illustrations, which reach the number of two hundred and fifty-four. They are connected with every period of the poet's life, and are procured from almost every conceivable source, but most of them are taken from the collections of Schiller relics—in the Goethe-Schiller Archives at Weimar, at the home of Schiller's grandson, Freiherr von Gleichen-Russwurm, in the Schiller house at Marbach, in the libraries at Stuttgart and Weimar, and in the Zarncke collection at Leipzig. Among these illustrations the first place is given to portraits, and all of Schiller's relatives and intimate friends are represented. Pictures of places and houses interesting from their association with the poet are also exhibited, together with several facsimiles of his letters and manuscripts. The book is published by Velhagen & Klasing, and adds one more to their already excellent list of popular works, such as König's 'Litteraturgeschichte,' Knackfuss's 'Kunstgeschichte,' and Stacke's 'Deutsche Geschichte.'

Mr. Percival Lowell guides the reader gracefully through the mazes of the new Martian geography (or Areography) in the *New England Magazine* for August. The best service of his article is that it makes the classical nomenclature of Signor Schiaparelli less unfamiliar. Most wisely Mr. Lowell adopts this *in toto*, and has conformably named the features newly found, as embodied in his painstaking sketches last year at his private observatory in Flagstaff, Arizona, more than 7,000 feet above the sea. The so-called photographs of Mars are not, as he explains, direct pictures of planetary detail, such being thus far impossible; but they are photographs in varying presentments of a globe on which all the visible detail has been carefully plotted. Thus is obtained a chart of Mars exhibiting great advances over Schiaparelli's famous map of seven years ago, itself almost incredible at that time. The marvellous spider-web system of the *canali* has never been better shown, and Mr. Lowell advocates here as elsewhere the theory, by no means an unlikely one, that these thread like markings actually are irrigated and vegetation strips, and their dark circular intersecting areas real oases in the general desert surface of our neighbor planet.

In Mr. Barnard's sketchily written paper in the August *Photographic Times* is told again in outline the story of the achievements, many of them most remarkable, of photography in the service of astronomy. The splendid array of illustrations, unusually well presented, is made up entirely from negatives of Mr. Barnard's own taking; and the whole conveys to the uninitiated an excellent notion of the state of astronomical photography to-day. Mr. Barnard brings out clearly the vast advantages accruing from the introduction of the

dry plate about fifteen years ago, enabling comets and the faintest stars to be photographed, and enormously large but exceedingly faint nebulæ to be discovered which the eye will probably never directly see. But, with all the advances, much yet remains to be done —in securing all those fine details of the moon and planets which the eye readily sees, but which the photographic film, from the coarseness of its grain, is still powerless to record.

Visitors to Florence who have overlooked at Fiesole the ancient theatre built on a Pelasgic retaining-wall, have not done well. Discovery has within the past three years been made near by of Roman thermæ identified with the "Baths of Catiline," and the plan laid bare. This and the very considerable architectural remains are well shown and described in the *Reliquary* for July, 1895 (London: Bemrose & Sons).

The recent completion of the harbor works at Bizerta in Tunis gives a timely interest to an account of that place by Capt. Maumemé in the *Annales de Géographie*. Formerly one of the most important of North African ports, it had been suffered to fall into decay mainly through the silting up of the channel which connects the Lake of Bizerta, famous for its fisheries, with the Mediterranean, and the destruction of the ancient mole which had been built to protect it. The French have restored this and built another, three thousand feet in length, on the opposite side of the channel, which has been dredged to a depth of twenty-four feet and a width of three hundred. This is not deep enough to admit the large vessels of the French navy into the lake, so that at present Bizerta is not a menace to the English supremacy in the Mediterranean. But the author explicitly acknowledges that the main object of the works is to make it as soon as possible a "port de guerre." As this is apparently in direct defiance of pledges given to England that Bizerta would not be permanently occupied, it has the tendency still further to embitter the feelings of the two nations. Another article discusses the treaties of 1894 delimiting the French and German zones of influence in western Central Africa, and describing the territories assigned to each country. Very useful maps accompany both these papers M. Gaston Bonnier treats of the Alpine plants and their climatic relations, and M. Bérard continues his scholarly exposition of the Phœnician Mediterranean.

—Three of the magazines have this month one or more social studies of greater or less importance. In *Harper's*, Mr. Warner devotes part of the "Editor's Study" to comment on the quality of our consular service, and its influence on our trade with foreign countries. As his remarks have a hard headed relation to the interests of our merchants and manufacturers, they are not so likely to be brushed aside as the chimerical notions of a sentimental reformer. The extent to which these interests are neglected and ignored by the haphazard horde of our representatives in foreign ports, can best be realized by contrast with the keen business methods of the British consular service, with its grades and promotions, its life tenure, and its suitable pensions at the end. To insist, in view of Mr. Warner's observation among Englishmen in the consular employ, that American consuls must naturally become denationalized by lengthened residence abroad, involves an admission of the inferior staying-power of our patriotism which even the practical politician would be loath to make in plain terms. In the paper which most ornaments the number, Mr. Howells dates from the period of his own consular service in Venice his record of the shifting of the literary winds that at last blew him safe to port. These seemingly unreserved revelations reveal nothing of the internal processes in the composition of those poems and sketches by which the coyness of the Olympians who then inhabited the editorial offices of New York and Boston was finally overcome; but, so far as external adventure or misadventure with them is concerned, the curiosity of the most curious reader could scarcely crave greater frankness. Mr. Abbey's illustrations to "A Midsummer Night's Dream" are below the level of his best work in this vein; while in the accompanying letter-press Andrew Lang's parting thrusts at modern progress, Mr. Pepys, and Darwin are hardly lively enough to conceal the fact, obvious to any reader, that Mr. Lang also sometimes nods.

—The more restricted view of Mr. Warner's subject in the foregoing magazine gains breadth and impetus in the paper in *Scribner's*, "Six Years of Civil-Service Reform," by Theodore Roosevelt. Concentration of popular energy in pushing through Congress a bill to include the consular in the classified service is advocated in this paper, rather than the continued diffuse support of a number of bills in the general interest of civil-service reform. A further practical suggestion thrown out by Mr. Roosevelt is that "every man interested in decent government should keep an eye on his Congressman and see how he votes on the question of appropriations for the Commission." His inside view, from the vantage-ground of a National Commissioner, of the covert attacks in both houses on the existence of civil-service reform—by refusing to appropriate for the Commission—is at once an interesting bit of political history and an object-lesson to the general reader in what are glibly termed parliamentary tactics. Mr. Roosevelt distributes blame with a pretty even hand to both the Harrison and the Cleveland Administrations for their violations of the principles of civil-service reform; but in selecting for praise the Congressmen who have especially supported the Commission in its efforts to strengthen itself and to extend the scope of the law, he almost takes pains to ignore Dr. William Everett in favor of Senator Lodge. It need hardly be said that Mr. Lodge's loyalty to Mr. Roosevelt has been at the expense of his own consistency as a hardy "Machinist" and dispenser of patronage, while Dr. Everett notoriously refused to exert "influence," and, both in committee and on the floor of the House, blocked many a scheme to crush the Commission and undermine the statute. *Scribner's* is further kept in line with *Harper's* by attractive reproductions of some of Mr. Abbey's pastels, with comment thereon by Hopkinson Smith. For the rest, fiction, and, on the whole, very creditable fiction, swells the number to the expected bulk. H. C. Bunner is especially happy in the delicacy and grace of both his imagination and its expression, bringing to light, in "Our Aromatic Uncle," one of the possible cases of the obscure, minor heroism which suffices to cover a multitude of humanity's shortcomings.

—The particular social grievance to which the current issue of the *Atlantic* gives voice, in the form of an article by Harvey N. Shepard, is the present mean and injurious treatment in many States of that somewhat doubtful bulwark of equity, the juryman. The wrongs of the juryman, which, pushed to their limit, have been seen to expose him to locking up without "meat, fire, drink, or tobacco," have been feelingly discussed ere now; but in this paper it is temperately argued that, with the ordinary privileges of food and sleep at the usual hours, and with no more time required for duties in court than other officers of the law are obliged to give, "some of the objections in the minds of business men to jury service will have been removed." Without openly avowed intention of showing a rent in the social garment, the brief and dramatic sketch, pregnantly entitled "Thrift," might, if tracts were still among approved methods of proselytizing, safely be printed as a campaign document for the social reformer. Whether the married girl or the priest was the sinner, in this compactly packed page of human experience, would be an interesting question to propound to the casuist who still declines to let the individual go scot free at the expense of his or her environment. In a fourth paper on "Oases," Percival Lowell brings to a conclusion his stimulating account of the planet Mars, leaving the reader with an agreeable sensation of having considered more things in the heavens than is his daily wont, and with a final remark that, though "he will probably never find his double anywhere, he is destined to discover any number of cousins scattered through space." Of the most important paper of the issue, "How Judge Hoar Ceased to be Attorney-General," we have already spoken at length.

—The *Century* emphasizes, by giving space to two papers on the single theme of the battle of the Yalu, the international importance of the struggle for sea-power in the Orient. Capt. Mahan's "Lessons" from the fight, while technical in character, carry instruction to laymen as well as seamen, and might profitably be conned by certain Congressional committees. He finds the Japanese victory simply as a naval engagement inconclusive, while, as regards systems, the result is "a drawn battle," Japan and China sharing the high-priced privilege of settling the wearisome contest waged by Jingo experts over guns versus armor. Apparently (until the next great sea slaughter) the rapid-fire gun of moderate calibre has established "its position as the greatest offensive power in naval warfare"; and armor, "thanks to the operation of causes carefully excluded in testing, has come out ahead when it was struck." The name of Sonya Kovalevsky will be sure to attract readers to the article by Isabel F. Hapgood. Miss Hapgood's account of this notable woman, the first to hold a university professorship in Europe, is full of interest, notwithstanding its unsympathetic conclusion and a marked determination to point the writer's own moral at the expense of the weaknesses, not unparalleled in masculine annals, of the famous subject of her sketch. Henry Dwight Sedgwick's "Reminiscences of Literary Berkshire" are of an old-fashioned order of wholly appreciative recollections of notabilities with whom a life-time of fortunate acquaintance has brought him in contact, and who have given to the country about Stockbridge, Lenox, and Pittsfield the atmosphere of personal association which makes its history no less attractive than its scenery. In "The Lilies of Nola" is pleasantly described and illustrated an Italian June festival with which few readers are likely to be familiar.

—The two Fellowships in Classical Archæology, recently mentioned in these columns, offered for the year 1895-'96 by the Managing Committee of the American School of Classical Studies at Athens, have just been awarded. The successful applicants were Frank C. Babbitt, A.B. (1890) and Ph.D. (1895) at Harvard, and Herbert F. De Cou, A.B. (1888) and A.M. (1890) at the University of Michigan. Mr. De Cou was a student at the School at Athens in 1891-'92, and for the last three years has been an instructor in the University of Michigan. These fellowships, each of the value of $600, were awarded by a special committee, on the basis of such written evidence of fitness as the candidates were able to furnish. The showing made by the applicants was unexpectedly strong. This was gratifying, but it made the decision of the committee difficult. There were seventeen applicants, two of them women. These candidates had taken their first degree at thirteen different American colleges; four had received the degree of Doctor of Philosophy by examination; six had studied abroad. Fifteen were teachers, five holding the rank of professor or assistant-professor. Twenty-four fellowships or scholarships had been held by them. Their studies had been carried on in twenty-one different colleges and universities, five in Germany included. Three applicants had previously been students at the School at Athens. All the applicants, except four, had done graduate work in some university of good reputation. In 1896-'97, and thereafter, the fellowships within the gift of the Managing Committee of the School at Athens will be awarded by competitive examination. The examination will be held, about the middle of May, at different colleges in this country, at Athens, and in northern Europe. Full information as to subjects, time, and place will be given in the next report of the Managing Committee, to be published in September or October of the present year. Special inquiries should be addressed to Prof. John Williams White, Chairman of the Committee on Fellowships, Cambridge, Mass.

—When a student at the School in 1891-'92, Mr. De Cou made an important discovery which furnishes another amusing instance of the disposition of the makers of books to draw on their predecessors for facts without verification. While making a careful study of the frieze of the choregic monument of Lysicrates, he discovered that the frieze would not square with the representations of it in the books. The original frieze naturally seemed to him to have the greater authority. He traced the error back through seven different works by authors of reputation, published between 1825 and 1890, and discovered that its source was the original publication of Stuart and Revett, in which two of the sheets containing the drawings had been misplaced, thus reversing the proper order of the figures! This set the original composition sadly askew, but the learned authors of the books never twigged the blunder—one of them, indeed, especially commended the *symmetry* shown in the composition of this portion of the relief. The deductions which Mr. De Cou was himself able to draw from a correct knowledge of the relief are of great importance.

—This quarter's instalment of the Oxford English Dictionary (Macmillan) leads us, under Dr. Murray's guidance, from *Deject* to *Depravation*—a tract, as he points out, so fully occupied by words of Latin origin largely taken over through the French that only ten out of 1,269 "main words" are of Old English origin. Of the borrowings, he cites eight words of very great utility, and it is noticeable that these all have a poetical capacity. Hatzfeld and Darmesteter's new French Dictionary now begins to be of obvious service as supplementing Littré for dates and etymology. French of derivation is *dentist*, and, as an innovation for the less comprehensive *tooth-drawer*, it was not acceptable to the purists of 1759; *dentistry* was a neologism as late as 1838. *Demoralize* and *denationalize* we owe to the French Revolution, but Noah Webster makes a prior claim to the former vocable. *Delimit* and *delimitation* are of the French of 1773, and, so far as appears, Gladstone was the first to avail himself of the verb, in 1852, and Sir H. Taylor of the noun, in 1836. *Delaine* was abbreviated from *mousseline de laine*, and how English writers and printers fumbled with it is shown in the forms *De Laine* (1849), *de-laine* (Dr. O. W. Holmes, 1860), and the now current *delaine*. *Depot* is fourteenth-century French, disregarded in English till the last decade of the eighteenth century, and still in a state of flux as respects both orthography and pronunciation. One may write *depot*, as in the earliest quotations and in common usage at the present day, or *depôt* or *dépôt;* and may pronounce as in French, or as day'po, dip'o, or deep'o. A similar uncertainty attends the derivates of *demagogue*—a word which we seem to have outstripped the French in adopting. *Fraser's Magazine* wrote *demagoguic* and *demagoguism* in 1831, affirming the hard *g;* Coleridge, ambiguously, *demagogic* in 1834; *Blackwood* preferred *demagogism* in 1824. And chiefly in this country is used *demagoguery*. *Demagoguish* or *demagogish* can be written, and *demagogy* pronounced, according to taste.

—The Latin prefix *de-* enters into the composition of the great majority of the words in this section of the Dictionary, and its primitive sense is often perverted. In "demereri," 'to merit, deserve,' it had an intensive force, and accordingly the earliest meaning attached to *demerit* in English was 'merit, desert'; but in this instance "in Romance the prefix appears to have been taken in a privative sense," and that influence presently engendered in our tongue a parallel and contemporary usage of 'desert in a bad sense, sin, offence,' which finally carried the day. In general, too, as an active element in forming compounds, the privative sense has come decidedly to the fore, and is naturally first hazarded in popular etymologizing. An unfamiliar word like *denigration*, for example, apart from the context, would perhaps suggest to most minds 'whitewashing' rather than 'blackening,' and the former meaning was plainly intended to be given to it by the scholarly J. H. Blunt in 1868, when, in a passage cited by Dr. Murray, he wrote the word with a hyphen ("de-nigration"). We may accordingly surmise that the ambiguity of *de-* has contributed to the obsolescence of longer forms like *depeculation* and *deperdition*, which the poets might have wished to retain for the sake of the extra syllable. And would it be a rash guess that the following is the original reading—afterwards, with his not always sober second thought, changed to *descending*—of the first stanza of Wordsworth's "Beggars"—

> "nor the hood
> Of that blue cloak which to her feet
> *Depended* with a graceful flow"?

This lection we do not find quoted by Dr. Murray, though it would have filled a gap in the historic chronology between Cowper and Jefferies, as likewise, by the way, would Lowell's "lone Inventor by his *demon* haunted"; and it would have been refreshing to meet with Cotton Mather's account of his father's last illness, that "he fell into an Apoplectic sort of *Deliquium*."

THE MORANT BAY TRAGEDY.

The Tragedy of Morant Bay: A Narrative of the Disturbances in the Island of Jamaica in 1865. By Edward Bean Underhill, LL.D., Honorary Secretary of the Baptist Missionary Society. London: Alexander & Shepheard. 1895. 8vo, pp. xix, 219.

THE Morant Bay Tragedy is the name given to the catastrophe at Jamaica by Dr. E. B. Underhill, a Baptist missionary who played a leading part on the side of humanity in those events, and now puts forth an apologetic narrative on his own behalf and that of his order. That man must be an historical optimist indeed who can see in the transportation of the negro to the New World a step in a beneficent evolution. Hayti and the war of secession proclaimed the ban of nature and morality on the slave trade. Nor will the cup of wrath have been drained till the problem of the South has been solved and the lynchings cease. England may be said to have escaped materially with a fine of a hundred and fifty millions of dollars. But she suffered morally by her unhallowed acquisition. The wealth which West Indian proprietors brought her was unblessed. They were as a class vulgar and luxurious plutocrats, socially less desirable than are the returned colonial millionaires of the present day, while they could not fail to be somewhat tainted in character by the evil source of their wealth. Of one of them the story was current that, seeing some of his guests, after a grand entertainment, at a loss about their conveyances, he waved his hand and said, "Bring round more carriages and four."

That the work of West Indian emancipation was, on the whole, well done and set a good example to the world, none but an Anglophobe will deny. In this case there was, what in the case of slavery in the United States there was not, a superior power to enact the measure and dictate the terms. Nor was it a power unfavorable to the negro; for in England the black man, having there never borne the brand of slavery, was regarded not with contempt or aversion, but rather as an object of sympathy or amused curiosity, and, when brought by the West Indian proprietor as a servant, was well received in the servants' hall. While the Governor of a Southern State is forced publicly to apologize for having inadvertently admitted a black man to his table, a leading club in London has admitted a coal-black African bishop as its guest. Unfortunately the British Government did not understand, and, perhaps, with such lights as it had in those days, could hardly be expected to understand, the social and political situation which, by emancipating the blacks, it had created. When two races, a stronger and a weaker, are brought together, the only effectual security for peace and equity is the balance of justice held by the hand of a superior and impartial power. Representative government in Jamaica was sure to lead to a strife of races, to the oppression of the weaker race, to insurrection when oppression passed endurance, and in the end to some such tragedy as that of Morant Bay.

The whites, as might have been expected, got power, both legislative and judicial, into their own hands and used it in their own interests as

a race. Representative institutions were in fact a mockery. In 1864 the number of persons qualified to vote for the forty-seven members of the House of Assembly was only 1,903, and the number of actual voters only 1,457, out of a population of 436,000. Secretaries for the Colonies deplored the lack of regard for the interests of the black people evinced in Jamaican legislation, and the exclusion of the bulk of the population from the suffrage, without seeing, or at least without doing, what was necessary to avert disaster. To the black peasantry the legislative and judicial firmament was brass and iron. Their discontent had been increased by bad seasons. They had a leader in George William Gordon, a half-caste, married to an English wife, a man of property, religious, and of fair repute. They had advocates in the Baptist missionaries, who were afterwards accused of stirring up disaffection because they had tried to obtain redress of the grievances which were its cause. Under these auspices they had been holding meetings; but no evidence of anything like a conspiracy or even of combination among them was ever produced. The riot at Morant Bay which fired the mine was local and accidental. It arose out of the arbitrary conduct of the district Custos, or Justice of the Peace. A mob gathered and assaulted the police. The volunteers were called out, fired on the mob, and killed or wounded a number of them. The mob being armed, a combat ensued in which twenty persons, volunteers and others, including the Custos and an Anglican clergyman who had made himself much hated, were slain by the mob, while thirty-four of the party were allowed to escape. A wave of disturbance spread over the adjoining district; but after the first affray only one white was killed, though for three days the blacks were in possession of that angle of the island. That the blacks had mutilated bodies, flayed one man, roasted another alive, disembowelled a third, and put out the eyes of a fourth, were the wild imaginings of white panic. Not a single woman or child suffered, and the suggestion that the women were spared only for worse horrors was perfectly gratuitous. A small body of regular troops would soon have restored order, and the Governor had ample force, military and naval, at his command.

It is but justice to British governors to say that in such circumstances they have usually borne themselves well. In the case of the Sepoy mutiny the Governor-General of India, Lord Canning, saved the honor of England by nobly controlling the sanguinary panic of the dominant race. But Edward John Eyre, the Governor of Jamaica, was an unhappy exception to the character of his class. Dr. Underhill, wishing to be candid, says that Eyre came with benevolent intentions. The intentions of most men are benevolent till their evil passions get the upper hand. Instead of attempting to control the panic rage of the whites, Eyre threw himself headlong into it, and gave the signal for a murderous reign of terror which has left a deep and ineffaceable stain on the honor of his country.

In a few days the insurrection was at an end. Not the slightest stand was ever made against the troops. On the 20th of October, Gov. Eyre certified under his own hand that the rebellion had been crushed, and that all the principal persons concerned in the outrages had been killed or captured. Yet on that very day fifty-one men and women were tried and hanged, and the reign of terror went on for twenty-five more days, with an average during three weeks of eighteen executions a day. Altogether four hundred and thirty-nine men and women were put to death, and the number flogged could not have been less than six hundred. Out of the four hundred and thirty-nine put to death, three hundred and twenty-six were executed on and after the 20th of October. The hangings went on till the thirty-fourth day (nearly five weeks) from the outbreak. The floggings were awfully severe; a hundred lashes was a common number for men and thirty for women. One of the officers employed officially notes that "the writhing and intense agony of the lash is dreadful to witness." Wire was twined with the whips. Of those who were flogged with the cat-o'-nine-tails many were women, on the simple charge of stealing. Among them was a woman with child. In hardly any case was there the shadow of evidence of guilt or even a decent form of judicial investigation. To complete the scene of devilry, the savage Maroons were called in and let loose upon the peasantry. By the ferocious exultation with which the atrocities were committed and the language held in glorification of them, the perpetrators showed that they were actuated not merely by wild panic but by murderous hatred and contempt of the inferior race. Conspicuous for cowardly ferocity, even among these butchers and torturers, was Ramsay, the Provost-Marshal, who wore the Victoria Cross. Among his exploits was the execution of George Marshall, a colored man who, on bare suspicion that he had stolen some woollen goods, was, by Ramsay's order, tied to a gun and flogged. On receiving the forty-seventh or forty-eighth lash, when his back was like a piece of raw flesh, bleeding profusely, the victim turned round and ground his teeth. Ramsay ordered him at once to be hanged. He was taken down, thrown on his back, his hands and feet tied, a rope put over his head and thrown over a rail, and "he was twisted up as you would a barrel of flour." He had no drop. After he had been suspended three minutes, a huge stone was taken and put between his arms which were tied behind him. The Provost Marshal then said, "Take him from the gun and hang him." A thousand cottages of the peasantry were burned in the mere wantonness of hatred.

The case of William Gordon stands apart. There was personal enmity of the bitterest kind between him and Governor Eyre, whose measures Gordon, as champion of the blacks, had often opposed in the Assembly. In connection with the quarrel, Eyre had drawn on himself a rebuke from the Colonial Secretary for irrelevant aspersions of private character. Gordon had nothing whatever to do with the rising at Morant Bay. At the time he was at Kingston, many miles away. His friends advised him to withdraw. But he, conscious of his innocence, refused. Hearing that a warrant had been issued for his arrest, he voluntarily gave himself up. Kingston was not under martial law. Eyre himself put Gordon on shipboard, carried him to Morant Bay, where martial law prevailed, and handed him over to the court-martial which was sitting there. The prisoner was tried and condemned to death by a court of reckless butchers with every circumstance of insolence, injustice, and cruelty; and the sentence was executed with the special and personal approbation of Governor Eyre. A Royal Commission pronounced afterwards that there was no sufficient proof either of Gordon's complicity in the outbreak at Morant Bay, or of his being a party to general conspiracy against the Government; and the Chief Justice of England condemned the whole proceeding as illegal. It seems impossible to designate the act of Governor Eyre in thus taking the life of his personal enemy under the abused forms of martial law as anything but murder.

The friends of humanity in England, headed by Bright and Mill, forming themselves into a committee, did their best to obtain justice and purge the honor of their country. They were, of course, denounced by the Tories and Jingoes as traitors to the empire, and they would have freely avowed that they cared little for empire if it was not to be an empire of law. Their efforts had but a very limited measure of success. All attempts to bring Eyre to trial for the death of Gordon were frustrated by Toryism and Jingoism, which, predominating in London grand juries and aristocratic Courts of Quarter Sessions, had power to bar the gates of justice. The State Church played her usual part—the part which, as Burke tells us, she played at the time of the American Revolution, as the pious handmaid of arbitrary power. The evangelical clergy of the Establishment, few in number, were inclined to the side of Christianity; but the bulk of the order showed their political sympathy with Eyre, while the Nonconformist ministers as a class took the better part. A bishop signed the manifesto in Eyre's favor, and the church-bells of a country parson were rung when the Quarter Sessions refused to commit. Carlyle's set, including Ruskin, were, of course, on the side of sanguinary violence, which they mistook for force, while morally it was the extreme of weakness. Kingsley specially distinguished himself by the part he took in a complimentary banquet to Eyre, as he had before by his conspicuous apostasy on the subject of American slavery at the time of secession. Lord Chief Justice Cockburn, in a charge to the grand jury of London, vindicated the principles of personal liberty against the abominable doctrines of martial law proclaimed on the bench by Judge Blackburn and supported in Parliament by Disraeli and the Jingoes. The Jamaica Committee did not want Eyre hanged, but they did want to have it established that a Governor of a Colony who put a man to death without law should answer for his act at the bar of Imperial justice.

The Government sent out a Commission of Inquiry, whose report, whitewashing as it was, could not fail to record indisputable facts. Governor Eyre was suspended and was not reappointed. Cockburn's charge and the removal of Eyre were the sum of the success achieved by the Jamaica Committee. In Jamaica, Ramsay was brought to trial, but was of course acquitted by the white jury, and stalked out of court with his Victoria Cross upon his breast. The best result of the catastrophe was the abolition of the Jamaica Constitution and the resumption of a tutelary power by the Imperial Government. Since that time, if the island has not prospered, there has been peace between the races.

This history is full of important warning, not only with regard to the race problem in the South, but in regard to the future of Africa, for the possession of which the European powers are now scrambling, too regardless of the existence of the large native population. Before, the black man was transported to the home of the white; now, the white man is settling in the home of the black. The exploits of Stanley are in themselves enough to show that the tragedy of Morant Bay is not likely to be the last of the series. To future British governors and to British settlers gene-

rally in Africa Dr. Underhill's history may be a salutary warning.

BIRD-LORE AT HELIGOLAND.

Heligoland as an Ornithological Observatory: The Result of Fifty Years' Experience. By Heinrich Gätke. Translated by Rudolph Rosenstock. Edinburgh: David Douglas. 1895. Royal 8vo, pp. xii, 599, 2 portraits and other illustrations.

HELIGOLAND is the magnetic pole of the bird-world, and few ornithologists can remember a time when it was not an observing-station in charge of a keeper, now in his eighty-third year, who has stood during half a century a unique figure in our annals—a sort of Pharos, not less conspicuous than the beacon on the island itself, steadily throwing light on that "way of the eagle in the air" which the wise man of old declared to be a mystery. This volume is the mature fruit of experiences unparalleled in the life of any single observer, and what Herr Gätke has not learned of bird-migration is known to no one. Billions of birds have winged their way in the eyes of one man, and sounded in his ears the messages they bore; if there be any mystery left, then some of the problems are insoluble, and full explanation of such phenomena is, as of yore, forbidden fruit in the ornithological garden. Sciolists who have written books upon what they do not know about flight and migration will find that the schoolmaster is abroad, with ruthless iconoclasm; but those whose experiences are ripest and soundest will prize this book most highly, for it will justify their own confessions of ignorance, while it confirms them in all they have well and truly learned.

Heligoland is the most peculiarly situated and most successfully operated ornithological observatory on the face of the globe—this little three-cornered island in the German Ocean, hardly more than a mile on its longest side—a mere red rock, flat-topped and steep-sided, with a low white sandspit at one end, and bare but for greensward. A more unpromising place could hardly be imagined for anything beyond a fair sprinkling of sea-birds the year around, and moderate migrations in spring and fall. But the name means "holy land," and all good birds go to this Mecca at least once in their lives, or perish in the attempt to reach it; there is no Heligoland but this one, and Gätke is its prophet. At least it would seem so when we scan the record and find that birds have flown from every quarter of the globe to swell the most remarkable list ever drawn up for a single isolated locality of no considerable extent and no obvious attractions. To be sure, it includes no ostriches or cassowaries; but the penguin or the hummingbird would hardly be more miraculous than some of the epiphanies actually witnessed.

To appreciate the Heligolandish ornis aright, in comparison with a thousand other local avifaunæ, we must first eliminate Gätke's personal equation, by making due allowance for the exceptional length of time this extraordinary observer has conducted his researches. A like period would give any local list—say of Central Park in this city—an amplitude few ornithologists picture to themselves, accustomed as they are to records of 200 to 300 species in fairly favored continental localities. But Gätke's total of 397 for such a small sterile spot as his island is far from being due entirely to his own ability as an observer and his long experience. As Heligoland has yielded nearly half as many species as have ever been ascertained to occur in the whole continent of North America, and as comparisons would show similar numerical proportions in the cases of other large areas, the discrepancy must be sought neither in Gätke himself nor in the physiography of his station, but in the geographical position of Heligoland with reference to *Zugstrassen*—as the Germans call the lines of ebb and flow of the bird-tides—and in the surrounding conditions which make this rock a way-station where feathered travellers stop for rest and refreshment. In calling this island literally a magnetic pole, or figuratively a Mecca, we refer to the wholly exceptional attraction it seems to have for birds *en route*, whether they be migrants in their regular courses or wanderers which have lost their way in the air.

For hardly any birds belong to Heligoland, except the ubiquitous sparrow; few seek to breed on the island, and fewer still to stay the year around. The breeders and residents together are wholly insignificant in comparison with the regular migrants, whether we count the species of the latter, or attempt to estimate the astounding multitudes of individuals by which they are represented. Then again, in the cases of such migrants, the numbers of land-birds which descend upon this sea-girt rock are out of all usual proportion to the waders and swimmers which we should expect, and which do in fact occur. Finally, the percentage of stragglers from far-distant lands which have actually visited the island is extraordinary; there is no record of any other place which compares with Heligoland in this respect. For example, sixteen distinctively North American species figure in the list—nine of them land birds, and nine of them also birds which have never been seen in England; and many other species, not less characteristic of Ethiopian and Oriental faunal areas than the sixteen are of the Nearctic region, also claim what Herr Gätke calls "honorary citizenship" of Heligoland. Such stragglers outnumber all the other species combined—200 to 197.

Consideration in detail of all such cases, and of all the rest that go to make up the "Four Hundred" of bird-society in this very select island, occupies about three-fourths of the book—p. 165 to the end. This "account of the birds observed in Heligoland" really goes back of the author's half-century, into the twenties; for his own observations are supplemented by still earlier ones of some of the fowlers and gunners with whom he has been so long associated. Bird-catching and bird-shooting have been for many years among the regular and profitable industries of the islanders, especially during the seasons of migration; they have occasioned legal enactments, and some curious customs, as that of the "first woodcock"; and some of the feathered prizes which have from time to time enriched the cabinet of the great ornithologist, were brought to him by others whose birdcraft was second only to his own unequalled acquirements. We cannot go into particulars here; we simply witness the fidelity with which the long record has been kept, and the precision with which it has been finally rendered, without a trace of flagging interest or failing powers which an octogenarian might be forgiven for betraying; and if the contemporary of a Blasius and a Naumann retains the nomenclature to which all the German ornithologists were accustomed in his youth, he is fortunate in a translator who supplies a modern terminology in rendering a faithful English version.

The interesting points to which we have thus called attention are of less consequence, as a contribution to science, than the treatise on flight and migration which occupies about one-fourth of this remarkable book. Under the exceptional circumstances already noted, Herr Gätke speaks with preëminent authority in all that relates to the facts in the case; and such experiences as his give an almost *ex-cathedra* character to his utterances—though that is exactly what his modesty never claims for the views he advances, as distinguished from his statements of fact. The subject has engaged the attention of uncounted writers; and the very excellence of Gätke's contribution to its elucidation certifies that he has not said the last word, for it reopens the whole question and will be sure to stimulate renewed discussion. The author considers: the course of migration generally in Heligoland; direction of the migration flight; altitude of the migration flight; velocity of the migration flight; meteorological conditions which influence migration; order of migration according to sex and age; exceptional migration phenomena; what guides birds during their migrations; and the cause of the migratory movement. We rise from the study of these chapters with two strong suspicions—first, that we knew nothing about migration before, and, second, that Herr Gätke knows entirely too much for our peace of mind and his own. Have such as Middendorf and Palmén and Marey written in vain? Are isepipteses, magnetic meridians, coast lines, food supply, breeding impulses, homing instincts, inherited memory, all of them idols, to be smashed by an arch-iconoclast who sticks to his facts and leaves us at the mercy of our fables? Instead of north and south movements in all cases, we are confronted with others due east and west. Instead of the millions we supposed we might reckon in the tidal waves of some birds, we are told of billions—of such incalculable myriads flying past one rock that all the destruction human agency could effect in all time would be imperceptible in the aggregate. Some fly at altitudes untold if not undreamed of before, with velocities that seem incredible—miles high in the air, across the Atlantic in nine hours from Newfoundland to Ireland; and among such are tender little land-birds we ordinarily see hopping about bushes. Barometric and hygrometric conditions influence migrations to such an extent that we begin to believe that what the Roman haruspices thought of birds as weather-prophets was short of the truth. Birds in the water alter their specific gravity to an unsuspected extent, in some unexplained way; birds in the air do as much; and some of their modes of flight, notably sailing and towering, are absolutely in defiance of much that has been alleged and believed. But Gätke insists upon his facts, gives our theories over to the winds, and has none of his own. For example, what guides birds during their migration? This is his answer (p. 142):

"Having thus examined the many various attempts made to explain the wonderful faculty possessed by migrants of discovering the right path of their migration, and shown how insufficient most of them are when confronted with actual facts, observed directly in nature, in the course of more than fifty years' investigations, and at a spot so favored as Heligoland, I cannot say that I feel encouraged to add further to the number of such attempts by others of my own."

This reminds us of the adage about fools and angels, and suggests the paraphrase, that some ornithologists rush in where a bird would fear to fly. We will hear a wise one again (p. 148):

"Both in regard to this question as to the

immediate departure of birds on their migrations, as well as in reference to that propounded in the previous chapter [just cited], we are confronted with a riddle which has hitherto defied every attempt at a solution, and which, indeed, we may hardly expect will ever be likely to receive a final explanation. Long and profound study has been devoted to the subject in many quarters, and has resulted in the enunciation of several very ingenious and plausible hypotheses. None of these, however, will stand their ground when the actual facts, which the life of birds in nature presents in such abundance, are marshalled against them. . . . In treating of the various momenta of the migratory flight, we have striven as much as possible to place before the reader only such facts as are beyond question or criticism, but no attempt has been made to furnish a solution of the wide problems which they involve. In thus abstaining from setting forth new theories I have been guided by the conviction, rendered firmer with increasing knowledge of the phenomena, that what at present has been ascertained in reference to the migration of birds furnishes us with no clue by the aid of which we are enabled to penetrate the depths of this wondrous mystery."

This is serious enough to make some authors we could name turn over in their graves and prick up their ears. It is distinctly a challenge to the present generation, some of whom have more or less reputation for sagacity to maintain.

We cannot close an already protracted review without noticing one important chapter, in a different field of research, concerning color-changes of plumage without moult. This is a phenomenon to which Schlegel called particular attention in 1852, with the result of exciting much discussion of his then novel views. It is better known now under Coues's name of aptosochromatism, but the subject is far from being exhausted. Gätke finds the processes more complicated than would appear at first sight, as there are various ways in which the change may be effected in different birds, in the same bird at different seasons, in different feathers of the same bird, and even in different parts of the same feather. The two factors, variable pigmentation and changes in the shape and texture of feathers with wear and tear of the plumage, are known to be mainly concerned; but the numerous details of these processes which may be observed in various cases offer an inviting field for further research. Aptosochromatism is not a subject of special difficulty, or one that requires exceptional training for its successful examination, but simply a matter of careful, patient, and protracted observation. It is one in which some bright young ornithologist might win enviable laurels if he would take time enough to study a sufficient amount of material, and avoid those hasty generalizations to which youth is prone.

It is not probable that Gätke's work will be widely known in this country, and interest in Heligoland is not sufficiently widespread to warrant the republication of the whole book. But the American Ornithologists' Union would do well to see if some arrangement could not be made to reprint for their own use the chapters on migration and color-changes.

VINCENT'S COMING CONTINENT.

Actual Africa, or, The Coming Continent: A Tour of Exploration. By Frank Vincent. With map and illustrations. D. Appleton & Co. 1895. 8vo, pp. xxiii, 541.

MR. FRANK VINCENT has closed his exceptional career as a traveller by the circumnavigation of Africa. During this journey of 65,000 miles, which lasted three years, he touched at nearly every important port on the continent, besides making several extensive trips into the interior. He seems to have travelled in a leisurely, comfortable way, as if neither time nor money were of any account, and we attribute his wonderful immunity from sickness—a sharp attack of Malagasy fever, ill omen for the French, he did not escape—in great part to his freedom from the worry arising from haste. The story of this journey is told in an unusually entertaining way, although it was without exciting incidents or adventures. Mr. Vincent's happy faculty of describing the little details of a traveller's life will enable most readers to realize unfamiliar scenes more vividly than would pages of elaborate description. He endeavors, also, to give some idea of the commercial and industrial resources of the places visited, together with historical information about them, as well as to picture the dress, dwellings, and customs of the people. Into the deeper questions of their race, religion, and capacity for development he does not enter, possibly from lack of space. As it is, the size of the volume will prove, we fear, a deterrent to the hasty reader of to-day. It would have been wiser, in our judgment, to divide it into three, giving a separate volume to the author's travels in North Africa and Egypt, in Madagascar and South Africa, and in Angola and the Congo Free State, respectively.

Mr. Vincent began his journey at Tangier in October, 1891, and passed through northern Morocco and Algeria to Tunis. As he did not leave the beaten track so fully and frequently described of late, there is nothing especially noteworthy in his account. Tripoli is more rarely visited, but this town presented no distinctive feature, except its closeness to the desert. "In twenty minutes after leaving the city we had reached the edge of the desert—a vast, smoothly undulating surface of fine sand and small stones. There was not even a weed in sight." Nor does the detailed description of the Nile trip by steamer to Wady Halfa call for comment. From Egypt our author went direct to Mauritius and Madagascar without touching at any of the Red Sea ports. This prevented his seeing the Italian colony of Eritrea, Abyssinia, or the British possessions in Somali-land, the only important and easily accessible parts of the continent, we may add, which he omitted to visit.

Madagascar was crossed from Tamatave on the east coast by way of the capital to Majunga on the Mozambique Channel. A graphic description is given of this journey, which was made by means of the national conveyance, the filanzana, a canvas chair swung between two poles and borne on the shoulders of four men. There seem to have been no difficulties beyond what the execrable paths (roads there were none) in the mountain region occasioned. The coast district was uninviting, malarious, and thinly inhabited, but the high land in the interior was more inviting. Little clusters of villages, with houses having "sharply pitched grass roofs, the ridge-poles being ornamented by pretty little pillars," were to be seen. Near Antananarivo were brown meadows, cultivated fields, threshing-floors, pits for fattening cattle, little roadside bazaars, numerous churches, streams bordered with great flat rice fields, or plains on which were large herds of sleek-looking cattle. One town through which Mr. Vincent passed was "surrounded by gardens of coffee, tea, manioc, bananas, sugar-cane, and peaches." The capital consists of 16,000 houses, mostly of stone and sun-dried bricks, built on streets or pathways, many of which are "little better than great rough gullies." The most interesting spectacle was the great Friday market held in a large open space on the side of a hill, where were innumerable rows of little grass-thatched booths, containing English and American cotton goods, articles of native manufacture, and great quantities of fruit. In one corner was the slave-market, where about fifty slaves, "of both sexes and all ages, were squatting in a long row against a wall, and would-be purchasers simply stood looking at them and asking them questions: there was no physical examination, no tests applied." They seemed happy and contented, and were apparently well treated by their owners. Mr. Vincent did not see the Queen, but he had an interview with her husband, the Prime Minister, whom he describes as a slight man "with a fine head, a high, broad, and prominent brow, and bright, piercing eyes"; quiet and dignified in manner. In their short conversation he referred to the fact "that the United States had always been friendly to Madagascar, a feeling which he cordially reciprocated and hoped might always endure."

The fortified posts on the route which the French expedition has taken, and over which Mr. Vincent passed to the coast, were at that time (September, 1892) "in a sadly dilapidated condition and the moats full of trees." A battalion of soldiers which he met were armed with modern rifles, but "they wore no distinctive uniform, and most of them used their rifles to carry their kit at one end and their ammunition at the other." Shortly before reaching the coast, Mr. Vincent visited a gold-mine worked by a Frenchman who pays fifty-five per cent. of the gold to the Government, which in return provides the laborers. "A Hova official will go to a village, impress every man, woman, and child there, and send them away to work at the mines." This forced labor is greatly dreaded by the natives, who have generally deserted this part of the country for the desolate mountain region, where many of them lead the life of banditti. Criminals also are compelled to labor in the mines and in chains. Formerly three or four thousand workmen were employed, but at the time of Mr. Vincent's visit there were only eight hundred, owing to the difficulty of obtaining men. The product of the mines is not stated, though the gold is said to be "nearly the purest in the world." The port Majunga, formerly important on account of the slave-trade, had lost most of its inhabitants and was quite dead commercially.

At Zanzibar Mr. Vincent is again on very familiar ground, and his trip from that place down the coast, touching at the various ports, is without special interest. Nor is it necessary to dwell upon his account of Johannesburg and Kimberley, through which he passed on his way from Durban to Cape Town. In order to reach the Portuguese possessions on the west coast he was obliged to go to Madeira, this being "the only part (save that between Tripoli and Alexandria) of the whole 16,000 miles of African sea-coast not served by several lines and nationalities of steamers." This *détour* enables him to devote two chapters to a description of Funchal, the Canary Islands, and a mid-winter ascent of the peak of Teneriffe. Following these is the account of an excursion of some five hundred miles into the interior of the province of Angola, during which he visited some extensive coffee and sugar-plantations. The Portuguese are displaying considerable energy in developing the rich natural resources of this region, but they are hampered, not so much by lack of means, as they assert, but by the fact

that one of the principal industries, if not the chief, is distilling. As no restriction is laid on the sale of liquor to the natives, it is not surprising to read that in Benguela (and the same was apparently true of all the other towns), Mr. Vincent was struck with "the frequency of the native rum-shops and their great number of noisy patrons."

The most interesting as well as the most valuable part of Mr. Vincent's book is the chapters devoted to the Congo Free State. These give ample testimony to the work which the Belgians have accomplished in the ten years of its existence. At Kinchassa, for instance, the principal post of the Belgian Commercial Company, on Stanley Pool, "a large square was nearly covered with bundles of rubber, and a peep into a warehouse disclosed a great pile of tusks of ivory. Gangs of blacks, superintended by whites, were carrying boxes and bales of goods and provisions down to some steamers about to depart up the river. Here was a busy scene of men at work on the steamers, and in the shops, from which came the noise of forges, of hammers and saws, like that of great shipyards at home." Here the traveller can take passage on one of the fleet of forty-two steamers on the upper river for Stanley Falls or for Lusambo on the Sankuru, 1,500 miles from the Atlantic. Mr. Vincent chose the latter, his ticket for the round trip costing him 300 francs. This does not include food or a cabin, which are 20 francs a day additional. This voyage up the river gave him an admirable opportunity of observing how civilization is being carried into the heart of the continent. His account impresses us with the immensity of the country and its comparative solitude. There were apparently days when no villages were to be seen. In other places, especially on a river which was ascended on this voyage for the first time, "villages followed one another in quick succession, and there were immense tracts covered almost wholly with oil-palms." Elephants too were numerous on this river, four being killed from the deck of the steamboat. Notwithstanding the number of stations scattered throughout the state—and there are apparently more than a hundred, not including the missionary stations, of which there are thirty, manned by upwards of one hundred missionaries—there are no evidences of colonization or a permanent settlement. These stations are mere factories for barter with the natives, and the reader cannot at times repress the thought that there is something unsubstantial about it, and that the fabric which has been so suddenly raised might vanish away as speedily. There can be little doubt, from the latest accounts, that too much has been attempted, and that the resources of the state are well-nigh exhausted, while the returns from the trade in rubber and ivory and the other products of the Congo Basin are still comparatively insignificant.

The closing chapters of this entertaining book are upon the Cameroons, the Niger Territory, and the Guinea Coast. They are chiefly concerned with historical and statistical information about the various colonies. In the statement that Cape Juby "now belongs to France" the author is in error. It was the site of an English factory which was transferred to Morocco by treaty last winter. The illustrations, taken from photographs, are admirable, and add much to the value of the book. There is a useful map and an excellent index.

The Life and Writings of Turgot. Edited for English readers by W. Walker Stephens. Longmans, Green & Co. 1895.

Mr. Rae justified his 'Life of Adam Smith,' which we recently reviewed, by the plea that it was a hundred years since Dugald Stewart's eulogy of that philosopher had appeared; and Mr. Stephens reminds us that the only Life of Turgot in English is the translation of Condorcet's work, published in London in 1787 and now extremely rare. But it is unnecessary to offer any apology in either case. The times in which we live afford a sufficient justification. From our point of view no more wholesome work can be done than to diffuse information concerning these older economists as widely as possible. The benevolent impulses are strong in this generation, and philanthropy is fast drawing to its support all the sanctions of religion. The improvement of the general condition of mankind, however, is an enterprise of such comprehensive character as to require thorough training on the part of those who would engage in it, and the lives of two of the greatest benefactors of the race are the best of lessons for the social reformer. Very many, perhaps most, of those who are engaged in philanthropical work, exhibit a marked disposition to call upon Government to interfere in the dealings of its subjects, and to regulate by the strong arm of the law the terms of their contracts and the conditions of their lives. It would be ungracious, if not unreasonable, to question the sincerity of people who devote their time and their money to the elevation of their fellow-creatures; but it is neither ungracious nor unreasonable to ask them to obtain all the light that experience can afford before they invoke the power of the law to enforce their ideals.

Although Adam Smith had a keen eye for practical matters, and possessed a remarkable acquaintance with the details of the arts, he was not properly a "man of affairs." He lived for many years in retirement, and his influence was mainly posthumous. Turgot was also of a modest and retiring disposition, but he was, during most of his life, intensely active as a judge and a ruler over men. He was thoroughly educated, according to the standards of the day, at the Sorbonne, and had such family influence as would have secured his advancement in the church. But, although poor, he decided that he could best serve his fellowmen by engaging directly in the administration of Government. His clerical friends and comrades protested at such disregard of his own interests, and pointed out that he could have his choice of excellent abbeys and was sure in good time to obtain a rich bishopric. But he declared it impossible for him to give himself up, all his life, "to wearing a mask," and took a comparatively humble position as a magistrate.

The spirit in which he discharged the duties of his position for nearly ten years is shown by a single anecdote. It fell to him to decide upon the case of a subordinate revenue officer, accused of some malversation; and as there seemed little doubt of the man's guilt, while the penalty provided by the law was excessively severe, Turgot, in the goodness of his heart, postponed action as long as possible. But when he took up the case, he found that the charge was baseless, and, having ascertained the amount of income lost by the accused pending the process, he made it up to him out of his own pocket, explaining that it was done as an act not of generosity but of justice. We should be glad to believe that our judges are similarly conscientious concerning the losses suffered by poor litigants from legal delays; but such anecdotes are not prominent in the annals of the bar.

As De Tocqueville points out, the Government of France was, before the Revolution, in the hands of "thirty tyrants," the intendants of the provinces. It had been the ambition of Turgot to administer one of these offices, and at the age of thirty-four he was appointed to the intendancy of Limoges. Owing to the poverty of the soil, the oppression of Government, and the ignorance of the peasantry, Limousin was perhaps the poorest province of France. The inhabitants barely escaped starvation in good years, living for six months upon chestnuts and the rest of the year on black bread; and the frequent failures of the crops were invariably followed by famine. After thirteen years of the most arduous labor, marked not less by kindliness than by sagacity, Turgot left the province with the finest roads in France, with free trade in grain, with an infinitely improved administration, and with such enlarged industries as promised to avert famine for the future. He had abolished the *corvées* for the highways and for military transportation; he had organized charities; he had established bureaus of employment, of relief, bakeries, eating-houses, and sewing-schools. He had reformed the system of conscription and put a stop to the practice of billeting the soldiery upon the people. He had introduced the culture of clover, lucern, and sainfoin, and, most important of all, the potato. He had disseminated the principles of veterinary science, and had even improved the practice of midwifery.

As to the manner in which all this was accomplished, Mr. Stephens is not so explicit as we could have wished. That Turgot's methods were despotic is only saying that he exercised the customary powers of intendants; but that his motives were pure is shown by all his acts. He might have secured other intendancies where the emoluments were far greater and the difficulties much less; but he preferred to devote himself to the poor peasantry whose rescue he had undertaken, rather than to let them fall back into the misery from which he was raising them.

The achievements of Turgot as Comptroller-General of Finances belong, as Mr. Morley says, "to the general history of France." For that reason it is unnecessary to dwell upon them. The whole country was steeped in aristocratic and religious prejudice, and the network of privilege was almost inconceivably minute in its ramifications. What would be thought at the present day of a minister that should propose to have ships of war built in a foreign country, because they could be built there for three-fifths of their cost at home? Yet this is but one example of the audacious reforms proposed and actually instituted by Turgot. Of course he had the whole world against him. He failed, and the Revolution was the consequence; but all the beneficial results of the Revolution would have been secured by following his plans, and most of its mischievous consequences would have been averted. It pleased the gods to have it otherwise, but the policy of Turgot stands justified by the event. It may be summed up in one word—Freedom. The abolition of exemptions and privileges, the suppression of monopolies and sinecure offices, the revocation of all laws restraining free trade, free intercourse, and free labor, the reduction of governmental expenditures—these were the great aims of this statesman, of whom it might truly be said that he was "one of Plutarch's men." And, if

we may venture a somewhat abrupt descent, our modern reformers may be pleased to learn that he arranged that his domestic servants should be lodged as comfortably as himself.

We cannot say that Mr. Stephens has been fortunate in his selections from Turgot's writings. Compositions upon the advances of the human mind and sketches of universal history are seldom profitable reading even when the work of brilliant young men. We could have spared these, if we could have had fuller particulars of Turgot's methods of administration. But we are grateful to Mr. Stephens for what he has given us, and we commend to all philanthropists the Life of the statesman of whom Mr. Morley says: "It was no small proof of originality and enlightenment to precede Adam Smith by ten years in the doctrines of free trade, of free industry, of loans on interest, of the constitutive elements of price, of the effects of the division of labor, and of the processes of the formation of capital."

The Principles of the Critical Philosophy: Introduction to the Theory of Science and Metaphysics. By Dr. A. Riehl, Professor of Philosophy in the University of Freiburg i. B. Translated by Dr. Arthur Fairbanks, Lecturer on the Philosophy of Religion in the Divinity School of Yale University. London: Kegan Paul, Trench, Trübner & Co.; New York: Charles Scribner's Sons.

THERE are occasions on which a translator justly feels himself bound to literalness—to go abroad in the coat and trousers his original provides him with, whether they fit him or not. He may be supposed to heave a sigh of relief when, as in the case of the present addition to the "English and Foreign Philosophical Library," no such occasion exists. Dr. Fairbanks has felt justified, even at the expense of a certain gentle violence, in aiming at a "fit," and has achieved it. The book is rather better English than the writings at first hand of most of the Kantians of Great Britain and America.

About the propriety of translating it there can hardly be a question. It forms the third section of Riehl's well-known 'Der Philosophische Kriticismus und seine Bedeutung für die positive Wissenschaft,' and presents chapters on the Problem of Philosophy, the Limits and Presuppositions of Knowledge, the Origin and Concept of Experience, Darwinism and Transcendental Philosophy, Reality of the External World and Idealistic Theories, the Relation of Psychic Phenomena to Material Processes, Cosmological Problem of the Infinite, Necessity and Adaptation. These are discussed from the general point of view of post-Kantianism (the word is sufficiently vague!), and with the finished competence that one has learned to expect from academic Germany. It should be added that "certain minor changes and corrections" which will appear in the second edition (now preparing) of the original work, are here offered to the English-speaking public in advance.

The point at which Prof. Riehl lays his fingers most firmly on the unexpected—breaks most resolutely with his traditions—is the freedom of the will. He calls the attention of the reader to it in his preface. Determinists have always had to meet the objection that if the will is not free, responsibility is an illusion and an outrage—that if, for example, one couldn't help murdering, it is abominable to hang him for it. They have always replied that the abomination is with their opponents. If the will, they have said, is determinable by motives, holding one responsible for a line of conduct, punishing one in case of failure, is educatory, is one of the most intelligent and necessary devices known to society for accomplishing its ends, and stands as little in need of justification as the existence of a government and the assessment of taxes. But if the will is not determinable by motives, holding one responsible can accomplish no worthy end. If a man's conduct is not ruled by fixed motives—by his character—the fact that he murdered to-day is no evidence that he will murder again to-morrow; and the knowledge that he will be punished if he murders, can in no wise hinder him from doing so. Punishment, responsibility, on the hypothesis of indeterminism, becomes a matter of vindictiveness simply, of systematic malice and revenge. But Prof. Riehl goes a step further. He holds that responsibility is not only reasonable and fair on the deterministic theory, but that it is not even intelligible on any other, for on the doctrine of free will to whom can you trace the action? Whom can you hold responsible as the cause of it?

"The character of the actor? That cannot be the cause of the action if the will is really to be free, free in the sense of indeterminism. The circumstances of the external world? They belong to the external world, and are governed by its laws. Perhaps the motive, *i. e.*, the mode in which those circumstances affect the actor? But this mode itself evidently presupposes a predetermined character of the actor, because it betrays the essential constitution of this character even more immediately than the action itself. A free being can have no predetermined, no definite character, for the most essential mark of character is persistence; but a free being can change his character constantly, and without reason. If I attempted to make such a being guilty of an evil action, and give him credit for a good one, he might meantime become a different being."

The point to which the translator calls attention as especially instructive to English readers (he mentions others besides)—Prof. Riehl's theory of the immediate perception of an external world—is not, we think, so well chosen. Inferior as the English philosophers not uncommonly were in a knowledge of the literature of their subject, against the points they attacked they brought a battery of logic—a dialectic scrupulosity and fight-to-the-finish—that one looks for in vain even in the best German things. To go, on any question of ethics or of the Perception of an External World, from the British Isles to Germany is like retreating from a deadly cut-and-thrust to martial evolutions and salutes at long range. "The facts of consciousness," says Prof. Riehl (p. 153), "cannot be understood by themselves; it is necessary to assume a reality on which consciousness is dependent. We know consciousness only as a phenomenon of life connected with an organism." It is a remark that lost its point a hundred and fifty years ago. He speaks of perceiving the external object just as it is. Hylas was enticed one peaceful morning shortly after sunrise into that specious position, and was driven from it in inextricable contradiction and confusion. Prof. Riehl's whole message on the subject is that the ego and the non-ego are given in the same pulse of consciousness—that we cannot know our own existence except as distinguished from a not-ourself. But the whole question is, whether they exist apart from consciousness and independently of it? Yes. Prof. Riehl says (p. 136): "What does not exist cannot enter into relation with anything, and what enters into a relation must have an independent existence. The relative existence of things as objects of consciousness presupposes absolute existence (existence independent of this relation)." But this would imply that a pain, or an emotion, or an illusion, or a fiction, or a hypothetical construction, or a "mistake" must have an existence independent of consciousness. The things related in consciousness must of course be real, but the very claim of idealists (done scant justice to by their opponents) is that mental states are the only realities.

Much more important for English thought (Dr. Fairbanks mentions it also) are Riehl's remarks on the social aspect of morality and experience. The original impulse of English speculation carried it to the doctrine of a multitude of separate individuals, "streams of thought," distinct universes, what you will—so many individuals, so many standards of truth, and goodness, and beauty. The debt it is to owe to Germany seems likely to be the perception that what is commonly called truth, virtue, and so on involves something more than this—a social convention. When the deliverances of the different individuals, the different standards, disagree (Prof. Riehl greatly exaggerates their consistency, and ridicules it as a preëstablished harmony of monads), the decision is left to a majority vote, and the minority if not large is apt to be confined in an asylum as lunatic, or in a workhouse as criminal, or in an æsthetic pillory as decadent or symbolist.

Selected Essays of James Darmesteter. The translations from the French by Helen B. Jastrow. Edited with an Introductory Memoir by Morris Jastrow, Jr., Professor in the University of Pennsylvania. Boston: Houghton, Mifflin & Co. 1895.

THIS volume was projected before the death of Prof. Darmesteter. It is doubly precious now, laid as a wreath upon his grave. Some of the articles it contains were written by Prof. Darmesteter in English, of which he had an easy mastery. That we pass from these to the translations without any sense of difference is all the praise that the translations need. The introductory Memoir is extremely brief. James was a younger brother of Arsène Darmesteter, also a distinguished scholar. The father was a poor Jewish bookbinder in Lorraine, who took his family to Paris in 1852, when James was three years old. Reared in the orthodox tradition, he departed from it widely in his maturity, but his early knowledge of the Hebrew Bible and the Talmud did much to fix the direction of his studies, nor did he ever escape the bias of his blood and early state. Only a Jew could write the studies we have here of Jewish prophecy and Jewish history, so enthusiastic, while so indifferent to the traditional dogma and cult. But it was in an Aryan, not a Semitic, field that he did his most monumental work—a translation, with commentary, of the Zend-Avesta, to which the French Academy gave a prize of 20,000 francs. The central conception of the Avesta, as of late origin and gradual growth, harmonizes well with the results of Kuenen and Wellhausen and others in Old Testament studies.

A great admirer of Renan, it was for James Darmesteter, as for his master, a necessity to put his thought into beautiful and effective literary form. But Renan was never allowed to guide his pen; the style is all his own. He was no intellectual recluse, but had his lighter studies—wrote poetry and admired that of Miss Mary Robinson, translating it in 1888, whence a lofty friendship, bearing the fruit of love and marriage in due time. He was a

Frenchman in all his personal tendencies and traits, and nothing of importance to the French people could be foreign to him. The photogravure likeness is that of a man already very ill. We should say that it was deeply marked with the characteristics of the Jewish race had not his essay "Race and Tradition" just been read.

The purpose of that essay is to minimize race and maximize tradition as a factor in history and civilization. Race, we are told, is one of the most palpable fictions of the popular mind. The Aryan race is merely a group of different races using varieties of a common speech. In the religious battles of these races with the Semites, *Hamlet* and *Laertes* are continually changing swords. To say the Aryan is a monotheist and the Semite is a polytheist is quite as true as the converse proposition. The application of this doctrine to Judaism is full of interest, as the following sentences will show:

"The permanence of the Jewish type, or, to speak more exactly, of the Jewish types—for there are several—is a secondary, not a primary fact. . . . It was the Ghetto that detached and fixed the Jewish types. It is the Ghetto that produced that unity of habits and customs which we are wont to regard as the result of race, and which in reality is the mark of a religious minority concentrated and thrown back upon its own resources. . . . Judaism is born in a Semitic medium, but it is the most absolute reaction imaginable against the religion, the manners, the tradition that prevailed in that medium."

Hence the absurdity and wickedness of representing the quarrel with the Jew in Russia and Germany as a battle of the races, Aryan against Semite. When we are told that all the civilized nations have removed the disabilities of the Jew, and Russia and Germany are not included in the enumeration, the implication is too evident to be escaped. "A nationality is all the more solid the more elements there are mixed in it." England and France are good examples. It is the misfortune of Germany that she preserves the element of race so well. The doctrine ought to be encouraging to America.

In the introductory essay, "The Religions of the Future," the treatment is too brief to be entirely satisfactory. It calls upon the Church, the Roman Catholic Church, to ally itself with prophecy and science, the two great forces that must recreate religion and assume again the direction of human society. But when we are told that the necessary revolution could be accomplished "without changing a dogma, a rite, a priestly gesture," we do not seem to understand. For there is elsewhere the assertion that, once organized in dogma and ritual, a religion tends inevitably to become fixed and hardened, and to oppose itself to science and the ever-changing conscience of mankind. A much more elaborate essay is "The Prophets of Israel." It is to some extent a review of Renan's 'Histoire du Peuple d'Israël,' which it warmly commends, without entirely reflecting its spirit. It is much more sympathetic, Prof. Darmesteter having a capacity for moral enthusiasm which was strange to Renan's breast. But the sympathy is not complete. Often as we read we are in danger of forgetting this, so ardent is the tone. But what makes the glow is not the prophetic theology, but the ever-greatening moral ideal of the prophets and their devotion thereunto. They called it by the name of God, and so does Prof. Darmesteter, but they imagined that their ideal was a divine reality, that they were *discovering* God and not *inventing* him. "Their Jehovah was, after all, only the dominant conscience of certain men deified, the human conscience projected heavenward." One can easily imagine that if Isaiah and Jeremiah had heard that "the unity of law throughout the world and the terrestrial triumph of justice" was the substance of their teaching, they would have "looked at each other with a wild surmise."

"Afghan Life in Afghan Songs" is an article of very great interest, the songs all being popular and the translations full of "birr and smeddum." Those exhibiting the Afghan sense of honor are particularly good. The characterization of Renan is reprinted from the pages of the *New World*, for which it was prepared. It is not only very generous in its appreciation of Renan's intellectual part, but it takes up the cudgels manfully for his moral earnestness. "Morality was to him the only thing absolutely certain." Can it be possible that Prof. Darmesteter had not read some of Renan's lighter lucubrations?

"The History of the Jews" is remarkable for its scope and condensation. Beginning with the earliest hints imbedded in the Old Testament, it traces the course of Jewish thought and life down to the present time. Hardly could an orthodox rabbi have written with more ardor and affection, but the same things would not have stirred his heart. The claim is made, perhaps justly, that no other history has ever touched life at so many points. The shame of the Old Testament for many—its silence concerning another life—is for him its joy and crown; or rather its hope of righteousness and justice on the earth is these. Here is a characterization of Christianity which, to say the least, is perfectly frank and far from being trite:

"—a mixed religion, a compromise between the past and the future, which conquered the world, bringing to it an abundance of good and much of evil—an abundance of good because it raised the moral standard of humanity; much of evil, because it arrested its intellectual growth by rejuvenating the mythical spirit, and by fixing for centuries the metaphysical ideal of Europe in accordance with the dreams of Alexandrine decadence, and with the last combinations of Hellenism in its dotage, . . . a new branch of the old Aryo-Semitic mythology."

It is an interesting suggestion that the substance of Judaism is not implicated in its miraculous elements to the same extent as those of Christianity, or, indeed, at all. But while we are assured that this religion never has entered into conflict with science or social progress, nor without violence can be made to do so, it is warned that it must not assume the rôle of a universal religion. Only by dying as a positive religion will it best serve the widest human need. "Hellenism, abolished, counts less sceptics to-day than in the days of Socrates and Anaxagoras." A book which contains scores of sentences like this—packed with significance and food for thought—is one for which to be profoundly glad, and one to pass along, whether we agree with all of it or only with a part.

L'Oeuvre de P. V. Galland. Par Henry Havard, Inspecteur-Général des Beaux-Arts. Paris: Quantin. 1895. 4to, pp. 224.

THIS book, which bears the additional and preliminary title, 'La Peinture Décorative au XIX^e^ Siècle,' is very handsomely printed on unusually heavy paper, with many full-page illustrations which are counted in the pagination, and very many other illustrations in the text. It is, therefore, a small book made large, and its thickness is increased by thirteen mezzotint engravings which are not paged and which have their own table. It tells the story of a very able decorative artist who lived, mainly in Paris and its neighborhood, for the seventy years ending in 1892; one who was little known to the public, because he rarely exhibited in the Salon or elsewhere, but whose paintings on the walls and ceilings of important buildings are known, as their painter is known, most favorably in the world of fine art. The details of the life and work which had earned this most enviable reputation were little understood before the appearance of the present very complete biographical treatise. It appears that, for many years, M. Galland, or his wife for him, kept a journal, in which are noted many very intimate opinions, many facts concerning his employment as artist which throw a great light upon other persons than himself and other achievements than his own, and many expressions of the artist's judgment of his own and other men's work and of fine art in general—all of singular value.

There might be included in the category of such critical remarks the numerous instances here given of Galland's habit of noting down his observations of nature and of man. Thus, in one place he notes (page 105) that children less than ten years old are not apt to look each other or any one in the face "unless," as he says, "they are badly brought up." He had seen a man talking with two children on the steps of the Church of St. Louis d'Antin, and he had observed that the children, even while answering his questions, "se dandinaient, se balançaient, et parfois faisaient la cabriole autour de la rampe du perron." A little farther on he notes under what circumstances grown persons look one another in the eye. At another time he notes the way in which the sleeves of a flannel shirt retain their folds and creases, and the importance of allowing for this tendency in textile fabrics whenever one has a study of drapery to make. "If one dared criticise the beautiful draperies of Poussin," he says in continuation, "one would say that his manner of draping reminds one of the lay figure. The sleeves of Leonardo da Vinci, on the contrary, are perfect in this respect." An admirable decorative composition is shown in a plate opposite page 56, and the journal explains (page 65) how it originated. Galland was talking to Gérardy, he says, while he was working on a piece of theatrical scenery, and as he talked he made this study in the middle of his large canvas. Gérardy cut it out and replaced it by a fresh piece of canvas, and the journal goes on to state what he, the artist, saw as possible and as it were latent in his composition.

Galland was the son of a goldsmith who brought him from Geneva to Paris and introduced him, about 1837, to Ciceri, then fifty-five years old and at the height of his celebrity. Upon his rejection by Ciceri, concerning which a series of amusing anecdotes are given, he became a student of architecture under Henri Labrouste and later a student of painting under Michel Drolling, pursuing both courses of study at the same time. When he was twenty years old, a portrait by him was hung in the Salon of 1842, and, having attained this success, he gained what he had sought, a place in Ciceri's atelier. There he worked until 1848, the time of revolution and tumult and the breaking up of industries. The pupils and the assistants of Ciceri found their legitimate occupations gone, and amused themselves by various escapades, of which an electoral squib painted by them on all the walls of Paris will serve as an example. It offered, as a candi-

date for the Constituent Assembly, a fellow-pupil named Turbry, stated to be very advanced in his views and very moderate in his ability, and it said: "Let us elect Turbry; poor and devoid of talent, he well represents the majority of Frenchmen and the majority of artists."

Galland's first independent work was the decoration of a large private palace at Constantinople. Returning to France about 1853, he undertook wall paintings in the official residence of the Minister of Finance, and a ceiling and other works in the palace of St. Cloud. These were all destroyed during the war and insurrection of 1871, and a few paintings in the Church of St. Eustache remain as the only public works left from among those executed by Galland under the Second Empire. Some struggles with the authorities of the Gobelin works are described in chapter 5, and form an amusing contrast with his later mastership in the same famous establishment. He had to provide designs for half-length portraits of the Emperor and Empress surrounded by borders of flowers, and the journal notices curious experiments in decoration as distinguished from such painting as (for instance) that of easel pictures. He doubts whether it may not be better to paint his flowers after drawings rather than directly from nature. Poorly as the Imperial Government acquitted itself with regard to Galland, the Paris of the Imperial epoch was friendly enough. We are told of important decorative painting for Mr. Garfunkel in 1856, for Mr. Lebœuf in 1858, for Mr. De Presles in 1859, for Mr. d'Erlanger in 1863, for Mr. Cail in the same year, for the Hôtel Parent in 1864, for the Hôtel Agnado in the same year, and also for the residence of Mr. Scherer at Lille, for that of Mr. Grandval at Marseilles, and for the Baron de Rothschild in London. Many photographic reproductions are given of ceilings, panels, and separate details drawn from these important works. Chapters 6 and 7 are devoted to them and to several others which we have not named, one of them a ceiling for Mr. Herter of New York.

Still, the important part of Mr. Galland's career was to come with the present republic. It was under the republic that the well-known picture in the Panthéon was painted, the "St. Denis Preaching," in which the misery of life, the wretchedness of the deformed, the feeble, and the infirm are combined into a vast composition full of religious hope. The cupola which covers the great rotunda of the Sorbonne was also of these later times. The long row of cupolas in the Hôtel de Ville, with their admirable compositions in which the active labor of men and women in the daily toils of life are conventionalized as if by mediæval artists, but with the knowledge and science of the nineteenth century, were perhaps not even completed when the artist died. At the same time private commissions poured in upon him, and he produced among other decorative paintings those for Prince Narishkin at St. Petersburg, of which charming specimens, reminding one of Paul Veronese, are here given in photographic reproductions, and those of the Vanderbilt house in New York. Space does not allow us to speak of Galland's work at the Gobelins, or to comment even briefly upon the hard work and the many disappointments which he met with at the École des Beaux-Arts. The value of this book to architects and to decorative artists is in the lively and brilliant picture it gives of the labors of an accomplished and most skilful and dexterous workman in their own line; and, in the second place, in the true portrait of artist life in Paris—its good side and its side that is not so good.

A History of Newfoundland, from the English, Colonial, and Foreign Records. By D. W. Prowse. With a prefatory note by Edmund Gosse. Illustrated. Macmillan. 1895.

Judge Prowse has been somewhat slow in publishing his 'History of Newfoundland,' but its appearance at the present moment is so opportune that one cannot complain of the delay. Misfortunes are always interesting, and few countries whose annals are limited to four hundred years can show a longer, more diversified list of misfortunes than this oldest colony of the British Crown. The feuds of fishermen and settlers, incursions of the French and raids of Sallee rovers, famine, fire, and scurvy were among the island's calamities in former generations. Recent events at St. John's are fresh in the memory of every one. The climax was reached with the political chaos of 1894 and the financial crash of last winter. Newfoundland now stands at the parting of the ways. Its situation has two sides—the one economic and local, the other political and international. Never have the affairs of the island been so critical for its inhabitants, or so well worth the attention of strangers. It is fortunate that we should have an admirable survey of its history just when one is most needed.

The materials upon which Judge Prowse has based his work are more ample than those which have been at the disposal of any other historian. In his quest he has gone far beyond the limit of printed books. The British Museum, the Record Office, the library at Hatfield, have all been ransacked for documents:

"The history of the colony . . . lies buried under great rubbish-heaps of unprinted records, English, municipal, colonial, and foreign, in rare pamphlets, old Blue Books, forgotten manuscripts, old English newspapers and magazines, and in the political tracts of the eighteenth century. The accounts of the defence of St. John's against D'Iberville, and the gallant fight of Captain Holman are from affidavits made before Devonshire justices, the latter to get tardy payment from the Crown for the powder expended in defending the colony."

These fresh sources have been used with much judgment and self-control. Judge Prowse is careful not to submerge his reader beneath a tide of ill-digested facts. Each chapter is followed by an appendix of citations from unpublished records, and the text, thus relieved of paraphrase and synopsis, rises above the flats of learned dulness. One would not suppose, *à priori*, that the catching of cod could be invested with a glamour of romance; but such is the case. What the herring was to townsmen of the Hanseatic League, that, and more, the cod has been to the fishing villages of western England. Yorkshire in the sixteenth century probably made more money from its wool than Devon made from the Great Bank; but the sea transmutes everything which comes from or sails upon it. No one was ever stirred by thought of the sheep-walks of Fountains and Melsa, but each cruise of a Bideford smack was an heroic adventure. Along with flakes, and curing-houses, and train oil, we hear of Biscayan and Spanish and Portuguese fleets, of gentlemen adventurers like Sir Humphrey Gilbert and Lord Baltimore, of sack, and sherry, and calabogus. Newfoundland went without a parson till 1697; but every spring brought its fishing Admiral, who was expected to maintain order in the fleet and administer such justice as the colonists required. Judge Prowse has drawn a picture of this important official—

"clothed, not in the dignity of office, not in flowing judicial robes, not in the simple and sober black of the police magistrate, but in his ordinary blue flushing jacket and trousers, economically besmeared with pitch, tar, and fish slime, his head adorned with an old seal-skin cap robbed from an Indian or bartered for a glass of rum and a stick of tobacco. The sacred temple of law and equity was a fish-store, the judicial seat an inverted butter-firkin. Justice was freely dispensed to the suitor who paid the most for it. In the absence of a higher bribe, his Worship's decision was often favorably affected by the judicious presentation of a few New England apples."

We are bound to take part with the colonists whom this despot harried and abused; but it must be confessed that Newfoundland's history loses much warmth of color when it passes into the constitutional phase.

Judge Prowse's narrative, from the landing of Cabot to the Peace of Utrecht, is so intimately connected with Devon that it might serve as a supplement to Westcote or Polwhele. Two centuries after its discovery the island had less than two thousand inhabitants. The period 1713–1825 is marked by more serious colonization. It was in the latter year that the first resident Governor, Sir Thomas Cochrane, was appointed. The population had then risen to fifty-five thousand. With the grant of a legislature in 1832, Newfoundland enters upon its autonomous career, and its history becomes hard for a local historian to write. Judge Prowse is on his guard against party bias, but not always on his guard against patriotism. The lenience of some of his contemporary judgments will need revision in the dry light of future scrutiny.

The subjects upon which Judge Prowse speaks with most feeling and vigor are the French possession of St. Pierre and Miquelon, and French treaty rights on the Newfoundland coast. Every concession made to the French since their surrender of Placentia has been a source of annoyance to the colonists, who claim that the mother country yielded their rights. The Imperial Government disliked the Bait Act, Newfoundland's great protective measure, and ratified it with reluctance. In the spring of 1888, Sir R. Thorburn proceeded to put the law into force, and placed Judge Prowse at the head of a fleet. It was while acting as "Bombarde Admiral" that he decided to write the present volume. The chapters on "St. Pierre and Miquelon" and the "French Fishery Question" are among his best. They are strong and a little *ex parte* in tone, but not unfair. The disgrace of St. Pierre is wholesale smuggling, and so long as the French Government excludes an English Consul, it must bear the brunt of any imputations which are cast upon it.

As in the case of most large works, a few slips occur. Surely Pope's line on Bacon does not run, "the *greatest*, wisest, meanest of mankind," nor was Mirabeau the orator who exclaimed, "Il nous faut de l'auduce, et encore de l'audace, et toujours de l'audace." Algernon Sidney is confused, p. 93, with Sir Philip Sidney. The former, born in 1622, could not have been concerned in any of the schemes which led up to the founding of Guy's Colony. Again, love of his subject sometimes betrays Judge Prowse into exaggeration. Can it be said, for instance, that the destruction of the Spanish fishing fleet in 1585—called "the most daring blow" of the years 1584–'88—was a more daring blow than the "singeing of the King of Spain's beard"? These, however, are small points, not to be dwelt upon when we

have so much to praise. Judge Prowse merits the thanks not only of Devon and of Newfoundland, but of all who care for American history in its wider sense. He throws light on much which has been imperfectly treated, and discloses much which has not been treated at all. His work will be the standard history of Newfoundland for a long time to come.

M. Tulli Ciceronis pro T. Annio Milone ad Judices Oratio. Edited, with Introduction and Commentary, by Albert C. Clark, M.A. Oxford: Clarendon Press; New York: Macmillan. 1895. Pp. lxiv, 145.

THIS elaborate edition of a well-known oration is unusually varied in its contents. There is a fresh recension of the text, with critical and exegetical notes; an historical introduction, a rhetorical analysis, and a most minute account of the diplomatic material, prepared obviously for the disciples of the inmost chamber—exhaustive at once of the subject and the reader. There is also an interesting account of our sources of illustrative information; and we have the commentary of Asconius, and scholia from Bobbio appended entire to the oration.

It is not easy to determine exactly for what readers this edition is mainly intended. The editor seems to disclaim writing a school-book, and certainly much of his matter will suit only advanced students. Yet some of his notes are hardly above the elementary, and appear obtrusive in a special edition. One example will suffice. Cicero speaks of Clodius ironically as *mansuetum;* whereon Mr. Clark annotates: "= χειροήθη, of a domestic pet: cf. Aen. vii., 470 Ille *manum* patiens, mensæque *assuetus* herili." As a piece of derivation, *quid hoc ad Clodium?* As an interpretation of Cicero's meaning, it is forced and improbable. The style of the introduction and of many notes is not to be commended. It belongs to the would-be smart and vivacious dialect by which so many English commentators seek to impart an unnatural realism, as in this sentence: "Fausta, a daughter of Sulla, a great lady with a seamy past, wedded the doughty fighter." Mr. Clark remarks that in Cicero's *narratio* "the language employed is that of good conversation, never attempting to soar, but neither vulgar nor bald." It is a pity he had not profited by the example.

It seems as if the English university writers of the present day could not possibly comprehend Cicero, or, indeed, the rhetorical and self-exhibiting men of southern Europe, at all. The Briton's undefined notion that there must be some good in men so fiercely attacked as Clodius, and that a thoroughly high minded person could not talk about himself as Cicero does, issues in this strange account: "The orator was a good hater, and it was a necessity of his nature to have an enemy. Clodius may not have been so black as he is painted. . . . An act of generous forgiveness on the part of Clodius became classic." Now the very authority for this act which Mr. Clark cites, tells us it was done in imitation of Cicero's conduct to Gabinius, which Mr. Clark chooses to say was at the dictation of Pompey. To speak of "the necessity of Cicero's nature to have an enemy," is like talking of the necessity of Bonaparte's nature to sacrifice his own purposes.

Mr. Clark has taken very great pains to revise the text according to the best MSS. He is particularly confident that in § 27 (74) the reading *harenam* should be substituted for the vulgate *arma*. This last word he thinks cannot possibly bear the meaning "tools." Such a use seems authorized by the 'Georgics,' i., 160; and if Cicero wanted to say "tools," what word could he use except *arma* or *armamenta?*

The book appears, in spite of the inevitable difficulties of its press-work, to have all the beauty and accuracy of the Clarendon press; but *Atque* at the top of p. 9 looks very much like a misprint for *Atqui*.

Celia Thaxter. Letters edited by her Friends A. F. and R. L. Boston: Houghton, Mifflin & Co.

THE editors of this biography have generously interpreted their right to withhold whatever would not bear out their notion of the woman and friend whose good fame was intrusted to them. They have supplied a brief account of the outward events of her life, and four portraits. In an introductory note they suggest the purpose which more or less obviously governs their choice of extracts from her letters: "Except for a light from within, which irradiated the world she lived in, her life could easily have worn the sad-colored hues of ordinary mortality." In the faith that she was a woman of radiant nature, they have shown her almost exclusively from the side of her affections. Incidentally, of course, the reader gets glimpses of her relation to wider interests in the world of thought and action, but for the most part the narrative is one of the affectionate duties and interests of Celia Thaxter as wife, mother, daughter, and friend. The narrative is one of a curiously sustained serenity. It suggests the possibility not only of an insular variety of literature, but of an island type of character. The woman described, spite of the evident purpose of her editors, constantly eludes their description, and appears half concealed, half revealed, in some tantalizing word or phrase quite remote from their characterization of her. She constantly suggests comparison with two women whose lives presented at different points great contrasts to hers. These two women are Maria Mitchell and Emily Dickinson. In her strong and durable personality she was like Maria Mitchell; so, too, in her love for birds and flowers. She shared with Emily Dickinson her curious incapacity for growth. Instead, she seems to have had the power to turn to a larger and larger world about her, to form wider relations with men and women. But, meantime, she does not change essentially. There are no stages in her poetry, no periods in her life. From season to season, like her own island, she seems to persist. She is there—to be discovered. Her duties are for the most part those of New England women two or three generations back, before "help" had been transformed into hired girls, and before the home-making had become so mechanically separated from housekeeping.

The most attractive part of Mrs. Thaxter's story is not that associated with her literary friends, her painted china, or the warm glow of her love for her grandchildren. It is not even her brave fight with death when she felt herself sustained by a faith half Oriental, half Christian. It is her early married life, when she loved her island, baked and brewed, hammered, and got temporarily cross over the washtub. One naturally compares Mrs. Thaxter's domestic struggles with Mrs. Carlyle's, and one discovers a similar stimulating effect on the struggler's rhetoric.

"Karly [her son], I think, is getting less nervous than he was. I try very hard to let him alone, but he is so mischievous that I can't help visiting him with small thunder occasionally, also spanks. . . . The biddies are fine. The other day we killed the old rooster, the magnificent sultan of the flock, and boiled him in a floured bag, and he was delicious. We had company to dinner, a strange young lady from Boston, and John kept saying, 'Please, Mamma, give me another piece of cockerel!' to my intense private amusement. . . . Oh, Lizzie, do you have races with things to get them eaten up? What with trying to eat up the quinces, apples, squashes, pumpkins, etc., as fast as they get a leaning towards decay, we are obliged to eat very little else; everybody in the neighborhood is so rich there's nobody to give them away to. I think Lamartine would be perfectly satisfied with our present diet. I've just got rid of the last tomatoes, to my great satisfaction. I've been lugging them about the county to my various friends for the last month, in the vain endeavor to get rid of them, and now there's only one *mess* left."

It must be admitted that, as the years go by, and Mrs. Thaxter gets to be petted by the literary great, and finds herself more interesting because they think her so, a slight affectation crops into her expression. But to the end there comes every now and then a whiff of charming downrightness—like lavender. This downrightness is all the more valuable since it comes associated with a sane, healthful view of life as worth living, of friends as worth cherishing, and of duty as worth the doing. Of late years, we have had many books about women, saints and sinners, cranks, simpletons, geniuses, but it is a question whether we have had one about a woman who was, on the whole, more encouraging than Celia Thaxter.

The Story of Sonny Sahib. By Mrs. Everard Cotes (Sara Jeannette Duncan). D. Appleton & Co.

MRS. COTES has made the massacre of the Indian mutiny of 1857 the starting-point of her semi-juvenile, semi-adult story, and the foundation of the very slight and transparent plot that underlies it. The court of an independant Rajput prince supplies the scenery to most of the incidents in its development. Amid dusky faces, Eastern coloring, and tropical accessories stands forth, in inward and spiritual, no less than outward and visible contrast, the figure of a fair haired English boy, an infant three days old, saved by his faithful ayah from the slaughter of women and children at Cawnpore, first to be made the playmate of the little prince of Chita, and finally for better things than this. The fact that its motive, as old as the history of story-telling, has been more skilfully managed elsewhere, and might conceivably have been more skilfully managed here, will hardly prevent the sympathetic reader from falling in with the emotional mood of the scene that brings the boy into the presence of his father, who could, according to the natural laws of fiction, be no other than the red-coated officer ordered into Rajputana to make martial remonstrance for the murder of the English medical missionary.

Enjoyment of the story consists largely in discerning, through its warp and woof, familiar aspects and habits of Indian domestic life, whether in the hill-village of Rubbulgurh or in the palace of Lalpore. Hindu dignitaries are depicted as *bouffe* dignitaries, or nearly so. A vein of ironical pleasantry serves at one and the same time to make the story move more lightly and to show the writer's light estimate of the national character. In regard to the dominant race, opinion is reversed. "A sahib's promise is written in gold," says old Tooni, the ayah; and the moral of Mrs. Cotes's pretty tale is nothing else

than an "Amen," variously illustrated, to this sentiment. Even at the threat of his life, Sunni "did not tell" that which would have been to the disadvantage of his selfish but indulgent friend, the Maharajah, thereby preserving to the end the cordial estimation in which the reader has held him from the early moment when he discreetly slept and throve under adverse circumstances.

BOOKS OF THE WEEK.

Bowen, E. W. An Historical Study of the O-Vowel in Accented Syllables in English. Boston: D. C. Heath & Co.
Butterworth, Hezekiah. In Old New England: The Romance of a Colonial Fireside. Appletons.
Farnham, G. L. The Sentence Method of Teaching Reading, Writing and Spelling. Syracuse: C. W. Bardeen.
Fischer, Prof. Kuno. Goethe's Faust. Vol. I. Manchester, Iowa: H. R. Wolcott.
Fisher, Mary. Twenty five Letters on English Authors. Chicago: S. C. Griggs & Co. $1.50.
Gage, A. P. The Principles of Physics. Boston: Ginn & Co. $1.55.
George, A. J. Coleridge's Principles of Criticism. Boston: D. C. Heath & Co. 90 cents.

Copeland and Day,
69 Cornhill, Boston.
BROWN (ALICE). MEADOW GRASS. A book of New England Stories. Cloth, octavo, $1.50. Twenty-five copies on hand-made paper, $3.00. Cover design by Louis Rhead.
"Miss Brown not only has humor under control. She has that rarer gift, spontaneous wit. She is neither feeble in her feminine charm, nor does she deal hysterically with the phrase, as one who beats on clangorous pans. Her style is not thrust upon you, yet it is undeniable and undeniably her own. She opens her picture-gallery, but she does not, pointer in hand, accompany you as you smile, are moved, admire. This volume is a revelation of keen observation, delicate humor, broad and womanly sympathy, as well as artistic self-restraint and eminent sanity."—*Boston Journal.*
"The simple villagers are pictured with a graphic skill that is not excelled by any contemporary writer of New England tales. In pathos and in humor Miss Brown is equally successful. Her stories have the fresh charm, the unforced humor, and convincing clearness that are begot by accurate observation controlled by sympathy and fostered by a simple and sound literary style."—*N. Y. Times.*

The Nation.

NEW YORK, THURSDAY, AUGUST 15, 1895.

The Week.

WHILE the absolute and relative volume of a harvest always exerts profound influence upon a community's prosperity, there are times when crop results become a peculiarly critical factor in the situation. That this year's anticipated harvest in the United States is of such a character, no one can doubt. It can never be affirmed with certainty how far the outcome of last year's corn harvest created or emphasized the trade depression. In the entire United States the season's corn yield footed up but 60 per cent. of the crop of 1891. In some States the result meant ruin. Iowa produced less than one-third its corn yield of 1893; Kansas had still less to show; Nebraska's farmers gathered hardly one-twelfth of their ordinary harvest. Since discontent is the child of penury, and since financial heresy is the certain political result of discontent, it is not strange that free silver coinage should have seemed, six months ago, to have absolutely captured Kansas and Nebraska. If this season had witnessed another deficient crop of 1,200,000,000 bushels or less, it might reasonably be doubted whether the Iowa conventions would have taken the stand they have for a sound currency. The results now so well assured are little short of providential.

No less than 80,000,000 bushels of marketable wheat overhung the market, in this country alone, when the panic of 1893 came on us. The sudden decline of fifteen cents a bushel was the simple consequence of "realizing" to protect outstanding debts and acquire actual money against emergency. The enormous world's production, after the price of wheat was thus fixed, steadily kept down the market, even below the panic level, until this year's returns proved that the farmer had sought out his own cure—had diversified his crops and cut down his acreage of wheat. The poor wheat crops in Europe, even on the diminished acreage, and the partial failure of our own winter-sown crop, have worked in the same direction. Last week the American "visible supply" was but 38,000,000 bushels, against 89,000,000 at the close of 1894. The decrease continues despite the fact that the Northwestern farmers, who suffered severely a year ago, are raising a bountiful "spring wheat" yield. Nature, in other words, may be said to have distributed her favors this year with a judicious hand, the enormous corn crop in particular promising to be the mainstay of our reviving trade prosperity.

Bland's Missouri convention was for Bland first and last, and only incidentally for 16-to-1 silver and down with a "panic-breeding currency," banks, and bonds. Bland was both kinds of chairman, temporary and permanent, Bland drafted the resolutions, and Bland announced his purpose to take charge of the party machinery, new created by himself, and run it for all it is worth in the interest of silver—meaning himself. It was a rather low-down trick on Senator Cockrell, and especially on Senator Vest, upon whose seat Bland has his eye firmly fixed. They walked most guilelessly into Bland's trap. He really packed the convention with his own followers, the so-called primaries being held almost without notice, and attended only, as in the case of the now absurd Illinois convention, by silverites, and then, assuming to speak for "the Democrats of Missouri," reorganized the State committee so as to make it his own tool and give him the inside track for the senatorship. It was as vulgar a piece of boss politics as ever was seen. We observe that Bland telegraphed his congratulations to Blackburn of Kentucky. This is intended, we suppose, to show how much better the Missouri way is than the Kentucky way. If you call a regular party convention and have the delegates elected in the usual way, you may get beaten. Bland's plan is much simpler—call a "snap" convention, keep your opponents out of the primaries, and you can resolve as you please for silver and endorse yourself for the Presidency, the Senatorship, or Examiner in Lunacy.

The overthrow of the free-silverites in the Iowa Democratic State convention is another staggering blow for that faction in all the other States. Even in Missouri it will have a strong influence. The result of the fight shows what can be done among intelligent people by intelligent work. In 1890 the Democrats of Iowa in their State convention went for free coinage with hardly a dissenting vote, the following resolution being part of the platform of that year:

> "We demand the free coinage of silver, and that it be made a legal tender for all debts, public and private, and denounce as unjust and dishonest the provision of the law recently enacted allowing parties to stipulate against payment in silver and silver certificates, thus setting up one standard of value for the poor man and the other for the rich man."

This senseless resolution was again passed in the following year. We call it senseless because the second half of it speaks of a law "recently enacted" which never was enacted at all, the right to stipulate for payment in any kind of money that the parties choose being a common-law right which existed anterior to the Constitution. But the resolutions of 1890 and 1891 are all rubbish now, the convention of July 7 having voted against the free-silverites by an overwhelming majority. The Des Moines *Leader* (Dem.) tells us that the party in the State is entirely satisfied with the national platform of 1892, which, whatever else it may mean, is not free coinage at 16 to 1 or on any basis which would land us on the silver standard.

The prospect of a new international conference to promote bimetallism grows fainter. A few days ago ex-Speaker Crisp was interviewed on the subject in London. He said that he could not discover that any interest was taken in the subject in Great Britain, and although he had been assured that the cause was gaining, the gain would be considered very slow in the United States. We have already adverted to the fact that although a general election has just taken place in England which fixes the government probably for seven years, not a word about bimetallism was heard on the hustings. The cause does not seem to be prospering in Germany any more than in England. Dr. Arendt (the German Bland) has become impatient at the slowness of the movement, and has issued a pamphlet attacking Director Koch of the Reichsbank as an ignoramus, unfit for his position. Dr. Koch replies that Arendt's pamphlet is unworthy of notice, but he adds that the holding of an international conference at Germany's invitation is further off than ever, and that not one important German State has declared in favor of bimetallism since the subject was formally submitted to them. This is a flat contradiction of Mr. Moreton Frewen's letter to the London *Times*, in which he said that Chancellor Hohenlohe had assured the silver men in the United States that a conference would soon be called.

The decision of Judge Goff in the South Carolina registration cases, dismissing the bill praying for an injunction, is a victory for the Tillman Government in the State, although it is yet possible that the Supreme Court of the United States may take a different view of the matter. Judge Goff's opinion states that he feels himself bound by the decision of the Circuit Court of Appeals to make this decision, but he does not conceal the fact that he believes it to be erroneous. The appellate court held that the plaintiffs, although deprived of their rights as citizens of the United States and of the State of South Carolina, had an adequate remedy at law, and that a bill in equity would, therefore, not lie. Judge Goff expresses his regret that the character of the remedy at law was not indicated, for he says that he cannot find any. But he goes further, and takes the position that as the United States courts are established for the purpose of determining controversies

arising from conflicting provisions of State and federal constitutions and enactments, they should not so limit their action as to make it useless. It is vain for a court to say that there is an adequate remedy at law when the injury will be completed before the remedy can be applied, and when it is of an irreparable character. Between the decision of the Supreme Court of South Carolina holding that it cannot interfere with the registration act, and that of the United States appellate court, many citizens will undoubtedly be deprived of the suffrage. To say that they have their actions for damages is no sufficient reply to their complaints. It is the free exercise of the right that they demand, not compensation for being deprived of it. But as the case is likely to come before the Supreme Court, we shall doubtless soon have a final adjudication upon the important principles involved.

The announcement that the California State Labor Commissioner is ready with a petition to Congress, asking for the passage of a law to restrict the immigration of Japanese to this country, is not unexpected. The labor department of California is a part of the political machinery of the State, and that machinery is always on the side of "labor," in the sense of the labor demagogue. The number of Japanese immigrants to this country has increased in the last few years. In the Treasury statistics, our Asiatic emigrants are classified as coming from China and from "other Asia." The Chinese Immigration Act reduced the emigrants from that country, who numbered nearly 40,000 in 1882, to 10 in 1887. The immigrants from "other Asia," principally Japanese, who numbered 50 in 1882, increased to 2,732 in 1890, to 5,984 in 1892, and, probably owing to the business depression, declined to 3,304 in 1894. There are no complaints in California against the Japanese such as have been raised so largely against the Chinese, in regard to their mode of living, personal habits, etc. The trouble is that California requires a vast army of laborers to gather its crops, especially the fruit, the working season being short. Then it becomes a problem what to do with the unemployed. There is a dearth of labor at one season, a plethora at another. Because the Chinamen and Japanese can accommodate themselves to these circumstances, living most economically during the period of their non-employment, they have incurred the deadly hatred of white men, who think that, but for the Asiatics, the supply of employment would last the year round. We shall hear a great deal about the Japanese character in Congress in the immediate future.

One of the most impudent manifestations of the pension-grabbing spirit yet seen is in a recent act of the New York Legislature which authorizes towns to recompense the men who were drafted under the law of 1863 for their patriotic sacrifices, and provides that if the drafted men are no longer living, their heirs at law shall receive the compensation so long withheld from their gallant ancestors. In case the drafted patriot had raised the $300 which enabled him to purchase exemption from military duty by borrowing it, or had received it as a gift, the lender or the donor is to be compensated. If the drafted man did not purchase exemption, but went to the war, he is to get his $300, and, if he was killed in the war, his heirs are to have it. If the drafted man paid for a substitute, he is to have his money back; and, in every case, interest for the last thirty years is to be allowed. When it comes to honoring patriotism, the New York Legislature does not do things by halves. But the courts, unfortunately for the drafted patriots, are less liberal, and this act has just been held to be unconstitutional by Judge Brown. As to the money paid by a drafted man, Judge Brown asserts that the sole object of such payment was to escape the performance of a public service, and that it was an affair which concerned the drafted man alone. This is a terrible blow to the drafted men and their heirs. Three hundred dollars with interest since 1864 is a very comfortable sum of money, and would go far to sweeten the recollections of the trials and sufferings occasioned by having to send a substitute to the war or pay for exemption. But let not these patriots be cast down. All is not lost while honor remains. No court can tear the laurels from the heads of our drafted compatriots. The proud distinction of having suffered in pocket for their country will ever be theirs. The Legislature has shown its appreciation of their gallant services, although ineffectively, from a pecuniary point of view. But Congress may yet be appealed to. When the Republicans get power again, a more liberal spirit will be manifested in dealing with pensions, and the drafted men and their heirs may at last obtain the pecuniary recognition of their patriotism which an ungrateful country has so long denied them.

The cases of the persons accused of defrauding the State of New Jersey in various ways, as charged in the testimony brought out before the Senate committee last spring, will not be improved in the public view by the defence made by the first of them who has been brought to trial, Col. Van Cleef, whom the disclosures forced out of the office of Secretary of the State Board of Assessors. The indictment against him charged him with obtaining money for 15,000 maps which had never been furnished to the State. This was a very direct charge and capable of a very direct denial. Instead of making such a denial, however, his counsel put in no testimony at all in his behalf before the court, relying wholly on technicalities to destroy the effect of the indictment, such as an effort to show that the money did not pass directly from the State to Van Cleef, that Van Cleef did not receive from the contractors for the work the identical money which they were paid by the State, and that the matter of false pretence on Van Cleef's part could be disposed of by a confusion of dates. The Judge, in his charge to the jury, brushed all this defence aside as utterly frivolous. Experience has shown the difficulty of convicting a man with a political pull before a jury selected at a State capital, and Van Cleef's acquittal will occasion no surprise. But his trial will only confirm the public impression that the Senate investigation was timely, and that perhaps it might go considerably deeper.

We are gradually learning the other side of the Bannock Indian massacre—that is, the Indian side. The first thing of importance is, that there was no legal authority for arresting the Indians at all. The charge was that they were violating the game laws of Wyoming, the maximum penalty of which is a fine of $10 and three months' confinement in the county jail. But, in order to execute the law, somebody must be charged with an infraction of it, and a warrant must be issued by a magistrate for that particular person. The warrants in this case were issued in blank. Therefore the constable and his posse committed an assault when they arrested the Indians. They had no right to molest them. It follows that the killing was murder, and it is said that Col. Coppinger takes that view of it. Another fact of importance is, that the Indian who was killed was not running away, although he perhaps had the intention to do so. His horse's bridle was held by one of the posse at the time of the shooting. Of course, the Governor of Wyoming takes the frontier view of these things, and laments that people at the East should say hard things about the bloodthirsty constable and his posse. This is easily understood. These men have votes; the Indians have none.

Two great Socialist congresses are to be held in October, one for France, at Limoges, and the German one at Breslau. At present "the programme" to be submitted at each of these gatherings is being labored over by the leaders of Socialistic thought, and the results are far from harmonious or reassuring. An especial gloom rests upon the French Socialists just now owing to their distinct rebuff in the recent election of the "General Councils." These councils are very much like our State Legislatures, ruling the departments and electing Senators to the national Parliament. Out of some 1,500 members, the Socialists succeeded in electing just twelve in all France. This adjourns the millennium again. It also makes it harder than ever for the French Socialists to arrange a plan of campaign

on which all classes can unite. In the cities they say they are going to extinguish private property; but that doctrine does not fall on itching ears when preached to the land-holding peasant. Hence the programme must continue to be two-faced. A like difficulty is felt in Germany. Bebel is for putting a strong agrarian plank into the Socialist platform, but is meeting with noisy and powerful opposition, even among his own followers. The *Sozial-Demokrat* calls Bebel's scheme a "tape-worm creation," which is an elegant way of saying it has no true place in the internal economy of Socialism. From such unseemly striving it is a relief to turn to the proposals of the managers of the Congress of German Catholic Socialists. They are sweetly going to "remedy existing social evils by the application of the principles of Christianity to the economic life." Some of the applications they propose to make, however, will surely expose them, if ever practically urged, to the rebuke which the Pope addressed to the Belgian clergy when he warned them "not to confound divine right and human law."

The Rev. Joseph Parker of the London City Temple has given his views of the causes of the Liberal collapse. Coming from an old Nonconformist and Liberal leader they will command, as they deserve, attention. He is very frank in charging the disaster to the fooling of the Liberal party with "Radicalism, Socialism, and Laborism." Labor tyranny, he maintains, "cost Liberalism dear in this election," and he sees no salvation for the party except in harking back to "Liberalism in the good old healthy sense." He objects to making any more "false promises to the farmer and to the unemployed," and to thinking that a great party can live on "the labor problem." Striking confirmation of these ideas may be found in many of the letters to the *Star*, explaining, on the editor's invitation, "why we lost." One correspondent writes, "Each of us workers wants to do his own work in his own way, in as many or as few hours a day as he pleases, and for as much or as little as he can get." That is clearly the voice of an old-style workingman Liberal, and the number of his kind that gave their votes against new-style Liberalism in the election ought to be a warning to politicians against supposing that all workingmen desire to have their labor and their lives regulated by walking delegates or a fussily paternal government. It is to be said for Mr. Gladstone that he never gave in to this Liberal labor and Socialist craze. He was not trained in that school. Labor delegations he would receive courteously, but would invariably stick pins in their bubbles. His style of meeting them may grow more popular now that the other style is shown not to have even the merit of succeeding in winning votes. Any other merit it never had.

Lord Salisbury has already been waited upon by representatives of workingmen in Government employ, and informed that his victory at the polls was due solely to them. They were the ones who smashed the Liberal party, and they are now prepared to smash his party unless some of their modest demands are promptly complied with. Samples of the little things they would like the new Premier to promise them are a minimum wage of thirty shillings a week for unskilled labor, and a pension of twenty shillings a week after fifty-five. They would also have the Government at once put an end to the pernicious plan of buying goods when it could just as well manufacture itself, at a much higher cost, everything it needs. One knows not which most to admire about this, its impudence or its ingratitude. The Liberals went further towards meeting the demands of workmen employed by Government than any party ever did before. They enforced the eight-hour law in all Government works; they passed the factory act; they practically said to the labor leaders, If you don't see what you want, ask for it. Now these same leaders turn and bite the hand that fed them. Their cool assumption that they settled the election will not deceive even themselves. Their main influence was to disgust the public with the party that truckled to them. This is not exactly an argument to make the other party begin truckling. But the Socialists are always good at claiming electoral importance. They were going to do tremendous things in the recent departmental elections in France, but, as a matter of fact, they were beaten disastrously.

The unanimous reëlection of Speaker Gully by the new Parliament on Monday was determined upon by the Cabinet some days ago; but the squelching of the attempt to override the unwritten law of Parliament, and oust him for a Conservative, is an event of great importance. It cannot be denied that the Conservatives were under peculiar temptation to elect a Speaker of their own. Mr. Gully had been chosen almost in the last hours of a dying Parliament by a moribund ministry, and under circumstances exasperating in more ways than one to the party that felt itself certain of coming soon into power. It was flatly intimated at the time, in fact, that if the Conservatives won the impending election, they would turn Mr. Gully out. This was understood to be Mr. Chamberlain's intention, and probably Mr. Balfour's. The latter, at any rate, went to Carlisle to speak against Mr. Gully's election to Parliament, though, as it turned out, the Speaker was one of the two or three Liberals who came back with increased majorities. But when the election was over, the party organs and party leaders changed their tune. It was time to be magnanimous, not grasping. It especially behooved a party that stood for the ancient traditions of Parliament in the matter of the powers and privileges of the Lords, to be careful about interfering with any of the dignities and safeguards of the Commons. But what really settled the thing was, no doubt, the open assertion of some of the oldest and most honored Conservatives, and some of the most influential Liberal Unionists without the fear of Mr. Chamberlain before their eyes, that they would not vote for a Conservative candidate should one be put up against Mr. Gully. Of course the Government could have elected a Speaker if they had insisted upon it, but they had no wish to precipitate a split on the first day of the session, and so chose the better part of making a virtue of an old custom which it would have been politically awkward for them to violate.

Before surrendering the Colonial Office to Mr. Chamberlain, Lord Ripon gave out a Parliamentary paper of great importance in the shape of a despatch to the Governor-General of Canada, the Governors of the Australasian colonies, and the Governor of the Cape. In it he takes up and examines the recommendations of the famous Ottawa conference, of a year ago, looking to the formation of a customs union between British colonies. It will be recalled that the conference declared a general British customs union impracticable, inasmuch as the colonies depend on their tariffs for so large a part of their revenue, but that it resolved heartily in favor of a system of "differential duties," by which the products of one colony should be favored above foreign products in the markets of the others and of the mother country. Lord Ripon first points out to the eager colonists the economic folly of such a scheme. Differential duties are only another name for protective duties, and he asks if anybody supposes England is going further to disable herself in the competition for the world's trade by increasing the cost of her raw material in that way. Moreover, he reminds the colonial governors, the Imperial Government has oversight of the colonies in all that relates to international obligations, and cannot permit treaties to be overridden. Existing treaties with Belgium and Germany contain clauses which would make differential duties, as against them, in a British colony impossible. The Ottawa resolutions asked the Colonial Office to have these clauses "removed." Lord Ripon says that he has referred the matter to the German and Belgian governments, and that they, maliciously enough, decline to remove them. He therefore tells the Governors that no differential-duty bill must be allowed to pass a Colonial Parliament except provisionally and subject to the approval of the Home Office. Lord Ripon's icy tone and cold logic will go far towards effectually chilling the enthusiasm of the colonists on the subject.

CATHOLICS AND THE SALOONS.

THE convention of the Catholic Total Abstinence Union was, of course, planned to meet in this city last week without the least foresight of the remarkable conflict in which it would find the authorities and the saloons. But it could not have been more happily timed if carefully arranged for just such a situation. No single event, in fact, since the agitation began has been of equal moral and political significance with the extraordinary demonstration of Catholic sentiment, witnessed on Wednesday week, against the arrogant saloon power. Endorsed by the presence and sympathy of the highest dignitaries of the Church in this country, and of the special legate of the Pope himself, the religious celebrations of the day were highly important, but had to yield in popular effect to the great evening meeting held in Carnegie Hall. The audience gathered there was fairly representative, we are told, of what may be called the middle-class Catholics of this city. Many active politicians were present of the kind that attend primaries and manage conventions. Yet the feeling of the meeting was so evidently and overwhelmingly in favor of enforcing the excise law, especially of closing the saloons on Sunday, that the lone Tammany orator put up to test the sentiment of Catholics on the great Tammany platform of not enforcing the law retired in complete discomfiture.

Discomfiture is visible in other quarters also. The *Sun* got wind last week of what was coming—was flatly notified, in fact, that the uproarious Tammany campaign it was going to conduct on the platform of violating the Sunday law would be a campaign in which the Catholic Church would take the other side. Since then it has worn a distant and abstracted air when the subject was referred to. Now that the threatened has become the actual, now that the authorities and the representatives of the Catholic Church have made their position so unmistakable, the hilarity of a great many statesmen will in like manner be checked. Senator Hill will take a little time to think it over before he writes another letter in favor of open saloons on Sunday, law or no law. The Democratic State committee will be fully as cautious as was the Republican in handling this dynamite cartridge. Inner Tammany circles will be again shrouded in that gloom which they thought was surely lifting before the prospect of their coming back to power as the champions of lawlessness.

That the Catholic Church could have been expected to take any other position only shows how inconceivably stupid politicians can be when they set about it. Her official and authoritative attitude towards the liquor traffic and the Sunday question has long been known. It was explicitly set forth in Archbishop Ryan's sermon last week. The Church does not lay down any absolute and binding doctrine of total abstinence. It does not declare liquor-selling of all kinds and under all circumstances to be a sin. But it has pronounced and will continue to pronounce in favor of temperance, and has stigmatized saloon-keeping as an "unbecoming business" for a Catholic. The Archbishop freely acknowledged that a stigma had been brought on the Catholic name by the fact of so many Catholics being intemperate and so many nominal Catholics being saloon-keepers. But that was only an added reason, he maintained, for making the true teaching and attitude of the Church known, and for encouraging the Total Abstinence Union and every other moral or legal influence which would tend to diminish or cure the evils of drunkenness. Most outspoken was the Rev. Father Cleary, President of the Union. Amidst loud applause, he denounced "the liquor power, intrenched behind a fortification of wealth gathered from the earnings of the unfortunate," now grown "defiant of public opinion," "the uncompromising enemy of religion and country," "desecrating the sanctity of our Sunday and making a mockery of universal suffrage."

Of course, the peculiar value of this great Catholic demonstration at the present juncture lies in the fact that it reveals the existence of an immense political power on the side of the observance of law and a quiet Sunday. The Catholic vote has undoubtedly been largely a Tammany vote. Therefore, some hasty political reasoners have argued, Tammany being for an excise law to be enforced or not according as the authorities were paid or not, and especially for a lawless Sunday, the Catholic Church will be for those things, too. No greater mistake could be made. Senator O'Sullivan knows more about his subject now than he did before the Catholics in Carnegie Hall hissed and hooted him for his law-defying words. Far from Tammany being likely to swing the Catholic vote on this question, the Catholic vote is likely to make Tammany see a great light such as has already dawned upon the *Sun*. Tammany may hope and mean to win the next election as the party pledged to restore the old fraudulent and corrupt excise régime, but it will be pretty secret about it; it will not go on openly boasting that the platform of lawlessness is the one on which to carry this city.

It is further to be considered that the working Catholic priests of New York are in a position to know and to influence the political sentiments of vast numbers of foreign-born voters. Their testimony is far more valuable than that of an equal body of Protestant clergymen. Many of them have assured the Police Board that the policy of Sunday closing is by no means working such havoc or proving so unpopular in the tenement-house districts as has been alleged. They also carry greater weight than Protestants because their views have a way of affecting the votes of their congregations. Of too many Protestant clergymen the politicians will say, as Lord Carteret said of Bishop Sherlock, "Oh, he talks like a parson, and consequently is so used to talk to people that don't mind him that I left him to find it out at his leisure, and shall have him again for all this whenever I want him." Catholic priests are not so open to this charge, and their arraying themselves, with so many of their people, on the side of enforcement of law and resistance to the arrogant pretensions of saloonists to special privileges, cannot fail to give a different political aspect to the whole question. For one thing, it puts an end, for a time at least, to the talk about Tammany, as the great exemplar of lawlessness and disorder, "coming back with a whoop."

LORD SALISBURY AND ARMENIA.

LORD SALISBURY'S natural predilection is for foreign affairs, and his equally natural predilection is to conduct them with a high hand. The big majority now behind him will not have a tendency to rein him in. The chances are, therefore, that he would, in any case, adopt a peremptory tone in the negotiations with Turkey about ravaged Armenia; these chances really amount to a certainty in view of the powerful and united sentiment in England now clamorous for such a course.

A highly significant fact about Mr. Gladstone's recent speech on the Armenian horrors is, that it was made practically at Lord Salisbury's request. Some of the latter's friends and supporters, notably the Duke of Westminster, chairman of the Chester meeting on August 6, arranged the demonstration and obtained Mr. Gladstone's promise to speak. He had steadily refused to say anything until the general election was over, lest a partisan twist might be given to his remarks. Then he virtually came forward to strengthen Lord Salisbury's hands. This was put beyond all doubt by the terms of the resolution he introduced, which declared that the Government would have "the cordial support of the entire nation, without distinction of party," in providing effective guarantees for "the safety of life, honor, religion, and property" in Armenia.

This coöperation of two rival leaders in such a cause is an incident which might be used to point a moral to some of our small-minded politicians. To have invited the assistance of Mr. Gladstone was practically a confession by Lord Salisbury that he and his party were not the only ones concerned about the national honor, not the only ones in whose keeping that honor was safe. And for Mr. Gladstone to go forward cheerfully, even ardently, not to put his old antagonist "in a hole," but actually to help and strengthen him, betrays woful mismanagement from the standpoint of higher American politics. But the one great result

of such a union of forces is to assure Lord Salisbury of support in the most vigorous measures he may see fit to adopt with the Porte. When Gladstone cries out, "Do not let us be afraid of the word coercion," it is safe to say that Salisbury will not be afraid of it.

The question is now an old one, but in its present phase it may be said to date from 1878. In that year England and Turkey made a convention, by the first article of which the Sultan agreed to introduce reforms into the government of his Christian and other subjects in Armenia, and in the same year the Treaty of Berlin was signed. It provided for religious liberty in all Turkey, and the Sultan undertook "to carry out, without further delay, the improvements and reforms demanded by local requirements in the provinces inhabited by the Armenians, and to guarantee their security against the Circassians and Kurds." It was further required that the Sultan should report periodically what steps were being taken to carry out this article, and that the Powers should superintend the application of them. The Porte, being responsible to all the Powers, has stood in real fear of none, and the Powers, not having decided upon the *modus operandi* to be employed in superintending the carrying out of the reforms, have stood idly by while the Turks and Kurds have played into each other's hands, and, actuated by a common hatred of the Armenians, have run riot in outrage and oppression. "Christian and civilized Europe," as M. Rolin-Jacquemyns said in an article in the *Revue de Droit International* in 1887, "was more occupied with its intestine quarrels and jealousies than with its collective duties." That since the treaty of Berlin the condition of the Armenians has not improved, and that Turkey has not introduced any real reforms in amelioration of their condition, there is abundant evidence.

Soon after the treaty went into effect, the British Consul at Erzerum wrote to his Government that the condition of the Christians was worse than ever, that the Kurds had the upper hand, and that in some localities arson, assault, and rape were committed with impunity. The regular troops were as bad as the Kurds, and committed precisely the same offences. Bribery of officials existed almost everywhere, and the occasional pure official was powerless in the face of extended organized official corruption. In 1879 Sir A. H. Layard, British Ambassador to Turkey, wrote as follows to Lord Salisbury:

> "Unless the Porte takes care, and acts with prudence and forethought, there will be an Armenian question in Asia similar to the Bulgarian question in Europe, from which the last war arose. The same intrigues are being resorted to in Asia Minor to establish an Armenian nationality, and to bring about a state of things which will cause a cry of horror among the Christian population, and a European intervention."

In 1880 the Powers addressed a collective note to the Porte on the subject of Armenia. It called attention to the fact that anarchy existed in the provinces inhabited by the Armenians, and that the existing state of affairs, if not remedied, "would, in all probability, lead to the destruction of the Christian population of vast districts." To this remonstrance the Sultan made no reply whatsoever.

But the question has now reached a stage where common humanity demands that it be settled. Whether Armenia is taken entirely away from Turkey and erected into an independency, or whether the Sultan shall be permitted to govern it only in such a way as European influence or coercion shall direct, are questions for discussion; but that existing conditions cannot be endured much longer is palpable. The extent of the massacre near Mush a year ago cannot yet be estimated accurately, and, in view of past experience in similar cases, it is probable that it will never be entirely known. That it embraced fully 10,000 people is not at all improbable. As the Armenians are not permitted to carry arms, there can have been no real contest, nor can the inspiration of the slaughter be properly attributed to a rebellion against the Turkish Government. An organized uprising is an impossibility under the circumstances. Mr. Gladstone, in his speech at Chester, merely repeated what he said in his speech of December last. After touching upon the evidence of the massacre which tended "strongly to a conclusion to the general effect that the outrages and the scenes and abominations of 1876 in Bulgaria had been repeated in 1894 in Armenia," he added:

> "As I have said, I hope it is not so, and I will hope to the last; but if it is so, it is time that one general shout of execration—not of men, but of deeds—one general shout of execration, directed against deeds of wickedness, should rise from outraged humanity, and should force itself into the ears of the ultan of Turkey and make him sensible, if anything can make him sensible, of the madness of such a course."

THE LEGION OF HONOR.

The French Chamber has furnished another example of its incapacity as a governing body by its recent action concerning the Legion of Honor. M. Eiffel, the eminent engineer, was a member of the Legion of Honor, and was also involved in the Panama Canal scandal. For his dealings in this matter he was prosecuted, and in the first instance convicted of fraud. His conviction was reversed by the Court of Cassation upon the ground that what we should call the statute of limitations protected him. The defence urged by M. Eiffel, that he was not guilty of fraud because he acted in the capacity of a contractor and not that of an agent, was not considered by the Court of Cassation, as his conviction was irregular upon the ground above mentioned. Upon the suggestion of the Minister of Justice, the council of the Legion of Honor undertook an investigation upon its own account. After prolonged inquiry the committee to whom the investigation was intrusted reported that the evidence showed that M. Eiffel had undoubtedly been too much "preoccupied with his own pecuniary interests," and had not sufficiently regarded his responsibilities as a member of the Legion of Honor. Nevertheless they declared that he had dealt "at arm's length" with the Panama Company and had been guilty of no breach of trust. He had made a contract with the company which no doubt brought him in enormous gains, but which the company deliberately agreed to. In view of all the circumstances, however, the committee reported that M. Eiffel, as a member of the Legion of Honor, deserved censure.

Upon this the Chancellor of the Legion requested the opinion of the President of the Court of Cassation, who submitted conclusions similar to those reached by the committee. The matter then came before the full Council of the Legion of Honor and received there also full discussion. At last one member, wearied by the prolonged debate, arose and said, "M. Eiffel is either guilty or not guilty. If he is guilty, he ought to be expelled; if he is not guilty, he ought to be acquitted." A vote being taken, the majority of the Council declared that M. Eiffel had not been guilty of dishonorable conduct, and was therefore not amenable to discipline. Upon this the French Chamber, in a tempest of virtuous indignation, voted, with only two dissentient voices, that the Government should undertake the reorganization of the Council of the Legion of Honor. There was nothing for the members of the Council to do after such a vote except to resign; but the Chamber was entirely unprepared with any scheme of reorganization. The Government has, therefore, requested the Council to continue its functions for the present, and, so far as yet appears, its members may retain their offices for an indefinite period. Their personal character, it is fair to add, appears to be above reproach.

While the action of the Chamber was hasty and ill-considered, it can hardly be said that it justified the virulent denunciation which it has received from the partisans of the Legion of Honor. This vituperation strikingly resembles that which our Grand Army pours forth whenever any reform of our pension abuses is proposed, and it may be apprehended that it has a similar cause. For it must be remembered that honor is not the sole advantage that goes with the red ribbon. Something more substantial in the shape of pecuniary emolument is very extensively enjoyed. Experience has shown that recipients of pensions are a sensitive class. They estimate highly the services for which their pensions are bestowed, and they resent angrily any manifestation on the part of the public of a disposition to question the accuracy of this estimate or to scrutinize the pension roll. Experience has also proved that where honorary distinctions have been combined with pecuniary gains,

a sordid condition of affairs tends to result. It must be admitted that the outcries of the champions of the Legion of Honor suggest that "that sensibility of principle, that chastity of honor, which felt a stain like a wound, is gone." Nowhere is it suggested that the inability of the Legion of Honor to purge itself of such dubious characters as M. Eiffel shows that its title has become inappropriate. Apparently its journalistic defenders are as indifferent as are the members of our Grand Army to the moral delinquencies of its members. It is not honor that is involved, but titles and pensions. It is not what the organization represents that is sacred, but the organization itself.

Every such organization bears within itself the seeds of its own decay, and the existence of this and similar organizations in France has had much to do with the perversion of the brilliant qualities of that country. The man who sets his heart upon obtaining a decoration—and a pension—on the ground of his virtue, is not ideally virtuous. Such decorations are appropriate in ages when bravery and virtue are synonymous. The motives which make men perform daring acts are then immaterial. It is enough when, from whatever motive, they are willing to take their lives in their hands. Superstition, race hatred, desire for fame, or whiskey may be the inspiring cause of bold deeds, but it is the deeds themselves that must be honored without questioning the consciences of the heroes. In peaceful times it is unnecessary to encourage moral excellence by any public "recompense of reward." The French nature, however, seems to crave open recognition of virtue, and thus tends to subordinate virtue to glory.

Napoleon, who founded the Legion of Honor, understood his countrymen, and he understood also the spirit of his age. That spirit demanded equality of opportunity—*la carrière ouverte aux talents*—and he offered a decoration to every common soldier who distinguished himself. In the quality of this decoration differences of rank or position were ignored, and the order was at once military and democratic. Under Napoleon III., however, aristocratical distinctions were introduced. The red ribbon was reserved for officers, while yellow was the color for private soldiers. For a time after the war of 1870 the Legion of Honor was again a purely military order. But, during a quarter of a century of peace, soldiers have had little opportunity to perform acts worthy of glorification, and the non-military element has increased until now nearly one-half of the members are civilians. The pitiful jealousies and heartburnings and intrigues which the anxiety to be decorated has injected into Parisian life are too well known to need to be dwelt upon. "Plus on la donne, plus on la demande," was Napoleon's experience with his creation, and the pressure to obtain the ribbon is like that to obtain office in this country. Doubtless the Legion of Honor will be after some fashion reorganized, but it is beyond the power of the French Chamber to make it "the nurse of manly sentiment and heroic enterprise," or to impart to it that "unbought grace of life" which is indeed the grace of a day that is dead.

ANOTHER HYMN TO APOLLO.

THE discovery of another hymn to Apollo, accompanied by the musical notation, is a piece of good luck which was well deserved by the explorers at Delphi, and, we may add, not entirely unexpected. It was thought probable that the Treasury of the Athenians which yielded the hymns described last year might furnish another contribution to the history of Greek music. This has proved to be the case, and the results are figured and described in the latest issue of the *Bulletin de Correspondance Hellénique* (xi-xii, November, December, 1894). The fragment of forty-two lines, with some letters missing in every line, is engraved in two columns on a marble slab sixty-one centimetres high and eighty wide. As in the former hymn, the stonecutter, following the musician's copy, pursues the practice of writing vowels and diphthongs twice, whether naturally long or long by position, when the rhythm and musical notes make them stand, by resolution, for two short syllables. The first column numbers twenty-eight lines, the beginnings of which are generally well preserved; the left-hand upper corner was broken off, but this lacuna is fortunately filled by a fragment figured in the last volume of the Bulletin. The second column has been reconstructed from nine fragments ingeniously pieced together by the efforts of MM. Homolle and Bourguet and the suggestions of Prof. Otto Crusius. The text is restored and ably edited by M. Henri Weil, the music transcribed by M. Théodore Reinach. It is a noteworthy fact that M. Weil was aided in his conjectures by a curious refinement of the musician, a correspondence between the word-accent and the melody, which requires us, for example, in line eleven, to read δρό]μους instead of ἀτ]μοὺς. The principle upon which this is based, and which was discovered by MM. Havet and Reinach while studying the Seikelos inscription, was observed by Crusius and Monro in the former hymn, and has just been completely formulated by M. Reinach.

The general sense of the hymn is given in a very satisfactory degree by M. Weil's restitution. It was a species of thanksgiving performed by a chorus of Dionysiac artists from Athens, and it belonged in strictness to the class called *hyporchemes*—that is to say, the words were chanted to the accompaniment of the flute and the lyre by a portion of the chorus, while the remaining portion executed a dance of appropriate character. The rhythm, like that of the first-discovered hymn, is pæonic; it consists of a succession of pæons or Cretics (— ⏑ —) in five-eighths time, except that the prayer at the close passes over into a Glyconic system. There is also a close family resemblance between the subject and the occasion of the two hymns. The epoch of the latter is absolutely fixed by the forty-first line as falling after the time of the Roman conquest, and may be placed near the end of the second century B. C. We may therefore assume the poem to be commemorative of the defeat of the Gauls. It was doubtless written by some member of the guild of Dionysiac artists, the τεχνιτῶν of line twenty-two; and it displays the conventional arrangement and sentiments that might be expected from a versifier who wrote professionally to order, without inspiration or with borrowed inspiration.

Beginning, as in duty bound, with an invocation of the Muses, the poem passes to the story of the birth of Apollo, of his visit to the Attic land, where a mysterious voice salutes him with the cry of Pæan, the title by which he is still invoked by all Athenians and by the Dionysiac troop that now chants his praise. As he then founded his temple and defended it against the dragon, so later did he keep guard against the barbarian horde, in memory of which they raise this hymn. Borrowing many phrases and epithets from the Homeric Hymn to Apollo, it closes with a prayer for the people of Delphi and of Athens. The translation runs as follows:

"Come to the twin heights of beetling Parnassus that looks afar, and inspire my songs, Pierian Muses, ye who dwell in the snow-beaten crags of Helicon. Sing of the Pythian god, of golden hair, Phœbus with the tuneful lyre, whom blessed Leto bore beside the famous water, grasping with her hands in labor-pangs the lusty shoot of the gray-green olive tree. And the vault of heaven was glad and radiant with unclouded light; the æther stilled the swift courses of the wind to calm, while the deep boom of the furious billows sank to rest, and mighty Oceanus, who with his moist arms clasps the earth around.

"Then, leaving the Cynthian Island, the god set foot upon the glorious land of Attica, first dowered with Demeter's gift, hard by the hill of Pallas; and he was sped by melodies of the Libyan lotus, mingling its honey-sweet breath with the varied notes of the lyre. Thrice did the voice that dwells in the rock hail him with the cry of 'Pæan,' and he rejoiced because he laid up in his heart and understood the will of Zeus. Wherefore, from that time forth, our Attic folk, sons of the soil, call him Pæan; and by that name he is invoked by the great sacred band of the servants of Bacchus, smitten by the thyrsus, who dwell in the city of Cecrops.

"Advance, then, warder of the oracular tripod, to the summit of Parnassus trodden by the gods, dear to the Mænads in their ecstasies. There once, garlanding thy golden locks with laurel boughs, thou wert dragging with thy sacred hand enormous blocks, the foundations of thy temple, when thou didst encounter the monstrous daughter of Earth [the dragon Python]; abiding her onset, O deity of the gracious eyes, thou didst slay with thy arrows the child of Earth. . . . And thou wert keeping guard by the holy place that is the navel of the Earth, when the Barbarian horde of Gauls, bent on profaning thy rich shrine with plunder, perished in the whirlwind of snow. Now, O Phœbus, save and guard the city founded by Pallas, and her famous people; and thou, too, goddess of the bow, and mistress of the Cretan hounds, and thou, Leto most revered! guard ye the dwellers of Delphi, their children, their consorts, and their homes, free from calamity. Be favorable to the servants of Bacchus, crowned with the honors of the games! Prosper and increase the martial sway of the Romans! May it flourish in the might of immortal youth, and be ever triumphant in battle!"

Our poet has chosen, singularly enough, to make his dragon feminine; the poet of the former hymn disagrees with him in this point. This might lead us to ascribe the two hymns to different authors; their epoch is certainly nearly the same, they belong to the same school, and are shaped on the same pattern. They are so much alike that the later discovery sheds light on the earlier, and enables the editors to amend in some particulars the readings and the music published last year. The chief change, and a very obvious one, is that which reverses the order of the marble slabs and makes the invocation to the Muses stand at the beginning, after the pattern of the second hymn. Minor changes are extremely interesting, but belong to the province of the scholarly expert.

Musically, the new hymn is the most interesting relic yet discovered. Unlike the former hymn, it is written with instrumental instead of vocal note signs. Crusius and Gevaert take this to mean that the accompaniment was in unison with the voice. Without positively denying this view, Reinach relegates it to a footnote, evidently preferring his own explanation, that the instrumental (probably Dorian) notation was originally the only one, and that the later Ionic notation superseded it only in vocal scores, and *that* not universally; just as the Germans use either Gothic or Roman letters for most books, but almost always the Roman for scientific works.

The new hymn, taken with its predecessor, confirms several points not fully established before. Thus, we observe that neither hymn has any signs to denote the duration of the notes; and it now seems safe to say, at least for this period (about 100 B. C.), that such signs were probably never used when the metre was certain without them. In the Seikelos inscription they occur and are indispensable, since without them it would be impossible to distinguish the iambic character of that piece. Again, the law of correspondence, mentioned above, between melody and word-accent, though not noticed by Reinach and Weil in their article on the former hymn, as both Crusius and D. B. Monro immediately pointed out, is seen to be observed in both hymns. It is time now to give this very simple law: (1.) Unaccented syllables may have the same note as the accented syllable of the same word, but not a higher. (2.) Circumflexed syllables, when musically resolved into two shorts, always pass from a higher to a lower note. Every one sees what a flood of light such a law throws upon the true nature of the Greek and Latin word-accent as distinguished from metrical accent and from word-accent as we understand it in the modern languages of the same family. We must look to the Chinese for word-accent in the ancient sense.

We have pointed out how this law aids in restoring the text when the note of the missing syllable is preserved. It may even do so when both syllable and note are lost. If, for example, the following note is the lowest of the scale, the note of the missing syllable cannot be the same, for in that case the one remaining would not carry the note-sign. It must, therefore, be a higher note, and the syllable must be accented, if the word is dissyllabic. The restoration of fragmentary music is very much more difficult than that of a defective text, as any one may ascertain by trying the experiment on an English ballad. Hence Reinach's transcription is given with distinct reservations. Add to this that this inscription is far less legible than that of the other hymn —a fact which caused the fragments now composing the second column to be attributed to a hymn written in vocal score.

Reinach's careful analysis of the partial scales of our hymn leads to certain conclusions, the detailed proof of which our space forbids us to give. The hymn is in the Lydian trope combined with the hypo-Lydian. We find the same accuracy in notation as in the former hymn, where the same note has different signs as it stands in different scales—just as in modulating, for example, from C minor to A minor, we write G sharp for A flat. As to the mode, Reinach (who, we are pleased to find, is not a convert to Monro's heresy as to the meaning of ἁρμονία) shows that the Glyconic finale is probably in the Dorian (descending scale of A minor with flattened B), while the remaining diatonic parts are hyper-Dorian, or mixo-Lydian, which is only Dorian with "conjoint" tetrachords. There are some peculiarities of style which suggest that the composer consciously imitated archaic or Attic models. One is the absence of the *lichanos* (C natural) in the Dorian passages—a peculiarity noted in the ancient music of Olympos. Another is the small compass of the mixo-Lydian passages, the diminished fifth B–F. To this we might add, if we adopt Reinach's explanation, the use of the ancient Dorian notation. Reinach's judgment of the composer is that he had more technical skill and less inspiration than the composer of the former hymn. The music is more ambitious, and the unusual compass (a diminished twelfth, of which the extreme notes are frequent) makes it clear that it was written for skilful professional performers. This, if we might venture on a suggestion of our own, may be the reason why the score could be written in the instrumental notation which might not have been equally familiar to less skilful vocalists. And may it not be that the instrumental performers also sang to their own harping?

The discovery of this hymn has seemed to demand a new transcription of the former one. This, and a new rendering of the Seikelos inscription, besides a collation of the new hymn with the Lydian and hypo-Lydian scales, are given in the tables in addition to the new hymn itself.

ALASKA REVISITED.—III.

JULY, 1895.

THE characteristic scenery of southeastern Alaska has been described by numerous tourists in various books which have been duly reviewed in your columns. The narrow channels, like rivers, between lofty spruce-covered mountains, though picturesque and peculiar, in time pall on the attention. Except where diversified by the glaciers of the mainland, each of which has a certain individuality, the landscape finally strikes one as rather monotonous. It is difficult to exaggerate the beauty and sublimity of such a glacier-field as that of the Muir in Glacier Bay, when seen under sunny skies, and this has been repeatedly described and photographed. There are, however, several corners which in their way are equally striking, but which, being aside from the tourist route, are almost unknown. One of these is Sumdum Bay, an arm of Stephens Passage, in which a good anchorage is found. Near the mouth, on the north shore, there is a fine large glacier. The bay is long and narrow, and at its head two other glaciers discharge a multitude of small bergs directly into the water. The mountains are high and wooded, snowy above the tree-line, and offer several beautiful cascades. Two or three remarkable narrow cañons diverge from the main channel, one of which is sometimes closed by descending masses of ice, and, from the temporary imprisonment of an explorer who ventured into its recesses, is known as "Ford's Terror." The currents in these passages acquire great strength during the flow of the tides. The varied tints of blue and green shown by the moving bergs against the dark background of sombre spruce forest, relieved by the immaculate snowfields above, which the sun suffuses with delicate rose and pearly light, present a scene of almost unique beauty.

Most remarkable of all, perhaps, is the view obtained at the head of Taku Inlet. Here also are numerous fine glaciers, some of which discharge into the sea, but beyond them is a mountain ridge rising in peaks 3,000 to 6,000 feet in height—a single one to the east, then three combined more westerly, linked by a sharp and jagged crest with a crag over a thousand feet above the rest, which has no equal in Alaskan scenery. Apparently composed of some schistose rock, it rises like a great stone book, the leaves represented by the fissure lines; the edge towards the spectator is nearly vertical, the covers incline slightly towards the east—sheer precipices of smooth rock on which no snow can lie—and at a distance of fifteen miles the eastern face actually seems to overhang some five degrees. The summit is nearly flat, like the upper surface of a book upon a shelf, and the width of the mass is about one-third of its height above the ridge from which it rises. It seems stupendous and incredible. Westward, the broken crags at its base connect it with another (pyramidal) peak enamelled with the whitest snow, contrasting finely with the black prismatic mass before described.

To turn from great things to small, I cannot forbear a few words on the characteristic vegetation which may be seen by the tourist fortunate enough to stray away from salmon canneries and dirty Indian villages into the forest which surrounds them. Here, among the moss-covered trunks of enormous conifers, a whole world of beauty is secluded. Prominent among green things is the large, pale yellow spathe of the "bearfood," a symplocarpus, less odoriferous than its New England congener, with leaves usually eighteen inches high, but sometimes reaching to four feet, recalling on a larger scale the erect, oval leaves of Cos lettuce. It is the favorite salad of deer and bear, whose footprints are not uncommon in the boggy places it prefers. In its immediate vicinity the "flowering raspberry," grown as an ornamental plant in old-fashioned gardens in the East, enlivens the wet places with its large rose-red blossoms. It is mistakenly called "salmon-berry" by many of the whites, though the true salmon-berry, also found here, does not reach one-tenth the size and has an insignificant white blossom. Abundant in the feathery sphagnum are the white flowerets of the dwarf cornel, and here and there the round cowslip-like leaves of a fragrant *Monesia*, with starry, delicately sculptured, waxen-white blossoms, the most elegant of the characteristic wild-flowers of this region. A pretty corydalis, a red columbine, numerous peculiar forms of the blueberry, and two or three fragrant white and purple orchids, with the maroon-colored *Fritillaria Kamchatica*, make up the list of most conspicuous forms. The latter, called saranna by the Aleuts, has an edible root, like a rosette of grains of white popcorn, which was formerly collected by the natives for food.

Most characteristic for all this region, and the greatest obstacle to inland exploration, execrated by hunter and prospector, is the false ginseng (*Panax horridum*), or "devil's club," which has the habit of a sumac; its tall, slender stems, close set, with fine poisonous prickles, rising sometimes to a height of ten feet. The leaves of this plant are large and radiately pointed, and are held aloft like the branches of a candelabra, nearly umbellular in general form; late in the season the centre of the cluster has a pointed bunch of red berries at the tip of the stalk. Few plants are more elegantly decorative, and it is surprising that no designer has yet made use of it.

Ferns are abundant, but of few species, the common brake being the most noticeable; mosses and lichens flourish mightily in the moist air from the sea. The ground in the

forest is entirely composed of decayed vegetable matter, chiefly dead trunks of trees, and mosses. One often sinks to the middle in endeavoring to force a passage. Yet decay is slow; we counted the rings in a stump of spruce from which the bole had been hewn away for firewood, and found that it must have been a well-grown sapling when Columbus discovered America. Yet clasped in its roots was the prostrate trunk of another, equally large and almost wholly sound. Deciduous trees are strangely absent. A few alders grow along the streams, and, with some small willows, streak the mountain sides where landslide or avalanche has swept the spruce away; their vivid green contrasting sharply with the sombre conifers on either side. A wild crab-apple occurs sparingly, but of oak, chestnut, birch, and maple there is not a trace. True pines are equally invisible; the spruce, hemlock, Douglas fir, and yellow cedar, with a few larch, make up the forest. The undergrowth away from the brooks is not dense, but rather feathery and graceful, everywhere reinforced by tufted mosses and luxuriant ferns. The extraordinary manner in which fallen tree-trunks lie over and upon one another, thickly carpeted with yielding mosses, renders progress difficult, but a few yards away from the beach one may find a perfect fairyland of greenery.

In and through it all are well-marked trails of the invisible forest population. These dense woods shelter more than one variety of large game still undiscriminated by naturalists. All the islands are inhabited by a small race of the black-tailed deer (*C. columbianus*) and usually by the brown and black Alaskan bears. The mountain goat is not uncommon, but is nearly inaccessible, on the ranges of the mainland and larger islands. A special, nearly white race of the mountain sheep is peculiar to this region; and the natives insist on the presence of an antelope-like animal with large straight horns. About the glaciers is found a black bear with long white-tipped hairs like a silver fox, the sides of the muzzle tan-colored and the belly nearly white. Some specimens of this animal are so hoary as to appear of a bluish white, and it is known to the trappers as the blue or St. Elias bear. As it is evidently a distinct variety from the ordinary black bear, it has recently been named *Ursus Emmonsii*. Another singular race of the brown bear has been reported to me which has, for a bear, quite a long tail. The skin of a young cub of this kind shown me from the Cook's Inlet region has a tail about six inches long. These facts indicate that the field for the sportsman and naturalist in Alaska is by no means exhausted, and that those in search of adventure, by leaving the tourist route, will find no lack of opportunity. W. H. D.

THE INDUSTRIAL ALLIANCE OF FRANCE AND RUSSIA.

PARIS, July 31, 1895.

THE successful emission of a Chinese loan of 400,000,000 francs in the Paris market is an event which has more than a financial importance. It shows once more how intimately connected France and Russia have become, as it is quite certain that the French subscribers did not for a moment think of affording any help to China, and really looked upon the loan of 400,000,000 as a Russian loan, since the Russian Government had given its guarantee for the payment of the interest, in case the payment could not, for any unforeseen reason, be made out of the proceeds of the Chinese custom-houses. It has been calculated that within a few years France has invested in the Russian funds a sum not much below eight milliards of francs. These vast investments have considerably helped Russia; her debt has been gradually converted, she has been able to build the strategic railroads which are necessary for the mobilization of her armies, and she is now engaged in building a trans-Siberian railway, which will put the Ural region in communication with the Pacific Ocean.

Russia, though still in many respects in a sort of inorganic state, is organizing herself more and more, and is becoming a more formidable power not only in Europe, but also in Asia. Her interference arrested without any difficulty the progress of the Japanese arms on the Asiatic continent; the treaty which ended the war, and by virtue of which Japan had to evacuate the provinces and the positions she had conquered on the continent, was due to the joint action of Russia, of Germany, and of France. In reality, Russia was the leading factor in this diplomatic action. Germany, without having any direct interests involved in the Asiatic question, joined Russia in the hope of establishing more cordial relations with her and also with France. It was in her case "love's labor lost," and the Germans saw, not without some irritation, when the Baltic Canal was opened, that the French and Russian squadrons arrived together, that the civilities exchanged by them with the German squadron were of the most formal character. We can not much wonder if the new Chinese loan, which received the guarantee of Russia, was subscribed only in France; Germany would have nothing to do with it, any more than would England, who always looks upon Russia as an hereditary enemy.

Much has been said and written, on occasion of this Chinese-Russian loan, on the character of the alliance between France and Russia. Is there a real alliance? Is there a written treaty, and, if so, what are its terms and conditions? Can there be a real treaty of alliance, and has the President of the French Republic the right to sign such a treaty? The question is being discussed with some warmth, and the framers of the Constitution of 1875 have been interviewed on the subject. Article 8 of the constitutional law of July 16, 1875, on the relations of the public powers, says merely that the President "negotiates and ratifies treaties." This same article says that "treaties of peace and of commerce, those which involve the finances of the States, and those which relate to the personal status and property rights of Frenchmen living abroad, are definitive only after having been voted by the two Chambers." You will perceive that in these articles there is no question of treaties of alliance. M. Wallon, the reporter of the law of 1875, said in a recent conversation:

"The President of the Republic, with the assent of his Ministers, has the right to put his signature to a draft of a treaty. Nothing forbids it. But the truth is, that no treaty has any real value before it has been ratified by the Chambers. I will explain. The Government of the French Republic can make a moral engagement, even a written engagement, with such and such a country, in view of such and such an eventuality. These are rational measures, which may be very useful. But to realize these measures, to put, so to speak, a treaty in motion, to draw from it its practical consequences, the assent of the Chambers is not only useful, but indispensable. This results from the general character of our constitutional laws, which have for their basis the national sovereignty."

It is easy to perceive that the character of these laws, it it does not preclude the executive power from taking some of the measures which are a preparation for war, makes it rather difficult to take them. Rapidity of orders is one of the essential elements of success. There are some eventualities which would force the assent of the Chambers to the action of the executive power; there are others which might induce the Chambers not to give their immediate and unanimous assent to a treaty prepared by the Cabinet. "People," said M. Wallon, "have spoken recently of a Russo-French treaty; it has been said that France and Russia have entered into a mutual engagement to support each other in all possible contingencies. Suppose for a moment that Russia wished to drag us into a war with England. Well! that would be . . . terrible; it would be worth while to examine the question."

Undoubtedly these questions have been well examined in Russia as well as in France. One thing, however, is certain, namely, the attraction felt in Russia towards France, the attraction felt in France towards Russia. I need not recur to the great popular demonstrations which took place when Admiral Avelan and his officers visited Paris; to the great naval reviews at Toulon and Cronstadt. The sympathy felt in France for Russia took a more utilitarian form when French capital began to look to Russia for investment. Not only did France help Russia to reorganize her finances and to improve her credit, she is playing a very important part in the creation of Russian industries. This powerful collaboration is perhaps not so well known as it ought to be.

Russia possesses enormous coal fields and an abundance of mineral ores, which constitute a reserve of wealth that is only beginning to be touched. She has to create an immense network of railways, and for a long time she depended on her neighbors for the needful supply of rails and machinery. She is now preparing to become a producer of rails and machinery instead of being a mere consumer, and in this great work she has found a powerful help in French capital and French initiative. The city of Lyons is at the head of this interesting movement. Lyons is a financial centre of great importance. The Lyonnese financiers and capitalists, who are in alliance with the powerful capitalists of Geneva, are a very intelligent and laborious body of workers. They are not, like the financiers of Paris, divided between pleasure and speculation; life has a severe aspect in Lyons, and its inhabitants sacrifice little to fancy and to luxury. I do not know how it came about that the attention of Lyons was turned towards Russian industrial affairs; but at the present moment an enormous amount of its capital is looking for investment in Russian affairs—coal mines, iron mines, iron and steel manufactures. While Paris, following the lead of London, is thinking only of the Witwaters Rand and the Transvaal, Lyons seems to think only of Russia. The Society of Briansk was constituted as far back as 1873, the Society of Huta-Bankova in 1877, the Franco-Russian Works in 1880, the Society of Kama in 1883, the Metallurgical Society of the Dnieper in 1887, the Society of the Donetz in 1891. Brussels has taken an important part in this movement, together with Lyons. To give an idea of the success of some of these companies, I will only say that the shares of the Dnieper Society, which are nominally of 500 credit rubles, or about 1,250 francs, are now quoted at 6,500 francs.

Metallurgy in Russia is now passing through a period of extraordinary prosperity. Nearly all over Europe the network of railways is al-

most finished ; the great railway companies of France, having now steel rails, give very few orders to the immense establishments which were created in view of railroad extension. In Russia, on the other hand, many large cities are still awaiting railroads ; in Siberia the Government is only beginning the long line to the Pacific. Russia has to make bridges over her immense rivers, to improve her ports, to open her vast coal-fields. Many years will be necessary for this great work. The economical consequences of the development of the wealth of Russia will be of immense importance, not only to Europe, but also to America. Hitherto, Russian corn has found its way only with much difficulty to the Black Sea ; hereafter it will have easier access to it, and will be better able to compete with its rivals.

If we look to a very distant future, as we now see the centre of industrial activity in its relation to coal and iron slowly transferring itself from the centre of Europe to the vast empire of Russia, our children will probably see it transferred to Siberia and to China. The time will come when the immense Asiatic continent will be covered with railways. The Chinese are admirable workmen; they can live on very small wages; they will some day, after having taken lessons from our engineers, make their own rails, their own cars, their own locomotives. There is something very suggestive in the diplomatic efforts made by Russia to secure the friendship and alliance of China. The Russian assimilates himself better than any other race with the Chinaman; and in the obscurities of the future we can discern immense changes in the Chinese Empire, achieved by the progressive interference not of Russian arms, perhaps, but of Russian industry and civilization.

At no time have the political and the economical interests of nations been more closely intermixed; revolutions which in old times could have been accomplished only by force, will in future times be accomplished more and more by peaceful means. The world, in a sense, is becoming more contracted, and the interests of nations lie nearer together than in the past. Europe is perforce obliged to watch and to help along the economical development of countries which, not many years ago, were known only to travellers and geographers.

Notes.

D. Appleton & Co. will publish directly 'Gustave Flaubert, as seen in his Works and Correspondence,' by John Charles Tarver; 'The Story of the Earth,' by H. G. Seeley; 'The Red-Badge Courage,' a Tale of the Civil War, by Stephen Crane; and the 'Watter's Mou',' by Bram Stoker.

'Reconstruction during the Civil War in America,' by Eben Greenough Scott, is in the press of Houghton, Mifflin & Co.

The Spenser Society has completed its set of Drayton by publishing an "Introduction." Mr. Oliver Elton, to whom, on the retirement of Mr. Bullen, the preparation of this preliminary essay was intrusted, has done his work well, and, if he has not solved all the literary and biographical problems involved, has at least furnished a solid basis for future investigation. The volume contains a good portrait of Drayton.

Dr. Karl Bülbring has recently edited De foe's unpublished tract on 'Royal Education' (London: Nutt). The manuscript long escaped attention by the accident of being embodied in that of 'The Complete English Gentleman.' The tract has slight literary importance, but is not without a certain interest. All possessors of Dr. Bülbring's edition of 'The Complete English Gentleman' will wish to secure it.

'Twenty-five Letters on English Authors,' by Mary Fisher (Chicago: Griggs), is a rambling book which the "young people" for whom it is principally intended would do well to avoid.

'Maureen's Fairing, and Other Stories,' which have been daintily brought out in the "Iris Series" (Macmillan), are not up to Miss Barlow's earlier and entirely spontaneous work. Such of them, however, as are Irish are still far beyond the average treatment of Irish subjects. Four of the eight tales have already appeared in current periodicals. Miss Barlow excels rather in conversation than in plot. Bertha Newcombe's illustrations are charming. Why "A Formidable Rival" should be placed before "Mac's Luncheon," which naturally precedes it, we fail to understand. "Stopped by Signal" and "The Murphys' Supper" are most instinct with the author's genius. The volume will well repay purchase and perusal.

Mr. Sylvester Baxter, Secretary of the preliminary Metropolitan Park Commission of Massachusetts, has just issued a 'Boston Park Guide,' which includes the municipal and metropolitan systems of Greater Boston, with maps and views. This guide deserves a very wide circulation in every municipality, for there is none to which the most notable American example of foresight, public spirit, and expert landscape gardening will not come as a revelation and a stimulus. Mr. Baxter is his own publisher, at No. 255 Washington Street, Boston.

A fresh volume from Brunetière's pen, 'Nouveaux Essais sur la littérature contemporaine' (Paris: Calmann Lévy), is full of matter for thought, full of instruction and suggestion. The great critic has his theories and his special antipathies and prejudices, but he has a large and effective way of dealing with the subjects he takes up, and a luminous fashion of treating them. The reader who has studied a writer carefully is amazed to find how much that is new Brunetière can still point out to him, and what novel suggestions of connection, influence, or effect a sentence of his will reveal. In the present collection there is an admirable essay on Leconte de Lisle, another on Baudelaire, and a third on Bourget which should be read in connection with that on Octave Feuillet and with M. Larroumet's essay on Bourget. Appended to the volume is M. Brunetière's *discours de réception*.

Teodor de Wyzewa's "Nos Maîtres" (Paris: Perrin & Cie.) is an interesting and useful volume, in which several important literary and æsthetic questions are discussed. Mallarmé is treated of rather fully, but it is the general questions which are most attractive—"Of Criticism," "Of Science," "Of the Religion of Love and Beauty." These should not be missed, particularly the last.

The life and work of Victor Duruy are succinctly described by M. E. Lavisse in "Un Ministre: Victor Duruy" (Paris: Colin & Cie.), the greatest stress being naturally laid on Duruy's work as Minister. It is a timely testimony to the educational labors which did much for France.

'Un Diplomate à Londres: Lettres et Notes, 1871-77,' by Charles Gavard (Paris: Plon) is a gossipy little book, very entertaining reading, and in many respects a valuable contribution to contemporary history. It consists chiefly of letters written home, the first of which, dated February 24, 1871, announces the author's arrival in England, and begins with giving vent to his patriotic feelings by the exclamation: "At last in a land where there is no Prussian!" About a month later Napoleon was released from captivity and took up his abode at Chiselhurst, and M. Gavard describes with evident disgust how the ex-Emperor was run after and cheered by the English on every occasion, and remarks, in general, their habit of lionizing any noted or notorious person who may have made himself conspicuous either in a creditable or a discreditable manner. The English attribute this tendency to sympathy with the unfortunate; our author ascribes it to vulgar curiosity. He also gives an account of the visit of the German Empress Augusta to Queen Victoria in May, 1872, and comments upon Augusta's extreme volubility—a characteristic which is known to have been a source of frequent inconvenience to Bismarck. M. Gavard gives lively descriptions of social life in England, especially at the country seats of Earl Granville, Lord Salisbury, the Duke of Bedford, the Rothschilds, and other men of eminence in political aad financial affairs. He is somewhat of a sentimentalist, with a nice appreciation of "das Ewig-Weibliche," and a fine eye for peculiarities of feminine toilet.

The name of Quatrefages is associated with that view of Japanese ethnology which makes a "white" Allophyllian race, coming from the Malay region in the south, a predominant element in the race-stock (see the *American Law Review* for November-December, 1894), and new interest is given to this view by the preliminary summary, just published in the *Japan Mail*, of the researches of that indefatigable worker, Prof. Basil Chamberlain, whose grammar of the Loo Choo Islanders' language is announced for early publication in the Transactions of the Asiatic Society of Japan. The affinities of this language, hitherto practically unexamined, are very close, it is announced, to Japanese, its relation being in effect that of a collateral but less advanced development of an originally identical stock. This suggests to Prof. Chamberlain that the Loo Choo people represent a southern offshoot of an immigration to Japan through Korea. But it seems not to have occurred to him that the stronger indication is just the opposite, viz., that the general stock came up from the south gradually, the present Japanese vernacular representing those who pushed on north and formed the dominant element in Japan. Whatever the ultimate decision, there can be no doubt that the kinship which Prof. Chamberlain will demonstrate adds abundant material for the reconsideration of the whole subject.

A new and interesting chapter in the history of Old Testament criticism seems likely to have been opened by Dr. Henry Hayman, the well-known classical scholar and former head-master of Rugby. In a communication to the *Guardian* he suggests that the original documents of the Pentateuch were not manuscripts, but clay tablets similar to those found at Tel el-Amarna a few years ago. He bases his theory on the fact that this was a common method of writing at the time of Moses, and goes on to show, by a detailed examination of the "Song of Moses" in Deuteronomy, how many of the insoluble difficulties in the text and its interpretation may have arisen from the faulty incorporation of the tablets into the roll. The proper sequence may not have been followed, or the wrong face of the tablet,

which was written on both sides, may have been taken first. "Sometimes a *lacuna*, brief but significant, points to an edge-line or corner phrase having been slurred or chipped." Or, to put his theory in his own homely form, he "believes that we have here a pack of cards which have been shuffled and some of them 'faced,'" that is, damaged by use.

Part vi. of *Bibliographica* (London: Kegan Paul; New York: Scribners) is not as readable as some of its predecessors. George Somes Layard's "Robinson Crusoe and its Illustrators" whets the appetite with its title, but is far too sparsely illustrated, giving but two reproductions, and these from the first edition. In this paper the elegant typography of *Bibliographica* is marred by a division (Stot-hard) of which a foreigner might pardonably have been guilty. There is no lack of cuts in part ii. of Paul Kristeller's "Florentine Book Illustrations," yet the discussion needed many more to avoid being dry and confusing. Valuable for record and reference are W. H. Allnutt's "English Provincial Presses," part ii., and Henry R. Plomer's "Notice of Printers and Printing in the State Papers." Cyril Davenport's article on "Little Gidding Bindings" is accompanied by several charming examples in color.

The second volume of the Aubrey-Beardsleyish *Moods*, "A Journal Intime" (Philadelphia: The Jenson Press), contains very little of letterpress or illustration to justify the costly manufacture. There is more substance in the moral of Owen Wister's little fable of "The Ape and the Thinker" than in all the rest. The Jenson typographic font revived in this publication will never supersede or compete with the fonts of to-day.

The "Winter number" of *Modern Art* (Boston: L. Prang & Co.) has at least one contributor in common with *Moods*, and some affinity for Beardsley, but its illustrations are on a higher level, consisting of a drawing by Mary Cassatt and a passable copy of Albrecht Dürer's "The Knight, Death and the Devil." The feature of real interest is the series of initials and title-pages elicited by a prize competition for *Modern Art*. The editor, Mr. Bowles, remarks of the former that some "were evidently thought of as parts of a printed page, and not as separate pictures, which is a rare [and inferentially a praiseworthy] thing." Judging by this correct standard, we should prefer the second prize to the first, and even the unpremiated "Hazel Nut" set—the work of women in both cases. All the best designs, by the way, come from England.

In the *Green Bag* for August, Mr. Edward S. Taney has a sketch of Chief-Justice Taney, exhibiting his amiable personal traits, his aversion to slavery, manumission of inherited slaves, personal attachment for individual negroes his pensioners, and his high tone as a public official, whose rule it was to accept no present, however trifling.

Two sterling papers adorn the current Proceedings of the State Historical Society of Wisconsin. One, an antiquarian investigation on "Early Shipping on Lake Superior," is by Prof. James Davie Butler; the other, by Theodore Clarke Smith, is a remarkably fair-minded and valuable historical sketch of the Free-Soil party in Wisconsin and its predecessor (and to some extent *alter ego*), the Liberty party. This paper is worthy of a reprint, and stamps the writer as one who has a clear call to be an historian.

A noteworthy contribution to the history of the sciences as a branch of instruction in secondary and higher schools is to be found in Dr. Emil Schmidt's articles on "Die Entwickelung unseres höheren Schulwesens hinsichtlich des naturwissenschaftlichen Unterrichts," in the current volume (January, February) of the *Paedagogium* (Leipzig: J. Klinkhardt).

The whole number of medical students in the universities of Germany during the summer semester of 1895 was 8,030, of whom 1,209 were at Munich, 1,080 at Berlin, 707 at Würzburg, 617 at Leipzig, 443 at Freiburg, 406 at Greifswald, 399 at Kiel, 338 at Breslau, 300 at Strassburg, 275 at Heidelberg, 246 at Königsberg, 245 at Marburg, 241 at Halle, 220 at Göttingen, 215 at Tübingen, 195 at Jena, 137 at Giessen, and 101 at Rostock. Thus Munich stands first numerically, and this superiority is due to its greater attractiveness for non-Bavarians, of whom there were 792, whereas at Berlin there were only 298 non-Prussians. During the winter semester of 1893–4 in German universities, 1,406 students received, on examination, the degree of M. D., of whom 100 were pronounced "sehr gut" (very good), 928 "gut" (good), and 378 "genügend" (sufficing). Of the first class there were at Leipzig 14, and of the second class 146, out of 201; at Munich, 12 and 111 out of 166; at Würzburg, 11 and 96 out of 135; while at Berlin there were none of the first class, and 111 of the second, out of the entire number, 169. These statistics would imply that the examination for a medical degree is more rigorous at Berlin than at the other German universities—assuming, of course, equal competence and diligence on the part of the students.

A very important moor find has recently been made on the island of Fünen in Denmark, whence so many remains of the Scandinavian iron age have come. These latest objects consist of seven swords, most of them bent together after the usual fashion, and a number of spears, both iron and bone. Unlike earlier specimens, these spears, especially the bone ones, are in an almost perfect state of preservation. Many of them still contain shafts so constructed as to prove that they must have been used for throwing. Of this fact no trace had before been found. Another novel feature lies in the receptacle itself, which is the site of a road dating from the iron age, and still in a good state of preservation. Its construction is very much like that of the best modern Danish stone roads, care having been taken to prevent spreading by the use of large stones along the sides.

—An officer in the Union army, who has lived for more than five years in Yokohama, makes the following curious observation in a recent letter to an American correspondent, apropos of the recent hostilities with China:

"The war has done one good thing. Several years ago the Buddhists had persuaded the authorities that Christianity made people disloyal to their ruler, the Mikado. During the war there were many Christians among the soldiers, and their officers watched them. The result was, that the watchers wrote home to their friends and their papers that the bravest and most loyal soldiers of the army were the Christians. They were to be depended on in camp and in field, they were not afraid to die, and never shrank from any duty to which they were called. Of course this changed public opinion in regard to them and disproved the statements of the [Buddhist] priests. Previously the Government was not pleased that the people should have the Scriptures; now the way is open and they want to make them all Christians. Anything that makes good soldiers is agreeable to the powers that be."

—In a paper recently read before the Boston Scientific Society Mr. Rotch of the Blue Hill Observatory makes interesting statements about high-altitude stations for meteorological observation. The first summit station in the world was that established in 1870 upon Mount Washington, at an elevation of 6,280 feet. Some remarkable observations have been made there, such, for instance, as a temperature of 50° below zero, during the progress of a gale blowing at 184 miles an hour. The station on Pike's Peak, 14,134 feet high, has been closed, and there are now but two summit stations in the United States where observations are made regularly, viz., at the Lick Observatory and at Blue Hill, near Boston. The highest meteorological station in the world is that maintained by Harvard College Observatory in Peru, at the summit of El Misti, 19,300 feet. It is visited several times a month by one of the staff of the Harvard Observatory below, at Arequipa, who attends to its self-registering instruments, checks the readings, and so forth. A splendid chain of high-altitude stations exists in France, including those on Mount Ventoux, 6,250 feet, and the Pic du Midi, 9,440 feet. The highest of the stations established by M. Vallot on or near Mount Blanc is at the Rochers des Bosses, 14,320 feet, which is provided with self-recording instruments capable of running two weeks without attention, and is in use during the summer. The Mount Blanc observatory of M. Janssen is not yet in operation; it has an altitude of 15,780 feet. The highest permanent observatory now in use in Europe is the Sonnblick station, 10,170 feet, in the Austrian Alps, which has given valuable results. Switzerland and Italy have well-located and equipped mountain stations; and the one on Ben Nevis, in England, though not so high, has given a ten years' unbroken series of hourly observations. Of course it is possible to send self-recording instruments up in balloons to a much greater height than a person could reach and be able to breathe. An altitude of ten miles and over has been reached by this means in France, and last July in Germany with very valuable results. Kites also have carried anemometers to considerable heights with good results. Dr. Berson last year reached an altitude of 30,000 feet, or nearly six miles, making from his balloon some very significant observations upon temperature and humidity, winds and clouds, in a seldom visited region. He is said to have suffered little from the diminished pressure of the atmosphere at this great height, probably because of his inhalation of oxygen from time to time.

—A British trade report on the employment of women, recently issued as a Parliamentary paper, reveals some unexpected facts in regard to the current condition of wage-earning women. Miss Collet, a member of the Labor Commission, who makes the report, states that in England out of 277 occupations, or trades, women are found in only 18, that there is a decrease in the number of married women working away from home, and that the main increase of women in occupations in England, of late years, has been in middle-class homes. It has been rashly assumed that the recent rapid increase in the number of women employed in special lines indicates commensurate general changes in the British field of employment for women. This is not exactly true. Miss Collet finds "that the industrial position of women varies with the degree of material prosperity of the men in the class to which they belong." As a matter of fact, the women in the families of men of small producing or earning power have always had to earn a portion of the fami-

ly bread. But as the earning power of the men in certain classes increases, the family can be supported by the male earnings, and the greater comfort available in the home creates a class sentiment opposed to the wife at least being called on to earn a part of the fund she dispenses—with thrift or waste, as the case may be. With a still higher standard of comfort and growing prosperity, the tendency is to retain the services of the daughters in the home. Mechanical invention and scientific appliances have multiplied the number of men in England who can afford to support their daughters, at the same time that any *need* for the services of the latter has decreased; consequently, girls of the middle classes have entered the labor market in untold numbers, urged thereto by a higher standard of comfort (which has increased their wants), by a smaller field for domestic usefulness, and by diminished chances for marriage.

—In comparison (and to some extent in contrast) with this British report, special interest attaches to an extra Census Bulletin (No. 99), "Statistics of Occupation," which gives the number of males and females in the United States of ten years of age and over employed in gainful occupations. Compared with similar statistics for 1880, these figures indicate a wider development of employment among American than among English women. In 1880 the percentage of "gainful" males over ten to the whole number of that age was 78.70, and of females only 14.69. In 1890 the difference in round numbers, and in proportional increase, between males and females justifies what has been claimed for the greater productive and earning power of the new American woman. The respective figures are, for males, 77.28 (a slight loss of 1.42 per cent.), and for females, 16.98, a gain of 2.29 per cent. for the working woman. The growing industrial power of women is still more emphasized by stating the figures differently: thus, the numerical increase in wage-earners between 1880 and 1890 was over 5,300,000, and the percentage of increase 30.72; but the increase in the number of males was 4,076,000, or only 27.62 per cent., and of females 1,267,550, or 47.88 per cent. Elaborate tables show that the ratio of increase in professional occupations and in domestic and personal service is largely on the side of women, and while the extraordinary development of trade and transportation is evidenced in all the returns (the number of employees increased 78 per cent.), the percentage of increase for females under these two heads is especially large (263.25 per cent.), due mainly to the number of young women employed as bookkeepers, clerks, stenographers, typewriters, and saleswomen. It is worth notice that there has been a wholesome increase in the proportion of women engaged in a variety of occupations in which the personal equation especially counts. Thus, of the 219 specified occupations, women have entered into 217, the exceptions being "officers of the United States Army and Navy," "United States soldiers, sailors, and marines," although there are twenty-two occupations which claimed in 1890 only from one to ten women members. It appears, therefore, that, unlike her British sister, the American woman has found her way into almost every department of honest labor where special capacity or economic advantage has discovered an opening for her as a class, or her sex does not disqualify her as an individual worker.

—The latest number of the *Historische Zeitschrift* contains an article of fifty-four pages by the late Prof. Heinrich von Sybel, entitled "Neue Mittheilungen und Erklärungen zu Band 6 u. 7 der 'Begründung des Deutschen Reiches durch Wilhelm I.,'" in which he defends his account of the origin of the war of 1870 and replies to some of the strictures of his critics. The article, already issued by the Munich publisher in pamphlet form, is divided into six sections, of which the last two, treating of "Napoleon und Eugenie" and "Bismarcks Politik," are the longest and most important. It is a noteworthy and significant fact that in the seventh volume of Sybel's 'Founding of the German Empire,' in which the causes of the Franco-German war are fully discussed, scarcely any reference is made to the Empress Eugénie, and in the elaborate table of contents to the same volume (the work has unfortunately no index) there is not the slightest mention of her name. It is evident, therefore, that the historian does not think that she exerted any appreciable influence upon the course of events. The prominent political rôle assigned to her in Pierre de Lano's 'Après l'Empire,' as, for example, where it is said that, at her urgent request, Grammont kept from the Emperor all knowledge of Benedetti's despatch, Sybel regards as purely mythical; he also finds no satisfactory proof that she ever uttered the frivolous words so often attributed to her: "C'est ma guerre, ma petite guerre, la guerre à moi!" The two persons, in his opinion, chiefly responsible for the war were Gramont and Ollivier, who, after the appeal to arms had resulted in disaster, endeavored to throw this responsibility upon the "party of the Empress." Had France been victorious, these men would certainly have claimed all the honor for themselves. Napoleon, severely suffering from gout, stone, and a complication of kindred disorders, felt an earnest desire to preserve peace, and realized the force of Princess Mathilde's exclamation: "My God! are you going to walk into a war on such legs as those?" Eugénie, as Sybel states, was deeply embittered by her husband's infidelity, but he does not believe that her resentment converted her into a "passionate and heartless intrigante." At least he fails to discover any evidence of the truth of this accusation. In the section on "Bismarck's Politics" an interesting incident of the war of 1866 is narrated on the authority of the Crown Prince Friedrich. On July 24, just after the armistice had been concluded, and while the provisional peace of Nikolsburg was being negotiated, King William urged that Austria should be required to make a cession of territory even at the risk of a resumption of hostilities. Bismarck opposed this proposition, and in the course of the discussion remarked: "Every monarch should adopt the general principle and adhere to it, so far as possible, not to appoint as minister of foreign affairs any man who has not been on a battlefield and seen with his own eyes all the horrors involved in the word War."

—Father Lépicier's 'Indulgences: Their Origin, Nature, and Development' (London: Kegan Paul & Co.) is a disappointment. A good critical history of the subject from a believer's point of view would be welcome, but the present volume is an uncritical medley of doctrine, history, and pious reflection, unnecessary to stimulate the faith of the faithful, and calculated only to excite the derision of the unbeliever. A writer who takes most of his history from Fleury; who quotes (p. 200) a twelfth-century inscription as evidence of the practices of the sixth; who speaks of Islam as an infamous and superstitious worship paid to the devil (p. 207); who quotes St. Bernard (p. 217) in favor of technical indulgences when that doctor is using the word *indulgentia* in its ordinary sense of pardon; who accepts as genuine the forged letter of St. Ludger in 803 (p. 228), the fraudulent character of which was demonstrated two centuries ago by Fathers Morin and Papenbroek; who deliberately or ignorantly falsifies a passage from the canons of the Council of Vienne (p. 293), and who, when he cannot otherwise justify the changes in the theory and practice of the Church, assumes that in all cases it must be right because otherwise God would have allowed the Church to fall into error, which is impossible—such a writer is impervious to argument and unworthy of refutation. This is to be regretted, for indulgences have played so large a part in European history that a conscientious Catholic who would candidly resume and bring up to the existing state of critical research the work performed in the seventeenth century by Father Morin, would render a service to all parties.

RHODES'S HISTORY OF THE UNITED STATES.

History of the United States from the Compromise of 1850. By James Ford Rhodes. Vol. III., 1860-1862. Harper & Brothers. 8vo, pp. 659.

Mr. Rhodes's third volume fully sustains the impression made by the best part of the first two. There is the same abundant and almost exhaustive collation of material, the same simplicity and directness of method, the same good judgment in the selection of topics for full treatment or for sketchy notice, the same calmness of temper and absence of passionate partisanship. He may fairly be said to be a pupil of the Gardiner school, and to have made the great English historian a model in subordinating the literary element to the judicial, and in compelling his readers to accept his guidance as that of a trustworthy pilot through the mazes of conflicting evidence and the struggles of opposing principles. The hot partisan will often protest at first at the charitable judgment of the motives or the recognition of the sincerity of those whom he has hated as enemies; but as the analysis of the evidence goes on, he finds himself yielding to the strong summing up; and even if he be not wholly convinced, he is filled with a solid respect for the judgment and temper with which the multitudinous facts are weighed.

The volume deals with the critical period from the election of Lincoln to the battle of Shiloh and the opening of McClellan's campaign on the Virginia peninsula. It therefore includes the actual secession of the Southern States, beginning with South Carolina, the conduct of Buchanan in relation to it while Cobb and Thompson and Floyd were members of his cabinet, and after these were replaced by the patriotic influence of Black and Stanton, of Dix and Holt. It covers the inauguration of Lincoln and the tentative measures of his opening administration, the perplexing debate as to the reinforcement of Fort Sumter, and the efforts to gain time by indirect diplomacy with Southern leaders. It gives us the dramatic opening of the war by the cannonade of the fort, and the outburst of fiery enthusiasm on both sides when once the die was cast. From this we pass to defeat at Bull Run, the pulling of ourselves together for the tremendous struggle whose proportions we now began

to realize, the organization of the great armies which were to fight it out, the growing impatience at the delays of that first autumn of the war, the beginning of real work under the direct order of Lincoln and its first fruits in the glorious successes of Grant and Foote at Forts Henry and Donelson, and the beginning also of that tide of Western triumphs which, with occasional reflux, was still to sweep across the Gulf States and into the heart of North Carolina.

The period was that which fixed the policy of both sides and of all parties. It mustered the armies and showed what men could lead them. It settled the principles which were to guide our foreign policy and to direct our home Government. It laid the foundation of the financial measures which were to provide for an enormous and unprecedented expenditure. It disclosed the perils which accompany administration in such a time, and the necessity for sharp remedies against extravagance and peculation, however powerful in civil life or in military command might be the offenders.

As to all these matters the historian must have a well-defined point of view. As the reader follows the author in his candid elaboration of the views of conflicting parties and statesmen, he will be tempted to fear that the story may turn out to be only the annals of complicated events, only the reporter's faithful account of the acts and the arguments in the great debate. Mr. Rhodes has not thus abdicated his historical office, and it is a great merit in his book that he has distinctly recognized his duty to declare his principles of judgment and to apply them firmly. His full array of evidence and argument attests his judicial character and his tolerance towards men and their motives; but when the summing up is completed, he pronounces his judgment distinctly, and, in the good old language of the law, without fear, favor, or affection.

On the great issue of the rebellion he is a nationalist who holds that secession was revolution, in which the first assembling of armed men was an overt act of war. On the issues of national politics he holds to Mr. Lincoln's conservative Republicanism, which declared the quarrel to be over the single question whether slavery should be extended. Clinging firmly to the belief that the war was certain to end in emancipation, he still justifies the President in "going slow," and in trying to hold back the border States from secession, first, by refusing to precipitate the progress even of freedom, and later by leading the North to justify itself in the eyes of the world by offering compensated emancipation.

In dealing with men he does not shirk the duty of plain condemnation after the case is fully examined. Thus, Frémont in Missouri is found to be incompetent as a general, and a weak tool of peculators in his administration. Mr. Rhodes justifies the President's removal of him on these grounds, notwithstanding the popularity of his emancipation orders and the attachment to his person which ardent Republicans felt toward their former Presidential candidate. Cameron is adjudged to have been careless of economy in the War Department, and to have been blind to the advantages taken of the Government by fraudulent contractors. His removal from the Cabinet was a public necessity, and a proof of Lincoln's ability to act vigorously even when his personal feelings suffered severely under the test. McClellan is found to lack the aggressive qualities without which no one can be a real general, and to be condemned as incompetent by his absurd exaggerations of the opposing army, which, out of his 'Own Story,' are shown to have been the key to his dilatory conduct after September, 1861. Grant is recognized as manifesting from the first the qualities of a born soldier, and Lincoln is justified in retaining him in command notwithstanding many strong criticisms after the battle of Shiloh. In the situation of our armies and in the relations of the country to the civilized world, the historian rightly concludes that no other military man then showed the powerfully aggressive character which was demanded. It was absolutely necessary, after so long an inaction, that the national army should be led by one who would fight, and Lincoln is justified in his famous saying to objectors, "I can't spare this man; he fights." The alertness of a Napoleon, the strategic intellect of Cæsar, were greatly to be desired; but if all great qualities could not be combined, energetic action and indomitable fighting were all the more indispensable.

The author's plan does not include a detailed description of military events, but aims at such a general sketch of campaigns as shall make the ordinary reader follow clearly the larger outline and understand the loss or gain for either side in the progress of the war. He has, however, felt the necessity of attempting a fuller picture of the battles which were followed by important results, and has studied with striking success to group the incidents which are most telling in each engagement. In this way he has made very vivid and perfectly intelligible presentations of such engagements as that of the *Monitor* with the *Merrimac*, the battles of Bull Run, Fort Donelson, and Shiloh. They are not overloaded with tactical details, while they are true to the real military significance and proportion of parts; and the military man will approve the justness of the picture which the popular reader will find easy to comprehend and of thrilling interest.

In finance, Mr. Rhodes's standpoint is that of the advocates of a tariff for revenue as contrasted with theoretic protectionism, and of those who disbelieve the necessity of making paper a legal tender even in time of war. But while avowing this creed, he sees so plainly the embarrassments of the Congress of 1862, and states so fairly the arguments which overcame Mr. Chase's reluctance and brought him to the support of the legal-tender bill, that its warmest friends must admit that the means of forming a judgment of his own are offered to every reader.

The author's reference to his authorities is most conscientious, scrupulously giving credit for even the slightest assistance, so that the student is challenged to verify the evidence and to judge for himself whether the conclusions are sound. Yet direct quotation is only sparingly used, and the narrative is Mr. Rhodes's own, after maturely digesting the mass of facts which are to make its body or give it color. This method, showing strongly the influence of the modern ideas of scientific research, must be admitted to be in the spirit of our age, which is not content with authority, and demands that all important conclusions shall be shown in direct connection with the evidence on which they are based. In this case, the result is a work which will be most authoritative with those who are most familiar with the original material for the history of the civil war.

The character and personality of Mr. Lincoln develop in his acts, illumined as they are by the complete knowledge of the man which we now possess. His awkward and homely exterior, his broad humor and plain speech, made a veil behind which he was completely hidden from those who met him casually. It is one of the most curious facts in personal biography that nearly the whole body of men who thought themselves near enough to him to judge him accurately, formed a contemptuous opinion which now overwhelmingly attests their own lack of true acumen and insight. It seemed that only those knew him who were far enough away to see his general conduct and policy apart from his personal peculiarities, or those who were so near that by intimate contact they experienced the power of his will over theirs and the domination of his lucid and sagacious intellect.

Mr. Seward's relations to his chief are only a striking proof of our assertion. In March, 1861, considering the estimate of Lincoln by the half-acquainted, and the relations of the Secretary of State to parties and to affairs, it is in no degree strange that Mr. Seward should have assumed the rôle of an authoritative mentor. The "Thoughts for the President's consideration" which Nicolay and Hay have made so notorious, would not have appeared an absurd assumption of leadership to Senator Sumner or Senator Wade, however they might differ from his views. The relation was more like that between Daniel Webster and Zachary Taylor, and struck nobody at the time as unnatural. It is only from our present measure of the men, especially of Lincoln, that the incident gets its amusing character. If Zachary Taylor had been President four years instead of four months, it is possible that the relations of Webster to him would have changed as much. Who knows?

In this matter, as in the half-negotiations with the Southern commissioners concerning the evacuation of Sumter, Mr. Rhodes seems too severe on Secretary Seward. In the latter case the facts were that Anderson had reported that an army of 20,000 disciplined men would be required to relieve the fort and to hold it (p. 325). Gen. Scott reported that evacuation was almost inevitable (p. 326), and later gave the formal opinion that Anderson should be withdrawn (p. 327). All of the Cabinet but Blair concurred in the opinion (*ibid.*). Lincoln did not decide, but, while holding the matter in abeyance, gave his friends to understand that he acquiesced in the opinion of his Cabinet. In the light of these facts, when the Southern Commissioners were trying to "play with Seward" for delay, and Mr. Lincoln was cognizant of the correspondence through Judge Campbell, the Secretary's conduct in gaining delay for his side also by indicating the actual belief of the whole Administration that the fort would be evacuated, does not seem the "rash assumption" that Mr. Rhodes regards it. He truthfully indicated the actual expectation of all, but made no explicit promises; and it would be pushing the rule of candor too far to assert that these quasi-belligerents who were playing their own astute game, had any grounds for complaint of Seward's diplomacy. When the President, contrary to his own as well as the general expectation, determined to try to provision the fort, his Secretary stood loyally by him. It was a right thing for Mr. Lincoln, in view of a ripening public sentiment, to make the effort in spite of Scott's and Anderson's adverse opinion. The motive was a reason of state, not of military affairs, and he was in his own province. The cordial acquiescence of his Secretary marked the recognition of his true

leadership. The whole affair was honorable to both.

This is almost the sole instance in which the conclusions of our historian seem open to question. In general, we find his reasoning (as we said in the beginning) compelling our assent, and the exception may be taken as proof of the rule. We shall look with earnest interest for the succeeding volumes, sure of a strong grasp of the whole subject, and confident that, within the compass he has prescribed for himself, it is not probable that we shall see a more complete or better balanced history of our great civil war than that which Mr. Rhodes is giving us. We hope that he will come back from his European tour recuperated, in full strength for the fulfilment of his important labor.

MARSHAL NEY AND HIS DOUBLE.

Historic Doubts as to the Execution of Marshal Ney. With numerous illustrations. By James A. Weston, Rector of the Church of the Ascension, Hickory, N. C.; Major Thirty-third N. C. Regiment, Confederate States Army; Chaplain Catawba County (N. C.) Veterans' Association; Honorary Member of the North Carolina Historical Society, etc. New York: Thomas Whittaker. 1895.

AFTER a peculiarly picturesque or conspicuous person dies, either in the due course of nature or by violence, it often happens that years afterwards a vague, unfounded rumor gets abroad that he is still alive. The regicide, John Bradshaw, for instance, it was said, lived in the island of Jamaica long after the Restoration, and in Hollis's memoirs is given the fictitious epitaph which was engraved, according to the story, upon a cannon near Martha Bay. Yet there is record of his burial in Westminster Abbey, when the Commonwealth still endured, and of the disinterment and hanging of his corpse when the Stuarts returned to power. In more recent times we have heard that Louis XVI.'s son lived among the French Canadians near Plattsburg long after his supposed death; that Webster, who murdered Parkman, was not hung, and that Wilkes Booth was not shot. And now comes another story of the same character as the others, to the effect that Marshal Ney was not shot, that he had a mock execution, and that he escaped to America and died in his bed in North Carolina in 1846. Thus far a stray magazine article and a number of newspaper articles have been the only things printed on the subject, but Mr. James A. Weston, a North Carolina clergyman and Confederate major, now publishes a book of 300 pages to prove that an old soldier who went by the name of Peter Stuart Ney, and taught school in the country districts of Missouri and the Carolinas, was none other than Napoleon's great marshal. He looked like Marshal Ney, he said he was Marshal Ney (often when he was drunk and occasionally when he was sober), and some people thought he was Marshal Ney. The case is interesting, even extraordinary, and it is but just to say that it is better constructed than the case of the Tichborne claimant himself. We will give specimens of the best evidence produced by Mr. Weston as briefly as possible.

Chapman Levy, a South Carolina lawyer, said he was told by some French refugees that they recognized in P. S. Ney, at Georgetown, S. C., the original Marshal Ney. Mrs. Mary C. Dalton, who was P. S. Ney's pupil when she was a little girl, says he told her twice, "when perfectly sober," that he was Marshal Ney, and he described to her his escape and flight to Charleston. The editor of the Danville, Va., *Times* reports his sister as saying that P. S. Ney on Saturdays, when he was drunk, used to say he was Marshal Ney. J. W. Sanders of Iredell County, N. C., reports two Germans, named respectively Snyder and Barr, who had seen Marshal Ney, as declaring, when they saw P. S. Ney, that he was the Marshal. Several persons testify that these Germans were men of good character. Col. John A. Rogers of Florence, N. C., describes P. S. Ney as fainting when he read in a newspaper in 1821 that Napoleon was dead. That night he burned a quantity of his papers, and the next morning was found with his throat cut. "The blade of the knife that did the work was broken in the wound. This probably saved his life." Mrs. G. N. Beale of Washington, D. C., says she saw Marshal Ney's picture thrown upon a screen at a Stoddard lecture, and exclaimed at once that it was Peter Ney, whom she knew in her youth at Beattie's Ford, N. C. Thomas D. Graham, Davidson College, N. C., nursed P. S. Ney in his last illness, and heard him say four or five times that he was Marshal Ney. He concludes his testimony thus:

"About three o'clock in the afternoon Dr. Locke [P. S. Ney's doctor] returned. He was much affected. 'Mr. Ney,' said he, 'you have but a short time to live, and we would like to know from your own lips who you are before you die.' Mr. Ney, perfectly calm and rational, raised himself up on his elbow, and looking Dr. Locke full in the face, said, 'I am Marshal Ney of France.' Two or three hours later he died."

Now all this is strange enough, but it has failed to identify P. S. Ney with Marshal Ney. If he had been the real Marshal, seeking to conceal his identity, why did he take the name of Ney? Why did he say he was Marshal Ney if he wished to pass as another man? Because a number of people believed him is no reason for our believing him. He played his part to the very end, but it is quite possible for a man to continue a deception even with death staring him in the face, and we have many instances of it in the case of murderers, palpably guilty, who declare themselves innocent just before they are hung. As for the saying *In vino veritas*, which Mr. Weston lays much stress upon, a moderate experience will convince any one that a man in his cups is often fully master of his tongue. Indeed, some men lie most when they are drunk. It is inconceivable that so extraordinary a man as Marshal Ney should have lived in this country and disclosed his identity without soon becoming known positively and proclaimed to all the world. And if Peter S. Ney was Marshal Ney, why did he stay here? When Louis Philippe was made king, a wave of Bonapartism swept over France. Soult, Napoleon's Marshal and Ney's friend, was Minister of War. Napoleon's body was carried to Paris from St. Helena. And all this time Marshal Ney was teaching school in the backwoods of America! It is true that a sentence of death stood against him in France; but does any one doubt the reception that would have been accorded him if he had suddenly come to life again? And is it credible that the sixty or more people who must have been in the secret if there was a sham execution, kept silence when the opportunity offered of bringing him home in triumph and under such romantic circumstances?

Mr. Weston says that an unsuccessful effort was made about this time to have Ney's sentence rescinded; but we fail to see how this circumstance alone was sufficient to prevent a man of Marshal Ney's daring from taking his chances of a return when popular sentiment was so strongly in his favor. Such was the affection for his memory during the reign of the Citizen King that his widow was granted a pension of 25,000 francs a year, and a monument was ordered to be erected in his honor.

There are weak points in the evidence Mr. Weston produces. None of his witnesses appear to have had pictures of Marshal Ney before them when they wrote their testimony. It is true they knew P. S. Ney only as an old man, but he wore no beard and was well preserved. The likenesses of the younger Marshal would have been a fair basis for comparison. One old lady thought the face of Marshal Ney flashed by a magic-lantern upon a screen was the face of P. S. Ney, but it does not appear that she ever deliberately and calmly compared her recollection of the one Ney with an effigy of the other.

Marshal Ney was born in Saar-Louis, and on one side was of German origin, and he could speak German, we are told; but all his life he was a Frenchman, speaking practically nothing but French. How is it, then, that P. S. Ney spoke English with a brogue, as some of the witnesses state, or with a German accent, as others say? It may be that P. S. Ney was really a French refugee, but we look in vain in the writings he left behind him, and which Mr. Weston has reproduced, for a single French idiom or Frenchman's expression. Did Marshal Ney know English? It is possible that he knew something of it, but P. S. Ney, even if he had an accent, spoke it and wrote it with a facility which convinces us that he had had an acquaintance with it from his youth. Marshal Ney was an ill-educated man—Napoleon and others have affirmed it. Could he have acquired languages, dead and living, and qualified himself for teaching school after he had passed his maturity? He had great talents, unquestionably, but they did not lie in the same channel as the talents of the schoolteacher, P. S. Ney.

Having said this much, it is only fair to quote a remarkable letter which appears in Mr. Weston's book. It comes "from a foreign gentleman of high character and position," and it reached Mr. Weston after his book had gone to press. It may be found on the last page of the last appendix, and is as follows:

"I am acquainted with the history of Peter S. Ney prior to his escape to the United States of America. Many years ago, when I was a young man, I visited your country for the express purpose of communicating with him. I found him in Rowan County, North Carolina, teaching school. . . . I never saw him afterwards. The identity of Peter S. Ney has been a profound secret. He was a fugitive from justice, and many persons in France were accessory to his escape. If Peter S. Ney had revealed his identity in America, his friends in France who aided in his escape would have suffered death. Even now, perhaps, his identity cannot fully be made known. . . . He was born January 10, 1769."

Marshal Ney was born on that day. The name of the writer of the letter, Mr. Weston says, cannot be disclosed, and is known only to his publisher and himself. One mystery does not explain another. Why should not the author of this letter disclose P. S. Ney's identity? Why should he conceal his own? We have no right to doubt that Mr. Weston received this letter, but we are justified in rejecting it as proof.

A History of the Novel Previous to the Seventeenth Century. By F. M. Warren. Henry Holt & Co.

THE difficulties besetting a differentiation of the novel, in the modern English meaning of

that word, from every other form of fiction known to Europe previous to the seventeenth century are not exaggerated in Mr. Warren's introductory remarks. They are, indeed, rather understated, for his book is a history of a thing that had no established existence until just about the moment when he leaves off. The modern novel is a product of a civilization well past kicking and plunging, settled down to a jog trot, and just now, perhaps, as in the era of its remote Hellenistic progenitors, significant of a general decadence. It came into life as human imagination weakened under the pressure of prosaic intelligence, with the diffusion of a general incredulity about heroes and magic and monsters, and in response to a demand for fiction that should reproduce life as it is known to the masses, or, at least, as it may be easily accepted by the common understanding. During a happy thousand years or so the joyous populace of Europe appears to have loved best fiction that scorned possibility, that made its eyes start and its mouth gape. In matter, it cared nought for the real except when that was also ribald, and generation after generation listened patiently to interminable rigmarole about the loves and wars of semi-mythical heroes, the monotony being interrupted chiefly by the ingenious device of changing names and scenes. With that genial public an old story was not equivalent to a tedious one, and at the fiftieth rendering it is recorded of no man that he was rude enough to mention that he had heard it several times before. When it is added that the sense or instinct for form was rare even among scholars, that no one dreamed of exacting a central motive or dominating interest, that characterization was accidental, not vital, it is clear that mediæval and Renaissance fictitious compositions were not even novels called by another name.

Mr. Warren's devoted quest from the Greek, through *chansons*, *lais*, romances of chivalry, and pastorals, resembles, therefore, the perchance engaging, but generally unfruitful, hunt for a needle in a haystack, and, apart from interesting information by the way, leads to nothing but an assurance of the unlikeness between the things looked for and found. Besides assuming the embarrassment of a special plea, he has foregone the advantage (for lucidity) of a definite outline of the chief cycles of romance connected, however loosely, with the legends of Troy, Alexander, Arthur, and Charlemagne. By darting to and fro among these immortal but mixed traditions, leaping forward and harking back on the supposed trail of his novel, he has succeeded in imparting to his treatise much of that air of inconsequence, contradiction, and vain repetition which distinguishes the subjects of his investigation. Conscious of treading debatable ground, his positive assertions are few, and those not dogmatic. He affirms that Montalvo's Spanish compilation of the 'Amadis of Gaul' legends (1470) is "our first modern novel," but his arguments and many of his facts cast grave doubts on the affirmation. He says "it is conceded on all sides that Spain gave birth to the romance of chivalry." Even at the risk of seeming a pariah lifting contentious voice in unbounded wilds, we suggest that Spain did nothing of the sort in the sense of originating or creating. Instead of regarding 'Amadis' as an independent composition very obscurely derived from the great cycles, we prefer to look upon it as a late artificial imitation, and a supremely tiresome one, and fail to see why it is any nearer to a modern novel than the 'Morte Darthur' of Malory, whose name is not so much as mentioned in Mr. Warren's index. In Malory's compilation his personality is very evident; however imperfect and elusive, the artist's hand moulding rough material is frequently perceptible. Moreover, there is so much unity that the gradual accretions may be easily separated from the pure, natural legendary growth. To say that, "unlike prose versions of the Arthurian legend, the career of Amadis points a moral," is to be strangely blind to the indirect but none the less impressive moral derivable from the tales of Launcelot and Tristram. Finally, if Amadis was "the first pattern of a true and perfect knight," what was Sir Galahad? And if "the thirteenth century did not ask for any presentation of absolute purity of mind and body," how did it come to adopt the vision of that bright boy knight in shining armor seen by Walter Map, court poet to Henry II. of England?

This cold indifference shown by Mr. Warren to the English novel's ancestor of race is extended to the purely Gallic *fabliaux* and the Italian *novella*, though we have been accustomed to believe that they too count for something in the evolution of fiction. His neglect of peers and equals may most easily be ascribed to our author's desire to claim everything for Spain. To Italy he allows chronological precedence in the pastoral romance; but for form, spirit, subsequent influence, the glory is given to Spain, summed up in Montemayor's 'Diana.' Arriving at the picaresque novel, we quarrel no more with Mr. Warren. If the term invention may be applied rightly to any form of literature, give it, by all means, to 'Lazarillo de Tormes'; and, though we are not quite sure what the author means by saying that "it completed the circle of novelistic action," we feel, to quote him again, that that should be "conceded on all sides." The literature which he has been at such pains to explore is inexpressibly monotonous and dreary. It is without form and void of ideas, and its interest and value are more properly linguistic and philological than literary. No human being could make an account of it entertaining, and the grind of reading it may be inferred from Mr. Warren's comment (pathetic in view of what he has gone through)—"The two *picaresco* novels ['Lazarillo de Tormes' and 'Guzman de Alfarache'] of the sixteenth century, are the only examples of all the many romances of that time which can be read at the present day for themselves alone."

Municipal Government in Great Britain. By Albert Shaw. New York: The Century Co. 1895.

MUCH of what is of most general interest in this book has already appeared in various periodicals, and has been received almost with enthusiasm. We have become so much accustomed to associate waste, jobbery, and inefficiency with the government of our large cities that accounts of the clean, economical, and brilliant management of the affairs of Glasgow and Birmingham come to us as a kind of revelation—harbingers, so to speak, of the future that may lie before our own towns. In this book, however, Mr. Shaw does not confine himself to panegyric, but furnishes us with a quantity of well-digested information as to the nature and operation of the British municipality—information which is totally inaccessible to most American readers, but which is of the utmost importance to them. It would be agreeable to us and to our readers were we to select from the book those exhilarating passages which depict the present and future glories of London and Manchester and Birmingham; but these passages have been already so widely read and copied as to be familiar. The natural effect of such glowing accounts is to suggest to Americans the question: "Why can we not receive all these beauties and conveniences and advantages from our own municipalities?" and we shall devote our space to answering this question. The answer may, indeed, be found in Mr. Shaw's pages, but we incline to think that he has not put the question fairly to himself, or fully comprehended the causes which have produced such differences as exist between the municipal institutions of this country and of Europe.

The most fundamental of these differences is very clearly stated by Mr. Shaw. It is the important and honored part played in the English system by the town councillors, and the despised and insignificant position occupied by the corresponding functionaries in our own country. A corresponding fact is the honorary position of the mayor in England contrasted with the vast powers which are lodged in the American officer bearing the same title. Mr. Shaw cannot understand why such autocratic powers should be conferred upon a single person. He says that it is unrepublican, and that "the one-man power is on the decline everywhere in this age." We ought to follow the example of the English and exalt our aldermen, instead of reducing their activity to the humblest affairs. He urges, rather hastily, that if a powerful city council cannot be trusted, the fault is with popular institutions. It will give the people, he maintains, as good a government as they deserve to have. It gives the English cities excellent government; why should it not produce the same result here?

The answer to this question may be stated in two words. England is still an aristocratic society; America ceased to be one more than half a century ago. We cannot enlarge upon this difference further than to say summarily that the direction of Government falls, in a community where aristocratic traditions prevail, into the hands of men of some distinction, while in a democracy it falls into the hands of men who please the common people. It may prove to be the case, eventually, that the common people will select as their legislators and rulers men eminent for probity and wisdom; that is the goal toward which we are struggling. But, so far, it is undeniable that democratic government has shown itself corrupt and wasteful to such a degree as to make necessary a resort to the "one-man power." We do not know what Mr. Shaw means by calling it unrepublican. "An two men ride of a horse, one must ride behind." We know of few wars that have been successfully prosecuted when conducted by a committee of generals, and most great business enterprises prosper under autocratic management. Undoubtedly there is much room for division of labor; and when a wise manager finds that he has a competent subordinate, he leaves him in control of his department. But, inasmuch as all people cannot be rulers, it does not appear to be more unrepublican for them to delegate the power to one of their number rather than to several.

That Great Britain is still an aristocracy, so far as municipal government is concerned, is proved by Mr. Shaw's statements. If the qualifications of voters in New York city were the same as in Glasgow, for instance, four-fifths of our voters would be disfranchised. We cannot state the details given by Mr. Shaw, but in a

general way it may be said that no one who has not paid taxes can vote at a municipal election in Great Britain. No doubt it may be claimed that all the residents of New York pay taxes, but they do not know it. The occupants of tenements are not aware that their rents have any connection with municipal expenditure; but the occupants of tenements in Glasgow or Birmingham are not ignorant upon this point. If more money is spent by the city government, they have their attention called to it whenever they pay their rents, and this single fact is of great political importance. Moreover, as Mr. Shaw points out, the requirement of the payment of taxes disfranchises a large class in the foreign cities.

"At least one-third of the householders and theoretical voters of Glasgow never appear on the municipal or parliamentary registration lists. . . . The whole body of men who are ignorant, vicious, and irresponsible is practically outside the pale of politics in Glasgow and Edinburgh, Dundee and Aberdeen. . . . The English municipal electorate excludes in practice nearly all the unmarried men, all floating laborers and lodging-house sleepers, and nearly all the serving class."

It is hardly necessary to say that such exclusions as this would make the problem of governing American cities a very different matter from what it is. In view of these exclusions it is not surprising that "the exploitation of the votes of the ignorant, vicious, and indifferent in English cities by demagogues or party agents is so extremely difficult that it does not count for anything at all in election results."

In the same line with these facts are to be ranged the paucity of elective offices in England compared with their multiplicity here, and our system of paying salaries for services which receive no pecuniary compensation in England. Considering all these vital and fundamental differences in our institutions, it seems absurd to suppose that the granting of greater powers to our aldermen would result in any approximation to the results obtained in England. Nor are we quite satisfied to take Mr. Shaw's word for the value of these results. We apprehend that there are seamy sides in British municipal government which Mr. Shaw's buoyant optimism has overlooked. The Manchester ship canal, which was to cost $25,000,000, required thrice that sum for its completion, and hardly pays operating expenses; but Mr. Shaw says that it is a monument of civic faith and energy, and will result in vast prosperity in the twentieth century. Meanwhile it results in a debt of $100 per capita to the inhabitants of Manchester. In 1872, before Mr. Chamberlain became Mayor, the debt of Birmingham was $2,500,000. It is now $40,000,000. But the community is richer by reason of this indebtedness, Mr. Shaw cheerfully declares, to the extent of twice or thrice this amount. So reasoned the people of the Australian colonies concerning their investments of borrowed capital, but they found themselves suddenly bankrupt. So have reasoned many of our Western communities, and have never comprehended why they came to grief. It is well to provide for posterity, but if the bills are left for posterity to pay, perhaps it would rather be consulted in the matter. It is conceivable that England may yet become involved in disastrous wars and suffer from declining trade. In such a contingency it might be found that the brilliant investments of her modern municipal governments were not so productive as had been anticipated, and that the policy of paying as you go would have been more judicious.

Aus meiner Zeit: Lebenserinnerungen. Von Friedrich Pecht. 2 Bände. Munich: Verlagsanstalt für Kunst und Wissenschaft.

THE author of these charming reminiscences began his career as an artist, and forty years ago enjoyed considerable distinction in Germany, especially as a portrait-painter; but, as he himself frankly confesses, it was the bias of early education and accidental circumstances, rather than any decided bent of genius, that led him to the choice of this profession. He was born October 2, 1814, in the picturesque and historic town of Constance in the Grand Duchy of Baden. The family was of East Prussian and more remotely, perhaps, of Swedish origin. His father was a man of culture, and was pursuing his theological studies in the University of Würzburg when the French invasion under Jourdan, in 1796, caused the Prince Bishop and his clerical court to flee in a panic. The young student seized this apparently not unwelcome opportunity to throw off his cassock and to start a book-shop at Constance as a branch of the then famous establishment of Rieger in Augsburg. About a dozen years later he married a Swiss maiden, the youngest daughter of the Amman Gänzli of the Canton of Thurgau, a remarkably clever and vivacious woman, with an inexhaustible fund of family traditions and personal recollections, which she was fond of relating, and some of which her son has recorded in the first chapter of his autobiography, thus carrying the reader back to the period before the French Revolution, when Thurgau was still under the imperious and oppressive tyranny of Berne. Among other incidents she remembers celebrating the emancipation from this galling yoke by dancing with other children round the village "tree of freedom" and singing "Ça ira, ça ira ça." Pecht himself states that he distinctly remembers the great inundation and famine that desolated portions of Baden and Eastern Switzerland in the summer of 1817, when he was scarcely three years old; and from that date his memory of events, comprising his experiences as a schoolboy and the earliest artistic impressions produced by the fine specimens of Renaissance and Gothic architecture in his native city, seems to be wonderfully vivid.

One of the most attractive features of these volumes is the admirable skill with which the author has woven into the narration clear and concise characterizations of the many distinguished persons whom he met in Munich, Dresden, Leipzig, Berlin, Vienna, Venice, Milan, Rome, Paris, London, and other places during the half century from 1833 to 1885. There is hardly an artist or literary man of eminence in Germany, belonging to the present or preceding generation, whom he did not know more or less intimately, and of whom he does not give, with a few bold and masterly strokes of the pen, a most lively and life-like portraiture. In 1839 he went to Paris, where he remained three years as one of the 120 pupils of Delacroix, whom he praises as "a very strict but excellent instructor." Here he met his old friend Heinrich Laube, who had just made a tour through France and was filled with enthusiasm for everything French, and through whom he became acquainted with Heinrich Heine and Richard Wagner. He even painted Heine's portrait, and enjoyed during the sittings the brilliant though often frivolous wit and venomous sarcasm of the self-expatriated German poet. Pecht knew the 'Buch der Lieder' almost by heart, and felt the irresistible charm of these lyrics, but had not yet learned to appreciate the truth of Sheridan's famous couplet concerning "easy writing." He remarked one day on the pleasure it must give the poet to dash off such delightful verses. "I meant well with my asinine compliment, but fared ill; with a glance of supreme contempt he replied: 'If you only knew how often I have filed away at a single one of those verses for days and even weeks!'"

Of Wagner, who was then suffering the greatest privations while composing "Rienzi" and "The Flying Dutchman," and vainly striving for recognition in Paris, Pecht speaks in terms of sincere sympathy and warm admiration. The unflinching courage and firm confidence with which he pursued his lofty purpose, the incomparable energy and elasticity of his nature, which supported him under the severest trials, are described as beyond all praise. This unconquerable force of will and faith in his star stood him in great stead on several occasions, and especially when the first performance of one of his pieces in a concert, upon which he had built the fondest hopes, proved to be an utter fiasco, owing to the imperfect training of the orchestra, which converted the sublimest harmonies into shrieking discords. On the New Year's eve of 1841, Pecht and a few other artists resolved to give the Wagners a surprise party. They bought a basket of champagne, a quantity of cold provisions, cakes and sweetmeats, and climbed four flights of stairs to the attic, where Wagner and his wife were sitting alone and apparently forgotten in the general festivity. The unexpected visitors were joyfully received, and Wagner, under the cheering effect of the kind attention and the brisk champagne, leaped upon a chair and improvised in delightful doggerel a New Year's discourse, full of happy hits at every person present, without sparing himself. He went on in this style for half an hour or more without the slightest hesitation, and kept the table in a constant roar of laughter. Pecht declares that he, at least, never heard so good an improvisation, except once, and that was by Emanuel Geibel at a dinner given him six years later in the famous Dresden restaurant, "Findlaters Schlösschen," and although Geibel's verses were more finished, they were hardly equal to Wagner's in pat allusions and flashes of wit and pure spontaneity. As he was about to return to Germany, Pecht found himself stranded in Paris, having lent all the money for his journey to the now wholly insolvent Wagner, but was generously set afloat by a young German merchant and accomplished flutist named Brix, who also belonged to the small circle of the composer's friends and admirers. Instead of the much-needed cash, says Pecht, "I received a long letter from Wagner from Meudon, whither he had fled to escape his creditors, entreating me to procure for him a position as organist or something of the sort, in order that he might finally find relief from this everlasting pressure of poverty." The tone of the letter betrayed a state of despondency and desperation quite incompatible with his usual sturdy self-reliance and irrepressible optimism, and even suggested thoughts of suicide. A year later his "Rienzi" had met with immense success at Dresden, and he had succeeded Morlacchi as conductor of the royal opera in that city.

In 1848 Pecht went to Frankfort with the intention of painting a large picture of the Parliament, and thus immortalizing that famous representative body. For this purpose he was diligent in attending the sessions of the Diet, which were held in St. Paul's Church, a massive rotunda with pillared galleries on three sides and marvellous effects of light and

shade. A national Parliament, however, does not fulfil its whole mission by merely looking picturesque, and Pecht became so disgusted with the puerility of its proceedings that, if he had been a poet, he would have found it difficult not to write satire; as it was, he abandoned the plan of celebrating a great historic event on a big canvas, and turned his pencil to the easier task of caricature. Although now in the eighty-first year of his age, he shows no perceptible diminution of his mental and physical vigor, and as art-critic of the Munich *Allgemeine Zeitung* and editor of the illustrated art journal *Kunst für Alle*, he is still as active and energetic as any man of middle life.

A Manual of Public International Law. By Thomas Alfred Walker, M.A., LL.D., Fellow and Lecturer of Peterhouse, Cambridge. Macmillan & Co. 1895.

THE primary object of this book, as defined by the author, is to furnish "students commencing to read public international law" with a "text-book which, whilst excluding unnecessary detail and mere theoretic discussion, might well serve as a fairly comprehensive general introduction to detailed study of the subject." As the author is a lecturer, and has confessedly found no English treatise that fully satisfies the conditions thus defined, he must have been conscious of the fact that his task was not an easy one. To avoid, in a manual primarily designed for students, both "unnecessary detail and mere theoretic discussion," involves the exercise of a large measure of discrimination and judgment, as well as the command of simple, lucid, and precise forms of expression.

The present work does not disclose the possession by its author, in a high degree, of these qualifications. The style is neither easy nor precise, and is often marred by mannerisms; and there are sometimes substantial inaccuracies and omissions which might, perhaps, have been avoided if he had entered more fully, or at any rate more carefully, into details. As an illustration of our meaning, we will take what the author says on the important subject of the free navigation of international rivers. After referring to a number of treaties by which such navigation has been secured, he declares that, "although the doctrine of the freedom of navigation of great rivers has advanced in general favor, the new order has arisen by virtue of particular treaty entered into by the interested nations, not by the outright recognition of a general law, and the right of riparian states to regulate the traffic has been, in each instance, formally acknowledged"; and he further declares that "in no case have we witnessed the recognition of any *natural* right such as that which the United States, in harmony with her earlier Mississippi experiences, asserted in the navigation of the St. Lawrence in 1824." Turning to Article 26 of the treaty between the United States and Bolivia of May 13, 1858, we find the following declaration: "In accordance with fixed principles of international law, Bolivia regards the rivers Amazon and La Plata, with their tributaries, as highways or channels opened by nature for the commerce of all nations." While this declaration refutes the general statement of the author as to the non-recognition of any international, or of any natural, right, it can scarcely be maintained that there has been a formal recognition in each instance of the right of riparian states to regulate "traffic." In the treaty of peace of 1783, the United States and Great Britain, on the supposition that the Mississippi was navigable in British jurisdiction, made the following simple and unqualified agreement: "The navigation of the river Mississippi, from its source to the ocean, shall for ever remain free and open to the subjects of Great Britain and the citizens of the United States." By Article 26 of the Treaty of Washington of 1871, the same governments agreed to the free navigation by their citizens or subjects, in perpetuity, of the rivers St. Lawrence, Yukon, Porcupine, and Stikine, subject to any laws and regulations of the riparian government "not inconsistent with such privilege of free navigation." This is far from stipulating for a right to regulate traffic. It merely secures a limited right to regulate navigation. It does not refer to traffic.

Under the head of exceptions to the territorial jurisdiction, we find the following rule: "Foreign sovereigns travelling within a state in their proper character, together with their personal attendants, are held exempt from local jurisdiction." Under this rule Mr. Walker cites the famous case of the Parlement Belge, but he does not refer to the sweeping effect given to that decision in the recent case of Mighell v. The Sultan of Johore, decided by the Court of Appeal in November, 1893, in which it was held that the defendant, though he came to England and lived there, not in his proper character, but as Albert Baker, under which disguise he became entangled with the plaintiff, could not, when he asserted in court his sovereign character, be required to answer in a suit for breach of promise of marriage and for the return of certain jewels.

In the course of his discussion of territorial jurisdiction, Mr. Walker introduces the much controverted and much misunderstood case of Martin Koszta; and his conclusion is that while the American Government "may have been actuated by a desire to save a human life," "their zeal for humanity outran their regard for law and the independence of foreign nations." Whether, or to what extent, this conclusion can be justified, it is not our purpose to inquire; but it is certain that Mr. Walker bases it upon an Austrian pretension which that government failed to substantiate. "Citizens of Austria might," he says, "under capitulation between Austria and the Porte, be lawfully seized by the Austrian consul at Smyrna for offences committed within the Austrian dominions against Austrian law, and Martin Koszta was so seized." If this be so, it is remarkable that Austria never produced the text of any capitulation that would justify the seizure; and it is quite as remarkable that, if such a capitulation existed, the method should have been adopted of suddenly seizing Koszta and throwing him into the sea, where a boat's crew lying in wait picked him up and conveyed him on board an Austrian man-of-war. If this was a lawful, it could scarcely have been the regular, mode of procedure. But it is a fact that four years previously Austria, instead of claiming a right of her own to seize or arrest, demanded of the Porte the extradition of Koszta, together with that of Kossuth and other Hungarian refugees then on Ottoman soil. The Porte then decided that the capitulations with Austria did not require the surrender of political offenders. In this decision Great Britain and France supported the Ottoman Government; and when, being again in Turkey, Koszta was seized, the Turkish Government protested against the act as unlawful and as a violation of its sovereign rights, but did not protest against the conduct of the American functionaries at Smyrna. It is true that Koszta, as Mr. Walker intimates, did not at the time of his seizure have an American passport. But he had a *tezkereh*—a kind of passport or safe-conduct—which had been furnished him by the United States consul at Smyrna, in accordance with the practice lawfully observed by foreign consuls in Turkey in respect to persons whom they received into their protection.

There are evidences that the habit of publishing students' manuals which are at the same time to be valuable to the general reader, is invading the domain of international law, which has heretofore been fairly exempt from it. With the exception of Lawrence's 'Handbook,' it has not as yet produced in that domain any publication of special merit. The present work of Mr. Walker is, in our opinion, distinctly inferior, even for a student's use, to his 'Science of International Law,' published two years ago.

Men and Women of the Time: A Dictionary of Contemporaries. Fourteenth edition, revised and brought down to the present time by Victor G. Plarr, Librarian of King's College. London and New York: George Routledge & Sons. 1895.

THE first edition of this well-known work appeared in 1852 and contained three hundred titles. The present edition contains somewhat fewer biographies (2,300) than that immediately preceding, which showed a large, and not always judicious, increase of more than seven hundred names over the twelfth edition. Four hundred prominent persons have passed away since the publication of the edition of 1891. This work retains its distinctly English character, and is in no proper sense a general dictionary of contemporaries. Of the biographies included 312 are from the Continent and 184 from the United States. It is curious to note the proportion of representatives of the different nations as a possible illustration of the relative influence in politics, literature, and art which these countries exert upon English thought. There are 120 Frenchmen, 77 Germans, 31 Italians, and 16 Austrians; while the remaining countries of Europe (including Scandinavia, Russia, Turkey, and Spain) contribute 67 names. The biographies of titled persons and artists, including actors and musicians, exhibit fewer omissions than those of statesmen, philologists, and scientists, though the last-named class is more fully represented than the two former.

The book is singularly deficient as a guide to the public men of the Continent. In France we miss Hanotaux, Constans, Rouvier, Mercier, Périer, Baron Courcel, the French Ambassador at the Court of St. James, Baron Hirsch, and numerous others; in Germany, Von Boetticher, Dr. von Stephan, to whom international postage is largely due, Bebel, and Richter; in Russia, Witte, Stall, and the Procurator-General of the Holy Synod, Pobedonostzeff, whose influence has been so baleful for many years in the internal administration; in Italy, Rudini, Giolitti, and Villari; in Hungary, Dr. Wekerle; in Norway, Stang. It is impossible to follow the politics, domestic and foreign, of these nations without some knowledge of these men.

American politicians are possibly more numerously represented. We find the President and the members of the cabinet included. This feature seems an innovation, for many members of former cabinets do not appear, as witness Messrs. Boutwell, Endicott, Dickinson, C. and J. W. Foster, Elkins, Chandler, Goff, Bristow, Wanamaker, and the late Hugh McCulloch, who was almost as well

Senators, two judges of the Supreme Court, and Messrs. McKinley and Wilson find mention — the latter out of compliment to the measures which bear their names. The late James G. Blaine and Benjamin F. Butler are reported in the body of this work as "Men of the Time." This posthumous existence is most noticeable among military men, and especially among Confederate generals, of whom we find Beauregard and J. E. Johnston still surviving in the text, as well as G. W. Cullum of the Union army.

Even for England there are notable omissions. There is a tendency to make prominent the writers of lighter prose and verse and to overlook authors of marked scholarship. We search in vain for F. W. H. Myers, W. J. Courthope, author of the 'History of English Poetry,' and the most prominent candidate for the Chair of Poetry at Oxford in succession to Francis T. Palgrave; F. H. Bradley the philosopher, D. G. Ritchie, W. M. Ramsay the archæologist, Sir W. H. Broadbent, Bart., the successor in medical fame to the late Sir Andrew Clark. American scholars and writers are mentioned with slight indication of their relative importance; and altogether passed over are Francis J. Child and Charles Eliot Norton of Harvard, George P. Fisher of Yale, Hiram Corson of Cornell, B. L. Gildersleeve, Remsen and Rowland of Johns Hopkins, and many others equally notable. Similarly, the historians Henry C. Lea, J. B. McMaster, James Schouler, Henry Adams, Henry Cabot Lodge, H. von Holst, Justin Winsor, John Fiske, and others are lacking. Several university presidents are admitted, but not Francis A. Walker, David Starr Jordan, or James B. Angell, whose diplomatic services alone would entitle him to mention. The artists Lafarge, Sargent, Chase, and numerous others are disregarded.

German scholars are, as a rule, ignored. It would be easy to select from every university names of the highest eminence which do not appear, such as Weiss, Pfleiderer, Harnack, Treitschke, Weber, and Wattenbach, from Berlin. Literary men fare no better, and hence we find no mention of C. F. Meyer, Herman Grimm, Paul Lindau, Rodenberg, Hauptmann, Wilbrandt, Blumenthal, Wichert, and others.

In general an effort has been made to keep the biographies proportionate, but in some cases, notably in those of English scientists, a discussion of scientific principles is often included in the statement of what the authors have accomplished.

The Telephone Systems of the Continent of Europe. By A. R. Bennett. Longmans, Green & Co. 1895.

WIDESPREAD dissatisfaction, according to the author of this treatise, has existed in Great Britain in regard to telephone rates, and he therefore determined to ascertain for himself what the telephone rentals are and what they include in the countries of Europe. With this purpose in view he made an exhaustive study of the telephone systems in these countries. With the exception of St. Petersburg and Moscow, where the rates are £25 per annum, no Continental rate equals the £20 rate which prevails in London. The English subscriber to a telephone service obtains for his money four services: (1) Local exchange intercourse; (2) internal trunk-line intercourse; (3) public telephone-station intercourse; (4) forwarding and receiving his telegrams by telephone (in some of the large towns only). Only one country, Portugal, has an inferior list of facilities; Italy has the same number; and all the rest enjoy superior advantages for a subscription which is often one-third less than the British. The author believes that rates of £2 10s. in the smaller and £5 in the larger towns are made remunerative on the Continent. With these facts in view, he discusses various plans for the reform of the present telephonic system in Great Britain. These plans cannot fail to be of interest to those who advocate Government control of the telegraph and telephone; yet one cannot help feeling that the author's former relations with the telephone companies in England have biassed his judgment.

The treatise also contains an account of the devices for facilitating telephonic intercourse peculiar to each country which he visited. The writer of this notice has seen in the offices of the American Bell Telephone Company a map of the United States on which all the existing telephone lines are indicated. The Eastern and Middle States on this map are heavily covered with the black lines which indicate the telephone routes. Other thickly covered regions exist about the great Western cities. The South and Southwest, however, show comparatively little use of the telephone. While one can say that such a map of the United States indicates where the greatest intellectual activity of the country exists, one could not draw such a conclusion from a similar map of Europe, for the use of the telephone in Great Britain is apparently more limited than in many of the smaller countries of Europe. Mr. Bennett's treatise lacks a good index.

BOOKS OF THE WEEK.

Adeney, Prof. W. F. The Song of Solomon and Lamentations. [Expositor's Bible.] Armstrong. $1.50.

Lakewood, N. J.

WINCHELL ACADEMY.

A Christian Home School for Girls and Small Boys, College Preparatory. $600. Reopens Sept. 18.
B. R. WINCHELL, A.M., Prin., Evanston, Ill.

Educational.

Montclair Military Academy,

Montclair, New Jersey.

WE INSIST

on shoes nicely blacked, clean hands and nails, hair and clothes neatly brushed, clean linen and teeth. These little items are looked after each and every morning; their tendency is to teach habits of regularity and neatness.

We do not neglect the studies. The high standing of "our boys" in college and business proves this. We prefer to have parents, who are thinking of a high-grade school for their sons, pay us a visit (Montclair is only fourteen miles from New York on the D., L. & W. and Erie R R.'s), but we will mail our catalogue to all applicants. Address

J. G. MacVICAR, Head Master,
Montclair, New Jersey.

Educational.

DEPARTMENT OF LIBRARIES.

LIBRARY SCHOOL. Courses of study offering one year in English Literature, German, Current Topics, Typewriting, Cataloguing, and Library Economy.

The Library contains 50,000 volumes as a laboratory for study and use.

FREDERIC B. PRATT, Secretary.

PRATT INSTITUTE, Brooklyn, N. Y.

Lenox Institute.

Girls' School, 334 Lenox Ave.; Boys' School, 336 Lenox Ave. Thorough preparation for Life, Business, Scientific Schools, and all leading Colleges. Primary Classes. Scholars from 6 to 20 years of age. Gentleman Teachers only. Perfect organization. English the language of the School. German and French also spoken. Two Gymnasiums, Scientific Laboratory, Painting, Drawing. A lady teaches Needle-work. No extras. A few boarding scholars received in Principal's family. One of our graduates entered Columbia College, third in rank, without conditions. Graduates of Public Schools finished. Occupy our own buildings, having superior sanitary appointments. Columbus and Lexington Ave. cars pass our doors. 8th year begins Sept. 17. For circular, address ANDREW ZERBAN, Principal. Residence 334 Lenox Ave., near 127th St., N. Y.

ST. LUKE'S

BUSTLETON, PA., near Philadelphia.

A school of the highest class in an exceptionally healthful location. St. Luke's boys now in Harvard, Princeton, Univ. of Pa., Cornell, Johns Hopkins, West Point, etc. Illustrated catalogue. Address the Principals. F. E. MOULTON, CHARLES H. STROUT.

Notre Dame of Maryland.

College for Young Ladies and Preparatory School for Girls. Regular and Elective Courses. Music and Art specialties. Conducted by School Sisters of Notre Dame.
ROLAND PARK, near Baltimore.

RIVERVIEW ACADEMY.

60TH YEAR. Prepares thoroughly for College, the Government Academies, and Business. U. S. Army officer detailed at Riverview by Secretary of War.
JOSEPH B. BISBEE, A.M., Prin., Poughkeepsie, N. Y.

St. John's Military School,

MANLIUS, N. Y.

Next terms begins September 18, 1895.
WM. VERBECK, President.

Houghton Seminary

For Young Women affords best facilities for scholarship, culture, and sound moral training amid pleasant, healthful surroundings. College preparatory.
A. G. BENEDICT A.M., CLINTON, N. Y.

THAYER ACADEMY,
Braintree, Mass.

First term, nineteenth year, begins Wednesday, September 18. For information address
J. B. SEWALL, HEADMASTER,
South Braintree, Mass.

WELLS COLLEGE for the higher education of young women. The revised catalogue gives full information on requirements for admission, courses of study, the history, equipment, and government of Wells College.
WILLIAM E. WATERS, Ph.D., President, Aurora, N. Y.

WOODSIDE SEMINARY,
HARTFORD, CONN.
Reopens Sept. 26, 1895.
Miss SARA J. SMITH, Principal.

Bingham School for Boys. Established in 1793. ASHEVILLE, N. C.
1793 Major R. BINGHAM Superintendent. 1895

School of Drawing and Painting

MUSEUM OF FINE ARTS,

Copley Square, Boston, Mass.

(TWENTIETH YEAR.)

The Fall Term will Open September 30.

Instruction in drawing from the cast and from life, in painting, modelling, and decorative design, and also in artistic anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell, and Philip Hale (Drawing and Painting), Mrs. William Stone (Decorative Design), B. L. Pratt (Modelling), E. W. Emerson, (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the Museum. For circulars giving detailed information, address
Miss ELIZABETH LOMBARD, Manager.

BRYN MAWR COLLEGE

FOR WOMEN.

Situated ten miles from Philadelphia. Offers undergraduate and graduate instruction. Awards annually two European Fellowships (value $500), five Graduate Scholarships (value $200), and nine Resident Graduate Fellowships (value $525) in Greek, Latin, English, Teutonics, Romance Languages, Mathematics, History or Politics, Chemistry, and Biology. Full undergraduate and graduate Courses in these departments and in Philosophy and Physics. Graduate Courses in Semitic Languages. For General Program or Graduate Pamphlet, address Bryn Mawr College, Pa.

State University of Wyoming.

(Located Main Line U. P. Railway, Laramie, Wyo.)

College of Liberal Arts, Normal School, School of Mines, Agricultural and Mechanical College, and Military School.

Well-equipped Library and Laboratories. Splendid buildings. Elective Courses. Tuition free. Expenses reasonable.

Climate unsurpassed for throat and lung troubles. Altitude 7,200 feet.

Send for Circular and Catalogue.
A. A. JOHNSON, A.M., D.D., President.

EUROPEAN SUMMER RESORT.

INNSBRUCK, TYROL, AUSTRIA.

Fine Hospital, and all modern advantages. 1,000 feet above the sea, with dry, bracing climate. Centre for Coaching and Hunting Trips. National Festivals, Music, etc.

HOTEL TIROL.

Open all the year. CARL LANDSEE, Proprietor. Large, airy, sunny rooms; elevator, electric light, etc.; superior cuisine EXCURSIONS OF ALL KINDS A SPECIALTY. Best references. Illustrated pamphlets sent on application.

SEVEN GABLES FOR GIRLS of all ages. Looks to their physical as well as higher mental culture. Boating, stately trees, handsomely appointed building. Gymnasium. A thoroughly modern school. Native French and German teachers. 20th year. Certificate admits to Smith. Direct trains from New York. Address for Catalogue, Mrs. SARAH S. WESTCOTT, Prin., Bridgeton, N.J.

THE MISSES VINTON'S
SCHOOL FOR GIRLS,
RIDGEFIELD (formerly of Pomfret), **CONN.**
Will reopen Thursday, October 3.

The Nation.

NEW YORK, THURSDAY, AUGUST 22, 1895.

The Week.

THE 16-to-1 Democrats in Ohio are beaten as badly in their State convention as the same faction was beaten in Kentucky. There are sufficient reasons for this result without ascribing it to the herculean labors of Senator Brice. The terrible thrashing that the party received last year, when the 16-to-1 men had everything their own way and adopted a 16-to-1 platform, has had its due share in producing the present result. The example of Kentucky has likewise had a powerful influence in shaping ideas on the north side of the Ohio River. Still, there does not appear to be any great anxiety among Democrats to secure the nomination for Governor, although there is a latent and widespread feeling that they may carry the Legislature and elect a Senator.

The victory of the free-coinage men in the recent Democratic State convention in Mississippi was overwhelming. Two causes have combined to prolong the silver delusion in that commonwealth. One is the fact that it stands somewhat aloof from the currents of business activity which make its neighbor, Alabama, more quickly responsive to the turn in the tide of public thought on this question throughout the country. The other is the fact that since Lamar left his seat in the Senate to enter Cleveland's cabinet ten years ago there has been no great leader to expose the fallacy of the free-coinage theory and open the eyes of the people to its folly, as he did when the silver issue came up in 1878. The present violence of the craze is a matter that chiefly concerns Mississippi. The fact that the State is solid for free coinage will not rescue that movement from its assured defeat, but it will prejudice the best class of possible settlers from making homes in a State capable of such folly.

The Maryland Republicans last week adopted a civil-service plank which is fully as explicit and far-reaching as the Illinois plan. It pledges the party to "the enactment of such legislation as shall permit the people of the several counties and municipalities of the State to decide for themselves by popular vote whether appointments to the police, fire, and all other departments of public service shall be in accordance with the principles of the merit system." This is a clear recognition both of the business arguments against the spoils system, and of the fact that a non-partisan public service is an essential part of home rule. When the people of any given locality are free to decide the question for themselves, the dictators at the State capital or at Washington will be told to keep their hands off. The result of the test vote at Chicago indicates how surely local sentiment may be appealed to as against the bosses. The spoils system has thriven on the indifference of local voters to local issues, compared with national questions, and now that local issues—municipal home rule, an honest and permanent public service—are coming to the front as never before in this country, the bosses will be sent to the rear as never before.

Mr. Manley, chairman of the executive committee of the national Republican organization, has some very bold and pronounced views on the questions where the next national convention should be held, how the Southern delegates should be treated, and how the business revival will shelve the silver question. But when pressed to name the really great issue of the campaign, he politely but firmly declines to answer. He knows, but he will not tell. In the matter of reminiscences he was communicative enough. His party had made a great mistake about the force-bill issue, and should have dropped it eight years before it did. This seems to be a confession that a leading doctrine of one national convention may be dropped by the next. If the force bill may be so dropped, if silver may be dropped, why not protection also, and the platform confined to an endorsement of a pure home life, useful knowledge, and the cardinal virtues? Anyhow, we are glad to see Mr. Manley so certain that whoever is nominated will be elected. What the man who is elected thinks or will do, is of course a minor matter.

Senator Wolcott is the latest of the erstwhile loud-sounding silver orators to discover that this is a time for modest stillness and humility. The silver question, he observes, has had "too much said about it for its own good." Is this a reflection on Stewart and Jones and their speeches for nine times the space that men call day? Who has said more, in his way, about the silver question than the Colorado Senator himself? True, he has been reëlected, and does not now need to fire the Colorado heart by announcing his willingness to do or die for the silver-miners; but, even so, we should hardly think it safe for him to indulge in such open cynicism. "This is no time to argue the question," he observes, "when nothing can be gained by it." As a lawyer, Mr. Wolcott must know that this sounds very much like counsel declaring, after the Supreme Court has decided against them, that they do not care to argue the case any further just then.

It is high time that a search party was organized in a scientific way to sail in pursuit of British bimetallism. That elusive natural phenomenon is in as great need of being discovered, located, and described, as was ever the snark. Returning travellers tell weird and conflicting tales about it. Mr. Whitney was powerfully impressed with the strength and ferocity of bimetallism in England, until he found people in this country laughing at his story as merely a horrid vision caused by the febrile conditions to which Presidential candidates are subject, and then he took it all back. Speaker Crisp told the correspondents that it might be true—he hoped it was—that bimetallism was making giant strides in England, but that not a stride had been taken in his presence. Speaker Fish had spent a large part of his vacation in hunting for British bimetallism, but confessed on Saturday that he had not seen so much as a feather of that shy bird. But these explorers were clearly too unenterprising, too sceptical, did not recognize an irresistible wave of bimetallism when they saw it. Let them learn of Prof. Robert Ellis Thompson. He writes to the Philadelphia *American* giving the most authentic and inside news about bimetallism in England. He knew enough to go to headquarters. Less shrewd observers contented themselves with reading the papers, scanning election addresses, and listening to the speeches of candidates; and, finding no more about bimetallism in them than about traducianism, rashly concluded that there "wasn't no such a thing." But if they had gone with Prof. Thompson to the office of the Bimetallic League in Manchester, their eyes, and perhaps their mouths, would have opened in astonishment. There were bimetallic posters—the walls were "papered" with them. They were written in "terse, strong, ringing sentences," which shows how different the art of bimetallic composition is in England from the form we know. Some of the posters were "in Welsh"—terse, strong, ringing Welsh. What excuse has Mr. Whitney for not informing the American public of this conclusive proof of the strength of English bimetallism?

One Southern State is at last aroused to the necessity of punishing "prominent citizens" who go around shooting anybody with whom they chance to quarrel. A fortnight ago T. Dabney Marshall, a Representative in the last Mississippi Legislature and Democratic candidate for Senator in the next one, as well as "a member of a leading family," started out gunning for a man who had made a charge against his character, taking along three companions to insure fair play; and when he met his enemy, who was un-

armed, Marshall and two of his party began firing at him, keeping it up until his body was riddled with bullets. None of the participants appears to have expected anything worse than formal and resultless proceedings in the courts, after many precedents in cases almost as bad; but the brutality of this assassination aroused public indignation. The Circuit Court met on Monday, the grand jury brought in a true bill for murder against Marshall and his two fellow-shooters, they were arraigned on Wednesday, pleaded guilty, were sentenced to imprisonment for life, and they have already begun to serve their sentences. We have so often been compelled to criticise the remissness of the South in the punishment of murder that it is a great pleasure to find a case where the authorities deserve to be commended. It is to be hoped that the example of Mississippi will be generally imitated.

There is much significance in the current discussion as to the possibility of Mr. Cleveland's renomination for the Presidency. Considering the popular prejudice which is known to exist against a third term, the vitality of the discussion is itself remarkable. We do not think that there is the remotest likelihood of a renomination being offered him, or of his accepting it if it were offered. The reasons for the discussion are, however, not far to seek. Mr. Cleveland is thought of as a possibility for a third term simply because of the dearth, we might say lack, of candidates who stand for what he stands for in the public mind. The people turn to him for further service because they are unable to find as a successor any one who gives assurance that, if elected to the Presidency, he would guard the public interests in the same fearless and effective manner as Mr. Cleveland has done. It was a keen perception of this feeling in the public mind which prompted certain rabid haters of Mr. Cleveland to start the present discussion by saying that he was intriguing for a third term. They were so alarmed at the possibility of having him thrust upon them for another four years that they sought to head it off off by arousing the third-term prejudice. They have performed a useful service in revealing the popular desire for a candidate of the Cleveland type. This desire is likely to be increased when the next Congress gets to work. That body is little different in quality from the one which made the Democrats so much trouble during the past two years, and it is very likely to give the President fresh opportunity to show the country that he is the inflexible defender of its most vital interests.

One of the most objectionable manifestations of false patriotism witnessed in recent years has been the attempt to deprive alien residents of this country of the right to work. In the State of New York the true motive for this discrimination has doubtless been the desire of the politicians to compel the men who are employed on municipal works to qualify as voters. When so qualified, the politicians reasoned, they could be made to vote as desired, and accordingly the Legislature was employed to pass an act making it illegal for a contractor with a municipal corporation for the performance of public works to employ any persons except citizens of the United States. Under this statute a member of a paving company was recently convicted of having employed an Italian in work on a street under a contract with Buffalo. That conviction has now been reversed by the General Term of the Superior Court of Buffalo, and the statute pronounced unconstitutional. Judge White, who delivers the opinion of the court, concludes by saying that until compelled by judicial authority to yield assent to such legislation, he shall esteem it a privilege and solemn duty to stamp it with his disapproval; and good citizens will find it hard to differ with him. The case ought certainly to be carried to the Court of Appeals, for the principles involved are of far-reaching importance. If the several States have power to enact such laws as this, it is evident that the general Government will soon have trouble with foreign countries. Our treaty with Italy provides that Italians residing in the United States shall enjoy the same rights and privileges in respect to their persons and property as are secured to our own citizens, and similar provisions are generally inserted in treaties. While Congress has power to override treaties, the State legislatures have not, and upon this ground alone, as Judge White says, the statute could be held unconstitutional.

The liquor-dealers of this city received a valuable lesson in the elementary principles of government from the Recorder on Friday. They learned with something of a shock that laws in regard to liquor-selling are subject to the same treatment as other laws, and that the first duty of a civilized government is to enforce them. Their previous instruction on this subject has been very inadequate. Mr. Mullins, a liquor-dealer with four saloons, has for many years been defying the law's regulations in regard to Sunday selling, and has never been seriously disturbed by the authorities till now. Occasionally some of his barkeepers were arrested, but they were never convicted of any offence, and were released promptly under the influence of a "pull." On Friday Mr. Mullins found himself in court under quite different conditions. He was adjudged guilty of the violations of the law which his barkeepers, under his orders, had committed. He could find nowhere about the court a "pull" which would work for the amelioration of this verdict. When he stood up before the Recorder for sentence, he was informed that when he violated the law he must take the consequences, that liquor laws were no different from other laws, and that the penalty for his offence would be imprisonment for thirty days and $250 fine.

Senator Hoar takes the bull by the horns when he declares, in his admirable letter on the A. P. A. business, that Catholics otherwise qualified ought to be allowed to teach in the public schools. The Catholic teacher has from the first been the great bugbear of this movement. It was Superintendent Marble's impartial course regarding appointments in Mr. Hoar's own city of Worcester which was made the lever by the A. P. A. element for turning that able and experienced instructor out of his place a year ago. It is therefore instruction that is much needed at his own home, as well as in Boston and other places, which the Senator gives when he says that he does "not wish to exclude Catholics from being public-school teachers (if they will keep their particular religious tenets out of the instruction) because of their religious faith, any more than I would have excluded Phil Sheridan from his office in the army, or would have refused to support him for any public office if he had been nominated for it." The only wonder is that a State which has always prided itself upon its progressiveness should need at this late day to be taught this fundamental lesson in equality.

The London *Economist*, in noticing some of the comments made on this side of the water upon its gloomy views of our finances, declares that it has no intention of making any attack on the credit of the United States Government. True, it continues, the expenditure exceeds the revenue, and Congress refuses to impose new taxes. Nor can it accept the sanguine view that the revenue will increase to such an extent as to cover the deficit. But, in spite of these adverse circumstances, it recognizes the fact that the resources of the country are too great to allow its credit to be questioned. "It is not to fiscal but to currency difficulties that the loss of credit by the United States Government and the lack of confidence in American securities is due." The silver craze has diminished in intensity, but it cannot yet be safely ignored, and the operations of the bond syndicate show that the situation is critical. This syndicate has, it is supposed, succeeded in placing abroad about $100,000,000 of American securities. The effect of this has been to cover an adverse foreign balance and to prevent the exportation of gold. This, according to the *Economist*, has involved "a continuous manipulation of the exchanges," and, so long as it continues, foreign investors cannot be expected to shake off their feeling of distrust, nor can confidence be felt

in the steady development of business in the United States.

The distinction made by the *Economist* between "fiscal" and "currency" difficulties is not very intelligible. We should certainly say that our difficulty was a fiscal one, and that if the revenue of the Government rose above its expenditure, we should have no currency difficulty of a pressing nature. With a surplus revenue the currency would be necessarily contracted, and it must not be forgotten that the increase of business and the growth of population are now operating to reduce the *per-capita* quantity of money. There is now no way of increasing the legal-tender currency except by increasing the quantity of gold in circulation. It is evident that a large amount of money will be presently needed "to move the crops," and there will be little temptation under such circumstances to ask for gold in exchange for paper. The *Economist* seems to fail to recognize accomplished facts. Undoubtedly we were suffering some months ago from a very acute difficulty, whether it be called a fiscal or a currency difficulty. The bond syndicate saw that they could carry the Treasury through the emergency in a particular way, they made their agreement to do so, and they have fulfilled and are fulfilling it. The time for shaking of heads and questioning of hearts is past.

For a question which the general election had for ever shelved, and in a Parliament which was going studiously to ignore it, Irish home rule had a fair innings in the House of Commons on Thursday. The dynamite and blackguard section of the Irish party did little except to give Ireland new reason to pray to be delivered from such deliverers, and to afford Speaker Gully an opportunity to show that he will sternly uphold the dignity of his position and of the House against all Irish blatherskites. But the remarks of the new Chief Secretary for Ireland make it clear that the Conservative party is well aware it must do something for Ireland. Nothing need be looked for at this short session, but in time, it is evident, Conservative bills to remedy the anomalies of government in Ireland will be introduced. Then the whole dead question will show that it is very much alive. The Tories, in fact, have suspected all along that it was not dead, or, at least, as the Irishman said, if dead, was not conscious of it; and the remarkable steadfastness of the Irish electorate in the choice of Nationalist members has made them sure of it. The London *Times* was quick to declare that Lord Salisbury would have to do something for the Irish, if the pestilent fellows would only stand still and see the salvation which the Tories would offer them; and the *Spectator* outlined an "Irish policy for the Government" which was enough to make thorough-going Tories turn purple. According to this policy, the Conservatives were to endow liberally a Catholic University in Ireland, and make grants from the national treasury to Catholic elementary schools. Then they were to improve and extend the land act of 1881, provide for local or county government, and, finally, set up a central legislative body in Dublin "armed with the powers of Parliament in the matter of private-bill legislation." To justify these home-rule schemes, the *Spectator* coolly adopts the arguments which, in Mr. Gladstone's mouth, it used to call revolutionary and treasonable. It says the present scheme of governing Ireland is unworkable, is "a gross scandal, and ought to be put an end to." That is what the wicked Gladstone and the Liberals have been saying for ten years, and their plans differ only in detail from those which the *Spectator* now urges as a prime necessity.

The collapse of many speculative enterprises has led to an attempt to devise some new legislative protection for investors in England, and a very able committee appointed for the purpose has submitted a proposed bill for amending the law regulating the formation of corporations. The committee observes that "the Legislature cannot supply people with prudence, judgment, or business habits," and the changes that it suggests are, from our point of view, conservative enough. The proposed act does not go so far as to require the payment of the capital, or indeed any part of it, before the shares are all allotted, and the directors may fix the amount of subscription required at any amount. It is certainly not unreasonable to compel corporations to record their mortgages when private persons are obliged to do so; and it is no very harsh requirement that directors shall buy and own the shares which qualify them, or that they shall be held to the same degree of care which they take concerning their own property. Probably the most necessary reform, judging from English experience, is that which requires that every prospectus shall disclose all such information as will enable investors of ordinary prudence to form some idea of the enterprise. Every contract and fact must be advertised "which would influence the judgment of a prudent investor in determining whether he would subscribe for the shares or debentures offered by the prospectus." This provision is obviously salutary and in the interest of good business morals. It will at least have the tendency to check the practice of fraud under the cover of respected names.

Another failure of actual England to live up to the legendary England of the patriots is involved in the announcement that the Government of India has decided to withdraw from Chitral as soon as the movement is considered practicable from a military point of view. Thus the policy of Lord Rosebery's Cabinet in this matter appears to have been confirmed by Lord Salisbury. But the Jingoes will not be comfortless, for has not Bechuanaland just been annexed to the Cape Colony? Thereby hangs a little tale of Mr. Chamberlain's self-assertion as Secretary for the Colonies. He insisted that the bill providing for annexation should be amended so as to prevent the sale of liquor to the natives, and also so as to continue native jurisdiction in certain classes of crime. The sticklers for the independent authority of the Cape Government were furious, accused Mr. Chamberlain of officious and unwarranted meddling, and maintained that his sole constitutional right was to advise that a bill be vetoed. But Premier Rhodes was very calm and pliant, and accepted the Chamberlain amendments in order to meet the views of those squeamish people in England who "held the erroneous idea that the natives were badly treated." So the bill was finally passed unanimously on August 1. This did not prevent a good deal of muttering over the fact that in his first contest with the new Colonial Secretary Mr. Rhodes had come off second best.

The cable gave a brief account of an anarchist's attempt at assassination at the mines in Aniche, France, on August 4. From the detailed description of the affair in the French papers it seems to have been an occurrence extraordinary even in the records of anarchist exploits. The object of the assault was the superintendent of the mines, who had worked himself up to that position, from being a foreman, after fifty years' labor. A fête was offered him by the men under him to mark the rounding out of that period, and it was this occasion which a young anarchist seized to try to kill the superintendent, though happily he succeeded in putting an end only to his own wretched life through the premature explosion of his bomb. The event certainly throws much light on the rationale of anarchist hatred. Here was no grinding capitalist, no exploiter of labor, to awaken, in the cracked brain of the anarchist, rage and a desire for vengeance, but an honored and successful workman, reaping the reward of long fidelity, and popular with his fellows. Yet he is really precisely the kind of man to rouse anarchists to fury. They know very well that he is their deadliest enemy. If he is allowed to demonstrate that labor can be well paid and even honored, and that laboring men can be contented, in this corrupt social organization, the anarchist cause is wounded in a more deadly manner than it could be by a dozen heartless capitalists. Away with such a fellow from the earth!

THE POINT OF VIEW.

It is easy to see and pleasant to record the international hypocrisies of our neighbors—as when Russia, after annexing in the last quarter of a century half a million square miles of territory on the road to India, protests unctuously against Japan's occupation of the Liao-tung peninsula; or when France, valiantly slaughtering her "protected" Hovas in Madagascar, fumes at England's industrial occupation of Egypt. But it is neither so easy nor so pleasant to remember that this is an insidious sin common to all "civilized" nations, and that the present outcry of the American press against outrages on foreigners in China is as good an example as Christian history has ever afforded of the mote and the beam. The American people should understand the state of their balance-account in this matter. Let us look at the items a moment, and then figure out the moral.

The following list, taken from our Foreign Relations Reports of the last twenty-five years, notes the recorded instances of outrages in China and in the United States which resulted in loss of life:

In China, in 1870, occurred the Tientsin massacre; nineteen French and Russians (including several nuns) were barbarously murdered by a mob and the mission premises destroyed.

In the United States, in 1880, came the Denver riot; Chinese dragged through the streets with neck-ropes; one killed, several wounded.

In China, in 1883, some Europeans on a carouse killed some Chinese.

In the United States, in 1885, came first (September 2) the Rock Springs massacre; a village of Chinese stormed and burned by 150 armed miners, inspired by Knights (!) of Labor; men and women, from noon till midnight, shot and looted the fleeing victims; twenty-eight were killed and fifteen wounded, fourteen were burned to death, mostly sick men, and the dogs and hogs ate the charred corpses. The whole population stood by and approved; a fruitless inquest, etc., followed. For this we paid $423,000. On September 7, at Seattle, the Chinese were expelled, their village burned, three killed, and several wounded. Early in 1886, at places in Washington, Idaho, Montana, Wyoming, and Oregon, twenty-eight were killed. In Juneau, Alaska, eighty-seven Chinamen were driven out and set adrift on the ocean in two small boats with no food. During this period the Chinese were expelled from a score of places on the Pacific Coast, and more than 100,000, it was said, fled to San Francisco in terror and destitution. For one year's work, including damage to property, we paid $275,000.

In China, in 1887, there were return-riots, on hearing the above news; but no lives were taken. In 1891, in numerous riots at Wuhu and elsewhere, property was destroyed and two British killed.

In the United States, in 1891, there was arson and robbery, with one woman burned to death in Vallejo, Cal. In 1894, in Oregon, ten Chinamen were ambushed and murdered: "Every one was shot, cut up, stripped, and thrown in the water," most of them being shot in the back.

This summary omits, on the one hand, two score or so instances of mere property damage or ineffective assaults at various times in China. It also omits, on the other hand, the countless unrecorded instances of personal assaults and property destruction of Chinese on the Pacific Coast—that period of systematic bedevilment in which scarcely a day passed when an inoffensive victim was not stoned in the streets or his property taken. It also omits the insolent practices of Americans (and others) in Chinese ports, where they are recorded as wantonly striking passers-by with their whips in riding and driving, or carelessly running down native junks without an effort to save the drowning crew. It also omits those forms of oppression of which the following opinion by an American Claim Commissioner is on record in our public documents:

"It is a mortifying fact that were a balance to be struck between the aggregate losses suffered by Americans from Chinese pirates, Chinese thieves, and Chinese debtors, on the one hand, and on the other the injuries inflicted on Chinese merchants, tradesmen, compradors, and citizens, in the non payment of debts honestly due them by American merchants, agents, shipmasters, mariners, etc., we should find that balance to our debit in a ratio of fully 90 per cent."

Omitting, then, these lesser matters, what are the general features of the aggravated cases? On this side we find the Chinese invariably and unanimously acquitted of any provocation; they are conceded to be inoffensive in their conduct, industrious and useful in their work. On that side we find, in the missionary settlers at least, a similar absence of provocation, together with a highly useful activity. On this side, however, the Chinese compete for employment at exasperatingly low wages, and thus undoubtedly disturb the economic order to a serious extent. On that side, in a similar way, the missionaries come with doctrines and customs which, by the Chinese standard, pervert morality and overturn its basis, the family; while an unfortunate combination of circumstances has spread an ungrounded but often highly plausible belief that they kidnap Chinese children for their orphan asylums, and use babies' eyes and hearts as medicaments in their hospitals. On this side, consequently, we find sporadic outbreaks of violence by a turbulent and lawless class of the community. On that side, no different results follow; these recent killings of 1895, for instance, being the work of a band of marauding rebels.

In China, again, while decent people think about these things just as decent people do here, we find often a part of the intelligent class—officials and scholars—openly or quietly abetting; we notice, also, that strife is often excited for political ends. On this side, too, we find the Pacific Coast officials often conniving, seldom protesting, at the persecution of the Chinese, and constantly effecting a practical denial of justice; we also find the same nefarious use of popular feeling for political purposes. On that side we find these outbreaks consisting of robberies, lootings, and burnings, of assaults and "massacres"; on our side, too, we find theft and destruction, with cowardly and barbarous butchery.

Thus far the cases run on all fours. But there are two differences. First, the Chinese Government has never denied its duty to pay for all these things, and in the vast majority of instances the records show a full and fairly prompt payment. But it has been reserved for the officials of our enlightened republic to record themselves before the world as repudiating our liability to pay, and to relegate the Chinese to the tender mercies of a hostile local tribunal and a farcical justice; and the Rock Springs and other indemnities came as pure gratuities, thoroughly inadequate, pushed through a not too willing Congress. Secondly, the Chinese who have suffered here were undoubtedly in the simple exercise of their full treaty rights in settling and working where they were. But the missionaries who have suffered outside of the treaty ports were with equal certainty voluntary intruders where they had no right to settle; for missionary work in China (strange as it may seem) has been and is largely conducted by the aggressive occupation and persistent maintenance of stations outside of the stipulated treaty limits of residence. That these two circumstances of difference increase the credit side of our account would be difficult to maintain.

The moral, of course, is that if the Chinese are black in iniquity, then we are equally so; that if we prefer to think our people as a whole untainted by these sporadic excesses, the same conclusion must follow for the Chinese; and that a little more deliberation in the choice of vituperative adjectives is desirable. But this is, after all, some one will say, a merely scholastic question; historians and sociologists may reconsider their estimates of the Chinese, but it is useless to expect our general public to interest itself in such judgments. This is exactly the root of a serious fallacy. Our popular attitude in such matters is all of a piece. The bigoted heedlessness which is anxious to try our new warships by thrashing Chili, which conceives it a duty to rescue Hawaii and Cuba by force for "enlightened" government, which every year dares the British to knock chips from its shoulders, is one and the same with the conceited sanctimoniousness which denounces the whole Chinese nation as barbarous, and abuses our plenipotentiaries in China as "denationalized" and "Orientalized," while it overlooks the black score of oppression and butchery repeatedly inscribed by our own people within the past ten years. No doubt our eyes will some day be opened. Meanwhile, a decent regard for the *tu quoque* argument, and an intelligent study of the point of view of our foreign neighbors, are things which our press cannot too assiduously cultivate among our people.

AN OBJECT-LESSON.

It is reported that Mr. Speaker Crisp was present at the opening of Parliament and witnessed what must have been to him a striking spectacle, singularly illustrative of the effeteness of his native land. He saw organize itself a House of Commons known to contain an overwhelming

majority of Conservatives and Liberal Unionists, the parties whose coalition had utterly overthrown Lord Rosebery and Sir William Harcourt. He saw the Conservative member for the University of Oxford, that Toriest of constituencies, which threw out Sir Robert Peel and Mr. Gladstone for even coquetting with Liberalism, rise and nominate for reëlection the Speaker of the last House and predict his unopposed passage to the chair. So it turned out, and Speaker Gully, on resuming his seat by a unanimous vote, was congratulated by Mr. Balfour and Sir William Harcourt.

Yet Mr. Gully was a Liberal of the Liberals—a follower of Mr. Gladstone so long as he led the Commons; a declared opponent of all the views of Lord Salisbury, Mr. Balfour, Mr. Chamberlain, and Sir John Mowbray who nominated him. He had been Speaker only a very short time, and his selection to follow one of the most successful of modern Speakers occasioned considerable surprise. He was little known to the House, and to select him Sir William Harcourt had passed over several prominent Parliamentarians of both parties. How came it to pass, then, that a Conservative government caused his nomination by one of their stanchest supporters and had it understood there was to be no opposition? Simply because he had made an excellent Speaker; simply because, coming after one who had received such universal respect and regard in the chair as no other Speaker since Onslow—134 years—Mr. Gully had risen at once to the height of parliamentary approval. There could be no reason for the change except that the control of the House of Commons had passed into the hands of the other party, after a campaign of exceeding bitterness; and that, say the oppressed subjects of a monarch, is no reason at all. If you have got a good Speaker, keep him. Why not do so in Congress?

Mr. Crisp has been heard from in answer. He says, of course, that things in England and in America are very different; that our "system" would not allow a non-partisan Speaker; that the Speaker is recognized as the head of his party in the House of Representatives, and exercises power which can belong only to a party leader. But why? What power does he exercise which an impartial Speaker, chosen for his individual merits above party standing, cannot? In the first place, he appoints the committees. Now, be it observed, there is no necessary reason why the presiding officer should appoint the committees at all. The Senate of the United States selects its own committees, not the Vice-President. But, in point of fact, so far as the party character of the committees goes, our Speaker is already tied down in practice to a rule which might be administered by any one. The committees are selected from the adherents of both parties in such a way that the majority of the committee shall correspond to the majority of the House. In the Fifty-third Congress, where the Democrats were to the Republicans as about two to one, the important committees, consisting of fifteen or seventeen members, contained six Republicans, and the committees of thirteen contained five Republicans. It is not as selecting between the parties, but as selecting in each party, that the Speaker uses his power. In this device the Speaker has often shown himself anything but a loyal party leader, distributing places on committees by local and even personal interests. Few things could have been more insidiously dangerous to the Democrats than Mr. Crisp's selecting Mr. Bland for chairman of the committee on coinage; and in constituting the committee on ways and means he made the Republican third of it much stronger than the Democratic.

But the Speaker is expected in the House of Representatives itself to lead the business and shape the policy. Undoubtedly he does so, and in some respects the tradition is a venerable one, for undoubtedly Henry Clay was the active leader of the House in Monroe's Presidency. But that was a time when party in the present sense, or indeed in any sense, hardly existed. It was many years after 1825 before one of Mr. Clay's successors took an active part, as he did, in shaping the action of the House. But the present arrangement, by which the Speaker is a more active partisan behind the scenes, and occasionally in debate itself, than the chairman of the most important committee, the President, or any cabinet officer, is a comparative novelty and an utter abuse of the Constitution. Mr. Crisp played this rôle himself in the last Congress in a way that did his party no good and himself very little. He came down on the floor in committee of the whole, nay, when the House was in session, and wrangled with his predecessor with anything but a chairman's dignity. He pushed the Democratic caucus into defying the Senate on Tuesday, and then drove them into truckling to the Senate the next Monday, because there was a divinity hedging him, and no one dared to dispute his dicta, as they would those of Mr. Wilson, Mr. Cockran, or Mr. C. R. Breckinridge.

There has often been advocated in our columns the admission of cabinet ministers to the floor of Congress, to explain and enforce the measures of the Administration. Such a course would render the Speaker's partisan leadership of much less value. But without adopting this phase of English parliamentary government, there is not the least need of mixing up the duties of a dignified and impartial moderator with those of an astute, keen, combative party leader. Our present Postmaster-General showed himself amply qualified to perform all the duties of a leader of the House; he had many able lieutenants at his call when he was compelled to be absent. But the energies of the Democratic party were dissipated, its purposes diverted, its hold on the country lost, in large part by the unseen manœuvres and theatrical appearances of a Speaker who may profitably breathe the air of Parliament, morally as well as physically purer than that where he bore sway.

THE SUPREME COURT VACANCY.

THE recent death of Justice Jackson of the United States Supreme Court offers an unexpectedly early opportunity for restoring the geographical equilibrium of our highest bench, which has been disturbed since one of the nine judicial circuits was given three of the nine judges two years ago, and since a Louisianian a little later succeeded a New Yorker. John Jay of New York was appointed by Washington Chief Justice when the court was organized in 1789, and, except for an interval of twelve years after his resignation to negotiate the treaty with France in 1794, and the two years 1843 to 1845, the tribunal has had a representative of the Empire State continuously until 1893, the order of succession being Brockholst Livingston, who served from 1807 to 1823; Smith Thompson, 1823–1843; Samuel Nelson, 1845–1872; Ward Hunt, 1872–1882; Samuel Blatchford, 1882–1893.

The propriety of giving New York representation in this tribunal, on the ground of the exceptionally important interests, national as well as State, that centre in this commonwealth and enter into suits arising here, has thus been acknowledged from the foundation of the government. Mr. Cleveland recognized the weight of these considerations when he sent to the Senate in 1893 the nominations of two New Yorkers, only to have them rejected in succession, after which he named Senator White of Louisiana. The argument recurs with added force now that another appointment must be made.

Of the eight judges now on the bench, Gray of Massachusetts represents New England; Shiras of Pennsylvania, the old "Middle States"; Fuller of Illinois, the interior; Brown of Michigan, the northern tier of Western States; Harlan of Kentucky, the northern part of the South; White of Louisiana, the lower half of that section; Brewer of Kansas, the region between the Mississippi River and the Rocky Mountains; and Field of California, the Pacific Coast. There are nine judicial circuits in the country. Six of these have now a representative in the Supreme Court, and one has two—the sixth, which stretches north and south so as to take in Tennessee, Kentucky, Ohio, and Michigan. During Judge Jackson's brief service this circuit, composed of only four States, had three out of the nine places. Neither the fourth (Maryland, the two Virginias, and the two Carolinas) nor the second (Vermont, Connecticut, and New York) had a representative. There can be no question where the choice should lie between these two. Indeed, there is general agreement among news-

papers throughout the country that the appointee should come from New York.

There is no lack of lawyers in this State who are well qualified by character, ability, and judicial temper for the place, and who would be sure of the Senate's approval. Character, ability, and temper are obvious tests of a lawyer's fitness to fill the vacancy. There is one other consideration, however, that ought to be taken into account, which has been too much neglected by Presidents of both parties during the past quarter of a century. We mean the question whether a possible appointee is of such age and bodily vigor that there is a good prospect of his being capable of efficient service for a long period. It is essential that a new judge should be qualified to ornament the bench; it is also most desirable that he should give promise of distinguished service for twenty or thirty years.

The Supreme Court has suffered sadly of late years through the appointment of judges who were too old and too weak for its exacting duties. A remarkable change of standards has come about in this respect during the past century, and it has been a change for the worse. The early Presidents made their selections largely from among men in middle life—even men "still young," to use an expression common nowadays. Chief-Justice Jay was not yet forty-four years old when he took his seat, and his five associates (the court then had only six judges) were forty-seven, fifty, fifty-four, and, in two cases, fifty-seven. From the foundation of the government till after the close of the civil war no appointee had reached the age of sixty, while among those in the earlier period James Iredell was but thirty-eight, Bushrod Washington but thirty-six, and Joseph Story and William Johnson but a few months past thirty-two.

Naturally enough, the average length of judicial service during the first three-fourths of the nation's existence was very great. If Jay had retained his place until his death (John Adams, by the way, wanted to reappoint him in 1801), he would have been Chief Justice forty years. A later Chief Justice, John Marshall, appointed at forty-five, sat for thirty-four years, and Story as long; John McLean, forty-four when appointed, and James M. Wayne, forty-five, each thirty-two years; Bushrod Washington thirty-one, and Johnson thirty; while four others of those appointed before the war sat from twenty-five to twenty-eight years. Indeed, it is an extraordinary fact that, leaving out of account those who resigned their seats, the average term of service for all appointees from Washington's day to Lincoln's was above twenty years.

Lincoln maintained the old traditions, and with the old result. Noah H. Swayne of Ohio, fifty-seven when appointed, sat for nineteen years, Samuel F. Miller, forty-five, for twenty-eight years; David Davis, forty-seven, would have served twenty-four years had he not resigned to enter the Senate; Stephen J. Field, forty-six, is now in his thirty-third year of service; and only Salmon P. Chase, fifty-seven at his appointment, but weakened by his exhausting work as Secretary of the Treasury, died after a brief term, lasting but little over eight years, during three of which he was an invalid.

Grant introduced the new system of appointing older men, even past sixty years of age—William Strong being in his sixty-second year, and Ward Hunt in his sixty-third, while Caleb Cushing had entered upon his seventy-fourth year when the President sent his name to the Senate as Chase's successor. Arthur appointed Samuel Blatchford at sixty-two, Cleveland named L. Q. C. Lamar at sixty-two, and Harrison nominated Howell E. Jackson at sixty-one. In more than one case, too, the aging man was far from robust when he entered upon the arduous duties of the place.

The results of this change of policy in the matter of age have been most unfortunate. In case after case the new judge has died in a comparatively short time, Lamar after five years and Jackson after only two; while in other instances he has soon become a wreck, like Hunt (for whose benefit a special pension act had to be passed when he broke down after a few years), or, when still strong enough for further service, has retired on a pension after ten years, as Strong did in 1880. The average length of service has been in consequence reduced more than one-half as compared with ante-bellum days. Nine judges appointed since Grant's first inauguration have died or resigned on pensions. The youngest of the nine was fifty-six when he took his seat, and the average length of their service fell short of ten years—less than half the average before Grant's day, up to which time the oldest appointee had been fifty-nine.

There should be a radical change in this matter. No lawyer should for a moment be thought of for the vacancy who is not below sixty years of age—and the nearer forty-five the better; and who is not a man in vigorous health, with an "expectation of life" as regards judicial service of twenty to twenty-five years. A bench of nine men who sit in final judgment on the affairs of a nation of sixty-five millions of people must not be recruited from the ranks of graybeards and valetudinarians who totter under the burden of their heavy duties, and eagerly await the day when they may save a fragment of life by retiring upon a pension.

THE TWILIGHT OF GREAT MEN.

Moved by the death of Von Sybel, the Paris *Temps* calls the roll of the great men who, in various countries, have gone within a few years past to join the mighty dead. Helmholtz and Huxley, Renan and Taine, Tennyson and Browning—these are some of the names upon which shadow now rests, and which stand for loss. Also do they stand, the French paper asserts, for the intellectual impoverishment of the present generation. Their successors are not visible, or, at any rate (which amounts to the same thing), have not taken, in public estimation, the vacant places. It is a veritable twilight of great men if not of the gods.

Such a plaint is no novelty. However ready the poet and the moralist may have been to assert that brave men lived before Agamemnon, they have never been so sure about what came after him. At any given time in the world's history, even just before a wonderful flowering of genius, despondent observers were doubtless saying that the race was approaching mental bankruptcy. Wordsworth in 1802 thought England and the world in general threatened with decay, though the century before him was to be starred thick with immortal names. But it would be idle to deny that there is a basis of truth in what the *Temps* asserts. We shall not look again upon the like of some of the great men whose departure it mourns. There is, from age to age, a change in the manifestations of human greatness, a different emphasis put upon it. Changed opportunities and demands make a changed product. Nature breaks her mould after each casting.

It is often said that democracy is fatal to individual distinction. The *Temps* thinks that the vulgarization of institutions carries with it that of intellect, and it is something of a coincidence that, almost at the same moment, the Prussian historian Von Treitschke, at a banquet commemorative of 1870, should have deplored the mental and moral bankruptcy of Germany, and attributed it to the fact that German society had been "democratized." Lowell seems to have spoken a juster word when he said that democracy had indeed a disagreeable way of interrogating the Powers that Be, but only for the purpose of finding out if they were the powers that ought to be. But there is little to be gained by attempting to draw inferences from such broad and vague premises. In the changing conditions of life and learning, in the growth of the human spirit itself, we can see more definite causes at work which, if they do not lessen the number of great men, make them appear great in different ways.

One such cause is, clearly, modern specialization. A leading characteristic of some of the great minds who have lately left the world poorer was their wide-ranging nature. A Darwin or a Dana, for example, worked in many provinces of science, and did fruitful labor in each. Where is the rising naturalist today who would not be appalled at the thought of venturing so far out of his groove? A scientist must needs have had his early training a good half-century ago to have so much as conceived the possibility of covering so vast a territory. What is now required, what is now fur-

nished, is drilling away at a single vein till its last filament is got out. A sufficient triumph of learning nowadays is such as that of Browning's grammarian —to have "properly based *oun*," given us "the doctrine of enclitic *de*." Prof. Foster, speaking of the bent of Huxley's studies, well says that any branch of science is always in want of a great man, but that it was a particularly fortunate thing that Huxley turned away from physiology when he did, to do work in morphology which was just then absolutely needed. The work which all departments now absolutely need is this sort of specialized work. Thus the conditions are wanting which produced the all-around intellectual giants of the past, and it would be foolish to look for their reappearance—at least just yet, or in as great numbers.

There is also, in the very mass and accumulation of knowledge, at once causing and caused by specialized learning, a subtle something which disinclines to original and creative effort.

"Child of an age that lectures, not creates,"

said Lowell ruefully of himself, before Chartres Cathedral. Well, lecturing is a kind of creation. To see and set things in their proper relations, to understand the science of the comparative, to keep one's head above the waves that beat upon the student from every direction—this is work for a great man. Certainly it is the kind of work to which our best minds are more and more forced to give themselves, and it must lend a peculiar note to the kind of intellectual greatness we should expect to be most frequent in the near future. It is a wise generation that knows its own great men.

We must reckon in, too, as an influence not favorable to the production of great men of the old type, the increased sophistication and self-consciousness of the present time. Some of the greatest men of the world have owed their fame in part to their ignorance, in part to their unconsciousness. If they had fully known what they were about, they either would never have undertaken it, or would have botched it in the process. Like Wordsworth's glad souls, they were great and knew it not. A keener sense of humor would have ruined many a hero. Certain kinds of greatness are compatible only with a sublime disregard of the reasonable chances of success and with an entire forgetfulness of self. But those qualities are rare in the modern world. We are great for figuring out the average. We insist upon knowing what the odds are. Nor can we take ourselves so seriously—or rather take ourselves so unconsciously—as our ancestors. No man now says, "Go to, I will be a great man," any more than he says, "Go to, I will make a new religion." The sense of the ludicrous has become too strong for us. How many American mothers now inform their first-born sons that they may be President one day? We say we know too much for that any longer. But this very decline in the prophecy and anticipation of greatness is one reason why greatness, at least of the old kind, dating from the time when more minds were "used to the approach of Glory's wings," may be expected to be rarer.

But none of these considerations, of course, touch the central mystery of human greatness, which remains a mystery when all is said. We may single out influences which affect second-rate intellects, but the origin, as well as the march and conquests, of a mind of the first class remains inexplicable. Such minds, of which the best account we can give is that they are dowered with genius and given a mission to accomplish upon which they wreak themselves as by an inner necessity, will doubtless arise, in unexpected ways, to bless or curse their fellows, in the future as in the past. We may yet, at any rate, share Wordsworth's confidence, even in his despondent mood, as respects the future of the race "sprung of earth's first blood." Our great luminaries may sink below the horizon, and the twilight of great men be apparently full upon us; but

"Fear not but that thy light once more shall burn,
Once more thine immemorial gleam return."

ALASKA REVISITED.—IV.

JULY, 1895.

WESTWARD from the Sitkan archipelago regular communication is confined to the mail-boat, a staunch little schooner with auxiliary steam power, which makes five monthly trips during the summer. For the rest of the year the dwellers in this part of Alaska must depend for communication with the outer world on the casual and infrequent visits of other vessels. The travellers on the mail route have hitherto been confined to those whose business demanded their presence, and tourists are practically unknown. The regular tourist route is so sheltered from wave and storm that the travel is almost like that on a large river, and sea sickness need not be feared by the most timid passenger. The western route presents different conditions. The voyage is largely on the open sea and has its full share of rough water. Only experienced travellers are likely to find compensation for its discomforts in the magnificent scenery by which those fortunate enough to have fair weather are repaid. Northwestward from Cross Sound to Yakutat Bay, about one hundred and fifty miles, extends the Fairweather range, a continuous series of peaks 5,000 to 15,000 feet in height, separated from the sea by only a few miles of lowland, chiefly of glacial moraine-stuff. Every valley or deep cañon has its glacier; the rugged forms of the mountains, due to the nearly vertical schistosity of the rock, are often grand in the extreme. The snowy slopes, seamed with projecting crags, are bordered below with dark spruce forest. The type of the scenery is not unlike that of Glacier Bay, so often described, but on a far grander scale, and much enhanced, under a sunny sky, by the broad expanse of sea.

This part of the coast has hardly been mentioned by travellers, and one must go to the Coast Pilot prepared for navigators to find any description of it. The graceful lines of volcanic cones like Rainier or Shasta are wanting here. The mountain tops are seamed and shattered; everything about them speaks of mighty forces, grim resistance, the strength that breaks but bends not, softened only here and there by the tranquil curves of immaculate snow. The few peaks of the range which give the effect of complete individuality usually exhibit two broad shoulders with a central prism-like peak, clear-cut against the sky. The finest example of this form, and to my taste the proudest mountain of them all, though not the highest, is Mount Fairweather, which fronts the sea with a dignity not surpassed by St. Elias. It supports five large glaciers, one of which enters the sea at the westerly arm of Lituya Bay. Beyond the mountain to the west several large glaciers extend nearly to the ocean. One, named by La Pérouse the Grand Plateau, when viewed near by appears like a vast limitless plain of snow, with narrow lateral and terminal moraines. At a distance of some fifteen miles off shore, however, a range of moderate height is seen to rise behind it. This to one who has first seen it from near by is very surprising. One can hardly believe one's eyes, though the explanation is simple enough, and I have lately seen the same effect produced by a near view of the Davidson glacier on Lynn Canal.

At Yakutat the range breaks, and is followed by the immense broken masses of the St. Elias Alps. Mt. Logan, the highest peak of all, is so far inland that it does not appear separable by the eye from the numerous nearer summits. Russell has made us familiar with this region, and especially with the enormous glacial plain which has received the name of Malaspina. At Icy Bay the ice comes down to the sea and the shores are low and muddy. Beyond Icy Bay all is undescribed along a stretch of 150 miles of coast. Here we have a range apparently composed of slaty rocks inclined at an angle of fifty degrees or more, and rising 6,000 to 8,000 feet above the sea. A single peak, Mt. Steller, its summit narrow but of the Fairweather type, dominates all the range and probably reaches a height of 12,000 feet. For one hundred miles the only landing-place is at Cape Yakhtaga between two projecting reefs. There are in the range a few recesses whose heads are occupied by glaciers, the descending streams from which make no obvious break in the straight coast line. In other places the steep mountain sides come down close to the beach. At about one hundred and thirty miles from Yakutat Bay the range recedes from the shore in a northerly direction, and the space between it and the sea is occupied by the great Bering glacier. This is an ice-lake of the Malaspina type, but more interesting, though not so large. For twenty-five miles its front comes down almost to the beach, and its surface, whiter than the Malaspina, is marked with two or three conspicuous medial moraines. It seems incredible that the mountains, fully thirty miles inland, can supply at present a sufficient mass of ice to cover to the height of a couple of hundred feet an area of more than 600 square miles. Yet the ice is there, and no other source for it now exists. This whole region teems with fascinating glacial problems.

The angle of the coast known as Cape Suckling is formed by an eminence which, but for the glacier that bounds it on the east and north, would be an island. Controller's Bay, shallow with deposits from the Atna River, separates the coast from Kaye Island. North of the latter is Wingham Island, smaller,

and between the two is an anchorage which formed Bering's landfall in his expedition of 1742. Here Steller landed for a few hours, and here the first white man set foot on the northwest coast above the Sitkan archipelago. The coast recedes northward in a wide bay, midway in which a sharp break in the mountains indicates the cañon of the Atna or Copper River. Most of the shore is occupied by the lowlands of the delta, behind which, at some distance, rise the snow-capped mountains. To the west, high wooded islands protect Prince William Sound. Ethnologically as well as historically this region is interesting, for here the Eskimo of the Sound, the Tinneh of the Atna River, and the T'linkit of Yakutat meet on common hunting grounds to pursue the sea-otter and seal. Twenty years ago this region was a wilderness in which two or three small trading-posts existed which received their supplies and sent out their furs once a year. Now every native village has its trader, most of them two competitors for trade. Almost every large stream has its salmon fishery, from which the product is promptly carried in small steamers to some centrally situated cannery.

Fur-bearing animals are becoming comparatively scarce, and the prices realized are ten times what they once were, with a corresponding diminution of the trader's profits. This has produced an effect hardly to be anticipated, namely, that, in the case of some animals, preserves have been instituted on convenient islands leased from the Government, and "fox-farms" promise to become increasingly numerous. Some of the salmon fishers have had the sense to project hatcheries in connection with their business, though in several cases fisheries have been wholly destroyed by taking all the fish and leaving none to spawn. The Government regulations for the preservation of the salmon are believed to be generally ignored or complied with very imperfectly. The discovery of rich cod-banks in Bering Sea has drawn away some of the vessels from the Shumagin Islands, formerly the centre of this business in Alaska. Fortunately the sea fisheries are not, like the salmon, capable of being easily monopolized and destroyed. Two or three years seem likely to complete the destruction of the fur-seal, after which Alaska must rely for her prosperity chiefly on the salmon, cod, halibut, and herring. At present the laws of the United States do not provide for, much less encourage, settlement in Alaska, and every stick cut for a log-house is in infraction of law. Land is not so valuable here that Uncle Sam need grudge homesteads to actual settlers, or timber for local uses. With the fur-seal out of the way, a new era will necessarily begin for the Territory, and it is to be hoped that a rational policy towards settlers will no longer be delayed. W. H. D.

THE SOCIALIST SITUATION IN GERMANY.

BERLIN, August 2, 1895.

THE little town of Kolberg in Pommerania, so famous for the bravery displayed by its citizens during the Napoleonic invasion, was recently the scene of a somewhat remarkable incident. As is not unusual in German watering-places, the bathing establishments of Kolberg are under the supervision of the municipal government, and the principal hotel of the town, the so called Strandschloss, is city property. As the dining-hall of this hotel is the largest hall in the town, it has come to be the customary meeting-place for political parties of every description. Some weeks ago Bebel, the Socialist leader, was to give an address in Kolberg. The local committee of the Socialist party applied to the Mayor for the use of the Strandschloss hall on this occasion, and the Mayor, himself a Liberal of long standing and a man without any Socialistic affiliations, granted the request. The meeting took place, and is universally reported to have been perfectly orderly and well behaved.

So far so good. But now the matter begins to be interesting. No sooner have the state authorities, the Landrat of the district of Kolberg and the Regierungs-Präsident of the province of Pommerania, been informed of the Mayor's compliance with the Socialist petition than they divine treason. The Landrat endeavors to induce the commander of the Kolberg garrison to withdraw the regimental band from the daily concerts in the Strandschloss Park; the Regierungs-Präsident countermands an official dinner which was to be held in the Strandschloss, and, at the same time, requests from the Mayor a prompt justification of the motives that have led him to an act calculated to endanger the commercial interests as well as the good repute of the city of Kolberg. And when the Mayor, in his reply, declares his conduct to have been actuated by the demands of simple, common justice, he is fined to the amount of ninety marks for misbehavior and neglect of duty.

Extraordinary as these facts are, they receive their proper relief only through the correspondence between Regierungs-Präsident and Mayor occasioned by them. The Regierungs Präsident distinctly affirms it to be incompatible with good morals and public decency to have any relations whatsoever with "a party which has written the overthrow of the existing social order, of the monarchy, and the Christian religion on its banner." The Mayor asserts with equal directness that to deprive the Socialists of the rights granted to all other political parties is simply shutting one's eyes to the fact that of all German parties they are, numerically at least, the strongest:

"He who does not want to sit where Socialists have sat, will nowadays be somewhat embarrassed to find a seat anywhere in Germany; at least he cannot any longer travel in railway carriages. What we eat and drink is for the most part made by Socialists. Our clothes have been largely manufactured by Socialist workingmen. You cannot live in a new house in the building of which Socialists have not been engaged. In short, to avoid Socialists or to stigmatize them as a class outside of the pale of correct society is an absolutely futile task. Only by acknowledging them as a public factor on an equality with all other public factors can the social peace be furthered."

In this Kolberg incident we have in a nutshell the whole of the political situation in Germany with regard to Socialism. The Government, on the one hand, since the defeat of the famous anti revolution bill, are more eagerly than ever resorting to a policy of small advantages and petty persecutions. Hardly a day passes without the conviction of some obscure enemy of society, or without the dissolution of some Socialistic organization. Since the courts in all cases of lese-majesty—one of the most common forms of Socialistic crimes—adopt secret sessions, it is impossible to get anything like full knowledge of this part of the anti-Socialist warfare. But there can be little doubt that the majority of cases is not very different from one which was tried before a Berlin court a few days ago and of which there was given out the following official report: "A butcher, Franz Rautenberg, having made some contemptuous remarks about the Emperor, was convicted of lese majesty. Although the utterances incriminated were not of an out-and-out insulting nature, the court fixed the sentence at six months' imprisonment, since the defendant had already served a previous term of two months for blasphemy, and consequently must be considered as predisposed to criminal acts of this kind."

In cases like this it is only an individual, and perhaps a worthless one, who is hurled by the defenders of morality into utter moral ruin. But it is not individuals only, it is above all the party organizations against which the saviours of society direct their hollow weapons. That in Hamburg a few weeks ago one hundred and fifty working-women were fined fifteen marks each for belonging to a club in which political matters were discussed (the privilege of forming political organizations being reserved to men), may have been reported even in American newspapers. Less striking, but none the less significant, is a case which recently happened in Cöpenick, a little town near Berlin. There exists in Cöpenick a Socialist Wahlverein, comprising some twelve to sixteen members, who meet as a rule every two weeks. At one of their last meetings they were surprised to see a policeman enter at ten o'clock and demand an adjournment, on account of the *Polizeistunde* having struck. The members of the club naturally protested against this action, pleading that their club as a closed society was not subject to the ordinary police regulations. But the Oberverwaltungs-Gericht, before which, as the highest tribunal, this protest, in the ordinary course of judicial proceedings, was carried, decided that inasmuch as the club in question had not a fixed membership, but could be joined on payment of a small fee by any sympathizer with the Socialist cause, it was *not* a closed society; that its meetings were not private meetings, but public gatherings, and therefore subject to all the regulations which are in force for public gatherings; that, in short, every one of its meetings must be announced beforehand to the police authorities and must be attended by a police officer.

It is clear that this decision of the Oberverwaltungs-Gericht, if carried out consistently, will put a speedy end in Prussia to all political clubs which, for one reason or another, are inconvenient to the Government. For it would be hard to find a political club of any description the membership of which was not equally elastic with that of the Cöpenick Wahlverein, and would not consequently come under the same kind of police supervision. And it is not surprising that already the larger Socialist organizations, as, for instance, the Berlin Freie Volksbühne, which at present is a body of some 8,000 members admitted by the payment of a small fee, are preparing for voluntary dissolution, of course only in order to carry on their work unmolested by official interference, under the disguise of some other less compact and palpable form.

While the Government is thus wasting its strength in the futile attempt to fight the Socialist propaganda with petty police annoyances, the country seems to be resistlessly drifting into the arms of this very propaganda.

It is a sad fact, but it is none the less a fact, that, twenty-five years after the foundation of the German Empire, German party life has reached a degree of confusion hardly less obnoxious than was the absence of all parliament-

ary institutions under the old Bundestag régime. There is actually not a single German party, except the Social Democratic, which, either on account of its mass or the consistency of its programme, can in any sense be considered an active public force. The Conservatives, naturally the allies of a Government which for generations has been accustomed to rely principally on the unwavering support of the landed gentry, have been forced into a perfectly untenable position through their exclusively agrarian policy and their consequent opposition to the governmental policy of a tentative free trade. The Centre party, since the death of Windthorst, the only man who was able to control its centrifugal tendencies, is more and more tending towards an open rupture between its feudal and its radical elements. And, what is most momentous of all, the very class which, after all, has had the largest share in securing to Germany her present position as a leading Power among the nations of the world in intellectual, industrial, and commercial progress—the *bourgeoisie*—is politically reduced to absolute impotence: whatever there is left of the old Liberal party is a mere name and shadow.

It is only natural that this condition of things—a condition unquestionably brought about through the Bismarckian policy of playing off one party against another without allowing either to obtain a share in the Government—should have led to a general discontent and uneasiness throughout the German land, the intensity of which it would be hard to overestimate. The farmer declaims against the commercial treaties with Russia and Austria, which are ruining his wheat trade; the manufacturer rebels against the burden imposed upon him through the accident- and old-age insurance laws, the bureaucratic provisions of which make the larger part of the contributions intended for the benefit of the laborer go to maintain an army of petty administrative officers; the small tradesman and artisan clamor against the ruthless monopoly of Trusts, and demand the restitution of the old-time guilds; and everybody is disgusted with a Government on which it is impossible to place any reliance, a Government which will undo to-morrow what it has done to-day, a Government which is nothing but a tool in the hand of a restless, impetuous, swaggering, and incredibly conceited sovereign.

Is it to be wondered at that, under these circumstances, the only party which is unwilling to make any compromise with the ruling system, which stands unwaveringly by the programme of a radical democracy, should rapidly increase its ranks? Is it, in other words, to be wondered at that the Socialist party is fast developing into the only formidable opposition party, so that the time may be foreseen when the Socialist leaders will at the same time be among the foremost leaders of Parliament?

That the new literature, which is characterized by the names of Sudermann and Hauptmann, is altogether on this side need hardly be stated; but it is interesting to note that the Socialistic quality of this literature has recently found an official confirmation through the Emperor's cancelling his subscription to the Deutsches Theater after the immense success at this theatre of Hauptmann's "Die Weber," while a German adaptation of "Charley's Aunt" was at the same time the object of most enthusiastic praise from the lips of the imperial critic. It is, however, not only in the drama that the Socialistic undercurrent of the time bursts to the surface. The same is the case in the domain of science and religion. Men like Wagner, Paulsen, Naumann, honest and devoted royalists though they be, are nevertheless each in his own way helping to destroy the royalist fiction of the Socialist party as a child-devouring monster; they are helping to bring on the day when the Socialist party will embrace all the liberal elements of the country, when it will have converted itself altogether into a party of peaceful, though radical, reform. That the party has for years been developing in this direction is a fact which only the blindest fanaticism can deny. The time is long past when the Socialist meetings were gatherings of the mob. To-day the Socialist organizations which devote themselves to the elevation of the masses, to the spreading of moral and political enlightenment, to the cultivation of science, literature, music, and other forms of intellectual refinement, are legion. To-day, it is a principle adopted by the rank and file as well as by the leaders of the party, that the only way to combat successfully the ruling system of militarism and officialdom is the peaceful revolutionizing of minds, not a violent convulsion of the social order. And if the present development is allowed to go on unchecked by international conflicts or other complications, we may look forward to the formation of a party resting on the broad masses of the working population and the small trades people, but reaching out into the sphere of the well-to-do burgherdom and yeomanry; and this party will control the majority of the Reichstag. When this moment arrives, the real struggle for civic freedom in Germany will begin.

KUNO FRANCKE.

Correspondence.

MISSIONARY WARS.

TO THE EDITOR OF THE NATION:

SIR: At a moment when an outpouring of vengeance upon the Chinese for their outrages on missionaries appears to be impending, it may be useful to recall a passage in the Diary of Lord Elgin, who was sent out as the diplomatic representative of England in China at the time of the opium war. On the day on which the passage was written Lord Elgin was lying off Canton, which, with its crowded population, was presently bombarded for twenty-seven hours.

"*December 22nd* [1857].—On the afternoon of the 20th, I got into a gunboat with Commodore Elliot, and went a short way up towards the barrier forts, which were last winter destroyed by the Americans. When we reached this point, all was so quiet that we determined to go on, and we actually steamed past the city of Canton, along the whole front, within pistol-shot of the town. A line of English men-of-war are now anchored there in front of the town. I never felt so ashamed of myself in my life, and Elliot remarked that the trip seemed to have made me sad. There we were, accumulating the means of destruction under the very eyes, and within the reach, of a population of about 1,000,000 people, against whom these means of destruction were to be employed! 'Yes,' I said to Elliot, 'I am sad, because, when I look at that town, I feel that I am earning for myself a place in the Litany immediately after "plague, pestilence, and famine."' I believe, however, that, as far as I am concerned, it was impossible for me to do otherwise than as I have done. I could not have abandoned the demand to enter the city after what happened last winter, without compromising our position in China altogether, and opening the way to calamities even greater than those now before us. I made my demands on Yeh as moderate as I could, so as to give him a chance of accepting, although, if he had accepted, I knew that I should have brought on my head the imprecations both of the navy and army and of the civilians, the time being given by the missionaries and the women." (*Letters and Journals of James, Eighth Earl of Elgin*, edited by Theodore Walrond, p. 212.)

The last words, "the time being given by the missionaries and the women," are especially worthy of notice. In the early days of missionary enterprise the missionary went without wife or child into the lands of the heathen, taking his life in his hand and looking to no government for protection. Now he takes with him his wife and children, and expects the Government of his own country to protect him and them with its cannon, and, if they are maltreated, to avenge them. A missionary unprotected by his government would be under some restraint in dealing with the prejudices of his people.

In demanding the punishment of the guilty at the hands of uncivilized officials, you run great risk of obtaining the punishment of the innocent. I think I have heard of a Turkish Pasha who, being called upon for reparation, took a few heads at random from the nearest village. A Chinese Mandarin is not unlikely to do the same.

The Chinese portions of Lord Elgin's Diary altogether are very wholesome reading for people who are inclined for high-handed dealing with weak and half-civilized peoples.

Yours faithfully, G. S.

Notes.

MR. HENRY C. LEA'S new historical work on 'Confession and Indulgences' is, we believe, now in the printer's hands.

'The Connection of Thought and Memory,' by Herman P. Lukens, is in the press of D. C. Heath & Co.

J. B. Lippincott Co. will have ready by Sedan Day, September 1, 'The American in Paris,' by Dr. Eugene Coleman Savage, who deals with the military and diplomatic phases of the Franco-Prussian war.

T. Y. Crowell & Co. announce 'Some Famous Leaders among Women,' by Mrs. Sarah K. Bolton.

A limited edition of an illustrated work of fresh research on the Chevalier d'Éon will be published in England in October by Tylston & Edwards.

W. M. Rossetti is preparing for publication a volume of poems by his sister Christina, which have not yet seen the light. His oldest daughter is preparing for her aunt's admirers a 'Birthday-Book.'

The British Government has acquired from Lord Bridport some dozens of volumes of Nelson's correspondence. These valuable papers now form part of the treasures of the manuscript department of the British Museum. In due course they will be indexed and made available to historical students. A volume of Nelson's correspondence has also been sent to the Museum by the Admiralty. Over and above the intrinsic value of its contents, this volume is interesting as showing that Nelson kept press copies of some of his letters, to which will be found subscribed the signature "Nelson and Brontë." The medals worn by Nelson at the time of his death have been deposited at Greenwich Hospital.

The value of the Calendars of State Papers from time to time issued by the Public Record Office, London, is highly appreciated by all students. The Calendars of the Colonial series are simply invaluable to students of the colo-

nial period of American history. The deepest concern must be felt by those interested when they learn that, since the lamented death of Mr. Sainsbury, in the early part of this year, no arrangements have been made for continuing the preparation of the Colonial Calendars. The Deputy Keeper of the Records, Mr. Maxwell Lyte, C.B, has put so much heart into his work since he has presided over the Public Record Office, that students will be much surprised should that distinguished official not cause arrangements to be made for the continuance of the work of calendaring the Colonial Papers either by Mr. Sainsbury's former assistant, Mr. Sharpe, or by one of the other members of the highly qualified staff which works under the direction of Mr. Lyte.

M. Léon Ottin, who holds a high rank as a designer and maker of stained glass, and has already written a practical work on the subject of his art, now addresses himself to the cultivated public in 'Le Vitrail,' which is to be at once an historical manual and a guide to the best extant glass of the present day. The book will be carefully illustrated, and will appear in February, 1896 (Paris: Laurens; New York: Dyrsen & Pfeiffer).

Mr. J. H. Hobson has shovelled together a batch of papers upon topics connected with British agriculture, which he publishes under the title 'Coöperative Labor upon the Land' (Scribners). While most of the papers are mere scraps, some are not without importance, and from the whole it is possible to derive a pretty clear impression concerning the future of the rural parts of England. Between 1851 and 1891 the census returns show a decrease in the number of agricultural laborers from 1,253,000 to 781,000. During the last twenty years about 2,000,000 acres of land formerly tilled have been converted into permanent pasture. The two phenomena are, of course, connected with the fall in price of corn and in the scale of rents. The fall in rents, however, is at last having some effect in breaking down the reluctance of the landed interest to grant allotments. This interest has hitherto pretty generally succeeded in neutralizing the measures intended to enable laborers to own small pieces of land, preferring to keep them under control as tenants. But the landlords are not so arrogant as they once were, and, what with reductions and arrears of rent and untenanted farms, they are beginning to feel that they may, after all, do worse than consent to cut up their property into allotments. Some interesting reports of progress in this direction are to be found in Mr. Hobson's volume; but the variety of subjects touched upon is too great for our further notice.

Macmillan & Co. publish a translation of Prof. Ugo Rabbeno's work on 'The American Commercial Policy.' The book consists of three essays: one on the commercial policy of England toward the American colonies, the second on the causes of the commercial policy of the United States, and the third on our theory of protectionism and the historical circumstances of its development. While these lectures doubtless interested those who heard them in Italian, the necessity of translating them is not obvious. American readers have easy access to the materials used by Prof. Rabbeno, and his ground has been well covered by American writers. Nor is it too much to say that the theory of protection developed by the Philadelphian school of economists, which Prof. Rabbeno examines with much gravity, does not require serious consideration.

A handsome quarto comes to us from the Werner Company (Chicago and New York), entitled 'Beautiful Britain: The Scenery and Splendors of the United Kingdom, Royal Residences, Homes of Princes and Noblemen, Palaces, Castles and Houses, Beauties of Mountain, Lake, and River.' This enumeration covers nearly everything depicted, unless it be the Crown jewels in the Tower. There are a number of interiors; but externally the castle, the palace, the seat furnish by far the greater number of the plates, which are excellent full-page half-tones, and are often striking in the extreme. Each plate is faced by letterpress cut to one measure, and hence not to be criticised for falling short. The volume is calculated to give much pleasure and no little information.

A bulky 'Monograph of the Order of Oligochaeta,' by Frank Evers Beddard (Oxford: Clarendon Press; New York: Macmillan), well exemplifies one of the most pronounced tendencies of modern science. It is a valuable addition to scientific literature; yet, treating only of the order of worms of which the common angle-worm is a familiar example, it will interest few besides the specialist. This order is subdivided into some fourteen families, more than a hundred genera, or more than six hundred species. In the bibliography there are more than six hundred and fifty titles, of which eighty-five are from publications by Mr. Beddard himself. The illustrations on the plates, and the fifty or more in the pages, are taken up mainly with anatomy, which occupies also about one-fifth of the text. Massive as the book is, there are places in the descriptions where it has the appearance of being too much condensed. From this one, an estimate of the probable size of a work on these worms to include those of the great extent of our earth not yet explored is somewhat startling. Everywhere the treatment indicates that this monograph is from the hand of a master. It is certainly a grand achievement.

Knowledge of the Bahamas, as of marine bank- and reef-formations in general, is much enhanced by the publication, in the Bulletin of the Museum of Comparative Zoölogy, of Alexander Agassiz's 'Reconnoissance of the Bahamas and of the Elevated Reefs of Cuba in the Steam Yacht *Wild Duck*.' It is monographic, especially in what relates to geology and topography. Its pertinence is not limited to the Bahamas, since in treatment of upheavals, coral formations, etc., research is extended to Cuba, other islands of the West Indies, and to various parts of the world. The foundations of the Bahamas are laid in upheaval and folding (volcanic or other) of the primary rocks; the superstructure, in æolian rocks largely made up of coral sands, shell débris, etc., from the waves. A subsidence of about three hundred feet, determined through the "ocean holes," has left only the æolian formations at the surface in the Bahama region. The coral sands were supplied by barrier or fringing reefs in positions not greatly differing from such as are now occupied. In Cuba the evidence from the terraces and elsewhere is found to favor successive upheavals, and the reef deposits are shown to form but a thin veneer. Due attention is paid to the life, marine and terrestrial, by the author, than whom there is no one more competent. There are numerous figures in the text. Fourteen of the forty-six plates are maps with soundings; the remainder are artotypes which give admirable ideas of the topography, rocks, vegetation, and scenery in the different islands.

A 'Narrative and Preliminary Report of the Bahama Expedition,' by C. C. Nutting, in a recent issue of the Bulletin of the University of Iowa Natural History Laboratory, is an outcome of a three-months' voyage, by about twenty students and professors, for marine study and collection, on a 116-ton schooner, from Baltimore to the Bahamas, Cuba, and the Florida Keys. The experience was one of the great events in the lives of its participants, and, as it was very successful, it is likely to serve as a pattern for a number of similar undertakings by others. The whole affair was well managed, it was without serious mishap, and its results must be gratifying indeed to friends of the University. The benefit to the latter is continuous, as will become more obvious with the publication of reports on the large collections now in the hands of specialists. Individual expenses were small, only about $200, and members of the party sold from their shares of the specimens enough to clear this, leaving but the time to be accounted for. Prof. Nutting's narrative is full of interest, contains a great deal of important observation of a value more than temporary, and forms a handbook for subsequent expeditions. We notice that he decides that flying-fish do really fly like birds. The present writer, however, from the same species, in study of their flight, their fins, and their muscles, was driven to conclude that these fishes did not, and could not, strike downward and backward, as birds do, to propel themselves in the air, and that the fluttering occasionally seen was merely a slatting, a temporary lapse in control, perhaps, in a struggle to adjust the parachutes to pressure from new directions.

The head of the Public Library at Brookline, Mass., deserves credit for the admirable shape in which his 'Catalogue of English Prose Fiction' appears. In place of the large, awkward two-column page hitherto universally employed for such work, he has chosen a page of 7¾ by 5¼ inches. This change renders the book portable, and favors the eyes of every reader. The type, also, is clear without the distracting prominence often given to headings, and the paper is excellent. The cataloguer's work is less well done than the printer's. Books are ascribed to the wrong authors, authors' Christian names are omitted or wrong ones are given, pseudonyms are accepted as true names, married women are entered under husbands' names, or twisted so that the first has become last and the last first (or middle), books by the same author are entered under different names, and different editions are treated as different books. The title-page of this Catalogue asserts that "historical works [are] indicated." This is true, however, of only a portion of the books of this class, and the selection of books to be indicated seems to rest on no principle whatever. As regards the quality of the collection, it is interesting to note, in these days when the social influence of novels is so much discussed, that this library keeps in circulation a full line of the trashiest novels in existence.

M. Jean Rozane's 'Maldonne' (Paris: Colin) is an earnest attempt to write a novel in which facts and psychology, love and morality, shall go hand in hand and charm the reader, be he sentimental, artistic, or scientific. The result attained is, as might have been expected, heaviness and dulness.

'Une Évasion—Souvenirs de 1871' (Paris: Colin) is a well-written, brief account of the escape, from a German prison camp, of the late Auguste Burdeau, some time President of the Chamber of Deputies, Minister of Marine, and Minister of Finance. In 1870, while still a student of twenty, he volunteered, went to

the front, rose to be sergeant, distinguished himself, and was finally taken by the enemy. He twice tried to escape, first with three companions—they were all retaken; next, alone—he succeeded. This little book tells the story in a spirited fashion.

'Les Mercredis d'un Critique,' by Philippe Gille (Paris· Calmann Lévy), is the collection in book form of M. Gille's brief newspaper reviews of recent books. It has no great importance, but may be consulted to advantage occasionally.

Few would suspect M. Albin Valabrigue of deliberately writing a serious book on serious subjects, and yet this is just what he has done in 'La Philosophie du Vingtième Siècle' (Paris: Bibliothèque Villiers). In it he discusses some of the very grave questions which men are called upon to face at the present moment, and, if he is neither dull nor slow, he is none the less in earnest. His book well repays reading.

The *Colonial Magazine*, founded this month by Bosworth, Hyde & Hyde, New York, is a presentable monthly which will seek its support chiefly in the membership of the shoal of half-sentimental, half-antiquarian patriotic organizations whose cult is the Revolution. It is illustrated, in the manner of the day, by "process" portrait and views, and seems likely to commend itself to its audience.

The principal feature of the *Geographical Journal* for August is Mr. J. T. Bent's account of his recent exploration of the frankincense country. This is a small strip of the southern coast of Arabia, about sixty miles long by ten wide, well watered, and of course very fertile. There are numerous ruins of ancient towns scattered over it, and the remains of at least one commodious harbor now inaccessible from the sea. The frankincense of commerce is found in three large groves in the mountains which separate the coast territory from the central plateau. Each tree is the property of an individual Beduin owner, who cuts the stem in the early spring, collecting the gum about once a week till the summer rains set in. The gum is sold to Banyan merchants, who export it to Bombay—the annual product being about nine thousand hundredweight. These Beduin are a wild race who live chiefly in caves and under trees, using reed huts only during the rains. They are regarded by the Arabs as heathen, and apparently speak a language peculiar to themselves. A map and several interesting illustrations accompany the paper.

The proposed "Nile Reservoir" is the subject of an interesting paper in the *Scottish Geographical Magazine* for August by H. D. Pearsall. He gives a brief, but clear, description of the different plans and the object sought, which is mainly the perennial irrigation of a large part of Upper Egypt. By this means two crops, and on some lands three crops, can be raised each year. This second or summer crop is by far the most valuable, averaging fifty dollars an acre, or three times as much as the flood crop. Should the scheme be carried out in its entirety, the increase in the value of the annual crops is estimated at over sixty million dollars. Mr. Pearsall pertinently asks if some means should not be sought to secure the people at large in the enjoyment of some of the benefits arising from this great increase of the national wealth. Unless this is done, the land-owners, not a half of the population, would alone profit by it, and the laborer's condition remain unchanged. He suggests that some of the surplus revenue to be obtained should be spent in simplifying the system of land tenure and in equalizing, as well as reducing, taxation.

The political meeting called at Thingvalla shortly before the opening of the Icelandic Althing, to discuss various reforms, was not a success. A third of the eighteen districts into which the island is divided sent no representatives, and the result of the discussion may be regarded as practically nil. Unlike their Norwegian cousins, the Icelanders are filled with all the conservatism of an insular folk, and they turn a deaf ear to the blandishing words of a political agitator.

—The most interesting feature of the current number of the *Bulletin de Correspondance Hellénique*, apart from the account of the newly discovered hymn to Apollo, is M. Homolle's description of a view of Athens and its environs, painted before 1680, which was lately exhumed from a bric-à-brac shop and is now preserved in the Museum of Chartres. There is, practically, no doubt that it was executed by Jacques Carrey, who accompanied the Marquis de Nointel to Athens in 1674, when he visited that city as Ambassador with a numerous retinue. The group of personages in the foreground represents evidently some episode which occurred during this visit. The landscape against which they stand is a view of the Acropolis, the city and the neighboring country, taken with almost photographic fidelity, from the slope of Lycabettus. By the precision of its date, the minuteness and accuracy of its detail, and the merit of its composition, the painting should take the first place among views of Athens of the seventeenth and eighteenth centuries. M. Pottier throws some definite light on the mooted question how far and how early archaic Greek statuary was influenced by Egyptian models. He concludes that if the influence existed, it did not appear earlier than the second half of the seventh century, and then only in regard to certain details. The feminine type was earlier practised and formed by native Greek artists, and owes hardly anything to Egypt, except, perhaps, the attitude of advancing the left leg. The masculine type, such as the archaic athletes and Apollos, is more decidedly influenced by Egyptian models, especially for the attitude just mentioned. The exact road by which the influence was conveyed is now proved by some alabaster statuettes found at Naucratis, and by some terracotta statuettes of Phœnician workmanship preserved in the Louvre and figured in the *Bulletin*. The Egyptian type of these is obvious at a glance. The Greek artists were therefore guided in two ways—first, by the works of Greek sculptors settled in Egypt, secondly, by imported Phœnician copies and imitations.

—In 'Polyclète,' by Pierre Paris ("Les Artistes Célèbres"—Paris: Librairie de l'Art), we have an admirable example of that art of guessing which constitutes the science of Archæology. There is not a fragment in existence which anybody pretends is from the hand of the contemporary and rival of Phidias, yet archæology undertakes, with the aid of a few ancient texts and a number of statues which may be copies of his works, to reconstruct that sculptor's artistic personality, and to give an idea of his style, his peculiar merits, and his limitations. M. Paris is by no means the most audacious of guessers, and frequently finds himself obliged to protest against the extraordinary conclusions of Furtwängler; yet M. Paris himself can proceed only by conjecture upon conjecture. There is a statue in the Naples museum of a young athlete. Of this M. Paris remarks:

"L'idée de rapprocher cet homme jeune et vigoureux . . . du Doryphore de Polyclète naquit d'abord dans l'esprit de Brunn; l'honneur d'y reconnaître une copie directe du Canon revient à Friedrichs (en 1863). Cette opinion, qui rencontrait encore des contradicteurs en Peterson (1864) et Conze, est acceptée de tout le monde depuis que Friedrichs a fait connaître une intaille du Musée de Berlin où le même personnage, dans la même position et dans le même style, est nettement caractérisé comme un Doryphore."

This is the initial guess, and, in view of the fact that other Greek sculptors than Polycletus have produced statues of Doryphori, it can hardly be called other than a guess, however brilliant or plausible. From this conjecture proceed all the others, for it is in virtue of the idea of Polycletian style formed from this statue, at most an inferior copy, that all further identifications are made. It is accepted as the "canon" in a double sense, and becomes the standard of judgment for all works which one may be tempted to refer to Polycletus.

—Of course it is only in this way that archæology can proceed; and as long as we remember that even the most brilliant conjecture is not proved fact, there is little harm done. M. Paris is fairly cautious, and only one of his conclusions seems to us to approach the danger line. In the "Villa des Pisons" at Herculaneum were found two bronze busts evidently pendants. One, resembling the Doryphorus, is signed; the other, a female head, not. "Si, donc, la tête de Doryphore est bien la copie exacte de la tête du Canon, . . . il est impossible d'admettre que la tête qui lui servait de pendant soit autre chose que la copie de la tête de l'Amazone." Why so? Is it impossible or even improbable that a Roman gentleman should have copies made for him of two favorite heads, whether or not the originals were by the same artist? And is the resemblance of this head to that of the Berlin Amazon sufficiently great to assure us that they are copied from the same original in spite of the entirely different pose? The illustrations given do not show any such identity, and the attribution of the original of the Berlin statue to Polycletus on these grounds seems to us somewhat hazardous. Such of the illustrations as are half-tones from photographs are fairly good. The drawings range from indifferent to downright bad.

—M. Salomon Reinach has published as a separate pamphlet an article of his in the *Revue Archéologique* on 'Epona, la déesse gauloise des chevaux' (Paris: E. Leroux). Engravings of sixty different images of the goddess, twice the number hitherto known to archæologists, are here given, accompanied by notes and maps indicating their original geographical distribution and present repositories. Several of these images, which are all of small size, in terracotta, stone, and bronze, and almost invariably show the figure mounted on the right side of the animal, have been heretofore taken for representations of other female characters (Europa, a bacchante, Isis, Vitellia, a peasant woman, Ceres, Julia Mammæa), or even for a postilion; but M. Reinach unhesitatingly recognizes in them the Celtic goddess. In another series of twelve illustrations, with descriptive text, Epona appears seated or standing between two or four horses or colts, while the group found at Bregenz, on Lake Constanz, represents the deity mounted, with four other horses at her side, thus forming a connecting link between the two. The Greek and Latin

texts which make mention of the humble goddess of the stable, together with thirty-eight inscriptions bearing her name, are collected in a third chapter of the brochure, but unfortunately reveal nothing concerning her effigy or the origin of her cult. In his concluding pages M. Reinach combats with vigor the views of Becker, Lindenschmidt, and Peter, according to whom the figures in question represent not Epona but mounted matrons, good or evil fairies, while Corson's theory, claiming for Epona a place among indigenous Italic and Roman divinities, is still more severely dealt with. Arguing from the geographical distribution of the monuments and inscriptions of Epona, as well as from the exotic form of the name (the *p* and short *o*), M. Reinach considers the Celtic origin of the goddess as incontrovertibly and definitively established.

—The latest pious labor of Mme. Jessie White Mario for the remembrance by a generation that knows them not of the Italian revolutionists, disciples of Mazzini and comrades of Garibaldi, is her 'In Memoria di Giovanni Nicotera' (Florence: Barbèra). This duodecimo volume of less than 300 closely packed pages is, though a loving tribute from an intimate friend and correspondent, not a mere eulogy; and it deals so much with the general history of the peninsula from the founding of Young Italy to the present moment that any one can read it with profit apart from the judgment he may form of the immediate subject. As a political prisoner of the Bourbons, Nicotera experienced in Sicily inhumanities as incredible as are the authentic accounts of the degraded habitations of the poor of Naples, which Mme. Mario has done so much to make public. He survived to become an Italian Deputy for thirty-five years of a life of sixty-six, and twice Minister of the Interior, when he stamped out brigandage. He proved less radical in office than out, was a firm believer in parliamentary government by party, and hence mistrusted coalition ministries, yet showed independence and patriotism in voting with men of other parties, and, on the whole, appears in these pages to advantage in comparison with Crispi, from whom he became detached when the latter, with Zanardelli, entered the Depretis ministry. Mme. Mario quotes at length from his always forcible speeches as well as from those of his contemporaries.

—In 1879, dissatisfaction with the Italian Senate led to an agitation for a reconstitution of that body by popular election, Nicotera made a stand against it, advancing arguments of much weight, applicable to a similar movement in this country. In the course of his speech he had occasion to compare the American Senate with that of Italy, and in so doing revealed a degree of ignorance unpardonable in a statesman of his rank, if, on the other hand, natural in a country whose press habitually used the rubric *America* for news from *South* America. Nicotera gravely assumed that, as a means of enforcing his veto, the President of the United States had the power to renew the Senate by one-third—of course selecting men favorable to his policy! The genesis of this confusion may, perhaps, be sought in the constitutional provision for a two-thirds vote overriding the veto; but also at bottom there lay the misconception of our Executive as governing in the same sense as do the European ministries modelled after the British system. In the San Domingo business, what would not Grant have given for the power to alter the complexion of the Senate as of his Cabinet!

—Among the contemporary historical writers of Italy few, if any, surpass Senator Luigi Chiala in those qualities which constitute a first-rate editor. His introduction and notes to Cavour's Correspondence were full of information which becomes more and more valuable as the generation which knew Cavour disappears. Senator Chiala has recently published a monograph on one of the most exciting episodes of the latter part of Cavour's life: it is entitled 'Politica Segreta di Napoleone III. e di Cavour in Italia e in Ungheria, 1858–1861' (Turin: Roux). It relates in straightforward style the intrigues which Cavour, and subsequently Napoleon III., carried on with Kossuth prior to the war of 1859, with a view to provoking a revolution in Hungary that would draw off Austrian troops from northern Italy. Kossuth was wary, and, although eager to close a bargain by which he hoped to recover the independence of Hungary, he refused to give the word until France and Piedmont should furnish a sufficiently large contingent. To one who imagines that diplomacy is necessarily a competition in deceit, this record of Cavour's perfect frankness may be a surprise. Before the outbreak of the war of 1859, he was too much hampered by his engagements with Napoleon to have the right to act independently; afterwards, while encouraging the Magyars to the fullest extent in words, he found no moment when he would have been justified in making a formal offensive and defensive alliance with them. "We aim at the liberation of Italy; you hope to emancipate Hungary; we have a common enemy, but I have not the right to jeopard Italy for Hungary, nor you to sacrifice the Magyars for us." This was, in substance, Cavour's policy with Kossuth. Several times the opportunity for a league seemed at hand, but it never came. Kossuth's part in these negotiations was made public fifteen years ago, in his 'Memories of My Exile.' Senator Chiala supplements Kossuth by presenting from Cavour's edited letters and from other sources the Italian and French versions of the episode, and he has thus made a consecutive story full of interest and illustrating an important side-current of modern history.

VERRALL'S EURIPIDES.

Euripides, the Rationalist: A Study in Art and Religion. By A. W. Verrall. Cambridge, Eng.: University Press; New York: Macmillan. 1895.

THE main title of Dr. Verrall's new book is quite unworthy of his genius. 'Euripides, the Rationalist,' is entirely too commonplace. "Euripides, the Pietist," would have been a theme in which he might have unfolded to greater advantage his rare powers of combination, whereas to show that Euripides was not a "believer" is simply to follow the orthodox view. However, Dr. Verrall may be trusted to treat any subject he takes in hand after a fashion of his own. It is a bright fashion, an ingenious fashion, but somehow it does not abide, it does not convince. There, for instance, are his 'Studies in the Odes of Horace,' in which he evolved marvellous things out of the "operose lays" of the "Matinian bee." Said Matinian bee, if Hartman and Tyrrell are half right, was more concerned about the shape of his cells than about the flavor of his honey, and is not to be suspected of wilfully infusing Italian wild thyme into the nectar which he gathered largely from Greek originals. But there are undoubted allusions in Horace to contemporary history, and Quintilian enlarges on one of his allegories. Now, as so much has been done for Pindar by subtle combination, and as we know a great deal more about the times of Horace than we do about the times of Pindar, why not enter in and possess this land with historical cobwebs? Why be satisfied with such well-worn parallels as Cleopatra and Helen? Why not penetrate into the meshes of the great conspiracy of Murena? So here. It is evident enough that Euripides did not believe in the gods, nay, that he died an infidel. If he had not died an infidel, Aristophanes might have been more merciful to him in the "Frogs"; and as to the "Bacchæ," which Dr. Sandys calls an *Eirenicon*, why, it is easy enough to show that it is a deliberate persiflage. Teiresias, the seer, clearly represents the poet himself, and when Teiresias gives his adhesion to the new cult, he figures as a materialist under thin disguise. The new gospel is a gospel of Something to Eat, Demeter, and Something to Drink, Dionysus. Behind the outward conformity we see the Sage of Ferney with his tongue in his cheek. Teiresias is simply a more refined Cyclops.

"Wealth, wealth, my manikin, is the wise man's God!"

It is an old story, and nobody cares to deny the thesis in its general terms. Rationalism itself was an old story in Greece, and if it had not been for the religious revival brought about by the Persian war, quite comparable with the religious revival brought about by the Franco-Prussian war, Euripides would not have had any "mission." A century before Euripides, in his dreadful "Andromache," was making mock of the traditional Apollo, Xenophanes was outspoken in his condemnation of the behavior of the Greek Pantheon as represented by hieratic Hesiod as well as by secular Homer, of whom nothing better could have been expected. Pindar refused to accept anything that was dishonoring to the gods, and treated Homer very much as the freethinkers of the last century treated the Old Testament. Æschylus shows plainly enough the doubts that stir his heart, and his justification of the ways of God to man did not bring him peace. Sophocles, good, easy man, was an office-bearer in Church and State, and observed the proprieties. But who, from the modern point of view, could be more "blasphemous" than Aristophanes? His treatment of the gods is simply "scandalous," and has called forth long dissertations in every European language from scholars who have tried to explain how Aristophanes could be a church-member in good and regular standing and yet assign to Hermes the menial office of washing tripe. True, in modern times Bible and catechism have been accommodated to every form of belief and unbelief, but it is hard for us to imagine so plastic an embodiment of religious notions as we find in the mythology of Greece.

In fact, if we examine closely, we shall find ourselves asking, Where was faith found in the fifth century? The reserve of Thucydides is a commonplace; but Herodotus, who is held up to us as the model of a believer, was a believer because faith suited his style, and, like his friend Sophocles and like many another man, he simply abode in the creed to which he was born. True, all this scepticism was not inconsistent with superstition any more than scepticism is inconsistent with superstition to-day, nor was it inconsistent with a practical con-

servatism in religious matters, which is perfectly comprehensible from a study of the Constitution of the Athenian State. But Dr. Verrall thinks that we have unconsciously taken up the Renaissance view of the Greek Pantheon; that we do not understand how serious the Athenians were about their "gods"; that we do not understand that Euripides's infidelity had reached an acute stage; that he deemed it to be his mission to expose the fraud of Greek religion, and that his dramas were constructed to sap and mine the absurdities and inconsistencies of popular belief. One cannot help asking how the poet could have got a chorus, for it is not to be supposed that the officials were less clever than the average Athenian; and although the average Athenian may not have taken all the points that Dr. Verrall has discovered, the Tom Paine attitude of Euripides in the handling of the myths would have been too great a scandal to be tolerated in a religious performance such as was the Greek tragedy. It is very much to be feared that the deep-laid design was too deep-laid even for the quick-witted Athenian. Certain it is that this most unbelieving of the poets imposed his mischievous versions of the myths on the plastic and ceramic artists of after-times. Ennius, who translated and transfused Euripides for the Romans, was also an unbeliever of the most uncompromising type, and wrote rationalistic essays after the Greek; but the impiety in Ennius, as in Euripides, was what may be called dramatic impiety, and not dramaturgic impiety, and affected only the sentiments put in the mouths of the various characters.

But what Dr. Verrall insists on is the dramaturgic rationalism, or, in other words, the presentation of the story so as to bring discredit on the traditional gods. His contention is that, viewed from any other point, the dramas of Euripides are open to all the objections raised against them by modern critics, and that it is impossible to see in Euripides anything but the "botcher" Mr. Swinburne has made him out to be. But, regarded as a cunningly contrived wheelwork for the pulverization of Greek religion and Greek tradition, the dramaturgy of Euripides, according to Dr. Verrall, deserves the highest admiration as an artistic achievement, and his popularity with the "advanced" Athenians is readily understood. These advanced Athenians were, it seems, not so slow to take a hint as are the fat-witted countrymen of George Meredith, whom Dr. Verrall repeatedly cites as a kindred master in the art of implication. In short, Euripides is that dreadful character known as a quiz, and from that day to this he has lacked an interpreter. Vase-painters and sculptors were deceived by him; translators and adapters of his plays failed to understand him; the great scholars, from the Renaissance downwards, with whom he was a prime favorite, were blind to his real significance; and the Grecians of this century, who have been made aware of the divergence of his ways from those of Æschylus and Sophocles, and who have not the key to the unhallowed delights of Euripidean mockery, decline to read him because they do not enjoy him. How many new friends Dr. Verrall will gain for his Euripides remains to be seen. Possibly some of the slow creatures for whom he has so little regard may suspect Dr. Verrall himself of mystification; but there is a passage at the close of the book which ought to dispel all doubt—a passage in which he reiterates his views with a solemnity that is hardly to be confounded with the pious utterances of Euripides's sham pillars of the church. "Euripides's stories," he says, with all the emphasis of italics, "*assume that 'the gods' do not exist;* and unless we are alive to this, unless we keep it *always* before us, the best of Euripides, the essence of Euripides, must be sealed up from us." Without this key, "all is confusion, vexation, waste of spirits and time. Euripides was a soldier of rationalism after the fashion of his times, a resolute, *consistent* enemy of anthropomorphism, a hater of embodied mystery, a man who, after his measure and the measure of his time, stood up to answer the Sphinx"—the Sphinx being, as Dr. Verrall explains elsewhere, "the spirit of mystery and darkness."

It would be impossible in any reasonable space to follow Dr. Verrall's exposition of his thesis as applied to the Euripidean plays that are discussed in this volume, and it must suffice to summarize the main results. The "Alcestis," according to Dr. Verrall, was intended to set forth the falsity of a resurrection from the dead, and Euripides's treatment of the theme is flippantly compared with an imaginary play, "The Shunamite, by Prof. T—— H——." Euripides asked himself the question of Job, "If a man die shall he live again?" and in mockery of an affirmative answer he gives an account of the recall of Alcestis from the lower world, which to the discerning Athenian public reveals the absurdity of the sham miracle. In the "Ion" the action of the play proceeds on the assumption that there is no Apollo, and that the oracle is a fraud. But with this view of the "Ion" the public has already been made familiar by Dr. Verrall's translation, published in 1890. The "Iphigenia among the Taurians," it is true, is "one of the few plays of Euripides which are explicable on the current hypothesis; is one of the few, the same few, which are loved and studied, known and admired for their own sake, and apart from the collateral interests of Hellenistic philology and archæology," and yet "the deepest part, the real substantial *tragic* foundation, is cut away. Orestes and Pylades are sacrificed to the relentless cruelty of a religion in danger." "The resolute faith and the invincible love of the two friends are *wasted*." Upon this follows a chapter headed "Euripides in a Hymn" (I. T. 1234 foll.), in which Dr. Verrall undertakes to prove that Euripides's object in this brilliant ode is to show up the mercenary character of the Delphic oracle; and in the "Last Scene of All," the close of the "Phœnissæ" is explained as the composition of an admirer of Euripides, who thanks Sophocles covertly for his tribute to his dead rival, and praises Euripides under the guise of Œdipus for his quelling of the Sphinx.

There has been, as every one knows, a return to Euripides, and scholars no longer find it necessary to admire under protest the brilliancy of his dialogue, the haunting charm of his lyrics, the swing of his descriptions, the truth of his pathos, his close sympathy with every throb of human heart or human brain. Even the economy of his plays has found more indulgent criticism, and in criticism indulgence and intelligence go oftener hand in hand than is commonly supposed. Much, it must be said too much, allowance has been made for the rehandling of the original poems, for the botcher who interpolates, the botcher who excises, the botcher who tacks on. Slowly, for it is slow work, we are approaching a juster estimate of Euripides than was possible for those who read but to praise and those who read but to pick flaws. A faultless dramaturgist he was not. Who is? The detection of inconsistencies, comparatively so easy in the closet, is absolutely impossible for the average spectator, even putting the average so high as it was in the Athenian theatre. The average spectator does not pull out his watch and say with Dr. Verrall, "Why, she has been dead only five minutes!" But, instead of looking upon negligence as negligence, instead of admitting such a thing as negligible quantities in a work of art, Dr. Verrall considers every incongruity as part of a deep design in the mind of the poet. Of course, he is far too clever to suppose that the Athenian intellect in the crowded theatre was quite so alert as his own intellect in the still air of Trinity College, and so he imagines the spectators as gradually evolving in conversation after the play the hidden meaning of Euripides's innuendoes, very much as the Hamburgers formed clubs of four in order to understand one joke of Rivarol's. Dr. Verrall is himself equal to a dozen such clubs, and under his manipulation the evidences of elaborate mystification increase and multiply.

'Euripides, the Rationalist,' is very acute, very clever, though it must be confessed that in the long run it is wearisome by its excess of sparkle. On the spider-webs of the German Athena who does most of this kind of spinning, we seldom find so many glittering dewdrops, for in the land of erudition to be "geistreich" is little short of a philological crime. However, we will not hold Dr. Verrall to too strict an account for being interesting; and yet it may be well to remember that acumen, ingenuity, cleverness of presentation, and power of combination are no guarantee of an abiding result. In fact, "the power of combination" is a very much overrated "power." The ancient Sophists did a great deal in the way of combination simply for intellectual fun, and those who are familiar with the history of literary criticism will readily recall many brilliant theories that have passed into the domain of curiosities. And so, while admitting freely all the seductiveness and suggestiveness of Dr. Verrall's book, one cannot suppress the thought that, the world being as dull as it is, there is little likelihood that the Euripides whom we are trying to know now will be definitively replaced by Dr. Verrall's 'Euripides, the Rationalist,' with his nihilistic network of torpedoes which have remained unexploded until the year of grace 1895.

MEMOIRS OF AN IRISH JUDGE.

Memories and Thoughts of a Life. By William O'Connor Morris. London: George Allen. 1895. 8vo, pp. viii, 402.

Judge William O'Connor Morris was born in the city of Kilkenny in 1824. His father, a minister of the late Established Church, was of "the English in Ireland," sprung from a race of Staffordshire freeholders who emigrated to Ireland in the reign of Charles I., had become merchants of good position in Waterford in the time of Queen Anne, and subsequently settled on the land as country squires. Judge Morris's mother belonged to the clan of the O'Connors of Offaly, who for three centuries were great princes, but in the seventeenth century had been nearly extirpated and their lands forfeited. Her great grandfather left Ireland to seek his fortunes in England, where he conformed to the Protestant faith in order to become a member of the English bar, and acquired enough wealth to enable him to buy back a portion of the old Irish estates of his ancestors.

Judge Morris takes pride in his ancestry and

in his connection, through the marriages of the O'Connors, with the great Catholic families of Ireland, concerning whose vicissitudes and romantic fortunes he relates a number of interesting anecdotes. Many of those with whom he can claim kinship turned Protestants, as the only means of making their way in the world, and became prominent members of the Irish bench and bar. He mentions especially Anthony Malone, "who was one of the great Irishmen of the first half of the eighteenth century, . . . and became Chancellor of the Exchequer in the Irish Parliament." Another was Edmund Malone, the editor of Shakspere. Of those who clung to their ancient faith, and were forced to find a career in the armies of the Continent, he names Field Marshal Nugent of the Austrian Army, who "was a colonel on the field of Austerlitz, distinguished himself greatly in 1813-14, was Radetzky's most trusted companion in arms in the memorable campaign of 1848, and rode by the side of his master, Francis Joseph, near Solferino, when in his nineteenth year. In the Ireland of his youth he would have simply been a pariah of somewhat high degree."

Morris and his younger brother received their education at home until the former was ten years old, and he says that by that time they "had had governesses and tutors enough to force the brains of children into precocious growth. Those were the days of hard training for the youthful frame and of hard teaching for the boyish mind; and I well recollect how I was boxed and cuffed if I missed a word in a page of Johnson—a lesson I was supposed to know by heart." In compliance with the custom and policy of the dominant race in Ireland, he was sent to England to be educated, and in his twelfth year was placed in a private seminary at Epsom, where there were about thirty boys, five sixths of them Irish. He remained there for about four years, on which he does not look back with satisfaction, and was then sent to a private tutor in South Wales to be prepared for Oxford, and went into residence at Oriel College in 1843. He had, before that, competed for a scholarship at Trinity, which was, however, awarded to Edward Freeman. Of his fellow-students at Oriel he mentions Tom Hughes as the one who became most famous. Bryce and Goschen were of a later generation of undergraduates. Newman was a Fellow of Oriel at that time. Among the younger Fellows were Arthur Clough and Church, who became Dean of St. Paul's. In 1844 Morris was elected to a scholarship. He speaks in terms of the warmest affection and eulogy of Oxford as it was before the days of educational reform. "The education of Oxford," he says, "was admirable. I have met no system that can be compared with it." And, elsewhere: "The old Oxford method, indeed, can, I think, be traced in Parliament, in the pulpit, and at the bar without difficulty by those accustomed to it; it was seen in the highest perfection in Newman's logic, in the subtle and persuasive tongue-fence of Gladstone, in the arguments of Bethell and Roundell Palmer, always cogent, well-informed, and complete." He developed an early turn for writing, and relates that his college tutor, Fraser, afterwards a bishop, ridiculed his style as "turgid" and "Celtic," and said to him, "You will be just fit to write for the *Edinburgh Review* and the *Times*, and you will never understand what pure English is." To which our author adds: "I do not know if the last remark is correct; the first, certainly, has been amply verified." Among Oxford undergraduates of his time, but of other colleges, were Conington, the translator of the 'Aeneid'; Matthew Arnold, Goldwin Smith, and Coleridge, late Lord Chief-Justice.

Morris had made up his mind to go to the Irish bar, but in consequence of the Irish famine the poverty of the gentry was such that for nearly three years after taking his degree at Oxford, he was unable to scrape together the £100 required as the fees of a law student. He devoted the interval to continuing and enlarging his Oxford studies, giving many months to Plato, reading Adam Smith and John Stuart Mill, studying Irish history, and performing the duties of an (unpaid) justice of the peace, having been appointed a magistrate by Lord Rosse, the constructor of the well-known telescope, and the Lieutenant of the Kings County. It was at this time, also, that he made his first literary attempts, contributing to the *Dublin University Magazine* papers on the Greek dramatists and on other subjects, writing for the Dublin *Evening Packet*, and publishing a pamphlet on the Irish land question. During one of his visits to his grand aunt, Lady Clanricarde, in Dublin, he witnessed the "enthusiastic and passionate acclaim which everywhere greeted" Queen Victoria and Prince Albert. "I took no part in the Castle festivities," he adds; "a Court dress was far beyond my means."

At last his name was entered at the King's Inns in Dublin, where he studied for eighteen months, going thence in 1852 to Lincoln's Inn in London for the purpose of eating his dinners for the bar for ten months, as was required of Irish students in those days. Among the lectures he attended were those of Henry Sumner Maine, who was reader in jurisprudence and Roman law. In 1854 he was called to the Irish bar, and was in the practice of the profession for nearly twenty years.

About eight years after his call to the bar he was "elected one of the professors at the King's Inns who lecture law-students in part of the Common and the Criminal Law. These offices had been founded by the Irish Benchers before the English had appointed their readers." The appointment is held for three years. In 1863 he was appointed the legal member of the Salmon-Fishery Commission. He had married in 1858, and had opened the door to his literary career by writing a paper on "The Land System of Ireland" in the 'Oxford Essays' of 1856, through which he made the acquaintance of Henry Reeve, the editor of the *Edinburgh Review*, also known as the translator of De Tocqueville and as the editor of the Greville Memoirs. Judge Morris has been a contributor to the *Edinburgh* for nearly forty years, writing in that time some forty essays, mostly on military subjects and in review of French works in biography and history, and has written for many other periodicals. His connection with the London *Times* began in 1857 and terminated with the death of Mr. Delane, its editor, in 1879. By degrees he became one of its principal writers of book-reviews, mostly on History and the History of War. He contributed to it a series of articles on the correspondence of Napoleon and on the supplementary despatches of Wellington. Some of his reviews extended to eight and ten columns; one, on the evidence in the trial of Bazaine, occupied about fifteen columns. Of late he has written a good deal for the London *Academy*. In the spring of 1869 he was asked to write a series of letters on the Irish land question for the *Times*, and made a three months' tour of Ireland for the purpose of studying the problem on the spot. He records that he had no instructions from Mr. Delane and Mr. Walter except to ascertain and set forth the truth. The letters were republished in a volume. He is the author of several other books, namely, 'Great Commanders of Modern Times' (1891); a sketch of the French revolutionary period, intended to be one of the "Epochs of History" series; a Life of Napoleon, in the "Heroes Series"; a study of Moltke; a brief account of the war of 1870-1, reprinted from the *Times*.

In 1872 he was appointed County Court Judge of Louth. "The office of County Court Judge in Ireland," he says, "is of much older origin than it is in England, of greater importance, of higher dignity. The judges have a large jurisdiction, unrestricted by modern statutes, in cases of crime, not possessed by their fellows in England. Their civil jurisdiction, too, is far more ample." But the main distinction is that in England they may be dismissed by the Lord Chancellor, while in Ireland they are removable only by a vote of Parliament. In 1878 he was transferred from Louth to Kerry, where he served for eight years and found his duties very laborious and disagreeable, owing to the disturbances caused by the Land League. At his own request he was transferred to the Counties of Roscommon and Sligo, where he still presides.

Judge Morris's life, it will be seen, has not been an eventful one, but that of a man useful in his generation and ambitious to be of service to his fellows. His book abounds in interesting pictures of a peculiar state of society, constantly undergoing radical changes, and in lifelike sketches of Irish lawyers and judges. By far the greater portion of it is taken up with the Irish question, which, in all its varied forms and phases, seems constantly to occupy his "Memories and Thoughts" and comes up in connection with every topic he touches. He throws a side light on its social aspects when he says that, as he belonged to a Liberal Protestant family and had a number of Catholic kinsfolk, the distinction which divides Irish social life was not observed in his case, and adds: "Yet I found myself often to be the only Protestant in an assembly wholly composed of Catholics. I seldom saw a Catholic under a Protestant roof." He also mentions the fact that up to 1792 no Irish Catholic could openly become a member of the bar. Although a Liberal, he is a decided Unionist and an uncompromising opponent of home rule. Although a Protestant, he condemns the late Established Church, and extols the Catholic Church as "a great living fact," saying that its growth "during the last half century has been a wonderful spectacle." Although a land-owner, he denounces as iniquitous "a mode of land tenure, precarious in itself, which gave a landlord facilities to appropriate a tenant's improvements." He censures the Land Act of 1881, and proposes a plan of his own. He thinks "the tenant should be given a perpetual and definite estate in the land, and that the landlord should possess a perpetual rent." He has also his own plans for political measures to allay discontent. They could not fairly be set forth in the space at our command, and would meet with disapproval in both the hostile camps. But, whatever may be thought of his opinions, it is evident that they are the fruit of much serious study and reflection. Undoubtedly instructive are Judge Morris's descriptions and history of the various movements that have agitated Ireland during the past half century, and of the events that led to them. He devotes separate chapters to the Irish Famine, the Land League, the National League,

Irish Local Government, etc. No one can doubt his patriotism or his sincere desire to arrive at the actual truth; and no one will deny him the right to use the motto from Montaigne which he places on his title-page: "Ce livre est de bonne foi."

Demon-possession and Allied Themes; being an inductive study of phenomena of our own times. By Rev. John L. Nevius, D.D., for forty years a missionary to the Chinese. Fleming H. Revell Co. 1894.

How the belief in demoniacal possession (which is one of the most articulately expressed doctrines of both Testaments, and which reigned for seventeen hundred years, hardly challenged, in all the churches) should have become the utterly dead letter which it now is in Christian countries, is an interesting historical question on which the present reviewer is unable to cast light. Its decay is far less intelligible than the decay of the belief in witchcraft, which Mr. Lecky has so vividly attributed to an unreasoned alteration of the intellectual fashions of the age, for most of the old witchcraft-accusations rested on direct demon-testimony, and the phenomenon which announces itself as demon-possession has never ceased since men were men, and is probably as frequent at the present day in New York and Boston as it ever has been at any time and place in history. It follows at all times the local and temporal fashions and traditions, and, from causes which, once more, would form a highly interesting problem to unravel, it has with us assumed a benign and optimistic, instead of a diabolical and hurtful form, constituting what is familiarly known to-day as *mediumship*. It differs from all the classic types of insanity. Its attacks are periodic and brief, usually not lasting more than an hour or two, and the patient is entirely well between them, and retains no memory of them when they are over. During them, he speaks in an altered voice and manner, names himself differently, and describes his natural self in the third person as he would a stranger. The new impersonation offers every variety of completeness and energy, from the rudimentary form of unintelligible automatic scribbling, to the strongest convulsions with blasphemous outcries, or the most fluent "inspirational" speech. Imitation is a great determining factor, and suggestions from the bystanders are readily adopted and acted out. Exorcisms of various sorts often succeed in abolishing the condition, and the possessing spirit often makes treaties and compacts with the bystanders and carries them faithfully out. The condition may become epidemic, as in our own "developing circles," or in those Alpine villages whose "hysterо-demonopathy" has recently been so well described by the French and Italian medical officials Constans, Chiap, and Franzolini; but more often it is sporadic and individual. At any rate it is a perfectly distinct and it may be a perfectly spontaneous "morbid entity" (as a Frenchman would say), or natural type of disease, and its essential characters seem to have been quite constant in every age and clime.

Of its causes, apart from suggestion and imitation, absolutely nothing definite is known, the psychical-researchers being the only persons who at present seem to believe that it offers a serious problem for investigation. The Charcot school has assimilated it to hysteria major, with which it unquestionably has generic affinities, but just why its specific peculiarities are what they are, this school leaves unexplained. The name hysteria, it must be remembered, is not an explanation of anything, but merely the title of a new set of problems. The tendency to prophesy, to profess to reveal remote facts, to make diagnoses and heal diseases, are among the commonest features of the demonopathic state.

Dr. Nevius is vouched for by the two editors of the book before us (he having died before its publication) as a singularly learned, versatile, and accurate man. His volume contains, in addition to a large amount of comparative natural history of the subject and a mass of bibliography, a number of interesting first-hand observations made in China. As in the Grecian oracles, in India, Japan, Polynesia, and elsewhere, the possessed person is in China prone to speak in the name of a god. This god often demands a shrine, worship, incense, food, and burnt-offerings from the household, and throws the patient into convulsions if these are withheld. Sometimes, again, a departed relative or other human being announces itself as the possessing spirit, but we seem not to hear in China of fox-demons as we hear of them in Japan. Dr. Nevius's book contains a great variety of cases, of which we have not space to extract a specimen. They are collected by missionaries or native Christian converts, and the remarkable thing about them is the almost invariable efficacy of Christian rites and invocations in setting the possessed person free. In China the name of Christ would seem to have even greater power to drive out demons than it had in Europe in the ages of faith.

One case related by the author has a curious analogy to one of the New Testament miracles. Two women of a Chinese village having been dispossessed by Christian services,

> "an extraordinary commotion occurred among the fowls, . . . who after a while cowered up in a corner of the yard in a state of fright. The swine also belonging to the family . . . were put into a singular state of agitation, rushing about the enclosure, running over each other, and trying to scramble up the walls. The swine would not eat, and this state of disquiet continued until they were exhausted. These manifestations naturally excited a great deal of interest and remark, and were accounted for by the supposition that the demons had taken possession of the fowls and swine" (p. 406).

It is but just to say that this particular account is at second hand, the witnesses being a Chinese family of converts. Such as it is, Dr. Nevius's book is one of the best contributions to the natural history of the subject, and a stepping-stone towards that not yet existing book which some day will treat this class of phenomena in a thoroughly objective and unprejudiced way, bringing it into comparison with all the other features of the "subliminal" life of which it is one modification.

Major James Rennell and the Rise of Modern English Geography. By Clements R. Markham. Macmillan & Co. 1895. [The Century Science Series.] 8vo, pp. 232.

It is a singular fact that Great Britain, with possessions in every part of the world, should have produced so few geographers. She has sent out a host of distinguished explorers who have added vastly to our knowledge of the earth, but the task of constructing "the mother of all the sciences" has been left mainly to Continental scholars. Had not the subject of this biography been incapacitated early in life from active service, it is not impossible that England might have had to wait another half-century for a great scientific geographer. The story of Major Rennell's uneventful career is quickly told. He was born in 1742 and enlisted in the navy as a midshipman at the age of thirteen. In 1763 he entered the service of the East India Company and was made Surveyor-General of Bengal. Badly wounded in a fight with the natives in 1766 (not 1776, as Mr. Markham incorrectly states), his constitution was permanently injured. This and his arduous labors in connection with his field survey compelled his retirement in 1777. The remainder of his life was spent in London, where he won for himself by his maps and his writings the place of "leading geographer in England, if not in Europe, for a period of fifty years." He died in 1830 and was buried in Westminster Abbey.

Major Rennell had this immense advantage over many other great geographers, D'Anville and Ritter, for instance, that he had been a surveyor, both afloat and ashore, before he devoted himself to the study of geography as a science. Much of his work, therefore, has a value beyond that of a mere contribution to knowledge. His investigations of the Atlantic currents, for example, by which he became the "father of oceanography," distinctly diminished the perils of navigation. It was he, it may be added, who first conceived of the Gulf Stream as "an immense river descending from a higher level into a plain." His first important published work was a 'Memoir of a Map of Hindustan,' which passed quickly to a second and third edition by 1793, and gained for him the Copley Medal of the Royal Society. Following this was his 'Geography of Herodotus,' which, together with the 'Illustrations' of the Anabasis, was part of a contemplated great work on the 'Comparative Geography of Western Asia,' for which he gathered all the materials, but which he did not live to complete. In addition to these and other books, he contributed papers to learned societies besides aiding the various exploring expeditions of his day. He was especially interested in Mungo Park's travels, and he prepared the map which accompanied Park's account of them.

It is hardly necessary to say that no one is so well fitted as Mr. Markham to be Major Rennell's biographer. He is in full sympathy with the latter's pursuits, and has the requisite knowledge to enable him to put a just estimate on what he accomplished. In fact, the book is more than a biography; it is a condensed history of geography, with sketches of distinguished geographers from Strabo down to Sir Henry Rawlinson. His abundant knowledge, indeed, leads Mr. Markham to be needlessly exact in minute, especially genealogical, details. Occasionally he errs in taste, as, for instance, when, mentioning by name some relatives of Mrs. Rennell's, he says, "the ——s lived in a very expensive style, and Mr. —— drove a four-in-hand, so that when he died, in 1790, he left his property much embarrassed." Apart from these petty blemishes, he has produced a valuable book, and one as interesting as the nature of the subject would permit. A useful index is appended, but we miss, what would have been even more desirable, a chronological list of Major Rennell's works.

Mental Development in the Child and the Race: Methods and Processes. By James Mark Baldwin, M.A., Ph.D., Stuart Professor of Psychology in Princeton University. With 17 figures and 10 tables. Macmillan. 1895. Pp. xvi, 496.

It is not to be concealed that this book is not well written. The author himself makes no

effort to do so—he recognizes it rather with a charming frankness. He speaks of the conflicting aims he had in writing it, of his inability to hit upon an arrangement of his material that would satisfy him, of the "need of a patient reader before the page." In spite of liberal warnings in the preface, and of statements of the problem and of what the several chapters contain, the perplexed reader about the three-hundredth page is inclined to throw the book aside, or to wish, when he finds the scattered threads at last being drawn together, that it had been written just backwards. The pages are too full, too well-fed. There *is* a central problem, a main discussion, but it lies so imbedded in remarks and considerations by the way that one is perpetually losing sight of it. Prof. Baldwin is essentially an inquirer at first hand, and he carries his method over into his exposition; he begins with his apparatus, he keeps one in suspense, he determines his shortcomings, he goes into side issues, he shows one his uncompleted work. With the best intentions in the world he is bewildering. And his sentences at times are as puzzling as his order of exposition. And yet, when one has vented one's spleen, one's abiding impression of the book is very favorable. Its pages breathe something of the intimacy, the frankness, the personal charm of a clever investigator's note-book. The fragmentary state of some of the experiments, the loose threads and ragged ends, give one the not unpleasant sense of being admitted behind the scenes, of seeing science in undress—in the making. And the substance of it all—of the experiments and discussions themselves—is capital.

'Mental Development: Methods and Processes' is a preliminary volume to be followed under the same general head by a companion sub-entitled 'Interpretations: Educational, Social, and Ethical.' Prof. Baldwin regards it as the fundamental weakness of current sociology that there exists no theory of the *socius*. It is this deficiency which his projected volume will endeavor to supply. The present one, leading up to it, yet possessing an independent value, deals with the evolution in the individual of conduct adapted to environment and of voluntary self-control. The hypothesis which has hitherto obtained the widest acceptance is best known in the form Prof. Bain gave it in his 'Emotions and the Will.' Granted, it says (what seems to be the observable fact), that the earliest movements of the new-born individual are quite at random, and that activity which results in pleasure tends to be continued and that which results in pain to be stopped, it may be shown according to mere natural selection how there would arise in the lapse of time habits of pursuing pleasure and avoiding pain, and a connection more or less complete between pleasurability and wholesomeness, pain and harm. This hypothesis, so far as it goes, Prof. Baldwin accepts, but it goes nothing like the whole way.

(1.) It proceeds as if all pleasures and pains came to the organism originally as effects of (random) movement on its part—which is in the majority of instances quite the opposite of the truth—"turns the case completely over," as Prof. Baldwin says, "and stands it on its head." It is the environment (including the living creatures that in part constitute it) that commonly takes the initiative, brings to bear on the organism some fresh stimulus of pleasure or pain—it is to this in the main, if not exclusively, that the "random movements," when they exist, are due.

(2.) It proceeds as if the organism were entirely dependent on the environment for the repetition of an agreeable stimulus; whereas the fact is, that the organism possesses the power of *Imitation* (Prof. Baldwin calls it), of taking a hint, of eking out the gaps in a defective environment and securing the repetition of a desirable stimulus by efforts of its own.

These two positions Prof. Baldwin argues with much point, in detail. Of their importance as completions of the Spencer-Bain theory of development, there can hardly be dispute. But whether the second of them is as distinctly an addition to that theory as is the first—whether *Imitation* is an independent factor in the result—is something more doubtful. Adherents of the Spencer-Bain theory have commonly held that, if the hypothesis of random movements and "lucky" chances would account for adapted conduct of any kind, it would account for *Imitation*.

This is the main current of the book, but, as has already been indicated, the discussion is of a richness and breadth of which the foregoing gives but a scant idea. Notably there are some admirable chapters early in the book on Distance- and Color-Perception by Infants, the Origin of Right-Handedness, the Rise of Tracery Imitation and the Origin and Analysis of Handwriting, and on Suggestions.

Essays and Studies. By John Churton Collins. Macmillan. 1895.

UNDER the unpretentious title of 'Essays and Studies,' Mr. Churton Collins has collected into a single volume five of his contributions to periodical literature. Two of these papers—"John Dryden" and "The Predecessors of Shakspere"—are of considerable importance. The third, "Lord Chesterfield's Letters," is interesting, but drives its thesis to such an exaggeration as to fail of convincing. The fourth, "The Porson of Shaksperian Criticism," is a labored attempt to rehabilitate Theobald. The fifth, "Menander," is of little moment. We shall confine our remarks to the first two essays, contenting ourselves, as to the fourth, with the suggestion that Mr. Collins is not the discoverer of Theobald, though he seems to think so.

Everybody knows Mr. Churton Collins's critical style, that curious combination of clearness, vigor, browbeating, and exaggeration, inspired throughout with zeal to reverse some verdict of history. When the offensive qualities are held in check—or, in other words, when Mr. Collins does not forget his manners—the directness and perspicuity of his diction are refreshing in these days of superfine critical slang and cant. One is always sure that he has a meaning and that he knows what his meaning is—two certainties not always attaching to some critics less old-fashioned. One feels sure, besides, that Mr. Collins is coming to something, right or wrong, and that also is a comfort. All these good qualities are present in the essay on Dryden, which is a good specimen of sober and virile criticism. We doubt if there is anything better on the subject. The author's weakness for reversing verdicts contents itself with a defence of Dryden's personal morality, and such a defence can do no harm if it brings the reader to consider. In literary matters the critic holds the balance well, and does not sacrifice truth to rhetoric. If he adds nothing to our knowledge of facts, he at least assists the settlement of our opinions.

The second paper in the volume, that on "The Predecessors of Shakspere," is not better done than the first, but it is of more consequence. Its occasion was the publication of the late J. A. Symonds's "Shakspere's Predecessors," of which it is in part a critique, and a just critique. Its most valuable portion, however, begins after the critique is finished, and consists of a sketch of the history of the English drama from its origin to the time when Shakspere entered upon his career. This is, in some respects, the best piece of work that Mr. Collins has ever done. It is a rapid sketch, and not always well-proportioned, but it has striking merits. In particular it states the relations of the English drama to Italian literature and to the classics more clearly and forcibly than they are stated elsewhere, and this is so considerable a service that we can pardon the inequalities, and even the inaccuracies, from which the paper is by no means free. We do not feel sure that Mr. Collins could write a good history of the drama on a large scale—that he is a poor editor was long ago proved by his attempt with the plays of Cyril Tourneur—but we cannot help wishing that he had tried it. The result, whatever its faults, would at least have possessed merits to which the ponderous and over-estimated work of Prof. A. W. Ward can make no pretensions.

BOOKS OF THE WEEK.

Beautiful Britain: The Scenery and the Splendors of the United Kingdom. Chicago: The Werner Co. $6.75.
Brown, H. E. Betsey Jane on Wheels. Chicago: W. B. Conkey Co. 25 cents.
Davis, Ethel. When Love is Done: A Novel. Boston: Estes & Lauriat. $1.25.
Fletcher, J. S. When Charles the First was King: A Romance. London: Gay & Bird; Chicago: A. C. McClurg & Co. $1.50.
Foster, Mary F. Doty Dontcare: A Story of the Garden of the Antilles. Boston: Estes & Lauriat. $1.
Foster, Rev. A. J. Ampthill Towers. T. Nelson & Sons. 80 cents.
Gift, Theo. An Island Princess: A Story of Six Weeks—and Afterwards. Putnams. 50 cents.
Graduate Courses, 1895-'6. Macmillan. 25 cents.
Henne am Rhyn, Dr. Otto. Mysteria. J. Fitzgerald & Co. 50 cents.
Hillhouse, M. L. Storm King. G. W. Dillingham. 50 cents.
Hinsdale, Prof. B. A. The American Government, National and State. New and revised ed. Chicago: The Werner Co. $1.50.
Hinsdale, B. A. Jesus as a Teacher. St. Louis: Christian Publishing Co.
Johnson's Universal Cyclopædia. New ed. Vol. VII. Appletons.
Kuphal, Otto. The Idiomatic Study of German. First Series. G. G. Peck.
Mallock, W. H. The Heart of Life. Putnams. $1.25.
Marsden, R. G. Select Pleas in the Court of Admiralty. Edited for the Selden Society. London: Bernard Quaritch.
Marsh, Richard. Mrs. Musgrave and her Husband. Appletons.
Morgan, T. J. Patriotic Citizenship. American Book Co.
Morier, James. The Adventures of Hajji Baba of Ispahan. 2 vols. London: Methuen & Co.: Chicago: Stone & Kimball.
Mott, Ed. The Old Settler, the Squire and Little Peleg. Lovell, Coryell & Co. $1.
Murray, A. S. Manual of Mythology. Revised ed. Philadelphia: David McKay.
O'Connor, Joseph. Poems. Putnams. $1.25.
O'Gorman, Prof. Thomas. A History of the Catholic Church in the United States. Christian Literature Co. $3.
Oxley, J. M. My Strange Rescue, and Other Stories of Sport and Adventure in Canada. T. Nelson & Sons. $1.25.
Parkes, Dr. C. C. The Elements of Health. Philadelphia: P. Blakiston, Son & Co. $1.25.
Pemberton, Max. The Little Huguenot. Dodd, Mead & Co. 75 cents.
Reid, Stuart J. Lord John Russell. Harpers. $1.
Reinach, Salomon. Pierres Gravées des Collections Marlborough et d'Orléans, etc. Réunies et Rééditées avec un Texte Nouveau. Paris: Firmin-Didot & Cie.
Richardson, C. F. The Choice of Books. Lovell, Coryell & Co. 75 cents.
Russell, W. C. The Honor of the Flag. Putnams. 50 cents.
Shaw, E. R. Legends of Fire Island Beach and the South Side. Lovell, Coryell & Co. 75 cents.
Smith, T. K. Altruria. Altruria Publishing Co. 25 cents.
Staats, Joanna. Drumsticks: A Little Story of a Sinner and a Child. Transatlantic Publishing Co. $1.
Stephens, Mrs. Ann S. Doubly False. M. J. Ivers & Co. 25 cents.
Super, Mrs. Emma L. One Rich Man's Son. Hunt & Eaton. 90 cents.
Visitor's Guide to Salem. Salem, Mass.: Essex Institute.
Wells, H. G. Select Conversations with an Uncle. London: John Lane; New York: Merriam Co. $1.25.
Whishaw, Fred. Boris the Bear-Hunter: A Tale of Peter the Great and his Times. T. Nelson & Sons. $1.25.
Whittaker, W. J. The Mirror of Justices. Edited for the Selden Society. London: Bernard Quaritch.
Williams, H. G. Outlines of Psychology. Syracuse: C. W. Bardeen.

The Nation.

NEW YORK, THURSDAY, AUGUST 29, 1895.

The Week.

THE statement of Mr. Balfour in the House of Commons a week ago puts international bimetallism out of its misery. It has been at the last gasp for many weary weeks, and now this lifting up of the heel against it by its old familiar friend leaves nothing to be done for it by anybody but the undertaker and the grave-digger. For Balfour has long been its last stay and hope. Did he not heroically and emphatically declare himself for international bimetallism in his Mansion House speech two years ago? Has he not been the man in all England upon whom bimetallic hopes have been fondly centred, and who was going to do great things for silver when he got office again? No one can have forgotten Mr. Whitney's glowing tribute to him when he returned from Europe on May 29. Balfour was "the brainiest statesman in England today." No wonder, therefore, that "in England the movement for international bimetallism is very strong." Business men were against it, but just look at Balfour! The "City" was against it, the Chancellor of the Exchequer was hostile, the newspapers were almost unanimously opposed, but how about Balfour?

He was plumply asked whether, as before, he was in favor of an international monetary conference, and whether he would advise the Government of which he was the leader in the Commons to invite one. He answered as plumply, it must be said for him; and when he was done, nothing was in order but a decent interment of international bimetallism. Mr. Balfour's answer was, in fact, peculiarly complete and crushing. He applied his Scotch thoroughness to the business, and got right down to what Dr. Chalmers called "the osteology of the subject." He was still in favor of an international agreement upon the currency question, but "he had no right to pledge his colleagues to such an opinion." What does that mean? It means that the matter had come up in cabinet, and that the said colleagues had bidden him let them have no more of the bimetallic nonsense. But worse was to come. An "international agreement" was one thing, and an international conference another. Even the agreement had no countenance from the cabinet, and the conference had no countenance from Mr. Balfour. A conference would be sure to be "abortive," and that would be "very undesirable." Therefore he was against calling one. He still cherishes his love for an "agreement," but it is evidently to remain a sad and hopeless passion. An agreement that cannot be talked about, that is only made more impossible by conferring about it, that no government can approach without danger of ruining everything, would smell just as sweet in bimetallic nostrils if it were frankly called disagreement. The only international agreement in sight is an agreement to drop once and for all the whole humbug of international bimetallism.

Kentucky is generally regarded as so impregnable a "Democratic stronghold" that any Republican assault is hopeless, but a review of the situation indicates that there is a fair chance of a revolution this year. It is true that the Democrats have carried the State every year since the formation of the Republican party except in 1863, midway of the civil war, when a "Union" candidate for Governor was successful; but the Democratic preponderance has been diminishing of late years. While Tilden received 62,534 more votes than Hayes in 1876, Cleveland's plurality over Harrison in 1892, when the tide everywhere ran so strongly with the Democrats, was only 40,020; and in 1894 the Democratic candidates for Congress led the Republican by only 160,350 votes as against 153,022, while the lead might have been with the Republicans if most of the party in one district had not supported the Populist candidate as the most hopeful way of beating the Democrat. Last year's total poll was almost as large as in the last Presidential contest, and if about 20,000 of the Democrats who voted for Cleveland on a sound-money platform in 1892 should vote in 1895 for the only sound-money candidate now running, Bradley would be elected. The success of the Democratic canvass is no longer to be desired on national grounds, now that it would be regarded as a triumph for the silverites, while, so far as State interests are concerned, there is no doubt that the general overhauling which would follow the inauguration of a Republican Governor would be the best thing for the commonwealth.

The issue of free coinage was the controlling one in the canvass for the late Democratic State convention. The sound-money men won a decisive victory, and the free-coinage element was beaten, nearly three to one, on a square vote upon the silver issue. The most prominent candidate for the gubernatorial nomination was Gen. "Wat." Hardin. He had always been a "red-hot" silverite, and Senator Blackburn, another of the same sort, told him before the contest was settled that he could not afford to be the candidate if the sound-money men should succeed in framing the platform. But Hardin assured the other side that he was a Democrat who would consider himself bound by the action of the majority, and the sound-money men accepted him upon the clear understanding that as a candidate for a State office having nothing to do with the silver question he would not obtrude his personal convictions. No sooner, however, had he got the nomination than he repudiated this agreement. Both Hardin and Blackburn refused to accept the action of the majority of the party as binding upon men who sought the governorship and senatorship. Blackburn took the stump at once, and proclaimed himself still for free coinage, while Hardin, after taking weeks for deliberation, at last came out on the same side. The extraordinary spectacle was thus presented of a Democratic Senator and the Democratic candidate for Governor abandoning the Democratic platform. An attempt was made on Saturday by the State central committee and other leading party men to persuade Hardin either to change his attitude or to withdraw as a candidate, but he flatly refused. Blackburn openly proclaims that the next Senator from Kentucky shall be either himself or a Republican.

Democrats who have any convictions on the financial question have thus been forced to make the choice between swallowing those convictions and standing by them at the expense of electing a Republican Governor and probably a Republican Senator. All who believe in honesty and independence will rejoice at the daily multiplying proofs that such Democrats are making the right choice. Leading party journals refuse any longer to support men who will not themselves support the platform of the party. The most prominent of all, the Louisville *Courier-Journal*, which made a splendid fight against free coinage during the canvass before the convention, will not stultify itself by advising its readers to vote for a nominee who still declares himself for free coinage. More than one other Democratic organ has taken down Hardin's name. Leading Democrats are declaring openly against him, and a host of the rank and file are evidently getting ready to vote for Bradley, the Republican candidate, who stands for the maintenance of the gold standard. The coming election will be the first when a Governor has been chosen under the Australian system, and it will be much easier and safer for the disgusted Democrat to express his feelings than when he had to proclaim *viva voce* his choice of a Republican candidate.

"No more important election has been held in Charleston and South Carolina since the war," said the Charleston *News and Courier* of August 20 with reference to the voting on that day for members of

the Constitutional Convention; and the statement was fully justified by the facts. The convention is to frame for the State a fundamental law, whose chief feature is sure to be some severe restriction of the suffrage. Various schemes are mooted for educational or property qualifications, for plural voting on the plan of one or more ballots for the property-holder above the single one for the poor man, for "privilege votes" to be cast by the husband or other male representative of a woman who owns property, and divers other devices, all of which are intended to keep from the ballot-box most of the blacks and swell the strength of the white minority. But, despite the immense importance of the interests involved in the election, very little interest was shown in the choice of delegates anywhere, the polls in some precincts not being opened at all, nobody voting in some other cases where they were opened, and not more than one-sixth of those registered even in Charleston taking the trouble to turn out. Many people believed that the call for the convention was fairly defeated in last year's election, and many others felt that it would make little difference with the results declared now whether they voted or not. The Tillmanites will control the convention by a large majority, and the result of their work must be awaited with apprehension.

Quay's threat to "have the law" on his opponents by appealing to the courts for a mandamus compelling the chairman of the Republican State committee to produce his books and papers and cash balance, in order that it may be seen just how he has managed the committee's affairs, is in itself of inestimable value. It will be remembered that we tried to get good Mr. Wanamaker, when he had admitted that he had raised a large sum of money for Quay to use in the election of 1888, to call upon Quay, who was chairman of the national Republican committee, for an accounting of the same, but Mr. Wanamaker thought it hardly worth while. Quay has now come over to our side of the question, and confesses that he thinks it would be in the interest of honest politics to have committee chairmen show what use they make of the funds placed in their hands. He says that if Mr. Gilkeson, the chairman whom he is trying to defeat for reëlection, were to be forced by the courts to do this now, it would make his re-election impossible. It is clear that Quay is familiar with the uses which political committees make of money, or he would not be so confident as to the damaging effect of the disclosure.

The Republicans have as yet put forth but one issue for the elections of this year and 1896, and here comes the *Tribune* of Monday to tell them that it is no issue at all. "Disgust," observes the profound political philosopher now guiding Republican thought, "is not usually long-lived," and hence "it seems likely that majorities this year may be smaller than in 1894." This is alarming, and, if carried to its logical conclusion, will compel the Republican party to get up some other platform than the simple and convincing one, "We are thoroughly disgusted." But there are ways of reviving moribund disgust, as the *Tribune* shows in its own person. Everybody remembers how its attacks on the bond-syndicate operations disgusted all Republicans who happened to be business men. Like Lodge, it was for some days convinced that the contract made with the syndicate was, "on its face, the blackest ever made." But, again like Lodge, it was shamed into silence by the unanimous approval of the contract by the business world. Republican disgust with these tactics of the chief Republican newspaper might also have shown itself short-lived and died away. But the *Tribune* chooses this auspicious moment to revive it, and asserts that, whatever bankers and business men may say, "it will be impossible to persuade most American voters that the Government had any business" to prevent the suspension of gold payments. This defiance of the financial world is heroic, but, coming just at the time when the operation in question has proved itself completely successful, can only be compared to the attitude of the Swedish abbé of whom Byron tells us. He was engaged in correcting the proof-sheets of a book designed to show that the constitution of his country was indestructible and immortal, when word was brought to him that the King had just overthrown it. "Sir," said the unflinching author, "our sovereign, the illustrious Gustavus, may certainly overthrow the constitution, but never *my book*."

We knew that there would be an exposure of that California Republican Congressman, Mr. Hilborn, who lately came back from Hawaii saying that annexation was preposterous. His views no sooner reached Honolulu than the mystery was cleared up. The annexationists admit that they were deceived in him. He had not been five hours in Hawaii before he drew one of them aside, and said, "My dear sir, you'll get annexation; the next Congress is Republican, and we want these islands." This looked like far-sighted statesmanship, and the Hawaiians were naturally pained to find the same person later taking the grovelling view that the United States didn't want the islands and wouldn't know what to do with them if it had them. But the explanation is simple. Congressman Hilborn was travelling "on a pass furnished by Spreckels." This accounts for everything. Most great statesmen travel on passes, but a pass furnished by Spreckels is well known to predispose to low views and to make a man ask troublesome questions about Hawaiian ignorance and unfitness for self-government, instead of just taking the whole lot of mixed nationalities to his bosom in a burst of generous enthusiasm for liberty. Something must be done to cut off the supply of Spreckels's passes, or the whole sacred movement for annexation will be in danger.

If Mr. Whitney's well-regulated blood ever boiled in this country—and there is no record of its ever having done so—it would have great provocation to boil now over the way in which the Democratic press of this State is treating him. He gave an interview, most reluctantly, a few weeks ago to the *World*, in which he firmly and impressively put away the nomination of his party for the Presidency next year. What has the *World* done with this magnanimous act? Why, made it the excuse for sending a circular letter to all the Democratic editors of the State, asking them how Mr. Whitney would run if nominated! In explaining this astonishing proceeding the *World* says that Mr. Whitney's declaration that he was not a candidate "aroused a curious amount of talk in newspapers and among people, all based upon the idea that Mr. Whitney may be a candidate after all." Was there ever such perversity as that, to take a man's positive refusal of a nomination as evidence that he would be a candidate! And the country Democratic editors, when asked what their views on the matter are, respond with more or less seriousness, giving somewhat varying opinions as to his running qualities, but expressing no doubt whatever about his willingness to run. One of them says he "would run like a steer in the corn," which is not a happy simile since it implies devastation along the path of the running. Only two express doubts as to his ability to carry the State, which shows that the Democratic press of the State as a whole is a prudent institution, and is not blind to the advantages of a candidate who has what the Tammany Boys call "de stuff."

What is the nature of the "pull" which Tammany is still able to exercise upon several of the morning and evening newspapers? It is exerted in the form of nagging attacks upon two of the most successful reformers in municipal administration—Col. Waring and Mr. Roosevelt—and scarcely a day passes without a new development of it. There is seldom direct assault made upon either of these officials, but individual peculiarities of utterance or dress are sought out and exaggerated in order to make them ridiculous. The great good accomplished by both is not questioned. That Col. Waring does clean the streets as they have never been cleaned before is not denied, but the twist of his moustaches, the cut of his clothes, the hardship to which he subjects his force by making them keep

their belts buckled, the fluency of his speech and his prolificacy in letter-writing—these and other peculiarities are dwelt upon at great length day after day and afford boundless comfort to Tammany and its sympathizers. Mr. Roosevelt's teeth, his volubility, and above all his recklessness in speaking directly of himself in the first person singular, are made use of to the same end. There is something more serious in this systematic and persistent effort to make these officials ridiculous than a desire to supply the "well nows" with arguments against the practicability of reform and the possibility of a theoretical reformer accomplishing anything. The real object is to prevent the public as a whole from getting the idea that good government of this city is not only a possible attainment under universal suffrage, but a very easy attainment. If that idea gets full possession of the community, Tammany can never regain power. Hence Tammany is working the press, as it is working the Comptroller, to break down the two men who are accomplishing the most for good municipal government.

No better evidence of the improving condition of business can be found than the increased receipts of the Post-office. The greatest absolute increase for the month of July is at Chicago, where the receipts this year are more than $65,000 above those of a year ago, a gain of nearly 20 per cent. But July, 1894, was a troubled month in Chicago, and such an increase is abnormal. If, however, we examine the returns from all the principal cities we see that in few cases is the gain less than 10 per cent., while in some it rises even to the Chicago rate. Boston shows receipts greater by 15 per cent., St. Louis shows 18 per cent., Brooklyn, Buffalo, San Francisco, and other centres show 20 per cent. and more. The total gain for the month of July is nearly $350,000, and probably as much as two-thirds of this is net gain. At this rate the deficit in this department, which is a chronic one, should be reduced this year by two or three millions.

Mr. Keir Hardie is making no such sensation in this country as John Burns did last year, and the reason is not far to seek. It is partly, perhaps, due to the fact that Hardie is not such a windy and reckless talker as Burns, but the main reason is that he and his fellow-agitators in England and this country have been badly discredited. Even in John Burns the great swelling words of vanity seem to have died away since the overwhelming rout of the Labor party in the English elections, and Mr. Hardie's feebler roarings will excite little but laughter. We observe that he, as President of the Independent Labor party, issued just before leaving England a résumé of their achievements and a programme for the future. They put up candidates for Parliament in twenty-eight constituencies, it seems, and did not elect a single one. From this the cheering inference is drawn that, at the next general election, "our comrades will throw themselves into the work and make it a complete success." A great deal of curiosity was expressed, at the time of the election, as to who was "financing" the Independent Labor party. It was charged that the brewers were backing them. Not so, says President Hardie; "we can say to all that no Tory or Liberal money, or money from any tainted source, has been received by us." This looks like political reform in earnest. Electoral contributions are to be closely scrutinized, and all "tainted" funds severely rejected. There is a great lesson here for Quay and Platt and Tammany. May not their present embarrassments be due to the fact that, in a weak moment, they have accepted money from tainted sources?

The recent opening of the port of Biserta in Tunis by the French republic was a pretty distinct indication of the policy to be followed in that region, and M. Leroy-Beaulieu frankly advocates a still more pronounced step in the same direction. Within a few weeks the time will expire for the "denunciation" of the commercial treaty between Tunis and Italy, and the *Économiste* insists that the opportunity must not be lost. Under the present treaty, Italy receives the treatment of the most favored nation, and the customs duties levied upon Italian goods imported into Tunis are limited to 8 per cent. M. Leroy-Beaulieu contends that France as a "protecting power" has a right to establish a customs union between herself and her ward. He thinks that to permit the importation of Italian goods on the same terms as those of France tends to create an "equivocal" situation. There is something incongruous in the spectacle of the merchandise of the protecting country paying duties in the country that is protected, and France has displayed great patience in tolerating such a discordant feature for the fourteen years of her occupation of Tunis. There ought to be complete freedom of trade between the two parties, and since this would involve a considerable loss of revenue, it is only proper that the deficiency should be made up by increasing the duties upon imports from other countries. It is true that there is a commercial treaty between Tunis and England, which fixes no date for its expiration. But that cannot be taken to mean that it shall be perpetual, and, by judicious diplomacy, England can be persuaded to consent to its gradual abrogation. In short, M. Leroy-Beaulieu concludes, France must make Tunis a veritable dependency, and thereby fortify its situation in the Mediterranean and in Africa. To this end she has been working for fourteen years, and the work must be carried on until it is completed.

It is evident that patriotism has somewhat colored M. Leroy-Beaulieu's economic views. He stands for free trade, and to advocate discriminating duties against the importation into Tunis of all goods except those of French origin is to go back to the colonial policy of the last century. As he points out, Tunis is the most prosperous of the French dependencies. Since it was taken charge of by France, it has made great progress. Many miles of railroad have been built, and many internal improvements made, all without involving the French Government in any expense or liability. Commerce has very greatly developed under French control. Fifteen years ago it amounted to scarcely 23,000,000 francs. It has now attained the figure of nearly 75,000,000 francs, and it is gaining all the time. The government is self-supporting, and that is more than can be said of most of the French colonies. While much the greater part of this commerce is with France and Algeria, the trade with other countries is by no means insignificant, and it seems regrettable that this trade should be hampered with new restrictions. Still, it is possible that the loss thus occasioned may be balanced by the gain from free trade between France and Tunis. At all events we may be sure that the policy recommended by M. Leroy-Beaulieu will be adopted, and that Tunis will eventually become practically as much a part of France as Algeria now is.

The Sultan now gravely informs the powers that he cannot consent to have reforms in Armenia carried out under foreign supervision. That would interfere with his precious sovereignty. His heart is set on reform, but he must be allowed to execute it in his own way and time. Of course that means never. The Porte is simply at its old tricks of shilly-shallying and solemnly negotiating to gain time. Turkish sovereignty is but a ghastly fiction. It has been overridden too repeatedly by the European nations to make them hesitate an instant now on that score. As Mr. Gladstone said in his Chester speech, the word "ought" means nothing at Constantinople, and the only word that counts there is the word "must." It is time that monosyllable was uttered, and uttered sharply, by the foreign ambassadors. The Turkish ministers have only been trifling with them. A little while ago the Porte's position was that it was going to reform not only Armenia but the whole empire. Reform, God bless you! there couldn't be too much of it, and all Turkey should have it. But this nonsense was well compared by Mr. Gladstone to that of an English government which should say, after a great and overwhelming agitation to repeal a particular act of Parliament, that there were a great many other bad laws which ought to be looked into and repealed after a few years' discussion.

OHIO FOR SOUND MONEY.

THE action of the Ohio Democrats on the silver question has been awaited with a good deal of interest because the attitude of the party in that State on financial issues has often served as a sort of political barometer—especially in the direction of "low pressure." Whenever any monetary heresy gained a foothold in the country, it was sure to spread rapidly among the Democrats of Ohio. Twenty years ago they were "red-hot" for more greenbacks, the amount to be limited only by "the wants of trade." When free silver displaced greenbackism a few years later, they became enthusiastic for unlimited coinage of "the dollar of the daddies."

The recrudescence of the silver craze after the panic of 1893 was therefore, naturally enough, especially violent among the Democrats of Ohio. Their State convention for the campaign of 1894 met in September last, while the business depression that followed the panic was at its height. The financial plank in the platform was the matter of chief interest. There were sound-money men in the body, and they were willing to stand up and be counted, but the test showed that they were sadly in the minority. By the decisive vote of 468 to 319, the convention adopted this "flat-footed" repudiation of Mr. Cleveland's financial policy, and endorsement of free coinage:

"We dissent from the President's views, construction, and treatment of the silver question, and, therefore, believe that silver should be restored to the position it occupied as money prior to its demonetization by the Republican party, and to that end we favor the unlimited free coinage of silver, at the legal ratio of 16 to 1, and with equal legal-tender powers."

The convention of 1895 met on Wednesday week, and again confronted the silver issue. The committee on resolutions reported a platform which "congratulated President Cleveland that his efforts in favor of the repeal of these vicious laws [the Sherman law, the federal election law, and the McKinley law] and the upholding of the credit of the country have been successful," and reaffirmed that portion of the national platform of 1892 which declared for "the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the payment of debts," and which demanded that "the paper currency shall be kept at par and redeemable in such coin." A small minority of the committee offered the following as a substitute:

"We demand the immediate restoration of the law providing for the free coinage and full legal tender of both gold and silver coins, without discrimination against either metal, as provided in the Constitution, and without awaiting the assent of England or any other foreign nation."

After speeches on both sides, the proposed substitute was overwhelmingly rejected by the convention. The vote stood 270 for the immediate and unlimited coinage of silver and 524 against, or in support of the President's policy. While last year the Democrats of Ohio in convention assembled supported free coinage in the proportion of almost five to three, this year they declare against it nearly two to one.

The history of American politics is full of sudden and sharp changes, but there has seldom been a quicker and greater revolution than is here recorded. The vote in last week's convention at Springfield drove the last nail that was required in the coffin of free coinage before its burial. When the Democrats of a State where the party has always been weak on the financial question so far recover their senses as to vote two to one against the silverites; when an unscrupulous politician like Senator Brice sees that his sole hope of a political future rests in the championship of a sound-money President; when a demagogue like Campbell, who in 1891 was "willing to chance it" on a platform declaring for "free and unlimited coinage," has to stand in 1895 on a platform from which such a plank was kept by a vote of 524 to 270—then even such purblind antediluvians as Senator Harris of Tennessee and his associates in the recent "national conference" of free-silver Democrats at Washington must realize that they are wasting their time and strength. If any doubt whatever remained that the Democratic national convention of 1896 would not take up the silver delusion, it was removed before the adjournment of the Ohio convention.

Popular interest in the Springfield gathering centred about its attitude towards free coinage. Other features of the convention require little attention. Senator Brice's speech endorsing President Cleveland as "the greatest statesman and party leader of his time," and declaring that the record of the Democratic party under him will be "the great paramount issue upon which the battles of both this year and next will be fought," was the tribute of a time-server which gains added weight from the fact that only a year ago he was himself doing all he could to mar that record by thwarting Mr. Cleveland's efforts to carry out the party's pledges as to the tariff. Mr. Campbell, the candidate for Governor, has always been a demagogue, and he advertised himself in that character afresh when he insisted upon the party's twisting the tail of the British lion as the condition of his acceptance.

Ohio is normally a Republican State—although Cleveland came within about a thousand votes of carrying it in 1892, and did get one of the twenty-three Presidential electors. At the last election for Governor, in 1893, McKinley got his second term by a plurality of over 80,000, and in 1894 the Republican candidates for minor State offices won by pluralities exceeding 135,000. The chief reliance of the Democrats in this campaign is the extraordinary coincidence that for the eighteen years beginning with 1877 they have elected the Governor and carried the Legislature that was to choose a United States Senator once in every six years; and 1895 is another sixth year. But history can hardly be expected to go on repeating itself in this curious fashion indefinitely.

THE RESULTS OF PROTECTION IN CANADA.

THE arrival of a distinguished English financier as president of the Grand Trunk Railway of Canada is an event that may have consequences outside the railway world. In his investigations into the condition of the great property committed to his charge, Sir Rivers Wilson will presently discover that the operating expenses are materially increased by protective duties. He will find that for the purpose of encouraging the coal-miners of Nova Scotia a tax of 60 cents a ton upon all bituminous coal imported into Canada is levied. He will learn that the result of this tax is, not to force Nova Scotia coal up to the province of Ontario, but to compel the industries of that province to pay the tax upon coal from Pennsylvania and Ohio, which they use exclusively, and that the contribution of the Grand Trunk Railway to this tax is about $350,000 a year.

Pursuing his inquiries further, he will ascertain that upon pig iron an import duty of $4.48 per long ton is collected, while the furnaces of Nova Scotia get a bounty of $2 a ton for their product, with $2 additional for steel. In spite of these protective arrangements, the manufacturers of Ontario find it to their advantage to purchase in this country a very large part of the iron which they consume. At the prices at which pig iron has recently been sold the tariff increases the cost about 50 per cent. This cost is, of course, further increased in the processes of manufacture, and it is evident that, in the case of such vast consumers of iron as railways, this increased cost must be a very large item. Another article the cost of which is increased by protective duties, is coal oil. There is some coal oil found in Ontario, and, in order to protect the industry of producing and refining this oil, that imported from the United States is taxed at a rate which in the year 1893-'94 amounted to over 100 per cent. The valuation of this imported oil at the custom-house during that year was $420,000, and the duty collected was $466,000. That it is possible to import this article to such an extent in spite of such a duty shows the intensity of the demand, or in other words shows the severity of the tax.

We might go through the Canadian tariff in this way, showing how the cost not only of operating a railway, but also of carrying on every kind of industry, is increased by protection. The experiment has now been tried for about sixteen years. It was defended by many reasons, the principal one being that, as the United States had prospered under a protective tariff, therefore Canada must. The event has proved the fallacy of this argument. In 1874 the value of the goods exchanged

between Canada and Great Britain was about $108,000,000. In 1894 it was $107,000,000. The whole foreign trade of Canada in the three years 1873–'5 averaged $212,000,000; for the three years 1892–'4 it averaged $229,000,000. By taking infinite pains a considerable immigration into Canada has been stimulated. Both private societies and the Government have established agencies abroad and encouraged immigrants to make permanent homes in Canada. The immigrants have come, but they have not made permanent homes. In the decade 1881-91 some 800,000 immigrants went to Canada, but during that period the population of the country increased by only 500,000 souls. This is less than the natural excess of births over deaths should have been, so that it may fairly be said that bringing immigrants to Canada is like bringing water in a sieve.

The increase of the debt of the Dominion by $100,000,000 in the last fifteen years, bringing it up now to over $240,000,000, is of course not to be charged directly to the protective tariff. But it is the natural result of the protective theory. Whenever the postulate is admitted that it is the duty of the Government to take the lead in guiding the industries of the people, protective duties and governmental extravagance follow together. The Government has no money of its own to spend, but it can extort vast sums from its subjects by the exercise of the taxing power, and this the Dominion Government has done. It is computed by a Canadian correspondent of the London *Economist*, who has carefully examined the whole subject, that British investors have altogether contributed not less than $1,000,000,000 to the development of Canada. This shows clearly enough that the interposition of the Government was not required in order to secure ample capital for Canadian enterprise. This interposition may have been to some extent imperative on political grounds: it might, for example, not have been possible to retain British Columbia except by the iron bands of the transcontinental railway. But there is no straighter road to legislative corruption than through the granting of subsidies, and such political unity as has been attained by bounties and protective duties in Canada has been purchased by grave political demoralization.

It is high time for the Government of the Dominion to retrace its steps, but it will not be so easy as it has been in our own case. The reason is, that the Dominion is so loaded with debt that it must raise a large revenue, and it will require great skill to accomplish this through a reduction of the tariff. Many of the duties imposed for the purpose of protection have proved to be revenue duties, and though the country would benefit by their immediate abolition, the Treasury would suffer. But the example set by this country will again be controlling upon Canada. The removal of restrictions upon industry here will make it impracticable to retain them there. The impulse given to our manufactures by freer trade will make it hopeless for those of Canada to try to keep up the race with the handicap of their present tariff. As Canada imitated us to her hurt in adopting the protective policy, she will eventually imitate us to her gain in abandoning it.

FRENCH COLONIZATION.

THE imitative impulse appears to affect nations as easily as individuals. We ourselves have recently constructed a very expensive navy for no assignable reason except the example set by other powers, and the European states are grasping at remote territories because they see England extending her possessions. The most remarkable manifestation of this spirit is in France. It is comprehensible that she should desire to extend her frontiers in Europe, and even across the Mediterranean Sea; but why she should undertake to found colonies in Tonquin and Madagascar is not so clear. An explanation has, however, been lately offered by a brilliant French orator, M. Chailley-Bert (who is the Secretary of the French Colonial Union), which throws some light on the question.

According to this authority, France does well to establish colonies because, beyond utilitarian considerations, there is something nobler and grander which a great nation ought to strive for. This is in effect to transmit to others the marvellous treasure of civilization which the French have inherited. France ought to perpetuate herself, to reproduce herself, under new aspects. Colonization is for nations what marriage is for individuals. It is the means whereby the species is continued; and the injunction, Increase and multiply, is laid upon the French as well as on other peoples. France was once a great nation in territory and remains one in intellect. She ought to assert her duty to be, not only to-day, but in the future, of equal greatness in thought and in dimensions.

Whatever may be thought of the validity of such an argument, it necessarily suggests, in the case of France, reflections which are painful. The French race is no longer a spreading stock. Hardly, by the constant infusion of foreign blood, does the population maintain its numbers, and the conditions of life are such as to hold the tendency to increase steadily in check. To maintain that a people which has reached the stationary state must undertake colonization upon a grand scale as a duty is paradoxical. Its marvellous treasure of civilization may be better communicated to mankind than by the assertion of military dominion over remote regions and barbarous tribes, when there is no reason to expect that French soldiers will be replaced by French colonists.

It is true, M. Chailley-Bert confesses that the ancient colonies of France were of a type that cannot now be imitated. Canada and Louisiana were colonies occupied by real settlers. Frenchmen emigrated, voluntarily or involuntarily, in large numbers to these colonies, and became permanent inhabitants. They married and reared families and reëstablished in a way the civilization of France. The conditions now render this kind of colonization impossible. There are no superfluous Frenchmen to emigrate. The climate of the new colonies is such as to prevent Europeans from reproducing themselves, and the regions are already occupied by indigenous populations. Hence such colonies as Tonquin and Madagascar are not to be settled by Frenchmen. They are to be colonies only of "exploitation and commerce." Frenchmen are not even to reside there steadily or to undertake to rear families. They are to return every three or four years to France to restore their health and to satisfy themselves that they are not exiles.

Hitherto, it is undeniable, this process of exploitation has consisted chiefly in sending soldiers to conquer the colony, and functionaries to administer it. The native population has been assured that the blessings of civilization were about to be conferred upon it, and the first step has been to double their taxes. Somehow or other, M. Chailley-Bert says, this must be changed. Colonists who are not prepared to live in these colonies or to mingle with the native races, must in some way be enabled to establish themselves there and to enrich themselves and the natives at the same time. It is obvious that peculiar qualifications are required for this task, and it is highly important, according to the standard set up by this philosopher, that the people who are ready to go as colonists should not be allowed to do so. They are the people who have been unsuccessful at home; who have lost their money; who have been dismissed from their employment — the dishonest, the spendthrifts, and the incapables. It is the people who do not want to colonize who would make the best colonists, and M. Chailley-Bert seriously recommends to his wealthy fellow-citizens that they should furnish capital to deserving young people who shall therewith undertake the exploitation of Tonquin and Madagascar.

No historical example of this method of colonization having been adopted is referred to. We have in British India, it is true, a "colony of exploitation" and not of settlement. But that colony was a consequence and not a cause of commerce, and we know of no reason to suppose that the order of events can be reversed. So far as France is concerned, M. Chailley-Bert incidentally shows why she cannot be a colonizing power. Before the liberty of testamentary disposition was abridged, younger sons were expected to shift for themselves. The family property passed to the eldest child; the cadets had to seek their

fortunes in war or the adventures of commerce. The present system of petty entails, as Sir Henry Maine called them, has altered this. The younger son no longer feels that he remains at home on sufferance, and, as some means of support are assured him, he lacks motive for undertaking an adventurous career.

Finally, life in France is on the whole so pleasant as to make the thought of expatriation among the barbarous inhabitants of Tonquin and Madagascar far from attractive. Why should any Frenchman who can manage to live in the bright and salubrious climate of France, surrounded with all the amenities created by centuries of civilization—why should he throw away his health and his life in the pestilential swamps of a tropical colony? There is room for all in France, since the population is stationary, and the disposition to emigrate may well be regarded as evidence of incapacity. Other countries are overcrowded, or are lacking in advantages; but France should be able to support an increasing population, and is intrinsically a country which charms rather than repels. Surely her modern schemes for founding great colonies are the vainest of dreams, and compel us to apply to those who entertain them the incomparable epigram of Mme. de Staël as being a people *qui ont pris les souvenirs pour les espérances.*

MANUSCRIPTS RELATING TO AMERICA IN THE BRITISH MUSEUM.

LONDON, August 9, 1895.

To Americans in quest of materials relating to the colonial period of their country's story, and who have not yet made themselves familiar with the collections of manuscripts in the British Museum, a few hints cannot but be welcome. A ticket of admission to the reading-room having been obtained, the student is at liberty to work either in the reading-room itself or in the students' room. The hours for the former are from 9 A. M. to 8 P. M.; those of the latter from 10 A. M. to 4 P. M. In the reading-room, which is sometimes called the Round Room, either books or manuscripts are delivered to one; in the students' room, manuscripts only can be had. The students' room is, in fact, for the use of those alone who are searching manuscripts. It has the advantage of being in the very heart of the manuscripts department, and documents applied for can consequently be more speedily obtained there than in the reading-room. Moreover, it is a shade quieter than the Round Room is. The difficulty of the shorter hours can be got over by having manuscripts in use transferred, at 4 o'clock, to the Round Room, where the student may go on working until 8 o'clock in the evening.

The searcher of manuscripts will not fail to use the students' room from choice. To get there the new-comer, having entered the Museum from Great Russell Street, will find himself in the hall. Here he must give up his umbrella to an attendant on the left, and will get a check for it. Then, turning to the lofty door on the right of the hall, he will enter the Grenville Library, so named after the donor, the Right Honorable Thomas Grenville, the second son of that George Grenville who helped materially to found the American nation, but without intending to do so. The treasures of this temple of books must be explored at another time; but the brilliancy of the illuminated manuscripts lying in glass cases will be sure to strike the wayfarer's eyes. Passing out of the Grenville Library, the saloon of manuscripts is entered, and as the pilgrim casts his eyes to the left, the grand hall that he gets but a glimpse of is the King's Library. Standing still for a few moments, his eyes fall upon letters written by persons whose names have been familiar to him since he began to read the history of that Old England from which his fathers went forth into the New World to build better than they knew. Not to mention other Kings and Queens, he will see the signature of good Queen Bess to a proclamation against the intentions of the house of Guise and its influence over Mary Queen of Scots. He will also find letters from Sir Philip Sidney, Mary Queen of Scots, and Lord Burghley. He must feel a glow of pride as he reads a resolution of a council of war of the English commanders, after the defeat of the Spanish Armada off Gravelines, and he will note with eager interest that to it are subscribed the names of Howard of Effingham, Clifford of Cumberland, Lord Thomas Howard; Edmund, Lord Sheffield; Sir Francis Drake, Sir Edward Hoby, Sir John Hawkins, and Captain Thomas Fenner. The signatures of Bacon, Strafford, Laud, Clarendon, Hampden, Pym, Montrose, Prince Rupert, Oliver Cromwell, Admiral Blake, Algernon Sidney, Claverhouse, William of Orange, Marlborough, Pitt, Fox, Wellington, Nelson, and other famous persons will also be noted. They must be inspected at leisure on some other occasion. There is, however, one document that the pious American cannot, must not, pass by. It is in Case 4, and is a letter addressed to the Earl of Buchan of that day, and dated Philadelphia, April 22, 1793. The signature is "G° Washington." In that part of the letter that is visible as it lies in the glass case, the Father of his Country speaks hopefully of the future of the United States, and elsewhere in the same letter gives it as his opinion that it should be the policy of the United States "to be little heard of in the great World of Politics." He further observes: "I believe it is the sincere wish of United America to have nothing to do with the Political intrigues or the squabbles of European nations; but, on the contrary, to exchange commodities and live in peace with all the inhabitants of the earth, and this I am persuaded they will do, if rightfully it can be done."

With the wise words of Washington lingering in his mind, the literary explorer will bear to his right hand from Case No. 4, as he walks towards an open door which has a slip-bar drawn across it, on which he will observe in painted letters the words "For Students Only." Passing through this door, and bearing to the left, he enters a short passage which in five seconds brings him to the door of the students' room. The door is ajar; and, as the ingoer passes through, it draws back again on its spring.

The presiding genius of this *adytum* of research is Mr. F. B. Bickley, one of the ten assistants to Mr. E. J. L. Scott, the keeper of the Manuscripts Department. The literary student, be he never so humble in rank, need never hesitate to apply to Mr. Bickley for guidance; for that courteous, cultivated, and expert official is as ready to help Mr. Nobody as to give the benefit of his knowledge and experience to a cabinet minister engaged in looking up a point. Excepting writing-paper, all mechanical aid to literary work will be found at hand, as the student takes a seat at one of the tables provided for searchers. Silence pervades the room, and those at work will hardly heed the entrance and exit of those who come and those who go. Many a person whose name is known far and wide, the world over, may from time to time be seen in the students' room. Of such are Lord Acton, Mr. Andrew Lang, and Lord Wolseley, now engaged upon his 'Life of Marlborough.' When Mr. Gladstone makes researches at the Museum, he does so in the board-room of the trustees, as being himself a trustee of the Museum. Lord Acton is entitled to the same privilege, being also a trustee, but he finds it more convenient to sit in the students' room.

There are, of course, rules for the guidance of persons who use the manuscripts, whether they do so in the Round Room or in the students' room. The very least that a student can do who is accorded the privilege of delving in this mine of information is to observe the rules with strictness. They are as follows:

(1.) Readers are particularly requested not to write for more than *one* Volume, Charter, or Roll on the same Ticket, unless the Numbers required form a series.

(2.) They are also requested to use the Manuscripts with care, and specially to avoid placing the hand on the written page or miniature before them; and in no case to place a Manuscript or Book on an open Manuscript.

(3.) As a general rule, Manuscripts, while in use, are to be placed upon book-rests, or in glazed cases.

(4.) There is no restriction on copying Manuscripts.

(5.) Manuscripts of more than ordinary value can be used only in the Department of Manuscripts.

(6.) Permission to draw from the Illuminated Manuscripts can be granted only on the production of a special Letter of Recommendation for that purpose, addressed to the Keeper of the Manuscripts.

(7.) Tracing is not allowed, unless by permission of the Keeper of the Department; nor in any case from paintings in body-colors.

(8.) As a general rule, only one Illuminated Manuscript will be supplied at a time; if others are required for the purpose of comparison, the permission of the Keeper must be first obtained.

It is well to know that, on application being made to the authorities, permission will be accorded for the photographing of manuscripts, under proper safeguards. As book-rests are provided for readers, there is no cause for any one not to comply with Rule 3.

Should the student not be in quest of any particular manuscript, but be on a search in general for manuscripts relating to America or to Americans, he must examine the large volumes of catalogues which he will find on shelves opposite the entrance door. There are catalogues upon every main division of knowledge, and there are catalogues of nearly all the collections of manuscripts. The seeker will find huge volumes lettered *Biography*. On opening volume i. of this series he will find a classification of the contents under the names of the leading political divisions of the earth. Then, there are catalogues lettered *Church History*, *Naval*, *Military*, *Voyages and Travels*, *Private Letters*, *Genealogy*, *Heraldry*, and so on, upon every subject that inquirers are likely to be interested in. To many of these catalogues there is an introductory classification of subjects, with a note of the pages over which their respective entries extend. These will be found at the beginning of the first volume.

This paper being intended for the guidance

of students of the colonial period of the United States, reference will not be made to the treasures of the Museum relating to Oriental and classical and general learning that abound in the Manuscript Department. Our inquirer may search with advantage the Harleian, the Sloane, the Egerton, the Hargrave (upon legal matters), the Royal, the Lansdowne, and the recently added Stowe collection, acquired from Lord Ashburnham for £45,000. This collection is so called because it was made by the Grenvilles, Dukes of Buckingham, at Stowe. Above all must he search the *Additional* MSS., which is the classification of the general body of documents acquired since the Manuscripts Department was founded upon the Sloane, Harleian, and Cottonian collections. Catalogues of these several collections, except the Egerton, have been printed, and, *where not out of print*, may be obtained at the Museum itself or through the agency of any London bookseller. The printed catalogue of Additional MSS. comes down to 1893. These are very valuable, being fully indexed. Those who can read Spanish will find much material relating to America in the four volumes of catalogues of Spanish MSS., edited by that literary veteran Don Pascual de Gayangos, whose assistance to Prescott is duly noted in that historian's Life. The worthy Don having finished his work of cataloguing, it is to be hoped he will now prepare an index to his catalogues. Students must, meanwhile, content themselves with the classification made in volumes ii. and iv., under the head of *Spanish Settlements in America*, of papers relating to America (North and South), Geography, and Travel. The special Catalogue of Seals in the Manuscript Department, and that of Maps, Charts, and Plans, contain much that will interest the American student. The Royal MSS. were collected by James I. for the use of Prince Henry, the too early cut-off elder brother of Charles I., and the very good friend of Sir Walter Raleigh. They were given to the nation by George II., and must not be confounded with the King's MSS., which were "presented" by George IV., on the nation's paying that most dread sovereign's debts. The King's collection consists of old MSS. mainly, many on vellum.

Let us suppose that our student has had his attention drawn to the Egerton collection. He takes down the catalogue, pores over it, and is struck by the number of documents he finds calendared under Volume 2395, as relating to New England and Virginia. Wishing to inspect these interesting papers, he has only to take one of the green-ticket forms of application which he will find at hand for the use of students, and to fill it up. The place for number of the reader's seat is to be filled up only when the student makes his application in the Round Room, for seats are not numbered in the students' room, where there is not accommodation for more than three dozen persons at one and the same time. Having filled out the form with the press numbers, exactly as they are given in the catalogue, our student must then place this ticket in a small box that he will find for the purpose, beside an attendant who sits near the entrance door. Going back to his seat, he will not have long to wait before the volume requisitioned for will be handed to him. He may then use it for the remainder of the day; and, should he be likely to require it on the day following, he has but to notify his wish to the attendant, on giving it up, to have it reserved for his use on the morrow. On giving up the volume, when he has done with it for the day, the student should make a vital point of getting back his green ticket from the attendant to whom he delivers the book. Although more than one volume of manuscripts (excepting the numbers forming a series), should not be applied for on the same form, any number of volumes, in reason, may be applied for, on separate forms, at one time.

Where a student cannot give the time to make copies himself of manuscripts, or extracts from them, he can get numbers of persons in London who are willing to do so at moderate rates of charge. Some of the attendants at the Museum will also undertake such work, which they are ready to do out of the hours of their official work. It depends upon the nature of the handwriting in the documents, but the usual charge is from 2d. to 4d. the folio.

Much valuable information with respect to the collections of manuscripts in the Museum is to be found in a 'Handbook to the Library of the British Museum,' written by Mr. Richard Sims, for many years one of the staff of that great institution. The work was published in 1854 by the late John Russell Smith of Soho Square, London. The difficulty is to get a copy of this precious tome, which has become very rare. Mr. Sims himself is now enjoying the proverbially long life attributed to pensioners. Would that he might be induced to bring out a new edition of his most useful handbook.

In a later number of the *Nation* a list will be given of some of the manuscripts in the British Museum that relate to the colonial period, mainly of the history of the United States. D. D.

LA ROCHEFOUCAULD.

PARIS, August 14, 1895.

IT was natural to give a prominent place to La Rochefoucauld in the collection of "Les Grands Écrivains Français." The author of the 'Maxims' will always remain among our classical writers. Some of the maxims have become proverbial, and in our pessimistic era La Rochefoucauld may almost appear to be the deepest of our French moralists. Such thoughts as these, "There is always in the misfortune of our best friends something which does not displease us," or, "Our virtues are oftentimes vices in disguise," are not made to displease the disciples of Schopenhauer. A Darwinian philosopher, accustomed to the struggle for existence and the survival of the fittest, cannot much object to the fundamental idea of La Rochefoucauld, who justifies our own egotism by showing egotism to be the universal rule of mankind.

It would be unjust, however, to consider the 'Maxims,' as has often been done, as a bald apology for egotism. If you read them with attention, you will find that M. Bourdeau, who has published a recent essay on La Rochefoucauld for Hachette's collection, is right when he says: "The 'Maxims' teach us not to count on others, not to confide in their promises, not to expect from them more than they can give, and thus to deliver ourselves from the most frequent cause of discontent and deception; they give us, in short, an imperious lesson in self-help." This lesson in self-help could well be given by La Rochefoucauld, who spent a great part of his life—the part during which ideas are formed and the bent of the mind is taken—amid the confusion and dangers of a civil war. The life of La Rochefoucauld throws much light on the formation of his genius; the 'Maxims' seem impersonal: they are in reality the work of a man who was engaged in a great historical drama, and who was able to see the play of human passions on the grandest stage.

François, sixth Duke of La Rochefoucauld, was born in Paris, in the Rue des Petits-Champs, the 15th of September, 1613. His house is well known to be one of the greatest in France; it bears the arms of the Lusignans, a house from which it was detached in the tenth century. Like the Plantagenets, they trace their genealogy to the fair Mélusine, who figures in their arms. After the Hundred Years' War, the La Rochefoucaulds preserved large estates in Poitou and Angoumois. In 1628 Marsillac (such was the first name borne by the author of the 'Maxims') was married to a great heiress, Andrée de Vivonne; he left the year after for Italy, where he made his first campaign. On his return we find him engaged in intrigues against Richelieu and in the confidence of Anne of Austria. After a short campaign in Flanders, he was exiled to his estates from 1633 to 1637; in this interval he met in Touraine, where she had herself been exiled, the famous Duchess de Chevreuse, the great friend of Anne of Austria and the mortal enemy of Richelieu. He helped her to fly to the Spanish frontier on horseback; she left him all her jewels, which were worth 200,000 *écus*, asking him to keep them if she died, or to give them back to her some day. Richelieu, when he knew that Marsillac had helped off the Duchess de Chevreuse, sent him for a week to the Bastille, and he was exiled again for two years to Verteuil. He was there approached by Saint-Mars, but was so fortunate as not to be compromised in his conspiracy.

In 1642 Richelieu died, and Marsillac thought that the time had come for him to be in favor. "For ten years," he says in his Memoirs, "the Queen had counted me particularly as her servant, for six or seven years I had been publicly denominated her martyr. . . . She assured me afterwards that it was a matter of honor with her that I should be satisfied with her, and that there was nothing great enough in the kingdom to recompense me for what I had done in her service." The moralist concealed in the *grand seigneur* had to learn that gratitude is not a common virtue. Marsillac was disappointed when he saw Mazarin assume all the power, and he entered into the cabal of the *Importants*, who afterwards became the Fronde. The Duchess de Chevreuse, after ten years of adventurous exile, came back. She had lost her beauty, and La Rochefoucauld transferred his homage to the Duchess de Longueville, the sister of Condé. Married at the age of twenty-three to a widower who was forty-seven years old, Mme. de Longueville was very tenderly attached to her brothers. She was ambitious, proud, intelligent; she was one of the stars of the Hôtel de Rambouillet. Mme. de Nemours says in her memoirs of the ladies of the cabal that "they employed their minds altogether in playful conversation, in comments on the delicacies of the heart and the feelings; they made the merit of a person consist wholly in subtle distinctions. . . . They regarded as ridiculous and coarse whatever seemed like solid conversation." La Rochefoucauld's love for Mme. de Longueville was mingled with ambition, and, if we may believe Mme. de Sévigné, he had always more ambition than love.

The history of La Rochefoucauld is intimately connected with that of the Fronde, perhaps the most confused portion of French his-

tory. It is not quite true to say that the Frondeurs followed only personal interests; there was among them a common desire, which was to resist the arbitrary and absolute power of a prime minister, and to preserve some authority for the French nobility. But it is quite true that every one of the Frondeurs had some personal interest, passion, or resentment to satisfy. La Rochefoucauld's ambition was to be treated at court like the Rohans, the La Trémoilles, and a few others; he claimed for his wife the *tabouret* in the Queen's presence, and for himself the right to enter into the Court of the Louvre in his *carosse*. These honors were the privilege of the peers of the realm and of the princes belonging to sovereign houses. There was a peerage in his house, but he was still Prince de Marsillac, and he asked before his father's death for another peerage. Mazarin did not comply with his wishes, and, besides, Marsillac had now become attached to Mme. de Longueville, and the *point d'honneur* more than his love obliged him to follow her fortunes. He became a rebel when she became a rebel. At that very moment, his father died; he formed a small army at Vertueil, and united his forces with those of the Duke de Bouillon.

The history of the Fronde of Bordeaux has been related many times. At the end of it La Rochefoucauld negotiated with Mazarin the deliverance of Condé, who was a prisoner at Vincennes. He tells us in his Memoirs how they met secretly at the Palais Royal, in the rooms of the Princess Palatine; the Cardinal came to meet him by a hidden staircase, with a lamp in his hand. When Condé broke openly again with the Court, La Rochefoucauld followed his cause. He confesses in his Memoirs that one day, at the Hôtel de Ville, he shut the head of Retz in a door, and told Coligny and Ricousse to kill him. Coligny refused; Ricousse simply said he had no orders from Condé. Retz was released by the great efforts of one of his friends, and, entering the *grand'chambre*, he told the President what had just happened: "Traitor," screamed La Rochefoucauld, "I care little what becomes of you." "I answered him," says Retz, "in these words: 'Very well, my friend *la Franchise* [we had given him this surname in our party], you are a coward [I lied, for truly he is very brave], and I am a priest, to whom duelling is forbidden.'" They were separated by the President. The next day the comedy followed the drama. Retz, who was the coadjutor of the Archbishop, was in a procession, in his pontifical robes. La Rochefoucauld came upon it in his coach where he was with Condé. They both left the coach and went upon their knees to receive the episcopal benediction. "I gave it to him," says Retz, "my mitre on my head. I took it off immediately, and made him a profound bow."

Condé entered into open revolt after the majority of the King was proclaimed. Gourville has given in his amusing Memoirs the account of the journey on horseback which La Rochefoucauld made from the Garonne to the Loire with his young son Marsillac, Condé, and a few gentlemen, travelling day and night by cross-roads. La Rochefoucauld had a touch of gout, and his leg was bandaged on his horse. At the battle which took place between Condé and Turenne before the walls of Paris, La Rochefoucauld received a shot which nearly put out both his eyes. Almost blind, his white coat all covered with blood, he was taken to the Hôtel de Liancourt in Paris, and his rôle of Frondeur came to an end. His terrible wound saved him from the necessity of joining Condé when he entered into alliance with Spain and began a war which lasted several years.

Gourville tells us that, as La Rochefoucauld had joined Condé chiefly for the sake of Mme. de Longueville, he inscribed under her portrait these two verses:

"Faisant la guerre au Roi, j'ai perdu les deux yeux;
Mais pour un tel objet je l'aurais faite aux Dieux."

His "objet" had not remained faithful to him; she had conceived a new passion for the Duke de Nemours, and had had the pleasure of taking him from the hands of Mme. de Châtillon, one of her rivals. Nemours was killed in a duel by Beaufort, and Mme. de Longueville turned her heart towards religion. She took an apartment in the convent of the Carmelites in the Rue St. Jacques. La Rochefoucauld was much interested in her conversion. He called her a "mother of the church." In his Memoirs he treats her with much severity. He describes, more than is becoming in him, all her weaknesses; he goes so far as to throw some doubt on the character of the relations of Mme. de Longueville with her brothers Condé and Conti, whose irritation at her engagement with Nemours was "more excusable in a lover than in a brother."

La Rochefoucauld, after the Fronde, had much difficulty in putting some order into his finances and in paying his debts. He fortunately found a very intelligent assistant in Gourville, who had been first a servant in his house and had by degrees become his factotum. Gourville's fortune is one of the most extraordinary of an eventful time. He was involved in the most important negotiations which ended in the Peace of the Pyrenees, employed by Condé and by Mazarin; he managed the finances of the La Rochefoucaulds as well as of the Condés; he amassed a great fortune, and in the end he married morganatically the sister of the Duke de La Rochefoucauld.

La Rochefoucauld began to turn his attention to letters, and found in them a solace, first in the company of Mme. de Sablé, and in his last years in the company and friendship of Mme. de Lafayette. Mme. de Sablé was the author of a small volume of 'Maxims' which has now become very rare. She had counted among her lovers M. de Montmorency, who was beheaded in 1632 by order of Richelieu. Tallemant des Réaulx, who was very evil-tongued, speaks of her as an "insigne catin" and calls her a "grosse dondon." She became a Jansenist in her old age, and aspired, like Mme. de Longueville, to become a "mother of the church." She had a salon, a sort of Abbaye-aux-Bois, where the fashion was to write maxims and sayings. La Rochefoucauld followed the fashion. His first maxims were composed in 1662, four years before the 'Pensées' of Pascal. Mme. de Sablé made copies of them, which were distributed among her friends. The 'Maxims,' by their conciseness, mark an epoch in French literature; they are like medals, and reduce an idea to its simple elements. Voltaire says with truth that "the 'Maxims' was one of the books which contributed most to form the taste of the nation and to give it a spirit of exactitude and precision."

About the long friendship between La Rochefoucauld and Mme. de Lafayette, there is nothing for readers of the correspondence of Mme. de Sévigné to learn. Add to what Mme. de Sévigné says what is found in Gourville's Memoirs. Gourville is not sentimental, and says coarsely that La Rochefoucauld had a great attachment for her—"à cause de la commodité dont elle lui était." La Rochefoucauld called Mme. de Lafayette "la vraie"—a fine and concise eulogy. There must have been a great charm in the society of the author of the 'Princesse de Clèves,' one of the most delicate works in the literature of the seventeenth century. The 'Princesse de Clèves' is the brightest and expiring ray of the society of the Hôtel de Rambouillet. The gouty Duke de La Rochefoucauld, and his friend, always lying on her bed "galonné d'or," are also the best representatives of a society which is the connecting link between the France of the Fronde and the France of Louis XIV.

Correspondence.

SOUTHERN HOMICIDE AND PUBLIC OPINION.

To the Editor of The Nation:

Sir: While the prompt punishment by the Mississippi authorities of Marshall and his abettors for the recent murder of Sinkler at Brandon Station merits all the praise it received in the last issue of the *Nation*, one incident connected with the trial has been almost universally condemned. It seems that among the array of counsel for the accused was the Democratic candidate for Governor. The more intelligent section of the Southern press has, therefore, criticised the unfortunate appearance in the case of one who is running for the office to which the pardoning power is attached. But future events may not justify the gloomy predictions of a speedy pardon.

The most encouraging feature of this fresh chapter in the long story of Southern homicide lies in the general indignation it aroused; and there is little doubt that if the accused had stood trial instead of pleading guilty, they would have received the maximum sentence of the law. Unfortunately, however, the brutality exhibited in the murder of Sinkler forms no very unusual exception to the ordinary run of such crimes: there are hundreds of similar cases. But it is reassuring to observe the birth of a new sentiment in regard to such occurrences, and even what many are inclined to regard as a mock imprisonment in the penitentiary is better than no punishment at all. It is to be hoped, moreover, that the day is not far distant when it will no longer be taken for granted in these parts that every man "totes" a revolver, which he is ready to use with savage effect whenever a blackguard may endeavor to "insult" him.

Sewanee, Tenn., August 24, 1895.

OWEN AND EVOLUTION.

To the Editor of The Nation:

Sir: In the *Nation's* notice of the 'Life of Richard Owen' (in No. 1569), I think that there is a misapprehension of Owen's actual position in regard to the doctrine of Evolution. I took a letter of introduction to him from Agassiz in about the year 1858, and I saw him from time to time until near the date of his death. He lived at Hampton Court and I at Clapham Junction, and it happened sometimes that we went out from London together. I remember very distinctly a conversation we had on the train soon after the death of Agassiz, in which he lamented that our great naturalist had held out so obstinately against Evolution, and said that if he could have had personal intercourse with him in those later days, he was convinced that he would have brought him over to a recognition of the law. His words

were: "If I could have had half-an-hour's conversation with Agassiz, I believe I could have convinced him of the truth of Evolution." He made no reserve in admitting the process of Evolution, but he did not accept Natural Selection as the sufficient and final cause of Evolution, and he insisted equally on the Divine Intelligence as the directing agency in Evolution.

He had, no doubt, in earlier years, fought hard against the apparently mechanical process of creation, as many early opponents of Evolution who now admit it considered it, because the theological bias in him was strong, as it was in Agassiz, and it was a ground of sympathy between them. With Agassiz there was another consideration which prejudiced him in the weighing of the new doctrine, in that it overstepped the limits of physical science. I remember his saying to me once, in the woods, that the question which was involved in the doctrine went into Teleology, and that this was the province of theology, not of natural science, whose business it was to observe and classify, not to investigate the final cause. Any man who has been reared in the influences of the old theology and has succeeded in freeing himself in mature life from its bias, will judge tenderly these two intellectual giants, in whom reverence for truth as they understood it was the feeling at the bottom of their science. But Owen always retained a little of the narrowness and bitterness of Scotch theology, from which Agassiz was free, and no doubt the extreme liberality of the latter's religious notions kept him from that reaction towards extreme scepticism which has been a powerful stimulant in the progress of the doctrine of Evolution. Perhaps, when we get to the end of the matter, we shall find that Agassiz was not so entirely mistaken as he is now considered.

Yours truly, W. J. Stillman.

Laufenburg, August 15, 1895.

ENGLISH LIVES OF TURGOT.

To the Editor of The Nation:

Sir: There is a slight misstatement in the *Nation* of August 8, in the review of Stephens's Life of Turgot, or rather in the preface of the book itself and quoted by your reviewer. There *is* another Life of Turgot in English, a translation by Melville B. Anderson of the one by Léon Say, published by A. C. McClurg & Co. of Chicago in the "Great French Writers" series. This set of translations is probably not known in England; hence the author's statement.—Yours very truly,

Mary W. Plummer.

Pratt Institute, Brooklyn, N. Y., August 24.

"INDUSTRIOUSLY."

To the Editor of The Nation:

Sir: Of this word there was long current, in the language of our forefathers, an acceptation which American compilers of dictionaries, without exception, pass by unrecognized. To passages exemplifying it, from Dryden and Swift, Dr. Johnson prefixes the definition "for a set purpose, with design." This, however, on the presumptuous assumption that he misunderstood his authorities, all his successors on our side of the Atlantic, Dr. Webster and the rest, alter into "with care," or else give nothing in its stead. The frequency of the by-gone occurrence of *industriously*, as distinctly one with "designedly," "purposely," "intentionally," "voluntarily," is attested by the annexed quotations:

"The chiefe remarkable thing in this Ile, from all Antiquity, is the burning Hill of Aetna. . . . The North side, toward Rindatza, at the Roote beeing vnpassable steepe, yet gathering, on all parts, so narrow to the top as if it had beene *industriously* squared." William Lithgow, *The Totall Discourse*, etc. (1632), p. 390.

"Of all which every man living, that injoyeth but the use of reason, findeth naturally within himselfe, at the very first naming of them, a plaine, complete, and satisfying notion, which is the same, without any the least variation, in all mankind, unlesse it be in such as have *industriously*, and by force, and with much labour, perplexed and depraved those primary and sincere impressions which nature had freely made in them."—Sir Kenelm Digby, *Two Treatises* (1644), vol. i., p. 6 (ed. 1645).

"Frederick perceived that his arrow had a little paper rouled about the end thereof, instead of a pile, and *industriously* accommodated." "At the end of the dance he let fall, *industriously*, his cypresse." Anon., Translation of De las Coveras's *History of Don Fenise* (1651), pp. 177, 239.

"The truth is, he *industriously* deferr'd the assailing those whom, for Oroondates sake, he lov'd." Sir Aston Cockain, Translation of Calprenede's *Cassandra* (1652), vol. i., p. 126.

"But an exact concatenation of the Series of things throughout is more than ought to be expected; no such Accuracy being *industriously* intended." Rev. Dr. Henry More, *Conjectura Cabbalistica* (1653), p. 145 (ed. 1662). "The Cherubims . . . were *industriously* hid from being any Object thereof" [*i. e.*, of worship]. Id., *A Brief Reply*, etc. (1672), p. 37.

"We have wordish Quibbles . . . studiously and *industriously* affected." Rev. John Sergeant, *Sure-footing* (1665), p. 176.

"The Romans were fond of thinking that Providence *industriously* adapted the various dispositions of its kings to the different necessities of its people." Goldsmith, *Roman History* (1769), vol. ii., p. 23 (ed. 1786).

"I had sent to the auctioneer, who could prove that the watch had been offered to him for sale, and whose evidence would, of course, have operated in my favour; but he was *industriously* out of the way." Rev. Dr. John Trusler, *Modern Times* (1785), vol. i., p. 70.

"The three pyramids of Egypt have been *industriously* built upon the first hill between Cairo and the western bank of the Nile." Rev. G. S. Faber, *Origin of Pagan Idolatry* (1816), vol. iii., p. 244. "It is not likely that this plural term would, as it were *industricusly*, have been employed in a sense so very different from that in which it everywhere else occurs." *Id.*, *Eight Dissertations* (1817), vol. i., p. 421 (ed. 1845). "But our legislator *industriously* joined the two together, employing at once both action and precept." *Id.*, *A Treatise on . . . the Dispensations* (1819), vol. ii., p. 192 (ed. 1823). Faber repeatedly uses *industriously* as in these citations.

Sedulo and *studio*, in classical Latin and in unclassical, respectively signify both "diligently" and "on purpose." When, therefore, as in several instances not here produced, their contexts being indefinite, they are rendered by "industriously," the sense which the translators intended by their choice of adverb is uncertain.

That *industriously* has often denoted "with care"—one of Dr. Webster's definitions of it, but overpassed by Dr. Johnson—is not to be denied, as I could show by numerous quotations.

The *industriously* now especially under consideration, though not corresponding, in signification, with *industrie*, is exactly equivalent to *de industria*, *ex industria*, etc., by which it was suggested.

Matching this *industriously* is *industrious*, "intentional," "purposed," etc., to which, likewise, Dr. Webster and others refuse record, as though Dr. Johnson were mistaken in supposing it to have warrant. Here follow proofs of its existence:

"It was the part of a shamelesse Cham to bee an *industrious* spectator of his father's nakednesse." Nathanael Carpenter, *Achitophel* (1629), p. 8.

"Some there are suspect this mistake to have been not involuntary, but *industrious*, in him." Hamon L'Estrange, *The Reign of King Charles* (1654), p. 188 (ed. 1656).

"His [Elijah's] *industrious* affectation of the wilderness." Rev. G. S. Faber, *Eight Dissertations* (1817), vol. i., page 269 (ed. 1845).

In its sense of "careful," *industrious* could be illustrated to profusion.

To turn to *industry*, it is not inapposite to point out that, in the seventeenth century, reminding one of *chevalier d'industrie*, it was occasionally put for "device," "scheme," "stratagem":

"Fenise, who had a subtle wit, made the Vice-Roy yet more beholden to him, teaching him an *industry* how to make these slaves feele the effect of the evill they had plotted." "On the contrary, the *industry* I have advised my selfe of tends onely to its conservation and safety." "If you please, this is the *industry* we will use." "But, if heaven inspire you with some *industry* to deliver me from the extreame torment which my soule suffereth," etc. Anon., Translation of De las Coveras's *History of Don Fenise* (1651), pp. 111, 156, 179, 188.

"And, to render their Design less perceptible, they added this *industry*, That Liante should continue in his dissatisfaction of Iphigenes," etc. Major J. Wright, Translation of Bp. Camus's *Nature's Paradox* (1652), p. 334.

"It happened that a Lord of great birth and quality . . . fell not altogether in disgrace, but in disesteem, with the Prince, by the artificious *industries* of a Favourite that loved him not." "To let him burn in a little fire, and take her vengeance in this love by a new *industry*, she makes no shew to understand these Enigma's, nor did say anything in particular." J. Jennings, Translation of *Elise* (1655), pp. 4, 135.

Of the *industry* in the foregoing quotations lexicographers know nothing, and nothing of the Gallicism *industriously*, "ingeniously":

"The first part was full of little Chambers, so *industriously* built that they seemed to be cut out of the Rocke it selfe." "The seeling was of a hollow mirror, made of many Venice glasses, so *industriously* joyned together, that, by a miracle in perspective, you would have thought your selfe to be under a vault of an extreame highnesse." William Browne, Translation of *Polexander* (1647), Part I., pp. 26, 28.

By this letter, as by many another of mine, it must have been made evident how very imperfect are nearly all existing English dictionaries, for want, on the part of their compilers, of a competent acquaintance with our literature. If not constructed on historical principles, and if not the outcome of extensive collaboration, no longer can any dictionary of our language claim to be of the first rank, on grounds that are tenable. F. H.

Marlesford, England, August 1, 1895.

Notes.

The Century Co.'s announcements for the fall season embrace 'Old Dutch and Flemish Masters,' Cole's engravings, and text by Prof. John C. Van Dyke; a wholly new edition of Gen. Grant's Memoirs, annotated by Col. F. D. Grant; 'Washington in Lincoln's Time,' by Noah Brooks; 'Electricity for Everybody,' by Philip Atkinson; 'Life in the Tuileries under the Second Empire,' by Miss Anna L. Bicknell; 'Municipal Government in Continental Europe,' by Albert Shaw; 'The Other Jungle Book,' by Rudyard Kipling; 'Kitwyk Stories,' by Anna Eichberg King; 'A Madeira Party,' by Dr. S. Weir Mitchell; 'Notes

of a Professional Exile,' by E. S. Nadal; and 'Rivalries of Long and Short Codiac,' by George Wharton Edwards.

The first autumn announcements of G. P. Putnam's Sons contain, among others, the following titles: 'The History of the Fifth Army Corps,' by Lieut.-Col. William H. Powell; 'Books and their Makers during the Middle Ages,' by Geo. Haven Putnam; 'The Literary History of the American Revolution, 1765–1783,' by Prof. Moses Coit Tyler; 'Echoes of the Playhouse: Reminiscences of some of the Past Glories of the English Stage,' by Edward Robins, jr.; 'Earthwork out of Tuscany,' by Maurice Hewlett; 'The Midsummer of Italian Art,' by Frank Preston Stearns; 'Buddhism: Its Origin, its Ethics, and its Sacred Books,' by T. W. Rhys-Davids; 'Selected Essays from Schopenhauer'; 'The Epic of the Fall of Man: A Comparative Study of Cædmon, Dante, and Milton,' by S. Humphreys Gurteen; and 'A Metrical History of the Life and Times of Napoleon,' compiled in songs and poems by William J. Hillis.

T. Y. Crowell & Co. have nearly ready an illustrated edition of De Amicis's 'Cuore.'

Stone & Kimball have in press a new volume of verse, 'My Lady of Dreams, and Other Poems,' by Eric Mackay.

'The Vacant Chair, and Other Poems,' by Henry Stevenson Washburn, will be published directly by Silver, Burdett & Co.

The Hakluyt Society will issue almost immediately a volume from the pen of its president, Mr. Clements R. Markham, C.B., consisting of a translation of the journal kept by Pedro Sarmiento during his voyage to Magellan's Strait in 1579–'80, supplemented by documents procured from the archives at Madrid. Another of the Society's volumes, which, under the joint care of Mr. C. A. Gosch and Mr. Miller Christy, deals with the Arctic voyages of Jens Munk and James Hall, is in the press and may be expected shortly; while a commencement has also been made with the printing of Dr. Robert Brown's edition of the 'Travels of Leo Africanus.'

The "Society of Iconophiles of New York," an inner ring of the Grolier Club, has progressed so far as to issue "publications" Nos. 1–4, of each of which only "101 impressions have been taken and the plate destroyed." The subjects chosen for illustration are "St. Paul's Chapel," "The Chancel of St. Paul's Chapel," "Fraunce's Tavern," and the "Roger Morris House"; and the plates from the burin of Mr. E. D. French make charming prints illustrative of Old New York. Each is issued in a wrapper on which are given brief historical notes concerning the subject of the plates, but these are hardly up to the quality of the engraving, for it is stated of St. Paul's that, "in 1774, Alexander Hamilton, then but seventeen years old, delivered a speech against the Stamp Act in the Chapel," though the only speech we know of Hamilton's making at that epoch was "in the fields," eight years after the Stamp Act was repealed; and, further, that "Dr. O'Meara," Lord Howe's military chaplain, preached a sermon in this church, though O'Beirne was the man. As the wrapper will in most cases be discarded, these blemishes detract in no sense from the value of the plates.

The 'Summary of the Vital Statistics of New England for the Year 1892' has just appeared (Boston: Damrell & Upham). These statistics are compiled under the direction of the secretaries of the boards of health of the New England States, and their value will be greater henceforth, as it is only since 1894 that the reports from the State of Maine have become available. In some respects the figures are still unsatisfactory, the returns of births being regarded as very incomplete in both Maine and New Hampshire. It is believed that 3,300 in Maine and 2,000 in New Hampshire should be added to the numbers reported, and this conjectural correction has been made. Even when thus increased, the New England birth-rate is lower than that of any of the principal countries except France and Ireland. The death-rate, however, is lower than that of most of these countries, while the marriage-rate is the highest known. Evidently the day of small families has come for New England, and in some of the States the number of married people having only one child is very large.

'Game Birds at Home,' by Theodore S. Van Dyke, is a dainty little volume bearing the imprint of Fords, Howard & Hulbert, New York, but copyrighted by the author, who is favorably known by previous sketches of outing and sporting, chiefly in California. 'Game Birds' consists of fourteen short stories about our best-known game birds, such as the bobwhite and other quails, several species of grouse, the turkey, woodcock, snipe, plover, various geese and ducks, and a few others. The articles are written in the vein of an enthusiastic sportsman's reminiscences, in general with much good feeling, but also with much mere sentimentalism and apparent straining for verbal effect. Those who like an extra gamey flavor in the literature of their craft will be best pleased with the book, which is a little too "high" for our taste. The description of riding into a flock of wild geese is one of Mr. Van Dyke's best.

Mr. Franklin B. Wiley (A.B. 1886) has just brought forth a new 'Harvard Guide-Book' (Cambridge: Charles W. Sever), which is both accurate and agreeable, as it is written *con amore* and enlivened with much pertinent quotation and historical anecdote, besides being copiously illustrated and supplied with a good map and reference index. It shows in a striking degree the present size of the University.

A valuable paper by Signor Vittorio Cian has been taken from the Memoirs of the Academy of Turin and published as a byprint: 'L'Immigrazione dei Gesuiti Spagnuoli letterati in Italia' (Clausen). Signor Cian begins with a study of the two currents of feeling, one favorable and the other unfavorable to the Jesuits, which were running in Italy at the time of the immigration, and describes the reception which the Spaniards received. He then goes on to an appreciation of the characteristics of the new-comers, and of their works, which overcame the prejudices by which they were at first met, and which enabled them to win their way. Incidentally he gives much interesting information on their relations with Italian writers of the time. It will be seen that his memoir does not lack immediate interest. The interrelation of literatures and their influence upon each other were, perhaps, never more studied than now.

Two recent publications, 'Les Dessous de l'Histoire: La Vérité sur Jeanne d'Arc,' by Francis André (Paris; Chamuel), and 'Le Portrait de Jeanne Darc, par un Essénien du XIXe Siècle' (same publisher), are to be recommended for perusal to those only who wish to realize what incredible absurdities the revived cult of the Pucelle occasionally calls forth. The former is a painfully pretentious treatise of nearly four hundred pages, written from the ultra-orthodox standpoint; the second, a pamphlet, fiercely anti-Catholic, yet seeing in the Maid not only a saint but the "Messiah of Nations," the "Spirit of Truth promised by Christ."

To say that passages in C. Wagner's 'La Vie Simple' (Paris: A. Colin & Co.) remind one of the seventeenth-century moralists, and again of Mme. de Maintenon's admonitions to the inmates of St. Cyr, is not praising the book too highly. The author believes in a regeneration of modern society through individual effort; his book is serious, but in no sense narrow or pessimistic. M. Wagner's previous publications have met with deserved recognition in France. His 'Jeunesse' must be known to some of our readers in Redwood's English translation, 'Youth' (Dodd, Mead & Co., 1894). We trust that this new work will be equally well received and widely read.

'Le Roman d'une Âme,' by Jean Bertheroy (Paris: Colin), is an interesting psychological study in form of a confession. With delicate frankness the heroine discloses the state of her soul during the stages of girlhood, young womanhood, and matrimony, and though her story is not entirely free from adventures beyond the bounds of conventionality, she has no transgressions of the grosser kind to record.

Daniel Lesueur, in his latest novel, 'À Force d'Aimer' (Paris and New York: A. Lemerre), relates a story of sin against society and the State, and its wages, without a morbid relish for particulars or an undue accumulation of horrors. A thread of socialism of a mild form is interwoven with the plot, and Panama Canal swindlers and Cornelius Herz are castigated under the names of the Channel Tunnel Company and M. Vallery. Some touching situations in the story are due to the author's clever use of his insight into child psychology.

Advanced students of German, and all who have occasion to use the language synthetically, will be interested in a work which, though not quite recent, has not, we believe, attracted much attention in this country: Schlessing's 'Deutscher Wortschatz, oder der passende Ausdruck' (Stuttgart: P. Neff; New York: Westermann & Co.). An explanation of its arrangement and use is here unnecessary, since the author has avowedly followed very closely Roget's 'Thesaurus,' a book which may be presumed to be within everybody's reach. Not only the general plan of the two works is the same, but the 1,000 idea-groups are identical in both to the point where the details of the English and the German "word-treasuries" make divergence unavoidable. The volume is handy, printed in good type, and comparatively inexpensive.

The *Revue Critique* of July 29, among other interesting literary announcements, says that the University of Budapest is now paying what is, in some sort, a debt of honor by the publication of the complete works of its founder, Cardinal Pazmany (1570-1637), the Magyar Bossuet, as he has been somewhat ineptly called, who not only was one of the fiercest opponents of Protestantism in the Reformation struggle in Hungary in the sixteenth century, but was also the first great prose-writer among the Magyars. His works, divided into two sections, according as they are written in Latin or in his vernacular, will be published in fourteen volumes by the theological faculty of the University. The first volume of each series has just appeared, with an introduction and notes.

Longmans, Green & Co. present the first number of a new magazine—the *Badminton*—devoted to sports and pastimes. It is edited by Mr. A. E. F. Watson, who has so successfully carried out the Badminton Library of sporting handbooks, and many of the contributors to

that excellent library have agreed to assist in the new venture. In this first number Mr. Hutchinson discourses entertainingly on the subject of Golf Championships, the Earl of Onslow on Wheeling in London, Mr. C. B. Fry on Cricket, and so forth. The print is clear, and the illustrations sufficiently numerous if not remarkable in quality. There is certainly in England, and probably here too, a large body of readers who will prefer these carefully written expert opinions on current sporting topics to the hasty and often ill-considered judgments of the daily press.

Sun and Shade for June and July (New York Photogravure Co.) presents the usual medley of plates from life and nature and art-product, but nothing calls for mention except the two specimens of color-printing in three impressions, which mark the progress of a process that is certain to be highly perfected and to have a far-reaching influence on the popularization of art.

Africa and the Polar Regions were the subjects which aroused the greatest interest at the recent Geographical Congress in London. Sir John Kirk, the veteran companion of Livingstone, introduced the former with a valuable paper on the white colonization of tropical Africa, in which he stated that this was possible only on the plateau to the north of the Zambesi, the uplands of British East Africa, and probably the mountainous districts of Abyssinia. He was followed by Henry M. Stanley, M. P., who, in a characteristic speech, urged the feasibility of colonization, but said that commercial development was all for which he looked at present. The feature of the session, however, was the deeply interesting account given by Slatin Pasha of his escape from his eleven years' captivity, and of the present condition of the Mahdist Sudan. He confirmed the death of Gordon, of which some have always doubted, by saying that, after his murder on the highest steps of his palace, "his head was severed from his body and was mockingly shown to me as I lay in irons." The culminating point of interest in the discussion upon the Polar Regions was reached when Herr Borchgrevinck (described by Dr. John Murray as "the first man, perhaps, who had put his foot upon the earth of the Antarctic continent") gave his graphic account of his voyage in an Australian whaler last winter as a man before the mast. He closed with an earnest appeal for the sending out of a scientific expedition to those regions, saying that he himself was "perfectly ready and willing to become the leader of a landing party to remain throughout the winter months at Cape Adair," on the continent. From this point the South magnetic Pole was only 160 miles distant, and he believed that it would be quite possible to reach it with dogs and sledges. A resolution was adopted by the Congress recommending the several scientific societies throughout the world to urge this work, "the greatest piece of geographical exploration still to be undertaken."

A new hurricane station has been established in Yucatan, and observations will be cabled from Mérida to New Orleans during the hurricane season, or when severe storm development is noticed. This station is the first link in what will probably be a long chain of stations along the borders of the Gulf. In this plan a thorough coöperation on the part of the Mexican Meteorological Bureau will, it is hoped, be secured, as it would be of the greatest assistance.

But one MS. was received in competition for the prize of $400 given by Dr. Gould's *Astronomical Journal* "for the most thorough discussion of the theory of the rotation of the earth with reference to the recently discovered variations of latitude." The paper was sent and the prize received by Prof. Newcomb. The other prize, of $200, was given to Mr. Paul S. Yendell, who made the best series of determinations of maximum and minimum of variable stars.

A year ago the students of history and geography in the University of Paris were invited to prepare, during the year, theses on subjects to be chosen by themselves and to be approved by the faculty. A score of young men responded to the appeal of their teachers and were then left to their own resources. Their examination and the discussion of their papers took place recently before two committees, presided over by MM. Himly and Lavisse, and the results proved to be most gratifying, five or six of the productions being, according to M. E. Lavisse, worthy of immediate publication, and others requiring but little additional labor. This new test of proficiency entitles the successful student to a new kind of diploma ("d'études supérieures d'histoire et de géographie"), which may be taken even by those not holding the bachelor's degree. It is hoped that foreigners also will avail themselves of this opportunity of obtaining recognition of their work in the University after a comparatively brief residence. A new effort to attract foreign students is being made by the "Comité de Patronage des Étudiants Étrangers," which, at a meeting held recently at the Sorbonne, formed a Franco-American committee with MM. Bréal, Levasseur, Lavisse, and others as members, and M. Paul Melon as secretary.

A genuine American artist, and no less genuine man, Mr. Thomas Hovenden, who lately sacrificed his own life in endeavoring to save another's, is worthily commemorated in the series of imperial panel photographs for which Mr. F. Gutekunst, Philadelphia, has won distinction.

—The death on Monday of Mr. Henry O. Houghton, founder of the Riverside Press and head of the eminent Boston publishing-house of Houghton, Mifflin & Co., was not unexpected, though he went to his office, if not to business, to the very last. He was a native of Vermont, born in 1823, and a graduate in 1846 of the University of Vermont. His first partnership as a publisher was with the late M. M. Hurd, and he gradually fell heir to the houses of Ticknor & Fields and Osgood, which gave his firm a practical monopoly of the New England classics in prose and in verse, and insured its remarkable prosperity. Mr. Houghton's business sagacity was not more marked than his kindness of heart, and his relations to his employees of the Riverside Press were most exemplary. He had, too, a pride in his function as publisher which sometimes led him to embark in enterprises without the hope of profit, like the magnificent issue of Prof. Child's 'English and Scottish Popular Ballads.' His views in regard to international copyright were tinged at first with the spirit of protectionism, or, in other words, with provincialism; but he soon found himself in accord with the new order. His genial presence will be much missed; his name will doubtless long be handed down in the imprint of his associates and successors.

—The remains of Sergeant Floyd were reinterred at Sioux City on August 20, in the grave where they had been discovered last June. His skull, of which plaster casts had been secured, was enclosed in an urn made for the purpose, with inscriptions cut into the material. With the skull was placed a copy of Floyd's journal, which he had kept up until the second day before his death, and which, as printed last year by the American Antiquarian Society, was the first narrative of the Lewis and Clark expedition that came from the press as its author wrote it, unmarred by editorial improvements. The day was hot, but a crowd, clustering around the grave, hung like a swarm of bees all over the narrow and sharp bluff. Prof. James D. Butler of the Wisconsin Historical Society had brought from the archives of that association the original of Floyd's Journal, which he held in his hand while delivering a funeral discourse. Other speeches were made; the urn and a casket containing other bones were deposited in the grave among decayed fragments of the Floyd coffin. The spot was marked by a slab of limestone about 8x3 feet and a foot thick, on which the following legend had been engraved: "Sergeant Charles Floyd, died August 20, 1804. Remains removed from 600 feet west and reburied at this place May 20, 1857. This stone placed August 20, 1895." In the evening Dr. Elliott Coues, editor of the admirably painstaking reprint of Biddle's narrative based upon the journals of Lewis and Clark, delivered a lecture on the expedition, which he summarized and celebrated as "our national epic of exploration," and was followed by Prof. Butler with a plea for some grand memorial in honor of Floyd.

—The languishing condition of the book trade in France is discussed by M. Albert Cim in the *Revue Encyclopédique* of July 15 and August 1. He confines himself mainly to new publications of the size published at 3 fr. 50c., and usually sold for 2 fr. 75c. Considering first the proper season for launching books on the market, he observes that formerly October was the favorite month, as marking the end of the vacation; but the present preponderance of opinion inclines in favor of March, April, and May, for a variety of reasons. People have no time to read in winter, being taken up with theatres and social duties, while, in summer, book-buyers, consisting mostly of ladies, are at a loss what to do with themselves, and have to read as a last resort. Then, again, books published in October and November have hardly appeared before they are driven out of view by the rising tide of gift-books that floods the book-stores in December; and when the tide has ebbed, they have already lost the charm of novelty, so that they are unable to compete with the fresher harvest of January. In like manner the newspaper reviews of books published in the autumn have to stand over till the new year to make room for notices of the holiday publications which have the right of way. And at this point M. Cim takes up the question as to what is the efficacy of newspaper notices of new books. Twelve or fifteen years ago a puffing notice, an "echo," on the first page of one of the leading journals was amply worth to a publisher the 300 or 400 francs that he had to pay for ten lines. Ten years ago the advertising manager of Hachette & Co. said to M. Cim: "As soon as an article on one of our books appears in the *Journal des Débats* (which has a circulation of only 9,000 copies), we notice the effect in the calls for copies the same evening." But the thing was overdone, and now the public declines to be fooled by the most elegant "derangement of epitaphs." As for the more literary book reviews, they have

ceased to appear. Publishers generally send at least two copies of their publications to every journal, one for the manager and one for the reviewer. These copies are always accompanied by a ready-made puffing review, usually prepared by the author himself, and bearing the request, "Please insert." By inserting this notice the manager saves the salary of the reviewer, and can keep both copies of the book. It may be noted, however, that in many cases the reviewer draws no pay at all, and gets nothing but the book.

—Among various other reasons for the decline of the reading habit, M. Cim mentions the bicycle fever, which has also injured the business of the theatres, cafés, etc.; the quantity of reading-matter furnished by the newspapers; the excessive production of books, many of which are published for account of the authors, who are usually out of pocket by the venture. The booksellers have endeavored to arrest the decline of their business by forming a syndicate, which has entered into negotiations with the publishers' syndicate with a view to fixing uniform prices and trade discounts, and cutting off the supplies of dealers who undersell. This measure was principally aimed at the large department or dry-goods establishments, like the Bon Marché and the Louvre, which have taken over bookselling and obtain extra discounts by buying large quantities. Booksellers appear to be vanishing in France as rapidly as elsewhere, especially since publishers have begun to announce that they will mail books free of postage on receipt of the regular price. Popular authors, however, do not suffer from the general neglect of literature. Zola heads them all. Of 'La Débâcle' 187,000 were sold, of 'Nana' 171,000, of 'L'Assommoir' and of 'Lourdes' 132,000, of 'La Terre' 113,000. He first sells the serial rights to some newspaper or magazine, and, when his novels appear in book form, he receives a royalty of 75 centimes (15 cents) per copy. The customary royalty is 10 per cent. of the gross retail price, but occasionally rises as high as 60 centimes for volumes at 3fr. 50c.

—A German translation of Freeman's 'History of Sicily,' by Bernhard Lupus of Strassburg, of which the first volume has just been published (Leipzig: B. G. Teubner), is noteworthy for the close fidelity of its rendering, which is attained without sacrificing idiomatic ease of style. It is, indeed, a readable and attractive book, and its literary value is even greater than that of the original, inasmuch as it embodies a number of rectifications and additions in Freeman's appendices, and contains a fuller index, as well as more complete maps. Thus, for Freeman's general map of Sicily it substitutes Kiepert's, which contains more names of places. The translation has one peculiarity which is due to Freeman's diffuseness of style. It is generally assumed, and with justice, that the English language is more concise than the German, and can express the same meaning in fewer words; in the book before us the reverse is sometimes the case. Thus, in one instance the translator uses fourteen words to render what Freeman needs eighteen for, in another thirty-eight German words give us everything that Freeman said in forty-eight. Even a German *Gelehrter*, however, is not quite infallible, and there are occasional minor slips, as when "countless" is translated "endlos," instead of "unzälig," or "zahllos"; but these are unimportant and infrequent inaccuracies. Five volumes are promised, covering the period from B. C. 735 to 241, all that Freeman finished; a supplementary sixth volume will treat of the Norman conquest of Sicily as far as Freeman completed it. Expected works by Adolf Holm, Lothar von Heinemann, and Ettore Pais will probably complete the story that Freeman left half told. Of the mechanical execution of the book it is enough to say that it is worthy of the great reputation of Teubner.

—*Hamlet's* brutality to *Ophelia* is perhaps the hardest thing to understand in Shakspere. The editors and critics are baffled by it. The players have met the difficulty variously, but only by dint of interpolated action. Now comes a little book with an explanation which looks paradoxical, but which is so logically and persuasively presented, and with such appeals to evidence, that one is inclined to accept it and even to wonder if it has not always been one's own opinion. We refer to Mr. John Corbin's 'The Elizabethan Hamlet' (London: Mathews; New York: Scribners). Mr. Corbin proves—we think this is not too strong a word—that in the lost pre-Shaksperian "Hamlet," ascribed by Sarrazin to Thomas Kyd, the assumed madness of the hero had a comic aspect. In explaining why this is so, he throws light on the temper of an Elizabethan audience towards insanity and physical suffering. We are thus prepared to assent when, reminding us of Shakspere's ways in making over an old drama, he concludes that, in the first draught of Shakspere's "Hamlet," some traces of this archaic element of brutal comedy were retained, and that these were not refined out of existence when, in the later version, the character of *Hamlet* was deepened and the whole play ennobled. Mr. Corbin's procedure is scientific, and gives him occasion to discuss many questions of sources and versions. Into these we cannot enter in a brief notice. Though recently issued, the essay has already raised a very pretty debate, the progress of which we shall watch with interest.

COURTHOPE'S HISTORY OF ENGLISH POETRY.

A History of English Poetry. By W. J. Courthope, M.A. Vol. I. The Middle Ages: Influence of the Roman Empire—The Encyclopædic Education of the Church—The Feudal System. Macmillan. 1895.

ANY extended work on English literature from the pen of a critic so able as Mr. Courthope would call for more than passing notice. The volume before us, however, will attract unusual attention, for it deals with a period not heretofore regarded as this author's peculiar domain—the Middle Ages. No one could doubt from what point of view Mr. Courthope would contemplate his subject. His creed was laid down some ten years ago in his brilliant, if partisan, 'Liberal Movement in English Literature.' Indeed, the 'History' now beginning is an attempt to carry out in elaborate application the principles set forth in this earlier work—particularly in the lectures on "The Conservatism of the Eighteenth Century" and "Wordsworth's Theory of Poetry." Holding that all great poetry expresses the thoughts and feelings not merely of the poet, but of his people or his time, Mr. Courthope rejects as a critical process the method of "appreciation," or, as he phrases it, the method "which seeks to explain the character of all masterpieces of literature and art by personal sympathy and intuition." Such a method seems to him a kind of divination. Its results, therefore, are more likely to reflect the idiosyncrasy of the diviner than to reveal the truth. It is the business of the literary historian not so much to furnish biographies with appraisements and specimens as to define the influences, foreign or native, to which literature has been subjected, and to trace their fluctuations from age to age. These influences are, in Mr. Courthope's view, identical with those to be traced in political, religious, and social history; for the poet is, to him, rather the spokesman or interpreter than the creator, and utters not his own message, but the message of his time. In literature, as in politics, Mr. Courthope has a deep distrust of individualism and innovation. This distrust, besides making his general theory of poetical activity somewhat mechanical and depressing, affects his historical perspicacity and his sense of proportion. Constantly on the alert to detect a reason for the form or the matter of poetry in the thoughts or manners of a whole people or a class, he habitually underestimates the influence exerted by a great poet on his contemporaries and successors: His abrupt rejection of Gray's classification of English poetry on the ground that "the 'schools' of which [Gray] speaks existed only in a metaphor borrowed from the art of painting," illustrates the tendency to which we refer. Another illustration will be observed in his chapter on the Early Renaissance, where the distinctly literary influences at work are not duly emphasized in comparison with the stress laid on the political movements of the time. However, when all deductions have been made, the method pursued by Mr. Courthope is a sound one. It is well that the continuity of literary tradition and the essential unity of all literary study should be strenuously insisted on, particularly now, when teachers and educational theorists are prone to overlook this unity and to foment an illogical opposition between one department of literary study and another, setting up English, for example, against Greek, or the modern languages against the ancient. If Mr. Courthope finishes his 'History' in the spirit in which he has begun it, its general effect on the study of literature cannot fail to be good, whatever flaws may appear in the execution of the work.

After defining his method and the scope of his book, Mr. Courthope proceeds to "The Character and Sources of Mediæval Poetry." Then follow two chapters on Anglo-Saxon and Anglo-Norman poetry. In the second of these the author attempts a history of the Saxon-Norman fusion of race so far as that fusion affected language, national character, culture, and imagination. This brings him to "The Early Renaissance." We have then a chapter on Langland, another on Chaucer, and one chapter each for "The Epical School of Chaucer," "The Progress of Allegory," "The Rise of the Drama," and "The Decay of English Minstrelsy." "A Retrospect" collects the threads.

The author makes every effort to reduce this varied material to order. Yet, in spite of his long preface, his careful "analysis of contents," his numbered headings, his repetitions, and his references backward and forward, the demonstration is not always easy to follow. Not that one's attention flags, for there are no dull pages in the volume. The difficulty comes rather from a kind of vagueness or wavering, produced—to adopt Mr. Courthope's favorite form of statement—by three causes: (1) a fondness for division and subdivision, resulting in a complex expository machinery; (2) a habit of conducting the argument in terms of abstractions; and (3) an inaccurate and frag-

mentary acquaintance with the details of the subject. Of these qualities the first two are perhaps inseparable from Mr. Courthope's method; it is their combination with the third which does the mischief.

The qualities to which we refer are all illustrated in the extremely interesting chapter on the "Character and Sources of Mediæval Poetry." In this chapter the author argues brilliantly in support of his main thesis of literary continuity. He admits no hiatus between the decay of the Hellenic culture and the revival of learning. He denies that Hellenism and Christianity have been opposed to each other in the intellectual development of the world. Christianity, he contends, alone prevented the fabric of Roman civilization from falling to pieces. The Church, necessarily succeeding the effete Empire as a centralizing force, was the only power that could perpetuate any kind of culture. In modifying the encyclopædic education of later paganism to suit the needs of a transformed social and political order, it operated not as a destroying but as a conservative agency, for it kept alive some faint memory of the classic traditions while society was settling itself upon a new basis. Thus, when time was ripe, the revival of learning came by an easy and natural process, and not as a volcanic outburst of forces long held in repression. So far Mr. Courthope's argument —which will be recognized as identical with that in his essay on the "Conservatism of the Eighteenth Century"—is developed with brilliancy and vigor. But when he attempts to take the next step, and to account for "the extraordinary difference between classical and modern poetry," he loses his footing. His labored exposition, worked out with a complicated series of subheadings, and presenting the appearance of the utmost fulness, is in fact confused both chronologically and genetically, vague at points where sharp definition is imperative, and excessively incomplete. He has no competent knowledge of the difficult questions that obscure the origin and development of "popular" poetry and its relations to the poetry of art. He talks much of the *chanson de geste* and the *roman*, but he has no clear idea of their genesis and their place in literary history. The account given of the Charlemagne cycle is a shred; that of the romances of the Round Table is pathetically futile. He informs us that "the simple Teutonic *lied*, or lay, branches into such various kinds of epic composition as the *dit* (dicere), the *fabliau* (fabula), the *roman* (romanus), and such lyrical varieties as the *ballad* (balla), the *sonnet* (sonare), the *chanson* or *canzone* (canere)." And in general he exhibits such ignorance of the achievements of modern scholarship as must deprive his 'History' of all claim to be referred to as authoritative.

This unfavorable judgment is only confirmed when we examine the remainder of the volume. The treatment of Anglo-Saxon and Middle English is conspicuously incompetent. At the outset we are confronted with the following dictum: "Between the poetry produced in England before the Norman Conquest and the poetry of Chaucer there is absolutely no link of connection. In the poems of the Anglo-Saxons the general reader finds an expression of the mind of a nation cut off from the long tradition of civilization almost as completely as the Britons before they were brought under the Roman Empire." Though this utterance reveals itself later as merely a rhetorical exaggeration into which Mr. Courthope is betrayed in his revolt against those scholars who unduly magnify the Anglo-Saxon element in our literature, still the exaggeration is so monstrous as to make us approach the chapter on Anglo-Saxon poetry with some disquietude. Nor are our misgivings groundless. The superficiality displayed is not creditable to a writer of Mr. Courthope's standing. The errors, omissions, and fantastic disproportions of the chapter are hard to reconcile with a conscientious effort to get at trustworthy sources of knowledge. The solemn excursus on the composition of 'Béowulf' and the uninstructed notes on Cædmon will amuse such of our readers as happen to be acquainted with the present state of information on these subjects. The last few pages of the chapter are devoted to a sketch of the "decomposition of the Anglo-Saxon language." This sketch bids defiance to chronology, dialectology, and morphology, and could have been written only by a man profoundly ignorant of Anglo-Saxon and Middle-English as well as of the general workings of linguistic law.

Scarcely more successful are the author's observations on the history of English metre—a subject on which he has expended some time and thought, and to which he often reverts in the course of the volume. To begin with, he knows very little about Anglo-Saxon versification. His description of it is derived from the 'Corpus Poeticum Boreale'; he has apparently never heard of the researches of Sievers, and no echoes of the strife now raging between the two-accent party and the four-accent party have disturbed his studies. With regard to Middle-English metre he is scarcely better informed. When he tries to explain how the preservation or decay of inflections is related to the development of versification, he becomes hopelessly confused. He is also quite unable to distinguish between Latin and French influence on the native measures. A cæsural dot, accidentally misplaced, leads him far astray in his scansion of Robert of Gloucester (p. 150). That the history of Middle-English alliterative verse is unknown to him, except in a fragmentary fashion, is shown both by what he says and by what he neglects to say. The omissions we have no space to record; of the distortions the closing paragraph of the chapter on Langland may serve as an instance. The sections on the metre of Chaucer and his successors require correction throughout. How patient the corrector must be, our readers can infer from the following sentence (p. 340):

> "In a word, the syntax of Occleve, as well as the prosody of Lydgate, shows the tendency of the native Anglo-Saxon element to revolt against those foreign laws of grammar and harmony which had been imposed on the English language by the cultivated genius of Chaucer."

This single utterance betrays such misconceptions that it is almost enough to prove Mr. Courthope unfit to discuss Middle-English Literature, and indeed much of his discussion will not pass muster. In the first place, he is unable to read the language correctly, as his amusing errors in translation show.* Then he has too narrow an acquaintance with the literature of the period to enable him either to select with the best judgment or to generalize soundly. From the Conquest to Langland he treats Middle-English poetry mostly in connection with that of the Anglo-Normans, and in neither field is his guidance safe. He has not succeeded in defining the literary relations of the Anglo-Normans to France, or in distinguishing Anglo-Norman influence on English literature from French influence. He is almost equally at fault with regard to the literary relations of Wales with the Anglo-Normans and of the Normans with Brittany. The vexed Celtic question cannot be settled by referring to Pomponius Mela, Venantius Fortunatus, and the Abbé de la Rue! His "three well-defined stages" of Anglo-Norman poetry are not quite intelligible. In describing "the second and most important" of them, "extending from the close of the reign of Henry II. to the reign of Henry III.," he involves himself in hopeless confusion, especially with regard to the prose romances of the Round Table. "The third stage," he continues, "is marked by the works of Marie de France." One is somewhat startled at first by this chronological overturn, but the reason for it is soon apparent: Mr. Courthope has had the misfortune to follow obsolete authorities, and hence he has put Marie in the reign not of Henry II., but of Henry III.—a blunder that brings on serious consequences. It would be hard to devise a phrase less true to the facts than that in which he defines Marie's "great merit as a poet" as "the skill with which she has blended the opposing elements of the *fabliau* and the romance." The *fabliau*, we may add, has been already described as "the offspring of the primitive genius of the tribesman brought into contact with city life"—a bizarre definition, which makes the character just given to Marie seem the more perverse.

After this, one is not surprised to find Mr. Courthope's account of Middle-English poetry distorted and incomplete. One serious defect is his neglect of the metrical romances. If he had known something of these interesting compositions, he could not have failed to perceive the important bearing which several of them have on matters with which his book is vitally concerned. Some knowledge of 'Ywain and Gawain,' for example, would have given him light on the literary significance of Chrétien de Troyes. The mere reading of 'Gawain and the Green Knight' would have suggested to him a number of important observations which we miss at present. How much his chapter on Chaucer suffers from his neglect of this class of Middle-English poems our readers will easily imagine.

Under the rubric of "The Early Renaissance" Mr. Courthope has contrived to include a consideration of Dante, Petrarch, and Boccaccio, of the 'Roman de la Rose,' of Wright's 'Political Songs' in Latin, French, and English, and of Laurence Minot. This is accomplished by means of an excessively vague definition. To him the Renaissance is a complex movement arising from "(1) a general recognition of the authoritative theory of life in church and state; (2) an equally widespread sense that this theory was not working in harmony with the actual requirements of human society; and (3) an attempt to give expression in the vernacular speech to the thoughts awakened by the sense of discord." The treatment is ingenious and suggestive, but it illustrates in a striking manner the dangers of the author's method. He is so bent on making the Renaissance out to be the inevitable consequence of slowly and obscurely working political and social causes that he undervalues the workings of another cause of a less occult character: we refer, of course, to deliberate literary imitation inspired by the wish to emulate the ancients. We must confess, too, that we doubt the soundness of a definition which allows one to introduce Laurence Minot as an exponent or even an unconscious forerunner of

*See, for example, pp. 130, 132, 133, 188, 189, 241. The strange fashion in which an extract from the 'Ormulum' is printed at p. 123 may be compared with the alleged Anglo-Saxon that disfigures pp. 106 and 244.

the Renaissance. Apart from questions of theory, however, the chapter contains one huge error in a matter of fact. We refer to the Courts of Love, which Mr. Courthope regards as highly significant phenomena, and which occupy a correspondingly important position in his discourse. Unfortunately, the latest news which he has heard on the matter is some seventy-five or eighty years old, and in the meantime scholars have not been idle. Thus it happens that his remarks are written—to repeat the words of a distinguished Italian whose elegant brochure on this subject would have been a revelation to Mr. Courthope—"con un candore di fede, un' ignoranza d'ogni dubbio, degni davvero del paradiso."

From Laurence Minot the author turns directly to Langland. A comparison of 'Piers Plowman' with the 'Divine Comedy' is the medium through which he looks at the art and purposes of Langland and at his place in our poetry, and not unnaturally his views are considerably affected by the nature of the medium. Still, there are many good remarks in the chapter, and the comparison, though the points of similarity and of contrast are occasionally forced, was on the whole worth making. Unfortunately, the author has not entirely recovered from the long-prevalent delusion which regarded Langland as a kind of belated Anglo-Saxon addressing the vulgar in the faltering metrical accents of a "last minstrel." Two curious blunders require a word. One is the notion that "Langland derived his conception of allegory mainly from the Miracle Plays." The other is contained in the remark that in the thirteenth century "no French poet seems to have raised his voice against the intolerable exactions and exaggerated luxury which attended the decay of feudalism." Mr. Courthope has heard of Eustache Deschamps—for he refers to his *ballade* to Chaucer—but apparently he knows him as a panegyrist only.

The long chapter on Chaucer is far from satisfactory. We have already adverted to the author's false conception of Chaucer's relations to the English language and English metre. His errors on these points are not merely discreditable in themselves; they seriously affect the accuracy of his general estimate of the poet. It may as well be said in plain terms that Mr. Courthope is no Chaucerian. He is but imperfectly acquainted with the work of his predecessors, and he does not always use with accuracy such sources of information as are accessible to him. Further, he does not know Chaucer's language quite well enough to read it without some limping sense of its remoteness. On no other theory can we account for the amazing assertion that "Chaucer rarely attempts the pathetic," and that "when he does, he usually has recourse to the machinery of interjections and apostrophes, by way of hinting to his audience that it is time to display a little emotion." Chaucer's humor, too, does not always reveal itself to him. Witness the solemnity with which he surveys "The House of Fame," and the result of the survey—the statement that "the poet wishes to present a moral and metaphysical view of the world in emulation of Dante." Another discovery is that the impatience of the Knight and the Host in the "The Monk's Tale" indicates "the dislike with which [Chaucer] and a large number of his countrymen regarded the educational discipline of the cloister." Frivolous is the remark that in the character of Pandarus "Shakespeare had afterwards merely to fill in the dramatic outline Chaucer had sketched." To call Chaucer's carefully finished delineation "an outline" is bad enough, but to imply that Shakspere's Pandarus is the same character as Chaucer's Pandarus is to forswear criticism.

We must hurry over the remaining chapters. In "The Epical School," Gower, Lydgate, and Hoccleve are discussed at some length, but no new light is thrown on the period, and there are, as usual, grave errors in matters of detail. We may specify the account of the supposed quarrel between Chaucer and Gower, and the excursus on Lydgate's verse. In the next chapter Mr. Courthope tries to show that "the development of allegory reflects very accurately the internal changes that modified the structure of society and men's system of thought during the fourteenth and fifteenth centuries." The attempted demonstration is incomplete and not well-proportioned, and it is somewhat hampered by the perplexing machinery which the author insists on employing, but it contains a number of excellent observations. Of "The Rise of the Drama in England" the less said the better. It is one of the weakest chapters in the volume. The author has nothing new to tell us; he has not even presented a good account of what is already known.

More remarkable is "The Decline of Minstrelsy" in England. In this, with unwearied confidence in the exhaustiveness of his researches, Mr. Courthope undertakes to treat the extremely difficult subject of minstrels—scalds, *scopas* (*scôpas*, as he prints it, holding fast to an obsolete etymology), jongleurs, mimi, ballad singers—what not?—to trace the history of the metrical romance, and finally to unveil the whole mystery of the English ballad. We shall not follow Mr. Courthope in his wanderings. His conclusion, as we should expect, is to the effect that the ballad, "so far from being a spontaneous product of popular imagination, was a type of poem adapted, by the professors of the declining art of minstrelsy, from the romances once in favor with the educated classes." No doubt this conclusion, announced with much assurance by so distinguished a littérateur and supported by the appearance of learning, will be widely quoted and widely accepted. As a matter of fact, however, it is of no value. Mr. Courthope's acquaintance with mediæval literature, with Germanic and Romance philology, and with the theories and reasonings of scholars on the subject of *Volkspoesie*, is too slight to entitle his opinion on any of the subjects discussed to more weight than that which attaches to the *aperçu* of a clever amateur. The whole chapter, we regret to say, has no scientific importance.

We have been forced to criticise the work of Mr. Courthope with some severity; but we do not wish to belittle its merits. It abounds in good critical remarks and instructive generalities; it stimulates thought; it follows an enlightened method; it is written in a finished and attractive style; it breathes a spirit of admirable moderation. These are qualities which insure the book an influence alike extensive and lasting, and it is with this fact in mind that we have allowed our critique to occupy itself mainly with the author's limitations. The volume deserves a place in the library of every lover of letters, but it cannot be resorted to as a storehouse of trustworthy information. We look with some eagerness for the continuation of the work, for, in the parts that are to follow, the author will be upon ground with which he is well acquainted.

HARTMANN'S ESSAYS.

The Sexes Compared, and Other Essays. By Edward von Hartmann. Selected and translated by A. Kenner, M.A. London: Swan Sonnenschein & Co.; New York: Macmillan. 1895. Pp. xl, 164.

It is difficult to avoid the supposition that the reader of a respectable publishing-house must have been nodding, or even half asleep, when he decided to issue this volume of essays. Neither in selection nor in execution does the venture seem to have been a happy hit. Among the subjects discussed are "Our Relation to Animals," "The Need of Books," and "My Relation to Schopenhauer." It is difficult to imagine who the readers are that will be interested in a repetition of the self-evident considerations which can be brought to bear against the anti-vivisectionists; in an argument for the reading of better books which involves the undertaking of the bookselling business by the post-office and the persuading of young men to postpone all participation in politics and even all reading of the newspapers until "about" their thirtieth year; and at the same time in the fact that between the Abstract One-Being and the subjective-ideal phenomena of consciousness there exists for Hartmann the objective-real (transcendental) phenomenal world of many individuals, while Schopenhauer, on the other hand, goes in for an internal development of the one will into several non-temporal acts of will, or intelligible characters of species and individuals. And it is equally difficult to imagine how any one who might have been interested in these essays in their original tongue could be able to preserve a serious frame of mind in reading this translation.

As a compendium of curiously meaningless sentences, the book is not without its charm; it would be unfair to our readers to withhold from them a taste of the good things which it contains. We are told not only that young men should shun newspapers, but also that "older men must cease to conveniently invest periodic literature with unmerited value." It is suggested that for the needy author a society should be formed "which will subject the manuscripts sent in to an honorary examination, and publish at its own cost those deemed worthy of publication." The imagination loses itself in trying to make out the nature of this "honorary" examination. We hear of a "nervous world-disgust, with its sickly harmoyance," of "the cloak of a transcendant religionism," and of a pessimistic theory which ends in Diskoly. "It would be very desirable to solve this technical problem, namely, to discover a method of issuing smaller editions, say 100 to 500 copies, which should be cheaper than the letterpress and at the same time present the usual appearance of small and large type." "Young men have never before put so high a price on their bachelorhood, and hope they might be spared the disappointment of marrying a poor maid." "For (as in England) it is the private house which enables one to keep a library for oneself. . . ." "It would also give to the school the opportunity of furthering such studies, as the history of art, with real use." "The cry against the increasing mortgages of large landed estates should be directed against the impetus given to the rapid rise in the prices of goods, by the advance in the habits of those families directly or indirectly deriving their daily bread from them."

And this is the standard which Mr. Kenner

(mistaken name!) attains in the translation of poetry:

"Longing is the world's great secret,
All creation's growth and glow;
Towards everlasting concord
One eternal effort show."

There is no doubt that the interest in German metaphysics is on the wane in Germany. The vigorous young men of the universities devote themselves more and more to hard and close-grained science; in particular, those who have the philosophical turn of mind have a feeling of uneasiness if they have not had a good grounding in experimental psychology, and sound German thinkers are less and less imposed upon by the all-embracing and incomprehensible "systems" of the metaphysicians. A large part of the admiration which the plain scientific man has felt for them has come from the fact that they can keep their head in the midst of considerations of a tremendous degree of abstractness and complexity. That they keep their head wholly *straight*, no rival metaphysician, at least, will for a moment admit. That their logic is sometimes childishly weak, the scientific man cannot know, for he has no time to read their books; but their safeguard lies in writing nothing but metaphysics, and to issue volumes of popular essays is nothing less than reckless carelessness on their part.

It would be a grateful task to show up the tissue of unrealities and inconsequences which constitute Hartmann's proof that his "pessimism" is a comforting doctrine, but it would take too much space. One instance, however, of the course of the reasoning may be given, because it is so extremely typical of metaphysical reasoning in general. He says: "Selfish love *forgets* that in the posthumous life the countless souls are as indistinguishable from each other as the pebbles on the seashore." Monism, that form of it which accepts a future life and a loss of individuality, is a speculation which it may please some minds to make, but it is not a thesis of which any one human mind can hope to convince any other, nor is it a thesis which offers much interest to those who like to keep their grounded beliefs distinct from their poetry. But Hartmann, having offered a loose argument or two in favor of it, treats it as if it were an established truth, and proceeds to berate his opponent for having "forgotten" to include it among his premises. We must make room also for this passage (correctly summed up by the translator), which is enough to make one's head swim:

"We must base our conduct to [*sic*] animals on justice and not on sympathy. It is a mistake to think that animal torture is due to the deadening of the sympathetic sense. On the contrary, without a powerful capacity for feeling the pains of others, no pleasure would be derived from these barbarously depraved practices. Sympathy, then, is a false principle of conduct, and must be displaced by justice."

That Hartmann is no more capable of comprehending either the nature or the results of science than the scientist is of reading Hartmann, will be sufficiently evident from a single quotation, probably the most delicious scientific statement that has ever yet been printed: "Owing to the senseless bloodletting of the last century, we have become an anæmic and chlorotic race." And as a contribution to methodology, which it is to be hoped that future metaphysicians will take warning by, we must reproduce the following *argumentum ad hominem* in favor of building up one's system by inductive reasoning rather than by deductive:

"This difference is of the greatest importance. For as soon as we assume the fundamental principle of a deductive system, we must, willy-nilly, accept every part of it which has been demonstrated to be the result of a formally correct syllogism. In an inductive system, however, we need only ascend the pyramid as far as we like. . . . It is this crowning point of my system which has led to a condemnation and a refutation of the whole of my philosophy, notwithstanding that this proceeding could only be justified if my system were deductive and not inductive."

It will readily be imagined that Hartmann's discussion of the woman question is antiquated in the extreme. He considers that every woman has failed in the performance of her duty if she has not become the mother of eleven children—"two before the twentieth year, five in the twenties, three in the thirties, and one in the forties—eleven in all"; that "the postponement of the average nuptial age of girls till the twenty-seventh year is unnatural; . . . several children which might have been produced will forever be lost to the world"; and that "maidens cannot learn too early that it is . . . their task to add to the state as many sound and well-trained citizens as they are capable of producing, so that it may engage triumphantly in the struggle for national existence." He forgets the terrible strain which would be put upon individual existence were all "maidens" to take his advice seriously. Most modern German writers, too, consider that the serious economic evils under which Germany already labors are due to over-population, and Hegar, who has written the most important book on the subject, speaks wholly in favor, for Germany, of what he calls the *Zwei Kinder System*, which has so long prevailed in France. Hartmann believes that the chief source of present-day ills is girls' high schools, and he would gladly "put an end to this system with one stroke, and set our daughters back to the level of education with which our grandmothers were satisfied." A girl's school life renders her too refined and cultured to perform "her natural and social [*sic*] duties—nursing and housework." "From the sixteenth to the twentieth year she is therefore compelled to spend her time in idleness, if she is not engaged in scientific or artistic studies, which render her still more unfit for her future occupation as housewife." And one-third of the volume is devoted to berating women for not doing all their own housework, with the occasional assistance of a charwoman for the roughest part of it. If German women, with the absolute absorption which they show in the labors of the household, are still not able to satisfy German philosophers, they are indeed to be pitied. The Germans do not know that half the pleasure of life consists in social intercourse between men and women of a common degree of intelligence. And Hartmann has not one word to show that he is aware of the belief which other nations hold, that part, at least, of the function of the mother is to see that her children grow up to be graceful, intelligent, and high-minded human beings. What interest can his treatment of the subject have for English-speaking people?

The Story of the Expansion of Southern Africa. By A. Wilmott. London: T. Fisher Unwin; New York: Putnams. 1895.

THE great British colonies of Australia and South Africa and (to Europeans) Canada have now somewhat the same position in the eyes of the world that the United States had in the eyes of Europe early in the century. They are looked on as rather unknown regions, occasionally visited from motives of curiosity, where there are great tracts of land inhabited by a few not over-civilized settlers, and where the cities, like the fashions, are merely rough copies of better models. Australia vaguely suggests convicts, sheep-farms, and kangaroos; South Africa, diamonds, gold-mines, and Zulus. Their history or politics appears to have little interest or importance for the rest of mankind.

Of the three, South Africa is the least known, yet it well deserves attention, for there is growing up there a great state (or states) which will some day occupy a prominent place among nations, and which will have problems to solve that have seldom been encountered elsewhere. Mr. Wilmott's book is a short history of this country from the time of its discovery by white men to the present day. The volume is well worth reading for the importance of its subject, even if it does not suggest that its author is an eminent historian. He tells his story simply and dispassionately. Though an Englishman, he is just to the Dutch, recognizing the mistakes and sins of the British Government, such as the annexation of the Transvaal or the robbery of the West Grigua-Land diamond-fields from the Orange Free States. To the natives he is a little less fair. It may be true that "it was also found, later on, that the teaching of Christianity was impossible, and that white men could not occupy the country unless the power of the savage was broken and his military organization shattered." The question remains as to the morality of propagating Christianity and civilization at the point of the sword. Likewise, remarkable as Mr. Cecil Rhodes certainly is, he is hardly an ideal philanthropist, and though the Mashona expedition was composed of skilful and daring pioneers, they do not deserve more credit than many others who have risked and accomplished much in the search for gold. As for the Matabele war, it was no doubt bound to come sooner or later, but the disparity between the spears of the naked savages, however numerous, and the Maxim guns of their adversaries, was too great to make the campaign either interesting or admirable. Again, Lo Benguela was a savage like many another, the creature and victim of his circumstances, who will soon be forgotten. The following remark shows a curious idea of perspective: "Extraordinary repetitions and analogies in history! Chaka was the first Napoleon of Southern Africa, Lo Benguela was the third." This black third Napoleon is soon after compared to Cato because he may have asked a friend to kill him.

South Africa is at the same time one of the oldest and the newest of colonies. The Cape of Good Hope, which was discovered by the Portuguese in 1486, was settled first by the Dutch in 1652. For the next two centuries its story was that of similar settlements—good and bad governors, hardships, discontents, wars with the natives, etc. The most important event during this period was its conquest by Great Britain in 1795, and definitively in 1806. Gradually the boundaries of the province spread, and the white population increased. Dissatisfied Boers who trickled into the wilderness founded Natal, then the Orange Free State, and the Transvaal Republic, into each of which British authority followed them to confiscate their independence, though the two latter have since regained it. The Zulu war in 1879 broke the power of the most dangerous native state, while the discovery of the Kimberley diamond-mines in 1875 proved a great source of wealth. But the recent history of South Africa, its aroused tenfold rate of activity and progress, dates from about ten

years later. When the diamond industry made a profitable "Trust," gold in immense quantities was discovered in the Transvaal, and then further north fresh territories were rapidly annexed. Zambesia, or British Central Africa, was founded, boundaries were regulated by treaties with Germany and Portugal. Mashona-Land was occupied by a bold expedition, the Matabeles were crushed. Now South and Central Africa (*i. e.*, British, with the small Dutch States) stretch in one united region from the Cape of Good Hope to the neighborhood of the great lakes, and "the country from the Cape to the Zambesi alone embraces an approximate area of one and a quarter million square miles, and this is larger than British India." Much of this immense expanse possesses a temperate climate. It contains fertile land, great rivers, valuable mines; in fact, all it appears to need for greatness is a sufficiently large white population, even if we Americans are too familiar with such descriptions as "a paradise for the downtrodden struggling men and women in the gloomy, overcrowded countries of the north of Europe," to be deeply impressed by them.

It would seem as if such a land must have a great future. At the same time it will have difficulties of its own to deal with. As in Canada, the white population is of two nationalities, who by no means always get on smoothly together. But for the sudden recent immigration, the prolific Dutch element might probably have preponderated in the end; now the chances are rather in favor of the English. Then, too, there are foreign rivals, for if it is improbable that Portugal will ever do much with her possessions, the Germans, little as they have accomplished in Southwest Africa so far, are intelligent and determined. They may become powerful neighbors some day, and are sure to claim a share in any liquidation of Portuguese territory. Far more serious is the negro question. The black races of South Africa, once almost six times as numerous, "are now multiplying in a quicker ratio than white people." Of the perils of this situation we have recently spoken.

Louisiana Folk-Tales, in French Dialect and English Translation. Collected and edited by Alcée Fortier. Boston: Houghton, Mifflin & Co. 1895. [Memoirs of the American Folk-Lore Society. Vol. II.] 8vo, pp. xi, 122.

THE American Folk-Lore Society began last year the publication of an annual volume of memoirs, the first of which, already noticed in this journal, was devoted to the folk-tales of Angola. These stories from the west coast of Africa were not inappropriately published in the memoirs of the American Folk-Lore Society, as it has been shown that a considerable part of the folk-lore of our own negroes was brought by their slave ancestors from that country. The second volume of the society's memoirs continues, as it were, the first, and presents an interesting and valuable collection of Louisiana folk-tales.

The collector, who is professor of the Romance languages in Tulane University, has heightened the value of his work by giving the original Creole text as well as an English translation. He says in his introduction: "It is very difficult to make a complete collection of the negro tales, as the young generation knows nothing about them, and most of the old people pretend to have forgotten them." This is the common experience of collectors, especially where they are of a different race from the story-tellers, and it requires great tact and perseverance to overcome the narrator's shyness. Still, there is no doubt that the popular literature of the Indians and negroes is rapidly disappearing, and that it was time for some organized body like the American Folk-Lore Society to save what it could from perishing.

Of the forty-one stories in the volume before us, fourteen have already been published in the Transactions of the Modern Language Association of America, 1885, and in the *Journal of American Folk-Lore* for the same year. The twenty-seven stories which appear here for the first time in print are divided into fifteen "Animal Tales" and twelve "*Märchen*," and the names and addresses of the narrators are carefully given in the notes, where may be found a few parallels from European folk-lore. The editor has expressly disclaimed any attempt to make a comparative study of the tales, and they are presented to folk-lorists as material for study. It would, however, have been a great advantage if the American variants and parallels at least had been given. This is the method pursued by Pitrè in his grand collection of Sicilian folk-lore, and is undoubtedly the correct one. The collector, for many reasons, should be familiar with the field in his own country; he cannot always be expected to know that of other countries. Nor would Prof. Fortier's task have been difficult or protracted, as few of the new stories have parallels, so far as we have found. We have noticed, however, the following: No. i, "The Elephant and the Whale"=Hartt ('Amazonian Tortoise Myths') p. 20, Smith ('Brazil and the Amazons') p. 545, Harris ('Uncle Remus,' 1881) p. 111; Nos. iv, xiii, "Compair Lapin and Compair L'Ours" and "Compair Lapin's Godchild"=Grimm, No. 2, "The Cat and Mouse in Partnership"; No. xvi, "King Peacock," *cf.* Grimm, No. 53, "Little Snow-White"; No. xvii, "The Singing Bones"= Grimm, No. 28, "The Singing Bone"; No. xviii, "Jean Sotte," *cf.* Grimm, No. 22, "The Riddle"; No. xix, "The Devil's Marriage" is a combination of "Bluebeard" with the theme of "Flight of lovers, and obstacles thrown in pursuer's way"; No. xxiii, "The Men who became Birds"=Grimm, No. 49, "The Six Swans"; No. xxv, "The Basket of Flowers," is the story of the "Thievish Magpie" (*La gazza ladra*); No. xxvi, "John Green Peas," *cf.* Grimm, No. 61, "The Little Peasant." Appendix No. i, "The Tar Baby"='Uncle Remus,' pp. 23, 29; No. ii, "Compair Bouki and Compair Lapin," *cf.* 'Uncle Remus,' pp. 70, 89; No. iv='Uncle Remus' pp. 89, 143; No. vi='Uncle Remus,' p. 34; No. vii=Jones, 'Negro Myths from the Georgia Coast'), p. 94; No. viii, see 'Roman de Renart,' ed. Méon, Paris, 1826, i., p. 29, *cf.* Bleek, 'Reynard the Fox in South Africa,' p. 16, Jones, p. 102, and *Modern Language Notes*, 1890, pp. 129, etc.; No. ix, "The Cunning Old Wizard"=Grimm, No. 98, "Doctor Knowall"; No. xi, "The Talking Eggs," see a Creole story published by L. Brueyre in *Mélusine*, vol. i., p. 43, cited by Fortier when this story was first printed in the *Journal of American Folk Lore*, 1888; and No. xiv, "Give Me," *cf.* Grimm, No. 85, "The Gold-Children."

Some of the other stories contain familiar episodes, as in No. ii, "Compair Taureau and Jean Malin," where an animal (bull) assumes human shape and courts a lady; No. x, "The Tortoise," where the tortoise escapes from the boy in a way which recalls the famous story in 'Barlaam and Joasaph' (see Gaston Paris, *Le lai de l'oiselet*, Paris, 1884); appendix, No. v, "Compair Bouki and Compair Lapin," No. 3, in which the tree opens and shuts like the robbers' cave in the "Forty Thieves." Finally, in No. xiii, "The Golden Fish," we have an incomplete and distorted version of "The King of the Fishes" (see Hartland, 'The Legend of Perseus,' 1894, chapter ii).

The stories in the present collection are not nearly so interesting as those in 'Uncle Remus,' or even in Jones's 'Negro Myths from the Georgia Coast,' but they constitute a very valuable and welcome addition to the stock of American negro tales, and the handsome volume in which they are contained is another evidence of the vitality and intelligence of the American Folk-Lore Society, which richly deserves the support of scholars and patrons of learning.

My Literary Passions. By W. D. Howells. Harpers.

MR. HOWELLS, having achieved eminence "in the line of his highest activity," need feel no concern at his failure as a critic. He can answer "non omnia" when his assailants rage. And indeed the flurry caused by his confession of heretical opinions has pretty well subsided. The republic of letters is not a South American republic. It is in no danger of armed revolt under his banner. The perpetual and necessary swing from the romantic to the "real," and back again to the romantic, has not been retarded or accelerated by his utterances or by the protests of the old guard, "*Yet* all goes well; *yet* all our joints are whole." Hence we infer that the hearty professions of extreme dogma which occasionally enliven the quiet pages of 'My Literary Passions' will not keep the most nervous admirer of Thackeray awake o' nights. They are not dangerous, and they do possess a curious documentary interest. Mr. Howells himself describes his successive enthusiasms as, collectively, a "perennial literary youth." His latest "passion" is as fresh and generous as any that have gone before. Mr. Howells thinks it will be lasting. Perhaps he is right; for his worship of Tolstoy is not merely literary—it satisfies his ethical nature; and one sees, in reading these pages, more clearly than ever, that his critical standards are really ethical standards after all. But the chief interest of the book is not so much literary as autobiographical. Slender as these papers are, and little as they content those of us who would have the author always worthy of himself, they still contain, in fragments, some record of a strenuous and happy boyhood. In this regard they can claim indulgence for their haste and their trifling, and may even challenge a hesitating respect.

Life of Thomas Pinckney. By his grandson, Charles Cotesworth Pinckney. Boston: Houghton, Mifflin & Co. 1895.

THE Pinckneys of South Carolina deserve a fit memorial of their public services in the last century, but it is impossible to give praise to the present Life. The military record of Thomas Pinckney in the Revolution was not of sufficient moment to offer material for a lengthy notice, though it secured him an appointment in the war of 1812. As Minister to England and to Spain, in which latter capacity he negotiated the treaty of San Ildefonso, giving the United States definite and valuable privileges on the Mississippi, he rendered important services, and was successful in dealing with the delicate questions then dividing the nations. As Governor of the State and as Congressman, he stood high in the esteem of

his contemporaries, and had more than one opportunity for promotion at the hands of Washington or the call of party. No matter what office he held or what duty he had to perform, he displayed a ready energy and unselfish devotion that enhanced his reputation and benefited his country. His love of agriculture and his earnest and intelligent efforts to improve methods of culture then in vogue place him by the side of Washington.

Not one incident of Pinckney's career receives adequate treatment in this Life. A very few, hardly a dozen in all, unpublished letters of Pinckney are given. Everything else is a restatement of what was already known, or a curious exaggeration of what is trivial and unimportant. What is called the "Tench Coxe letter" is treated at greater length and with more solemnity than the Spanish mission and the resulting treaty. Yet this letter was one written in a moment of spleen by John Adams, containing a charge of English influence on Pinckney which was beneath notice. None of Pinckney's "state papers," military letters, or despatches are reproduced, and the frequent comparisons between men and events in the Revolution and in the civil war of 1861-'65 are in questionable taste, as they have no immediate connection with the subject. In place of original research, a quotation from Lodge, Dallas, Bancroft, Ingersoll, or Garden is given; instead of original documents, the reader is treated to hasty generalizations, or a crude sketch of contemporary events in which Pinckney took little or no part. In short, it is discouraging to receive such a work in a critical spirit, for it is cast in the historical methods of fifty years ago, neither worthy of the subject, nor, we sincerely hope, of the author.

If the Pinckney papers are in existence (and even of this we are left in doubt), his grandson cannot do better than to print them as they are, and let his ancestor tell his own story. In this way he can confer a lasting benefit upon his family and his State, and give material aid to all sincere students of American history.

BOOKS OF THE WEEK.

SCIENCE.

Beal's Grasses of North America.
For farmers and students. By W. J. BEAL, Professor in the Michigan Agricultural College. 2 vols. 8vo. Copiously illustrated. [*Ready in December.*]

Hertwig's General Principles of Zoology. From the Third Edition of Dr. Richard Hertwig's *Lehrbuch der Zoologie.* Translated and edited by GEORGE WILTON FIELD, Professor in Brown University. About 200 pp. 8vo. [*Ready in October.*]

Kerner & Oliver's Natural History of Plants.
From the German of ANTON KERNER VON MARILAUN, Professor of Botany in the University of Vienna, by F. W. OLIVER, Quain Professor of Botany in University College, London, with the assistance of MARIAN BUSH and MARY E. EWART. 4to. 2 vols., each bound in two parts, $7.50 a vol., *net.* [*Vol. I ready; Vol. II ready soon.*]

MacDougal's Experimental Plant Physiology. On the basis of Oels' *Pflanzenphysiologische Versuche.* By D. T. MACDOUGAL, University of Minnesota. vi+88 pp. 8vo. $1.00 *net.*

McMurrich's Text-book of Invertebrate Morphology. By J. PLAYFAIR MCMURRICH, M. A., Ph.D., Professor in the University of Cincinnati. vii+661 pp. 8vo. $4.00 *net.*

Remsen & Randall's Chemical Experiments. A laboratory companion to Remsen's *Introduction to the Study of Chemistry.* By Prof. IRA REMSEN and Dr. WYATT W. RANDALL of Johns Hopkins University. [*Ready in September.*]

Sedgwick & Wilson's General Biology.
(New and much enlarged edition.) By WILLIAM T. SEDGWICK, Professor in the Massachusetts Institute of Technology, and EDMUND B. WILSON, Professor in Columbia College. 8vo. (*American Science Series, Advanced Course.*) [*Ready in September.*]

Williams's Geological Biology.
An introduction to the geological history of organisms. By HENRY S. WILLIAMS, Professor of Geology in Yale College. 8vo. About 500 pp. [*Ready in October.*]

PHILOSOPHY.

Paulsen's Introduction to Philosophy.
By FRIEDRICH PAULSEN, Professor in the University of Berlin. Translated, with the author's sanction, by FRANK THILLY, Professor in the University of Missouri. *First American from the Third German Edition.* vii+437 pp. 8vo. $3 50 *net.*

Spinoza: The Philosophy of Spinoza.
As contained in the First, Second, and Fifth Parts of the "Ethics," and in Extracts from the Third and Fourth. Translated and edited with notes by GEORGE STUART FULLERTON, Professor of Philosophy in the University of Pennsylvania. *Second Edition, Enlarged.* vi+358 pp. 12mo. $1.50 *net.*

YALE MIXTURE.
The choicest tobacco made, and pre-eminently a gentleman's smoke.
Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

RECENTLY PUBLISHED.

Lectures on the Principles of Political Obligation.
By THOMAS HILL GREEN, late Whyte's Professor of Moral Philosophy in the University of Oxford. With Preface by BERNARD BOSANQUET. 8vo, $1.75.

"Of all recent reprints this is by far the most important. At a time when political and social theories are in the melting-pot, and it is impossible to forecast what concrete, definite form will issue from it, it is of enormous value to bring within the reach of every student such a text-book as this. Professor Green was one of the earliest thinkers to open up the new avenues of thought which are crowded with eager seekers after truth to-day."—*Bradford Observer.*

SHELDON'S OLMSTED'S COLLEGE PHILOSOPHY.

FOURTH REVISION. An Introduction to Natural Philosophy. Designed as a Text Book in Physics for the Use of Students in College. By DENISON OLMSTED, LL D., revised by E. S. SNELL, LL.D., and R. G. KIMBALL, Ph.D. *Fourth Revised Edition*, by SAMUEL SHELDON, Ph. D. (Würzburg), Professor of Physics and Electrical Engineering, Polytechnic Institute of Brooklyn. 8vo, pp. xiii, 466. Price, for introduction, $2.50; by mail, $2.75. Copies for examination mailed to Professors upon receipt of $2 00.

The Third Revision of Olmsted's Natural Philosophy was published in 1882. Since that day many changes have been made in the technical nomenclature of Physics, many improvements in the methods of presentation of complicated portions of the science have been published by experienced educators, and, above all, the whole subject of Electricity and Magnetism has outgrown its former apparel. For the Fourth Revision the whole book has been carefully gone over, the requisite changes made, and several chapters entirely rewritten. Many new engravings from drawings made expressly for this edition have been inserted.

The experience of those who have used this Revision is proof of its value as a text book in Physics adapted to the requirements of a college course. As now presented it is believed to contain all that is necessary for this department of a liberal education.

SHELDON'S CHAPTERS ON ELECTRICITY.

An Introductory Text-Book for students in college. By SAMUEL SHELDON, Ph.D. (Würzburg). Second Edition, with a Course in Electrical Measurements. 8vo, pp. vi., 122. Price, for introduction, $1,00; by mail, $1.10.

These Chapters on Electricity, prepared for and included in the Fourth Revision of Olmsted's College Philosophy, are here offered in a separate volume. In this, the Second Edition, is added a Course on Electrical Measurements.

SNELL'S OLMSTED'S COLLEGE ASTRONOMY.

THIRD STEREOTYPE EDITION, REVISED, WITH ADDITIONS BY COFFIN. An Introduction to Astronomy for the Use of Students in College. By DENISON OLMSTED, LL. D., Professor of Astronomy in Yale College, and E. S. SNELL, LL D., Professor of Mathematics in Amherst College. Third Edition, revised, with Additions by Prof. SELDEN J. COFFIN, Lafayette College. Octavo, cloth, pp. viii, 236, with numerous Illustrations and Diagrams. Price, for introduction, $1.60; by mail, $1.75. Copies for examination mailed to teachers and professors upon receipt of One Dollar.

The subject of Spectrum Analysis appearing to demand more extended treatment, Chapter XX. has been prepared for this edition, which also contains a number of revisions and corrections in accordance with the best authorities. A few articles have been rewritten and some matter added.

The special advantages recognized in this text-book are: First—Absence of all superfluous matter and its moderate size, rendering its contents capable of being compassed within the limited time generally allotted to the subject. Second—Its distinct and accurate mathematical demonstrations, showing the strictly scientific basis and methods of astronomical work, and rendering the book valuable, both as a means of mental discipline and as an introduction to the practical application of its principles.

COFFIN'S CONIC SECTIONS.

NEW EDITION. Elements of Conic Sections and Analytical Geometry. By JAMES H. COFFIN, LL.D., late Professor of Mathematics and Physics in Lafayette College, and author of Treatises on Solar and Lunar Eclipses, Astronomical Tables, The Winds of the Globe, etc. Sixth Edition, revised and improved by SELDEN J. COFFIN, Ph.D., Hollenback Professor of Mathematics in Lafayette College. One volume, 8vo, cloth, pp. 167. Price, for introduction, $1.08; by mail, $1.20. Copies for examination mailed to professors and teachers upon receipt of One Dollar.

In this edition are included a number of original Numerical Exercises, adapted to illustrate the meaning of Propositions, and to show the utility of the truths taught.

The student of Conic Sections will welcome the explanation of geometrical points by the introduction of numerous references to the treatises of Professors Loomis and Wentworth, which are given in addition to those to Legendre and Euclid in the earlier editions.

For Sale by the Baker & Taylor Co., 5 East Sixteenth Street, New York.

Leading Books in Science and the Committee of Ten.

In no department of instruction has more substantial advance been made in the past few years than in the Sciences. The prominence given to work in Science by the Committee of Ten has created a call for text-books to meet this advance in methods. **D. C. HEATH & CO.** invite attention to the following list of modern books in Science in the belief that they will be found fully abreast of the demands in their respective departments:

Boyer's Laboratory Manual in Elementary Biology.

The *special advantages* of this book are: (1) The pupil is equipped, by a single inexpensive volume, with a text-book on Zoölogy, Botany, and a key for the analysis of plants; (2) The teacher is enabled to conduct a large class in practical laboratory work; (3) The school programme of studies is simplified by combining the two kindred subjects of Zoölogy and Botany, and treating them as a year's work under the head of Biology. Cloth, pp. 257. 80 cents.

"It is the best laboratory manual that we have. It is judiciously arranged and well adapted to the needs of our high schools."—DR. C. O. WHITMAN, *Head Professor of Biology, University of Chicago.*

Chute's Physical Laboratory Manual.

A series of problems, quantitative in character, to train the student's powers of accurate observation and to develop his ability to reason back to a general law from a particular set of observations. The manual is the outgrowth of many years' experience in teaching practical physics to very large classes. Its methods and plans, therefore, are not visionary, but are known to be reliable, and le ad to excellent results. Cloth, pp. 236. 80 cents.

"I like it more and more and I am becoming convinced that it is one of the most valuable school books that have ever been published in this country."—A. C. HALE, *Teacher of Physics Brooklyn High School, N. Y.*

Chute's Practical Physics.

A laboratory book for high schools and colleges studying physics experimentally Contains experiments for selection, rather than a definitely arranged course. Cloth, pp. 407. $1.12.

"I do not see how a student can use the book, according to instructions, without becoming thoroughly imbued with the spirit of *original investigation.*"—EDWARD P. JACKSON, *Instructor in Physics, Boston Latin School.*

Colton's Practical Zoology.

A clear exposition of the subject as a whole by the careful study of a few typical animals. A laboratory manual prepared on the plan of helping the student to help himself. Cloth, pp. 196. 80 cents.

"It is the most useful book of its kind ever published in the country, not only for high-school use but for beginners in college as well."—A. H. TUTTLE, *Professor of Zoölogy, Ohio State University.*

Remsen's Organic Chemistry.

An introduction to the study of the compounds of carbon. For all students of pure chemistry or of its application to the arts, medicine, etc. Cloth, pp. 374. $1.20.

"A great many students in this university are using the book, indeed, I think it will soon be used in preference to any other elementary work on the subject."—M. M. PATTISON MUIR, *Professor of Chemistry, Cambridge University, England.*

Shepard's Inorganic Chemistry.

The distinctive features of this book are: experimental and inductive methods the union of descriptive and qualitative chemistry, thus allowing these kindred branches to supplement and illustrate each other; a practical course of laboratory work illustrating the general principles and their application; a fair presentation of chemical theories, and a conciseness which confines the work to the required limits. The book covers more fully than any other the outline of work laid down in the report of the Conference on Chemistry to the Committee of Ten. Cloth, pp. 397. $1.12.

Shepard's Briefer Course in Chemistry; with Chapter on Organic Chemistry.

Designed for schools giving a half year or less to the subject and limited in laboratory facilities. Illustrated. pp. 248. 80 cents.

"The book teaches that chemistry can be learned in the laboratory only, and that the book is only a guide to experimental work—a lesson which certainly needs to be taught above all others in chemistry."—IRA REMSEN, *Professor of Chemistry, Johns Hopkins University.*

Spalding's Introduction to Botany.

A practical study of plants by the laboratory plan. For high schools, academies, and colleges. Cloth, pp. 311. 80 cents.

"One of the best contributions to the subject of elementary teaching we now possess."—*The Nation, New York.*

Shaler's First Book in Geology.

For high schools, or highest class in grammar schools. A text book with all the interest of a story. Cloth, pp. 272. $1.00.

"Of all the attempts of making elementary text-books on the natural history sciences, this is the most successful."—F. W. HOOPER, *Teacher of Natural Science, Adelphi Academy, Brooklyn.*

CORRESPONDENCE INVITED BY

D. C. HEATH & CO., Publishers, Boston, New York, Chicago

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 5, 1895.

The Week.

MATT QUAY won last week the greatest victory of his career. The fight for control of the Republican State convention in Pennsylvania this year has challenged the attention of the whole nation. The nominations to be made counted for nothing, except to the candidates for the State treasurership and a half-dozen judgeships. There was no controversy over the platform, like the one over the free-coinage issue that lent interest to the recent Democratic State conventions in Kentucky, Iowa, and Ohio. The fight was solely and purely for the control of the party machinery in the greatest Republican State, with a view to its exercise in the national convention of 1896 and the disposition of the patronage in case a Republican President shall be elected next year. Quay's old pupils in Philadelphia had turned against him, and, under the lead of Dave Martin, sought to overthrow the man who had helped them into power. At the other end of the State, Chris Magee, who runs the party machinery in Pittsburgh, organized his forces in an alliance with the well-named "hog combine" of Philadelphia. Despite all these disadvantages, Quay won, dictated the terms of surrender, and shrewdly yielded to his opponents the empty honor of uncontested nominations while he pocketed the real prize at stake. There was hand-shaking of former opponents and plenty of gush over a harmonious party, but the real harmony consisted only in the absolute yielding of all would-be usurpers to the dictator whom they could not dethrone.

Quay's appearance in the rôle of reformer lends the needed touch of humor to a performance which would otherwise have been too solemn for many of the participants. The resolutions which he himself introduced, "decrying the growing use of money in politics," "earnestly insisting" upon wholesale measures of civil-service reform, "demanding that public office should be for the public benefit, and its term in subordinate positions should be during good behavior," declaring that "schools should be divorced from politics," and the rest of it—how grotesque it all sounds! It is a satisfaction to find that the sound-money sentiment of Pennsylvania insisted upon a "flat-footed" declaration against free coinage at 16 to 1, which a Republican convention in that State has never before made; and forced the abandonment of the absurd plank favoring the expansion of the currency to $40 per capita, which the boss put into the platform last year and the year before. For the rest, if Matt Quay represents the perfect flower of Republicanism in the greatest "Republican stronghold" of the Union, the country can stand it if Pennsylvania can.

Quay seems to have had the enthusiastic support of the G. A. R. in his recent fight for the control of the Republican party of Pennsylvania. The fact that the leader of the opposition forces, Gov. Hastings, had vetoed a bill giving preference in appointments to honorably discharged soldiers and sailors, and making it a misdemeanor punishable by fine to disregard this requirement, was made great use of to rally the soldier support to Quay's side. One veteran published a letter setting forth the Governor's dastardly conduct in the most "scathing" manner, and saying of the services which the veterans had performed in the war that the flags floating from the school-houses were "enduring monuments of the bravery of the Pennsylvania soldier," adding: "Any man with an ounce of brains would know that were it not for the courage and heroism of our soldiers upon the battlefield, there would be no flag, no schoolhouse, no teachers, nor no children of any account in the State to-day." It cannot be denied that if this view of the soldiers' services is correct, and even children would have ceased to be born in Pennsylvania if those services had not been rendered, no reward can be too great. The old soldier from whom we have quoted is, therefore, quite modest in his demands when he goes on to say: "Whenever and wherever there is a 'soft place' within the gift of the Administration, where the work is light and the salary heavy, that is the place for the old veteran. It is his by right of conquest, humanity, and common sense."

It is rather hastily assumed that because Quay has become once more the undisputed Republican boss of Pennsylvania, Mr. Harrison has lost all chance of the Presidential nomination next year. This does not follow by any means. Quay was just as much opposed to Harrison in 1892 as he is now, and Pennsylvania was against his renomination at the Minneapolis convention—that is, she cast 45 of her 64 votes against him. It is assumed by some of the Republican newspapers also that Platt will control the New York vote just as Quay will control that of Pennsylvania, and that it will be cast against Harrison for that reason. This is another *non sequitur*. Platt is no stronger in Republican party councils than he was three years ago—in fact, is rather weaker. He did all that he could at Minneapolis to prevent Harrison's renomination, yet 27 New York votes were cast for the latter, 35 going to Blaine and 10 to McKinley. There is nobody in the field now who possesses anything like Blaine's strength in the party in New York. It will be correspondingly difficult for Platt to divert from Harrison any votes that are inclined to go his way. If it be true, as the Harrison men claim, that the Republican masses are for him, Mr. Platt will not be able to turn them against him, nor will Quay, with all his prestige, exercise much influence outside of his own State.

Northern Republicans who believe in sound money cannot be pleased with the outlook in North Carolina, as there is every indication that the Republicans and Populists mean to maintain the fusion which they established successfully last year. The Republican and Populist members of the last Legislature from Cleveland County and the chairmen of the Republican and Populist executive committees in that county have issued a statement declaring their belief that "it is essential for the welfare of the State and the preservation of the laws passed by the Legislature" that there shall be a continuance of the fusion, or "coöperation," as they prefer to style it, between the two parties next year. Moreover, the Populist managers declare their readiness, in view of Republican liberality in the division of the offices already won, to let the Republicans have the candidate for Governor; and the Cleveland County fusionists "take pleasure in unfurling to the political breeze the name of Judge Daniel L. Russell of Wilmington, as the Cooperation candidate for Governor of North Carolina for 1896, and pledge him our hearty support and promise to do everything in our power that is honest and legitimate to bring about his nomination." Mr. Russell has been prominent in North Carolina politics ever since the war, was once elected by the Republicans of his district to Congress, and is probably as good a man as could be named in point of personality. But the fatal defect of his candidacy is that any fusion nominee must run upon a free-coinage platform.

An extraordinary incident of the Mississippi campaign is the demand upon the Democratic candidate for Governor, whose election is assured, for a pledge that he will not pardon out of the penitentiary a group of murderers, and his prompt recognition of the propriety of the demand. It appears that before the candidate for State Senator who recently went with three friends in pursuit of an unarmed man began preparations for the killing, he retained ex-Senator Laurin, the gubernatorial nominee, as his counsel in the legal proceedings which he expect-

ed would grow out of the encounter upon which he deliberately entered. In other words, he planned a cold-blooded murder, and engaged the future Governor to defend him. Naturally enough, the disclosure of this fact aroused suspicion that the counsel, when elevated to the executive chair, might pardon his former client and the latter's equally guilty friends, who were forced by an unexpected display of popular indignation to plead guilty of murder and take a sentence of life imprisonment. Mr. McLaurin says that he does not think any application will be made to him, but that if one should be made, "it would be indelicate and improper in me to grant a pardon in this case, and I would therefore neither grant the pardon nor consider the application." This vindicates the next Governor, but what shall be thought of a state of society where a prominent politician goes about a murder so coolly that he engages the lawyer to defend him before he shoots his man?

Massachusetts has a political organization of a rather novel sort. The Socialist Labor party has just held a State convention and nominated a full ticket for the November election, but the candidate for Governor says that "the party is not at this time looking for votes." The mission of those already enlisted is only to teach the working people the doctrine of international socialism and organize "sections," as the subordinate bodies are called, with a view to the education of the voters. The leader has an unfaltering faith in the final success of the party "within a generation." This is a greater exhibition of self-restraint than we are accustomed to see in our politics—especially when "all that is necessary is that the common people, the working people, go to the polls and elect men who are pledged to carry out the demands of the party." When those demands are carried out, by the way, the millennium will be ushered in, with "the human race one great family organized on a business basis for the common good." The candidate for Governor insists that "there is nothing complicated or Utopian" about this scheme, and it really does not appear why we should have to wait a generation for its fulfilment.

The New York Liquor-Dealers' Association has ratified the resolution of its executive committee, pledging all its members to keep their saloons closed on Sunday hereafter in obedience to the law. There were some dissenting voices, but the vote in favor was by a large majority, and the entire association will be bound by it. Some of the observations made by the President of the association in advocating the adoption of the resolution were remarkable. He said that, under former officials, the law was interpreted with such liberality that the liquor-dealers were able to violate it without incurring disgrace of any kind, but at present it was impossible for them to violate it without being branded as criminals and constant violators of the law. He declared that the liquor-dealers must place themselves "in the category of citizens who respect the law, be it what it may, must comply with the law at present and assume their places in the community as law-abiding citizens," and devote their energies to securing the enactment of more liberal laws. He said very truly that both political parties had been hostile to them, and he might have added that both had played tricks with them in the past and are likely to pursue the same policy in the future. The chances at present are that neither party will venture to take up the question of local option in its platform this year, but will seek to dodge the issue and to put its opponent on the unpopular side of it.

The arrival in this city of a fleet of steel canal-boats towed by a steam propeller from an Ohio port is an event of much significance. For a number of years the old-fashioned wooden boat towed by horses or mules has been losing in the race, and the boatmen have had hard work to make a living. The Delaware and Hudson Canal Company long ago found that it was cheaper for them to carry their coal by rail than by boat, and have continued to operate their canal less from business considerations than from motives of mercy to the unfortunate men whose little capital was all invested in the canal industry. The new steel boats, drawing but six feet of water, have the relatively small carrying capacity of 250 tons. But they should be compared, not with the great lake or ocean steamers, but with freight-cars, which they much resemble in function. The propeller corresponds with the locomotive, and the carrying capacity is that of the fleet that is towed, as the train-load is the true unit of reckoning in railroad computations. From the experimental trip concluded last Thursday it would appear that a fleet of these boats drawn by one propeller can carry over 1,200 tons of freight, or four or five ordinary train-loads. How far the low rate of speed attainable may offset the gain from cheapness of operation is a question which the railroads will need to investigate. At all events, it should not be forgotten that a vast amount of freight necessarily goes in comparatively small lots, and that the internal distribution of goods is a far greater commerce than the exportation of grain and provisions in bulk.

The deficit of the National Treasury for the last fiscal year is in round figures $44,000,000. For the previous year it was nearly $70,000,000. Thus it appears that the Treasury has gained $26,000,000 without any help from the income tax. Twenty-six millions is a very small sum in the fisc of a country like ours. Yet it is much to be desired that it should be on the credit rather than on the debit side of the ledger. That the receipts will equal or exceed the expenses of the present fiscal year is the belief of the best judges in Washington. In a letter to a morning newspaper, Postmaster-General Wilson considers the prospect of a large increase of revenue from customs duties very hopeful, as a consequence of the renewed prosperity of manufacturing industries. "Tariff reform," he rightly says, "although wounded in the house of its alleged friends, is triumphantly justified by its results." This remark, by the way, may be taken by Senator Gorman as a reflection on himself.

Secretary Morton continues to infuriate the protectionists by the economies which he is enforcing in his department. His last reform consists in winding up the business of carrying on experimental sugar stations, and the particulars of this business as carried on by Government may be commended to the attention of those who desire to nationalize our industries. During the last ten years Congress has appropriated over half-a-million dollars to carry on experiments in the manufacture of sugar, nearly half of which was expended in the purchase of materials and machinery. Yet for three years nothing has been done at any of the stations, and nothing for four years in Kansas. Last winter Senator Peffer laid before the Secretary a bill providing that any person found in possession of any of this machinery should be considered to have good title to it—a measure of such suggestive character as to indicate the need of prompt investigation. It now appears that something like $10,000 has been received by the department from the sale of machinery and buildings, and that there remains only one factory to be disposed of. No evidence can be found that a pound of sugar was ever made from sorghum, but doubtless experiments were made. Probably it was the intention of Congress to produce not sugar, but experiments, and to employ as many people as possible in this valuable industry. In short, although no pure, unadulterated sugar may have been produced, the sugar-experiment business beats the record, Secretary Morton says, as a pure, unadulterated steal.

The arrest of the band of Cuban filibusters ought to have a sobering effect on many excited minds. We do not suppose it will prevent the reckless press from keeping on after its kind, but it ought at least to instruct Cuban agitators in this country that the reckless press is one thing, and that the law is quite another. The hysterical people who ask why we do not throw over Spain and "free" Cuba, do not stop to ask what are our obligations to Spain. They are, first, the general

obligations which, under international law, one nation is under towards another—obligations which especially embrace the duty of strict neutrality in case the other country is at war or has a rebellion on its hands. That it would not be a serious breach of neutrality to allow an armed expedition against Cuba to fit out in the United States, the country that made England smart for letting the *Alabama* get away should not have the face to suggest. Then, we have our special treaty obligations to Spain, and our own laws which make crimes of such acts as those for which the Cubans were arrested on Friday by the federal authorities. Whatever our sympathies may be, we have but a single course to follow under the law.

Mr. James Schouler's second *Atlantic* article on President Polk's Administration gives most interesting revelations concerning the Mexican war. The historian says that the Polk diary and correspondence, "with their private disclosures, confirm the worst that was ever imputed to this Administration in its deadly and depredating course." Particularly flagrant does Polk's war message of May 11, 1846, appear. The President had hoped to get territory from Mexico by purchase, but on Saturday, May 9, Slidell came back to Washington to report the frustration of that hope. Polk immediately called his cabinet together and told them that he desired at once to send to Congress a war message. The majority concurred, though Buchanan hesitated, and Bancroft candidly said that we ought to wait for some act of hostility before declaring war. Polk, however, as his diary shows, determined to go on with the message. By a great piece of luck, that very night, after the war message was thus decided upon, news reached Washington of a skirmish on the Rio Grande, and the President jumped at the chance to say to Congress that "War exists, and, notwithstanding all our efforts to avoid it, exists by the act of Mexico herself." Such perfidy is monumental, and the wonder is that Polk should have left behind him the papers to display it to posterity. But he had a curious conscience. He worked on his message all day Sunday, except the time spent in public worship of the Prince of Peace, and, after deliberately spending the day in doing what he knew would plunge two nations into needless strife and bloodshed, piously recorded in his diary, "It was a day of great anxiety to me, and I regretted the necessity for me to spend the Sabbath in the manner I have." Posterity may discern a parallel to this piety in President Harrison's Sunday Chilian war message.

No British Prime Minister in an official and public address ever went the length that Lord Salisbury did in his speech in the House of Lords in threatening the Turkish Government. This was the more remarkable as coming from the leader of the Tory party—a party which, as Lord Salisbury said, had been traditionally anxious to maintain the integrity and independence of the Ottoman Empire. Yet he went on flatly to say that there was nothing but a "factitious stability" about that empire, which might fail the Sultan at any moment if he did not take heed to his ways. The Sultan's boasted "prerogatives," affirmed the Prime Minister, were only "nominal," and his "independence" only "formal"; which is but another way of saying that England is prepared to go ahead, treaties or no treaties, and make the Sultan reform his government of Armenia or be himself reformed altogether off his throne. Mr. Gladstone, in office, never spoke so bluntly as this. We doubt if even Lord Palmerston ever did. With three British men-of-war reported on the way to Constantinople to back up Lord Salisbury's words, it is no wonder that the Turkish Government is now said to be in a great scramble to do something for Armenia. Mr. Gladstone urged Salisbury to say "must," and he has said it.

An amusing feature of the debate on the Address in the House of Commons was the attempt made to hold the Tories up to their ante-election promises in regard to their famous "social programme." One amendment moved was, "But we humbly beg to draw the attention of your Majesty to the existing widespread depression in agriculture, and submit that it would be expedient to pass remedial measures during the present year." This produced vast squirming among the Conservatives. Only two months before, they had been reviling the Liberal Government for doing nothing for the farmer, and saying, when Sir William Harcourt asked them what they would do, "Put us in office and we will tell you." Now they are in office, but they will not tell. Solemn Mr. Chaplin said they must take time to consider, to prepare their bills with deliberation. Sir William rallied him with excellent humor on this sudden access of caution, and Mr. Balfour had to take refuge in Lord Salisbury's joke that all the Conservatives had ever promised to do was to think hard and long about depressed agriculture. Thinking is one thing and doing is another. So the amendment was voted down by a majority of 131. So, too, was voted down a similar amendment relating to the "evils arising from want of employment." The effect of office on the Tories is very like the effect of property on a Socialist: This is not such a bad world, after all; let us be careful how we make changes lest they be changes for the worse; above all, let us do nothing to put our property or our offices into the hands of those who will not make as good a use of them as we shall. So far, the vaunted social programme of the Tories is clearly a do-nothing programme.

The art of getting witnesses to testify to things they never dreamed of saying seems to be passing from the courts to commissions of inquiry about labor. Nothing is more common than for a zealous investigator to extract from an amazed witness all sorts of arguments and opinions to bolster up his pet theories. Mr. Chamberlain gave a beautiful example of this in a question he put when sitting on the English aged-poor commission. A rather slow-moving witness was testifying, when Mr. Chamberlain darted at him the question whether he didn't think there would be "a dangerous agitation if nothing were done—an agitation that the provision of an old-age pension scheme might do something to prevent." Of course the startled witness took the cue, and thought there would be a very dangerous agitation indeed, though it was evident that this was the first time he had ever heard or thought of such a thing. Imagine, however, the gravity and earnestness with which Chamberlain would say, in his next socialistic speech, that it was high time something was done, that the working classes were in an inflammable condition and might break out into riot and bloodshed at any moment, and if you didn't believe it, just read the testimony taken by the aged-poor commission. A great deal of the evidence quoted as to the opinions and wishes of laboring men is of precisely this character. Labor investigators are too often like boys throwing a ball against a barn: they get their own opinions bounded back at them, and then solemnly cite them as proof of what the working classes really think.

Despite what were taken for authoritative announcements to the contrary, Lord Salisbury's Government have decided to reverse the decision of the Rosebery cabinet to withdraw from Chitral. For the present at least, it was declared in both houses of Parliament in the debate on the Queen's speeech, the British garrison will be retained in Chitral, and the routes thither be kept open and patrolled by British troops. Lord Rosebery rather hotly attacked this policy of the new Government, asserted that it would necessarily result in a vast increase in the Indian army and the Indian budget, and added that, in his opinion, Russia would have good ground to be offended at what would look very much like a breach of faith. He read the proclamation of the Indian Government when the expedition was undertaken, which said: "The sole object of the Government of India is to put an end to the present and to prevent any future unlawful aggression on Chitral territory, and, as soon as this object has been attained, the forces will be withdrawn." Both Salisbury and Balfour contented themselves with saying that when all the papers were laid before Parliament, the decision of the Government would be fully approved.

THE SOUTH DIVIDING.

BEGINNING with the Presidential election of 1876, the South became solidly Democratic, the Republican governments being soon afterwards made way with in South Carolina, Florida, and Louisiana, though these States were counted for the Republican candidate in the national contest. From that time down to and including the Presidential election of 1892 every one of the sixteen States in which slavery had once existed went Democratic, not only in national contests, but also in each election of Governor—with the single exception of Tennessee in 1880, when a split among the Democrats on the State debt question, which was the only issue, enabled the Republican nominee to slip in between his two rivals.

During all this long period, covering almost half of the time allotted to a generation of men, the Republican party of the nation pursued a policy which could not have failed to keep the South solid. It maintained on the statute-book laws regarding the control of elections which had been enacted for especial use in the South, and it constantly threatened to extend the scope of this federal interference with States in that section by passing force bills far more rigorous than the old laws. Just before the Republicans, for the first time since they came into power, lost control of both branches of Congress in 1875, the Grant Administration made a desperate attempt to pass such a bill, which was defeated only by the open opposition of Blaine, then Speaker, and some other prominent Republicans in the House. Sixteen years later, when a Republican President again was supported by a Congress Republican in both branches, the Harrison Administration repeated the attempt of Grant's, and failed only because free-silver Republican Senators from the mining States made a trade with Southern Democrats to block the force bill, in return for help in their free-coinage schemes.

Two motives combined to hold the Republicans to this sectional policy. One was the honest belief of many sincere members of the party that federal interference in Southern affairs was necessary for the protection of the negro voters, and essential to the full reaping of the "fruits of the war" in the emancipation and enfranchisement of the slaves. The other was the cool calculation of the managing politicians, that the solid South created by persistent threats of force bills would make the North so nearly solid as to insure the election of a Republican President more easily than would be possible by any other policy.

Thoughtful students of the race problem gradually reached the conclusion that federal interference in Southern affairs only harmed the negroes. Professional politicians found that the solid South bugbear had utterly lost its power to frighten anybody in 1892, when Illinois and Wisconsin went Democratic for the first time since the ante-bellum period, and Ohio came so near it that Cleveland actually got one of her twenty-three electoral votes. The Democrats came into full power in 1893, under the distinct pledge to repeal the existing federal election laws, and the pledge was promptly redeemed. The Republicans in Congress made only a perfunctory opposition. The true friends of the South among them at last realized that the force-bill policy did no good, from the standpoint of the public interest. The men who cared nothing for patriotic motives, but everything for partisan considerations, had become convinced that there was "nothing more in the bloody shirt." Repeal had hardly been carried before Republican journals began to admit that it was a good thing for the country—and for their party, too. To-day no politician would listen for a moment to the idea of reviving the policy of the Harrison Administration. Indeed, Joe Manley confessed to an interviewer the other day that "it would have been infinitely better for the Republican party if it had dropped the agitation of the force-bill question eight years before it did," as "that policy kept the South arrayed against it."

The effect of eliminating the sectional issue was plainly discernible in Southern elections last fall, and is still more obvious in this year's canvasses in that region. The force bill had been cunningly and successfully used by Democratic politicians to keep the whites together, not only in States where the negroes were numerous or even exceeded the whites, but also in the border States, where the black vote, if counted, could not be dangerous to white control. Attempts were made to draw the race line in Maryland and Kentucky, in Tennessee and Missouri, as well as in Alabama and Louisiana, and with too much success. In the election following the repeal of the federal election laws, on the other hand, the Republicans carried Tennessee on a square test between the two parties, for the first time since the reconstruction period; their candidate for Governor having several hundred plurality, although he was afterwards counted out by the Democratic Legislature. At the same time the Republicans, again for the first time since reconstruction, carried Missouri for minor State officers, both branches of the Legislature, and ten of the fifteen Congressmen. Simultaneously the Democrats, for the first time since reconstruction, lost the Legislature in North Carolina, and the two senatorships which that body had to fill, through the desertion of the party by enough whites to give the Republicans and Populists control.

The tidal wave which swept over the country last year, of course, put the Democrats at a disadvantage in the South, as everywhere else; but if the party organs and stump-speakers could still have used the force-bill issue, they might easily have held to their old allegiance enough whites to prevent the narrow Republican pluralities that were secured in Tennessee and Missouri. The change caused by the loss of this ancient issue is even more clearly visible in this year's campaigns in Maryland and Kentucky, particularly in the latter State, where it used to cut a great figure. In the old days, Hardin might have preached free coinage, and still have held sound-money Democrats to his support by urging the necessity of standing together in the interest of white domination in the South. As things are now, he cannot use the "horrors of negro rule" as a reason why Democrats who believe in an honest dollar should vote for a candidate advocating a fifty-cent dollar. The same tendency must operate in States further south as elections there come on.

The nation is immensely the gainer by the now assured division in the South. The solidity of one section was alike an injury to itself and a menace to the rest of the country. That substantially all of the white men in one-third of the land should vote together, decade after decade, was abnormal, undemocratic, and dangerous. The abolition of the old sectional issue, and the consequent division of the Southern vote, are grounds for national congratulation.

IMPROVED LEGISLATION.

No better subject could have been selected by Mr. Carter for his address to the American Bar Association than that of reform in our methods of legislation. Laws are like the books of the Sibyl: the fewer there are, the greater their value. In the State of New York we suffer under an annual infliction of nearly 2,000 pages of new statutes; and although the Legislature ceased its production several months ago, the people of the State, owing to the delay in publication, are still without any means of ascertaining what the newest laws are which they are expected to obey. A short time ago a judge in Buffalo discharged two barbers who were brought before him charged with practising their art on Sunday, contrary to the statute in such case made and provided, on the ground that no copy of the statute had been furnished to the court. Application had been made for such copy, but it had received no attention. Even if the statutes were promptly published, it is obvious that very few people could find time to read them, and no task is now more onerous to the bar than that of ascertaining the statute law actually in force. We have consolidations and codifications and revisions without number, but our last state is worse than our first, for before any one can be sure that the law is as it appears to be in the latest code, he must painfully inquire whether the previous statutes on the same subject have been repealed or amended, or have been allowed, by accident or design, to continue in force.

The revision of our statutes is no doubt

theoretically desirable. We can imagine codes and revisions that would simplify and condense the law; but the commissions that are charged with this task do not perform it successfully. It is too often the case that appointments to such commissions are made as rewards for party services, and the appointees fail to exhibit a due sense of professional responsibility. A few years ago there was a revision of the general laws relating to corporations, and almost the first act of the Legislature succeeding that which had enacted this code was to repeal some of the exasperating innovations which it had introduced. More recently the law affecting dower was changed in a revolutionary manner, without the knowledge of the profession, and within a few weeks the Legislature was compelled to repeal the act in response to the chorus of complaints that arose from the bar. Last year an alteration was made in the law relating to the legitimacy of offspring. The change may have been a desirable one; the subject, however, is one of such fundamental importance that it should have received the most serious consideration. But it was accomplished in what may be fairly called a surreptitious manner. We venture to say that the people of the State are to-day ignorant that the alteration has been effected. It was not advocated by the bar or by the press, nor was it opposed. No newspaper, so far as we have observed, alluded to it or commented on it. Thus a fundamental change in the most fundamental of our social institutions, involving the decision of a question which has for ages exercised the thought of the most eminent writers on jurisprudence, was accomplished by the unknown author of an unnoticed act of the New York Legislature.

It is impossible to overestimate the political advantages of our peculiar system of combined national and State governments. They may be summed up in a word as averting from the people the most serious of the dangers of centralization. On the other hand, we are industrially one people, and the losses and inconveniences arising from the existence of more than forty different jurisdictions are very great. In so far as the people of the several States differ in their social standards and customs, it is altogether desirable that their laws should reflect these differences. But in their business affairs the differences are relatively slight, and uniformity of legislation ought to prevail. Some attempts have been made to secure such uniformity, and some progress has been made by the commissions already appointed by a number of the States. Good will eventually come from these attempts, but it is undeniable that they fail to arouse the interest of our legislators. Party advantage and the gains of office absorb their attention, and most of them would stare and laugh if any one undertook to engage them in discussions concerning comparative jurisprudence. As Mr. Carter says, never so much as at the present time has the need of competent legislators been manifest.

The reason assigned by Mr. Carter for abstaining from attempts to codify our unwritten law may strike those unfamiliar with legislation as paradoxical. The unwritten law of the several States is substantially the same, and therefore, he says, it ought not to be reduced to a written form. But experience has proved that Mr. Carter is right in holding that, if the attempt were made, it would result in "plunging the law into diversity." At the present moment it is seriously proposed to undertake a revision of the code of procedure in New York, which would amount for practical purposes to the enactment of an entirely new system of practice. No one could undertake to conduct a legal proceeding without the most anxious scrutiny of all the new provisions in the light of the old; and, no matter how perfect the new code might be, the next Legislature, following the example of all that have preceded it, would introduce hundreds of changes.

The truth is, as Mr. Carter declares, that we suffer from two evils, the passion for framing new laws, and the willingness of Legislatures to act upon subjects which are not proper subjects of legislation at all. On this account the substitution of biennial for annual sessions of the Legislature in most of the States is to be regarded as a conservative measure. Rather than have an excess of bad laws, we prefer to forego the possibility of obtaining a few good ones. But, of course, the true hope of improved legislation lies in obtaining improved legislators. In this direction many efforts must be made; but we can agree with Mr. Carter that nothing is more needed among us than "a deepened conviction that the sphere of legislation, like that of other forms of human activity, has its proper limits, which can never be exceeded without mischief, and a sufficient knowledge of what these limits are."

THE GERMAN ANNIVERSARIES.

It was lucky that Kiel came two months before Sedan—the glorification of peace before the celebration of war. Even French politeness would have been too severely strained if invited to the opening of the canal after the opening of the wounds of 1870. That was what some of the fervid French patriots wanted M. Hanotaux to say to Emperor William at the time: "After Kiel, will your Majesty also ask us to the fêtes at Woerth and Metz?" Yet, curiously enough, we find sensible German newspapers, like the Berlin *Nation*, gravely arguing that the whole series of commemorations running through the month of August, from Weissenburg up to Sedan, with their inevitable renewal of French rage, and their equally inevitable revival of the war-spirit in Germany, will make powerfully for international good feeling and peace. The argument, stripped of its philosophical elegances, comes down to about this: "We whipped you once and we can do it again, if necessary." This is the true way to make your neighbor love you and beat his spears into pruning-hooks.

Of course, it was inevitable that the anniversaries should be commemorated. Even the French admit as much. They think there has been too much exultation shown by the Germans, too defiant an attitude struck towards the France of 1895, and they say that French taste would have been sure to display in the same situation more considerate regard for the feelings of the vanquished, and would have made the tribute merely one to the memory of the heroic dead. But the non-French world will feel bound to acquit the Germans of anything unduly offensive in these celebrations. If there has been too marked a tendency to take the German army for the German nation, that has been largely the work of the harum-scarum young officer who now waves his good sword over the most learned heads of Europe. Even so essentially peaceful and civic a ceremony as the dedication of the national memorial to William I., big-booted William II. had to turn into a military display. The Reichstag voted the money for this memorial just as it did for the Kiel Canal; but whereas, at the opening of the latter, the President and Vice-Presidents of the Reichstag had a prominent part in the ceremonies, they had to give way to the Knights of the Black Eagle and army and navy officers when the corner-stone of the national monument to William I. was laid. And it was this occasion that the valiant grandson chose, to affirm that he was going to make the German army strong enough not only "to guarantee, but to dictate, the peace of Europe."

The Germans of 1895 might easily be pardoned for appearing more vainglorious than they do over the achievements of the Germans of 1870. It is not in human nature, even in Exeter Hall, to refuse admiration to that swift and terrible march to victory. But thoughtful Germans may also be pardoned if a certain melancholy and foreboding intrude upon them in these days of national festivity. The events of 1870 did not solve all of Germany's difficulties; they created new ones even harder to solve. A sober comparison of 1895 with 1870 is not wholly to the disadvantage of the latter. There were giants in those days. William I. could scarcely be called a great man, but he was one beside his megalomaniac grandson. From Bismarck to Hohenlohe is a terrible fall. And as for the unification of Germany, the phrase seems almost a mockery in view of the furious wrangling, and bitter factions, and legislative impotence of the German Parliament of to-day. The strongest party in the Empire at present is the one which the Emperor calls upon the Chancellor and the Reichstag to put down as revolutionary—the party that has filed its

protest against the very fêtes in celebration of German unity. Thoughtful Germans, we say, might be excused for feeling somewhat depressed, as there are signs that many of them do, when they consider these things.

But such matters are, after all, it may be said, of the nature of accidents. There is no law of nature which prevents great men from having fools for their successors. Party development takes strange and unforeseen turns. Yet there are two great national perils now confronting Germany which may be said to have grown directly out of the war of 1870, and which are really more serious than any danger arising from the side of France under Napoleon III. One of these is the mania for war. This grows by what it feeds upon, and it has been grossly fed in Germany for twenty-five years. More regiments, has been the cry, bigger ships and guns, more elaborate equipment, swifter and completer mobilization, vaster annual manœuvres. It is not in flesh and blood to stand this tension for a long period of years without deteriorating or utterly breaking down. A nation that, in the midst of this industrial world, gives so much of its best talent and strength and treasure to perfecting instruments of destruction is not in a state of health. Preparing for all possible wars in order to make all wars impossible, is one of the shallowest sophistries that pass for statesmanship. What you really make impossible is a sound and stable national sentiment. The German nation, great in intellectual leadership, great in industrial expansion, cannot afford to pose before the world like a cowboy with his finger all the while on the trigger, lest somebody get the "drop" on him.

The other characteristic German peril is the mania for organization. It was organization, drill, method, bureaucratic supervision that conquered France; therefore let us organize everything. Take over the railroads and make state officials out of every porter and switchman. Fill the mines and forests with state operatives and inspectors. Seize on workingmen of all sorts and insure them against accidents, against old age, against death, against everything but the fussy interference and petty exactions of an over-organized government. It was in that spirit that Moltke conquered France, and it is in that spirit that we shall conquer social discontent. But this is very much as if the gastric juice should set about digesting the coats of the stomach. Organization run mad destroys a government. The German Socialists are the true logicians. "Certainly," they say, "organize everything, put all industry under state control, organize capital and interest and rent off the earth, and throne and altar along with them." But this logical extension of his own doctrines young Wilhelm calls rank *Umsturz*, and sets about putting it down by more organization, more uniforms and inspectors and bureaus; and what will the end be? We should hope, driving into the German mind the conviction that states cannot live by organization alone, and that it is time for the old German assertion of the rights of the individual to make itself heard again.

THE AUTHORSHIP OF GILES'S RESOLUTIONS.

BROOKLYN, August 17, 1895.

ON February 27, 1793, William Branch Giles, a member of Congress from Virginia, moved in the House of Representatives a series of resolutions, directed against Hamilton's conduct as Secretary of the Treasury, well known to the students of that period. For those resolutions, which constitute their mover's chief claim for mention in our national history, Giles has been more often abused than praised, but neither critics nor apologists have ever questioned if he had the ability to frame what he moved, or have searched for a more likely author for them. A rough draft of the resolutions, in the handwriting of Thomas Jefferson, furnishes a suggestion too strong to be disregarded, and a comparison of this series with those moved by Giles is interesting as showing how far they had been softened before they were laid before Congress:

JEFFERSON'S DRAFT.	RESOLUTIONS AS MOVED.
(1.) Resolved, That it is essential to the due administration of the Government of the United States that laws making specific appropriations of money should be strictly observed by the *Secretary of the Treasury* thereof.	(1.) Resolved, That it is essential to the due administration of the Government of the United States that laws making specific appropriations of money should be strictly observed by the *administrator of the finances* thereof.

The slight change in this first resolution was merely one which made the charge against Hamilton a shade less specific. The second resolution was identical with that of the draft. The third shows a marked departure:

JEFFERSON'S DRAFT.	RESOLUTION AS MOVED.
(3.) Resolved, That the Secretary of the Treasury, in drawing to this country and lodging in the bank the funds raised in Europe, which ought to have been applied to the paiments of our debts there in order to stop interest, has violated the instructions of the President of the United States, for the benefit of speculators, and to increase the profits of that institution.	(3.) Resolved, That the Secretary of the Treasury has violated the law passed the 4th of August, 1790, making appropriations of certain moneys authorized to be borrowed by the same law, in the following particulars, viz.: First, by applying a certain portion of the principal borrowed to the payment of interest falling due upon that principal, which was not authorized by that or any other law. Secondly, by drawing part of the same moneys into the United States, without the instructions of the President of the United States

This particular charge—that Hamilton had violated the instructions of the President in order to aid the Bank and speculators—was a favorite one of Jefferson's, as is shown by other papers. Thus, in a manuscript the purpose of which is not evident, but which I infer was drawn up as a guide for Madison in the series of attacks on the Treasury policy made or inspired by him in the session of 1793, the following paragraph occurs:

"The most prominent suspicion excited by the Report of the S. of the T. of Jan. 3, 1793, is that the funds raised in Europe & which ought to have been applied to the paiment of our debts there in order to stop interest, have been drawn over to this country & lodged in the bank, to extend the speculations and increase the profits of that institution."

Even more explicit was a second paper, submitted to Washington, in which Jefferson wrote, as a reason for disapproving of a new loan:

"The apprehension that the head of the department means to provide idle money to be lodged in the banks ready for the corruption of the next legislature, as it is believed the late ones were corrupted, by gratifying particular members with vast discounts for objects of speculation."

Why the resolution moved was changed in its character so as to omit all charge of corruption, and tone down the Secretary's act from "a violation" of the instructions of the President to an act done "without the instructions of the President," is obvious. At the moment when this whisper was most rife, it became known to a few of both parties that the Secretary had in his possession a written sanction for the acts so criticised, and that while Hamilton did not wish to involve Washington in the imbroglio, too direct an attack would force him to give publicity to his authorization, thus transferring the criticism from his own to his superior's shoulders. This was the last wish of Hamilton's enemies, and the clause was at once moderated so as to make the charge one of omission, not commission; and though Hamilton showed the letter to a few of his own adherents, he spared Washington the abuse that would have inevitably fallen upon him had the paper then been made public.

There were no differences between the draft and the completed resolutions 4-8, but what followed differed radically:

JEFFERSON'S DRAFT.	RESOLUTIONS AS MOVED.
(9.) Resolved, That at the next meeting of Congress, the act of Sep. 2d, 1789, establishing a Department of Treasury, should be so amended as to constitute the office of the Treasurer of the United States a separate department, independent of the Secretary of the Treasury.	(9.) Resolved, That a copy of the foregoing resolutions be transmitted to the President of the United States.
(10.) Resolved, That the Secretary of the Treasury has been guilty of maladministration in the duties of his office, and should in the opinion of Congress, be removed from his office by the President of the United States.	

In the Jefferson MSS. in the Department of State is a small, undated memorandum which was undoubtedly made at this period, and which, read in connection with this draft, is most illuminative. It is apparently an outline of the reforms in the Government desired by Jefferson, and, in the absence of a definite platform of the newly formed Democratic party, is therefore of considerable importance as showing its leader's plans to break up the "Treasury Junto," by dividing the Treasury and by excluding from Congress all holders of Bank stock. The report referred to is probably Hamilton's report on foreign loans, of January 3, 1793, which was specially obnoxious to Jefferson.

"Agenda.
Divide the Treasury Department.

Abolish the bank.
Repeal the Excise law & let states raise the money.
Lower impost.
Treasurer to pay and receive cash, not bills.
Repeal irredeemable quality and borrow at 4 per cent.
Exclude paper holders.
Condemn report of."

It is interesting in this connection to read Jefferson's own history of these resolutions, written to his son-in-law, T. M. Randolph, on March 3, 1793, or the day after the last had been negatived in the House of Representatives:

"You have for some time past seen a number of reports from the Secretary of the Treasury on inquiries instituted by the H. of Representatives. When these were all come in, a number of resolns were prepared by Mr. Giles, expressing the truths resulting from the reports. These resolns you will see in Fenno's paper. Mr. Giles and one or two others were sanguine enough to believe, that the palpableness of the truths rendered a negative of them impossible, & therefore forced them on. Others contemplating the character of the present House, one third of which is understood to be made up of bank directors & stock jobbers, who would be voting on the case of their chief: and another third of persons blindly devoted to that party, of persons not comprehending the papers, or persons comprehending them but too indulgent to pass a vote of censure, foresaw that the resolutions would be negatived by a majority of two to one. Still they thought that the negative of palpable truth would be of service, as it would let the public see how desperate & abandoned were the hands in which their interests were placed. The vote turned out to be what was expected, not more than 3. or 4. varying from what had been conceived of them. The public will see from this the extent of their danger, and a full representation at the ensuing session will doubtless find occasion to revise the decision, and take measures for insuring the authority of the laws over the corrupt manœuvers of the heads of departments under the pretext of exercising discretion in opposition to law."

In the sting of this defeat, Jefferson recorded in his Ana a list of the "paper holders" and "bank-stock holders" who had voted down these resolutions, practically including the whole majority, for he names 28, and the resolutions were defeated by votes ranging between 38 and 40. A similar list was printed in a party pamphlet of the day relating to this matter, entitled: 'An Examination of the Late Proceedings in Congress respecting the Official Conduct of the Secretary of the Treasury,' which includes 34 names, agreeing most closely with Jefferson's set. In my 'Bibliotheca Hamiltoniana,' I hazarded the suggestion that this pamphlet was written by John Taylor of Virginia, but I have since found that it was published on March 8, or only a week after the voting down of the resolutions, and it must therefore have been written in Philadelphia. Jefferson himself mentioned the piece in a letter to Monroe (May 5), writing: "The fiscal party having tricked the House of Representatives out of the negative vote they obtained, seem determined not to lose the ground they gained by entering the lists again on matters of fact & reason. They therefore preserve a triumphant silence notwithstanding the attacks of the pamphlet entitled 'an examination, etc.,' and of Timon. They shew their wisdom in this, if not their honesty." From this list of corrupt Congressmen, as well as from certain other ear-marks, I infer that the same hand which drew Giles's resolutions had at least an overlooking eye upon the preparation of the pamphlet.

PAUL LEICESTER FORD.

ACROSS SIBERIA.—I.

OMSK, July 24, 1895.

THE great Siberian railway, properly speaking, begins at Cheliabinsk, nearly 1,400 miles beyond Moscow. This preliminary journey can be made in three days and four nights, on the whole not uncomfortably, at the exceedingly cheap rate of about thirty-seven and a half rubles, or some twenty dollars, for a first-class ticket. The fare all the way from St. Petersburg is proportionately even cheaper, as the Russian Government a few months ago introduced the system of a rapidly decreasing rate of mileage for long distances. The trip is only moderately interesting. The country passed through is flat and seems fertile and prosperous. The crowds at the stations are the usual picturesque, red-shirted muzhiks, with a sprinkling of the original native inhabitants as one gets to the eastward. The Volga is crossed on an iron bridge 1,484 metres long a few hours before the train reaches Samara. What one sees of the passage through the Urals is decidedly pretty, but to a foreigner hardly more, though the Russian, accustomed to level or rolling plains, is moved to much enthusiasm by mountains and valleys less striking than one can find, for instance, in New Hampshire.

Cheliabinsk is beyond the mountains, and already in Asia, but not in Siberia, as it lies in the government of Orenburg. The population, which is somewhere between fifteen and twenty-five thousand, is rapidly increasing, thanks to the railway, and is likely to continue to do so, as from here a branch line is being built to the Perm-Tiumén road, which crosses the Urals further north. The station, in true Russian fashion, is a good mile and a half from the city, and about it a suburb is quickly growing up. The place itself is in some ways not unlike some of our own Western ones of the same size, with its unfinished buildings and general air of untidy newness; but there is less bustle, and the color is different, for, instead of our prevailing white, most of the houses are unpainted and weather-stained, giving a generally dark effect. Very different, too, is the population, with its soldiers and officials in uniform, its peasants (for the lower classes in the Russian towns still are peasants, long-bearded, red-shirted), its Tatars and Kirghiz, the latter of whom are apt to live in the surrounding country, from which they come in to market. The streets are broad and shadeless, with the low houses, often of logs, straggling along loosely on either side; and carriages for hire abound, as the distances are considerable and the Russians are not fond of walking. Besides the churches, most of the chief buildings are public ones, such as official residences, schools, the offices of the railway, etc. The shops are small, but apparently not ill-supplied. Here and there one may see the omnipresent bicycle.

The Trans-Siberian itself is at present finished and open from Cheliabinsk to Omsk, a distance of 741 versts, or about 500 miles. It takes nearly forty-eight hours to traverse this, not so much on account of the easy slowness of the train as because at only one station does it stop for less than twenty minutes, while an hour or more is not infrequent. Our train was a fairly long one and packed, many of the upper-class passengers being on Government service; among them half-a-dozen engineers who were going two or three thousand miles further to work on another section of the road. Besides several baggage-cars, etc., there were three classes for travellers. There were no first-class cars, and the two seconds were borrowed from elsewhere, and so old, bad, and overcrowded were they that, like many of the other unfortunates with second-class tickets, I preferred to ride third. These thirds were the best I have ever seen, new-built expressly for this line, and capable at night of being turned into sleepers with three tiers of beds, thus insuring each of us a whole one, even if it was only a board. The five fourth-class cars were like freight cars plus a few windows, and were provided with benches filled with men, women, and children, a sturdy, cheerful crowd, not at all miserable in appearance, bound for the broad vacant lands to the east. Emigration to Siberia has increased very fast in the last few years. For a long time it was unwisely discouraged by the Government, which made futile efforts to check or limit it. This policy has now been abandoned, and last year well over a hundred thousand colonists crossed the Urals, the majority of them by the north to Tiumén and thence by steamer to Tomsk. There are various causes for this movement, such as exhaustion of the soil or growth of population till the lands of the Mir or commune are overcrowded; but perhaps the chief one is the restless, wandering spirit so characteristic of the Russian peasant. The extension of railways must stimulate this emigration, which will soon assume dimensions equalled only, if at all, by that of Europeans to the United States.

Such of the stations as were finished were satisfactory brick buildings, with granite water-towers near by, and each with its embryo garden. At each the sight was the same. Knowing that the wait would be a long one, the passengers streamed out for air, exercise, and refreshments. Three times a day we came to a buffet with very tolerable food, and more than ample leisure was allowed for a meal, while at every stopping-place there was a great samovar filled with boiling water from which any one could fill his precious tea-kettle gratis. A little way off, kept at this respectful distance by the orders of the gendarme who paced the platform, stood a crowd of peasants with wild strawberries or fish or vegetables or kumiss for sale, and from them the emigrants seemed to get most of their food, which they eked out with much tea. The town or village that the station represented was frequently not in sight, and in no case very close. Instead, there stood nondescript vehicles to carry any possible visitor to it. Among the loafers about were good-natured-looking Kirghiz, men of a marked Mongolian type and clad in sheepskins with the wool inside. They are largely still in a pastoral state, and own much of the land in this region, to the discontent of the more pushing Western intruder.

There are but two towns of any importance along the route, Kurgan and Petropavlovsk, each with some ten to fifteen thousand inhabitants. The whole way lies through a prairie broken by continual patches of woods or now and then a salt lake. The soil seemed to be a layer of black earth over sand, the degree of fertility varying with the thickness of the layer and its intermixture with sand. It can be fearfully cold here in winter, and must often be equally hot and dusty in summer; but, thanks to cloudy weather and occasional showers, we, at least, had nothing to complain of in this respect. Thus for two days and nights we jogged along until, on the third morning, we saw before us rolling northward the great river Irtysh, partly spanned by a fine half-finished railway bridge. By us were some wooden barracks for a temporary station, and in the distance, four or five miles off, the roofs and

domes of the capital of this region, the city of Omsk. ARCHIBALD CARY COOLIDGE.

A UNIONIST'S VIEW OF THE GENERAL ELECTION IN ENGLAND.

LONDON, August 17, 1895.

FROM the result of the general election in England a thoughtful Unionist may draw with some confidence the following conclusions:

First. The people of the United Kingdom, or, to use ordinary language, the English people, have pronounced decisively against the policy of home rule for Ireland.

The validity of the conclusion, is, I am aware, disputed by Home-Rulers. It rests, however, not on any subtleties of political calculation, but on broad, indisputable facts, of which every man, whatever be his political leanings, can and ought to take notice. Up to the end of 1885 all English politicians of influence had, without exception, opposed the policy of home rule. Mr. Gladstone's conversion induced the mass of Liberals to overcome their natural repugnance for every scheme which repealed or invalidated the Act of Union with Ireland. In 1886 Mr. Gladstone brought forward his first Home-Rule bill. It was unhesitatingly rejected by the House of Commons, and, on an appeal to the people, was even more decisively rejected by the electorate. And the measure of 1886, be it noted in passing, offered great advantages to the people of Great Britain. It practically removed the Irish representatives from the Parliament at Westminster, and left to the Parliament at Westminster the control not only of all British but of all Imperial concerns. The current of events and the personal influence of Mr. Gladstone produced in 1892 a change of sentiment. The Liberals returned to office; they were supported, however, only by an uncertain majority of about forty—a number, by the way, which is almost equivalent to the excess, on democratic principles, in the Parliamentary representation of Ireland. They were authorized, or, to use the political slang of the day, "had received a mandate," to produce a measure of home rule. The bill of 1893 was produced. It offered to the people of Great Britain no one of the advantages presented by the bill of 1886; it was passed through the House of Commons by means of the closure and the gag. Many of its chief provisions were not so much as discussed; it was summarily rejected by the House of Lords; its authors dared not dissolve Parliament.

Unionists had, therefore, even before the general election a right to presume, as they did presume, that the bill of 1893 did not command the assent of the people. To suppose that Mr. Gladstone and his colleagues could, if Parliament had been dissolved in 1893, have obtained a majority in favor of home rule, is to accuse them, without the slightest cause, of blindness to their own interests and of treachery to their allies. If they could have commanded success in 1893, it was arrant folly to throw away their chance of victory and wait for the defeat of 1895. If they knew in 1893 that they could obtain a verdict of the nation in favor of home rule, they sacrificed the interests of the Irish Nationalists by refusing to appeal to the nation. Every one knows that Mr. Gladstone's cabinet were guilty neither of stupidity nor of treachery; they did not dissolve Parliament because they conjectured, rightly enough, that on the question of home rule the electors would support the House of Lords. This well-founded belief explains their whole subsequent course of action. The proposed crusade against the House of Lords, the refusal to accept any modification in the Employers' Liability bill, the scheme for Welsh Disestablishment, the advocacy of local prohibition—the whole policy, to put the matter shortly, of "filling up the cup"—was nothing less than an attempt, almost an avowed attempt, to carry some scheme of home rule not on its own merits, but as part of a general democratic policy. Of the morality of this mode of action I say nothing; this is a point on which the opponents and the advocates of home rule cannot be expected—human nature being what it is—to agree. What I do assert is that the course of action, which was by no means without its political recommendations, was an admission that the electorate of the United Kingdom was unfavorable to the policy of home rule. No one bribes a person to perform an act which he deems to be beneficial to himself and is ready to perform of his own accord.

A conclusion, however, which was rendered probable by the conduct of the Gladstonians from 1893 to the moment when Lord Rosebery resigned office, is made certain by the result of the general election. I doubt whether, in any foreign country, it is possible for men fairly to estimate the effect of this election. It comes more near to a plébiscite than any other demonstration of the national will which is possible under the English Constitution. It amounts to a general condemnation of the policy pursued by the Liberal party since 1885. Members of the Opposition, indeed, who think anything more possible than that politicians who deemed themselves the special and indeed the only friends of the people should be unpopular, find in the generality of their condemnation a reason for attenuating its effect. Because a verdict went against them on any definite number of issues, they argue that they were not found guilty on any one issue in particular, and, above all, that the people of the United Kingdom have not pronounced against home rule. The fallaciousness of this assertion is demonstrated by two considerations. Not a single supporter of Lord Salisbury's Government would have been returned to Parliament if he had avowed himself a Home-Ruler. If the election had resulted in a majority (I do not say of 152, but of 50) in favor of the Opposition, they would undoubtedly have asserted, and not without reason, that the nation had approved the policy of home rule.

Secondly. The Home-Rulers have suffered not only a repulse but a permanent defeat.

It has now become impossible that, during any time for which politicians need take forethought, an act should be carried establishing an Irish Parliament with a parliamentary executive. To assert this is a very different thing from saying that the home-rule conflict is over. How far and with what vigor the Irish Nationalists, or, what is a different matter, their English allies, will carry on the contest, no man can foretell; this is not a subject on which a Unionist will venture to prophesy. It is again probable that the swing of the pendulum will have its effect; it is possible, though not, I think, probable, that, at the next general election, say in 1900, the Opposition may obtain a decisive majority and return to office. Assume, for the sake of argument, that they in their turn will obtain a majority of (say) 100 to 150. Under said circumstances they will, of course, be able to carry a measure of home rule through the House of Commons; but, after all that has happened, it is idle to suppose that the House of Lords would allow such a measure to pass into law. The Peers must, under some form or other, insist on the specific measure being submitted to the arbitrament of the electors, and, as Unionists hold, it is now established that a law establishing an Irish Parliament will never receive the assent of the nation.

Thirdly. The salient political fact of the time is the increasing strength of English Conservatism.

The Opposition contend, and not without reason, that the unpopularity of Lord Rosebery's Government was due far less to its advocacy of home rule than to the other parts of its policy; but since Lord Rosebery and his colleagues were the avowed champions of every popular or democratic reform or nostrum, the assertion that their unpopularity was due, not to their being Home-Rulers, but, in effect, to their support of the Newcastle programme, is at bottom nothing but an admission that so-called democratic reforms are not really popular, and that in England modern Conservatism is a stronger force than modern Liberalism. Nor does the truth of this conclusion rest upon the result of the recent election, nor, indeed, upon any one recent event. Men past middle life who can carry back their memories over a period of more than forty years, say to 1852, when the Conservatives first began to rally from the crushing blow of 1845, will see that, on the whole, decade by decade, the Conservative forces of the country have, under modern forms and in new shapes, gained strength. It is, of course, true that the Conservatism of to-day is a very different thing from the Conservatism of forty years ago. Lord Eldon would have considered Mr. Balfour a Jacobin, Peel would have hardly held him a Conservative, and Lord Palmerston, who in all but in name was a Conservative, would, we may suspect, not have offered him a place in any of Palmerston's cabinets. But if the Conservatism of to-day is unlike the Toryism of 1880 or the Conservatism of fifty years ago, it is equally clear that the Liberals of 1895 are unlike the Whigs of 1830 or the Liberals of 1860. It was no accident or mere freak of fortune which compelled John Bright to end his political career as the honored supporter of a Conservative ministry. Of the differences between modern Conservatism and the Toryism or Conservatism of former times I may, with your permission, say something in a future letter. All my present contention is, that modern Conservatism is in England, at the present moment, a stronger force than modern Liberalism. Gladstonians, at any rate, who delight in calling their opponents Tories, are precluded from maintaining that the victory of their opponents is not a triumph of Conservatism.

These are some of the conclusions suggested to a Unionist by the result of the general elections; they are conclusions to which I know neither English Liberals nor the *Nation* will assent. Their importance, however, lies not in their truth, but in their being believed to be true by members of a party who for the moment control the destinies of England. I do not profess to write with impartiality. One of the great evils of party contests is, that they render the impartial judgment of public affairs by men interested in the result of a conflict all but impossible. He who undertakes to comment upon the current course of events ought to do his best to write with fairness. This duty I trust I have performed, but a critic who knows himself to be subject to a bias ought to let the existence of that bias be

known. I write as a strong Unionist; my sole object is to let the readers of the *Nation* know the effect which the general election has upon the minds of Unionists. AN OBSERVER.

Correspondence.

SECRETARY MORTON.

TO THE EDITOR OF THE NATION :

SIR : Anent the third-term discussion, the *Nation* of August 22 says of the President : "The people turn to him for further service because they are unable to find as a successor any one who gives assurance that, if elected to the Presidency, he would guard the public interests in the same fearless and effective manner as Mr. Cleveland has done." The successor to Mr. Cleveland is not far to seek. J. Sterling Morton possesses in an equal degree every quality which has made the President strong in the public confidence.

There has been no more staunch upholder of the public credit than Mr. Morton. He was among the very first of our public men to stem the "16 to 1" free-silver tide in language so clear and incisive as to leave no doubt about its meaning. With him, "sound money" is that in which the civilized world does business —gold or its equivalent. He has shown administrative ability of the highest order in the conduct of the Agricultural Department. While, with a wise economy, saving to the Treasury over $1,000,000 returned to it from the appropriations, the value and efficiency of the department have been greatly increased. No branch of the Government has, in the interests of the people, been more carefully guarded or more intelligently directed. This is recognized by men of all parties. The toiling millions, whether in the workshop or on the farm, have in him a faithful and fearless friend, too honest to deceive them with false hopes. Labor and capital, each needing the aid of the other, friends, not foes, have in him a defender and ally. A graduate of Union College, he is a man of broad and generous culture, and at the same time he is, like Lincoln, a plain man of the people, easily accessible and of gracious manner. Indeed, he possesses many of Lincoln's characteristics which so endeared him to his fellow-countrymen. The author of Arbor Day, now so generally observed, of which he is justly proud, he is widely and honorably known. In the purity of his public and private life he is above reproach.

A representative Democrat, Mr. Morton stands for a wise economy in administration, for commercial freedom in a tariff for revenue only, graduated by the actual needs of the Government; for honest money as opposed to any scheme for tampering with the standard of value; for a pure civil service depending upon merit. Should the Democratic masses, as in the case of Mr. Cleveland, summon him to the leadership of the party, his candidacy would inspire confidence in business men everywhere, draw to its support the most intelligent and thoughtful of our people—in the majority it is believed—East, West, North, and South; and should he be elected to the Presidency, it is safe to say that in high purpose and patriotic devotion his administration would be equal to that of any of his predecessors. G. M.

MINNEAPOLIS, MINN., August 27, 1895.

POST-OFFICE RECEIPTS AT CLEVELAND.

TO THE EDITOR OF THE NATION:

SIR: In the issue of the *Nation* of August 29, I find an interesting article evidencing the improved condition of business throughout the country. You say that the increase in receipts for the month of July over the same month last year in the Chicago post-office is 20 per cent., Boston 15 per cent., St. Louis 18 per cent., Brooklyn, Buffalo, and San Francisco 20 per cent. It might interest you to know that the increase in this office for the same month was 26.86 per cent., which is, I believe, the largest increase shown in any office in the country.—Yours very truly,

JOHN C. HUTCHINS, Postmaster.

CLEVELAND, OHIO, August 31, 1895.

THE MIDDLE AGES AND THE RENAISSANCE.

TO THE EDITOR OF THE NATION :

SIR : The principle of intellectual and literary continuity, to which reference is made in the review of Courthope's 'History of English Poetry' in your issue of August 29, will constitute the leading thought of the forthcoming work by Prof. Stein of Bern on 'Die Philosophie im Zeitalter der Renaissance.' From the introductory considerations published by him in the *Rundschau* for June, it is evident that Prof. Stein rejects the idea of the Middle Ages as an intellectual vacuum, as a cessation of the progress of civilization, and consequently of the Renaissance as a sudden reawakening of the spirit of antiquity from a lethargy of many centuries. His purpose is to show that continuous development is the fundamental principle of the history of the human intellect.

Yours truly, A. L.

YPSILANTI, MICH., August 31, 1895.

MISINFORMATION ABOUT RUSSIA.

TO THE EDITOR OF THE NATION :

SIR : In view of the fact that the name of "Prof. E. Borges" has come before the public again in the daily press, it may not seem out of place or too late to make a few comments on his peculiar article, printed in the June number of *Harper's Magazine*. It was evident throughout that article that the writer was entirely ignorant of his subject. But I must confine myself to a few specific points.

Having been given to understand that "Prof. Borges" was connected with the St. Petersburg Lyceum, I made inquiries. I am informed from the capital that no such person is known there. Had he ever been in Russia even, he would hardly have asserted that Count L. N. Tolstoy, the author, holds, or ever has held, the post of "Secretary of Public Education." Count Dmitri Tolstoy was Minister of Public Education for a time, but was dropped in 1881, about Easter tide. Hence the jesting Easter greeting that year ran: "Khristos voskrese, Tolstoy iskrese!" (Christ is arisen, Tolstoy has disappeared), in place of the customary: "Khristos voskrese," and the reply: "Vo istinny voskrese" (He is risen indeed.) When Count Dmitry Tolstoy died, in the spring of 1889, he was Minister of the Interior. I described his funeral, at the time, in your columns. I saw it.

"Prof. Borges" asserts the "intimate friendship of the Czar [Alexander III.] and the famous painter Verestchagin." Of this, also, nothing is known in Russia.

More important than either of these errors is the gross misinformation contained in the paragraph which relates to the marriage and coronation of the Emperor Nicholas II. I quote only the conclusion of that paragraph: "Even the Emperor may be single, but he cannot be crowned as a bachelor. Simultaneously with his coronation the Czar receives his consecration as the supreme head of the Greek Church, and as such he must be a married man, according to the dogmatic law, 'A priest shall be the mate of a woman.'" If "Prof. Borges's" statements were founded on fact, the Emperor need not have been married until next spring, just before the coronation. The wedding took place immediately after the death of the late Alexander III., at his express request. It was also advisable for the peace and prosperity of the country, which, as in other monarchical lands, depends greatly on the existence of a direct heir to the throne. Moreover, as an editorial in the leading newspaper of St. Petersburg expressed it, at the time:

"For more than a century past the Russian nation has been accustomed to see the new Emperor a married man when he ascended the throne. An unmarried man is considered as an incomplete man, in the life of the common people. This very sound and profound view, which has been held by the populace from time immemorial, applies even more forcibly, if we may be permitted so to express ourselves, to the Emperor, as the leading Russian man, the representative of his people, the independent head of so great a country. Truly does the wisdom of the common people assert that the man is the head, the woman the soul. . . . The marriage of the Emperor is a matter-of-fact necessity for his fatherland, etc."

The Emperor is anointed at his coronation in token of his consecration to his lofty office and duties. But he is not a priest, any more than is the layman or the woman who receives anointment on the eve of one or all the twelve great annual festivals of the Russian Church. Therefore St. Paul's words, which enjoin that a minister of God shall be "the husband of one wife," and which are so construed in the Russian Church that priests must be married before they can be ordained, and can never have a second wife, in no sense apply to the Emperor. It is not imperatively necessary that he should be married before he is crowned. My authority for this statement is an educated clever arch-priest, connected with a Government institute, who assuredly not only knows the exact truth, but would be apt to claim all that is truthfully possible for the person on whom his position depends.

The Emperor is not "the supreme head of the Greek Church." Jesus Christ is the head of "the Holy Catholic Church of the East," which is the official title of that Church. The falsehood that the Emperor is its head is being so constantly repeated that I quote in full my authority for contradicting it. I have before me a copy of the Office for the Reception into the Russian Church of all converts from other Christian churches. The form is invariable, for a future Empress or for the humblest of her subjects. It is printed in Church Slavic, which bears about the same relation to modern Russian as Chaucer's English and black-letter script bear to modern English. Evidently, it is even more inaccessible to "Prof. Borges" than modern Russian! One of the questions put by the bishop or priest to the candidate for admission, in case that candidate has been a member of the Roman Catholic Church, is as follows: "Dost thou renounce the false belief that it is wrong to acknowledge Our Lord

Jesus Christ as the head of the universal Church; and that the head of the body of Christ, that is to say, of the universal church, can be a man, to wit, the Bishop of Rome?" The candidate replies: "I renounce it." And again: "Dost thou believe and confess that the foundation, head, highpriest, and chief pastor of the Holy, *Pravoslávnaya* [right-glorious] Catholic Church is Our Lord Jesus Christ, and that all bishops, pastors, and instructors for the government of the Church are appointed by Him? . . ." Answer: "I believe and confess."

Many other interesting things—among them, the true use of images—are plainly set forth in this Office of Reception, which is, practically, a confession of faith and rule of life.—Very truly yours, ISABEL F. HAPGOOD.

BELMAR, NEW JERSEY, August 30, 1895.

Notes.

GEORGE BELL & SONS, London, will publish by subscription 'Richard Cosway, R.A., and his Companions: English Miniaturists of the Eighteenth Century,' by George C. Williamson, D. Lit., with a number of illustrations, a list of pictures exhibited by these artists, etc. The ordinary edition will consist of 350 copies. Dr. Williamson desires to make the list of Cosway's works known to exist as full and accurate as possible, and would gladly acquire descriptions and photographs of them, either by gift or by purchase. His address is The Mount, Guildford, Surrey, England.

Another subscription work is 'Picturesque Worcester (Mass.),' announced for publication in the fall by W. F. Adams & Co., Springfield, in three volumes. The half-tone scenic illustrations have been made under the supervision of the well known wood-engraver Elbridge Kingsley, and of Frederick Knab, and will number nearly 2,500, all original.

Fully illustrated, too, will be 'Beautiful Houses,' by Louis H. Gibson, which T. Y. Crowell & Co. have nearly ready.

D. Appleton & Co.'s fall announcements embrace 'The Beginnings of Writing,' by Walter James Hoffman, D.D., of the Bureau of American Ethnology; White's 'Natural History of Selborne,' in two volumes, with an introduction by John Burroughs and many illustrations; an *édition de luxe* of 'Uncle Remus, his Songs and his Sayings,' with 112 illustrations by A. B. Frost; Hall Caine's 'The Manxman,' in two volumes, with forty gelatine plates of the Isle of Man; 'Westminster Abbey,' by Miss Bradley, daughter of Dean Bradley, elaborately illustrated; an illustrated work on 'The Music of the Modern World,' edited by Anton Seidl, with the aid of specialists; a work on 'Oriental Porcelains,' by Dr. S. W. Bushell, the illustrations being in colors from the collection of the late W. T. Walters of Baltimore; 'Genius and Degeneration,' by Dr. William Hirsch; 'Our Juvenile Offenders,' by Douglas Morrison; 'General Sherman,' by Gen. M. F. Force; 'The Story of the Indian,' by George Bird Grinnell; 'The Intellectual Rise of Electricity,' by Park Benjamin; and a new revised and rewritten edition of Prof. C. A. Young's 'The Sun.'

Macmillan & Co. have in preparation 'The Economic History of Virginia in the Seventeenth Century,' by Philip A. Bruce, corresponding secretary of the Virginia Historical Society. "Servants and Slaves" will form the subject of one of the chapters.

'From Far Formosa: The Island, Its People and Missions,' by George Leslie Mackay, D.D., will be published in November by Fleming H. Revell Co., with maps and illustrations.

George H. Richmond & Co., No. 12 East Fifteenth Street, promise for next month a theatrical story, 'Dolly Dillenbeck,' by James L. Ford, author of the pungent 'Literary Shop.'

Mr. J. G. Bourinot, whose work as an expounder of the Constitution of the Dominion of Canada is well known, has prepared a manual entitled 'How Canada Is Governed' (Toronto: The Copp, Clark Co.). The book contains accounts of the political institutions of the provinces and municipalities, as well as of the Dominion, with an historical outline of their origin and development, and has a map and illustrations of some of the public buildings. It will be found convenient as a book of reference, but appears to be better adapted to the requirements of the average Canadian citizen than to those of students of politics.

The great work on 'Taxation in England' by Dowell was almost wholly confined to the national and imperial system, and the history of local taxation and finance has not received much attention. An essay on this subject by Mr. Inglis Palgrave appeared in 1871, but since that time nothing of importance in this direction has been attempted. The Local Government Board, however, has been for many years collecting and arranging materials, and this matter has now been utilized by Mr. G. H. Blunden in the preparation of an essay entitled 'Local Taxation and Finance' (Charles Scribner's Sons). The facts dealt with are of a sufficiently dry and repellent character; but, from the point of view of the economist, the investigation may be said to be enlivened by discussions of the incidence of rates, the taxation of ground values, and the theory of betterments.

'Stock Exchange Values' (London: Effingham Wilson) is a compilation of the prices of innumerable securities in the London market for the decade 1885-'95, prepared by the firm of F. C. Mathieson & Sons. Mr. S. F. Van Oss, the author of 'American Railroads as Investments,' contributes an introduction with statistics and diagrams. This introduction consists of a review of the general history of British business for the last ten years, including such financial events in foreign countries as have had important effects. Mr. Van Oss is a writer of ability, and he handles a difficult subject with skill as well as vivacity.

Under the title 'The Wealth of Labor' (Baker & Taylor Co.), Mr. Frank Loomis Palmer develops the beauties of protection from an unusual standpoint. He maintains—with very great obscurity of expression, it must be said—that in the exchange of goods the profit to the different parties may be very unequal, and that the party whose goods are most cheaply produced gains the least by the transaction. This is especially the case where natural advantages, or what Mr. Palmer calls gratuities, are involved, and hence the true protective principle is concerned only with exported products. A nation should devote itself, therefore, to keeping up the price of its exports, or at least of those in the production of which it has a clear advantage over foreign countries. It follows from this that restrictions should be imposed on the most productive industries, and labor be compelled to resort to those which are less so. The best way of accomplishing this appears to be by putting duties on exports. It will keep foreigners from getting our good things away from us, and compel them to stop trading or to accept commodities in the production of which we have no advantage over them. There is much force in Mr. Palmer's argument; but we fear that he will need to labor a long time before he induces our protected interests to consent to replace duties on foreign goods by duties on our own.

The University of Chicago Press issues a translation of Prof. Gustav Cohn's 'System der Finanzwissenschaft' made by Dr. T. B. Veblen, under the title 'The Science of Finance.' Prof. Cohn certifies, on reading the proof-sheets, that the translation is excellent, so that any complaint that we might feel disposed to make of the crabbedness of the style would apply only to the German of the original. The third book, which deals with the German tax legislation of the present time, has been omitted, inasmuch as, during the six years that have elapsed since its publication, so many changes in the law have taken place as to have made it useless except as history.

'Statistik und Gesellschaftslehre' (Statistics and Sociology) is the title of a work by G. von Mayr, the first volume of which, treating of "Theoretical Statistics" (Freiburg and Leipzig: Mohr), has just appeared. This volume is divided into five sections, beginning with a general introduction, followed by a discussion of the basis of statistical science, the methods, technics, administration, and history of statistics. To each section is added an excellent bibliography of the special subject considered, and reference to the entire contents is facilitated by a full index. The author maintains that sociological studies, unless founded upon statistical observations, are apt to lead to uncertain and illusory results, which are of no practical or scientific value and often give rise to vague speculations and false generalizations. This is a point, however, which he reserves for more thorough examination in a second and concluding volume under the head of "Practical Statistics, or Exact Sociology."

A valuable and very readable contribution to the recent history of ethics is Dr. Alexander Tille's volume, 'Von Darwin bis Nietzsche' (Leipzig: Naumann), in which an attempt is made to determine the influence of evolution in natural science upon the development of moral conceptions and their application to the social life of the individual and the race. Evolutional ethics, our author thinks, finds its clearest and most complete expression in Friedrich Nietzsche's 'Also sprach Zarathustra,' and he has therefore set this work as the limit of his present investigations. Full justice is done to the labors of Huxley, Spencer, and other English scholars in this province of research. The book needs an index. In Germany, at least, this lack is usually due to false economy on the part of the publisher, and is often as keenly regretted by the author as by the reader.

The same Leipzig publisher has just issued the first volume of 'Das Leben Friedrich Nietzsches,' by his sister Elizabeth Förster-Nietzsche. Although somewhat hobby-horsical, as men of intense convictions are apt to be, Nietzsche was a brilliant thinker and an exceedingly original character. His outward career was uneventful, but his intellectual life was peculiarly rich and rare. The fact that Dr. Max Nordau selected him as one of the most prominent of modern "degenerates," rivalling Richard Wagner and Henrik Ibsen as specimens of neurological deterioration and decay, ought to invest his biography, at least, with a psycho-pathological interest. In this record of his early life the reader will look in vain for symptoms of incipient imbecility.

A number of reprints and new editions have

accumulated on our table. Prof. Hinsdale has revised to date and extensively recast his 'American Government, State and National' (Chicago: The Werner Co.), but it seems strange that Bryce's 'American Commonwealth' should not have been singled out for recommendation, and should not appear among the references to works in which the American and the English systems are contrasted. From Macmillan we have the second volume of the translation of Adolf Holm's 'History of Greece,' concerning which work we have already expressed our judgment; and two more volumes in Dent's charming edition of Defoe, viz., 'Journal of the Plague Year' and 'Captain Singleton.' The editor, Mr. G. A. Aitken, examines, in his introduction to the Journal, the sources of Defoe's information about the visitation, which he could have remembered only as a boy of six, and adds an appendix of extracts from contemporary narratives about the Plague. In the introduction to 'Captain Singleton,' he follows Prof. Minto's discussion of Defoe's alleged anticipation of recent discoveries in Central Africa. Copeland & Day, Boston, have made a pretty brochure of Walter Pater's 'The Child in the House,' and have limited the output to 350 copies. D. Appleton & Co. send us the current issues of their well-known 'General Guide to the United States and Canada,' 'Canadian Guide-Book' (now compacted into a single volume), and 'Dictionary of New York and its Vicinity' (the "vicinity" has not always been carefully attended to in the revision).

Paul Langhans's 'Kleiner Handelsatlas' (Gotha: Justus Perthes; New York: Westermann) is designed for use in schools and for self-culture, and will work efficiently to both ends. It shows the distribution of the world's raw products, the routes of commerce, etc., in a great variety of ways, with especial reference to European and to German trade. The little side-map in sheet Nos. 2 and 3 errs in coloring the United States as having the double standard of value; and Chili, too, should now be colored yellow to please the gold-bugs and to square with the facts. The same New York firm brings us the fourth part of the Spruner-Sieglin 'Atlas Antiquus,' and Parts 5 and 6 of the second volume of Ritter's 'Geographisch-Statisches Lexikon' in the eighth edition. The letter O is here entered upon.

The highly esteemed popular 'Dictionnaire Général de la Langue Française' of Hatzfeld, Darmesteter & Thomas (Paris: Ch. Delagrave) reaches *hystérotomie* in the 16th fascicule.

We make tardy mention of M. Salomon Reinach's review of M. P. Foucart's "Recherches sur l'origine et la nature des Mystères d'Éleusis," which appeared in the *Revue Critique* of July 15. M. Foucart holds that the worship of Isis and Osiris, as well as the art of agriculture, was introduced into Greece by Egyptian colonists about the seventeenth century B. C., and he insists on the likeness between Isis and Demeter. A thousand years later the Greeks borrowed from Egypt the eschatology contained in the 'Book of the Dead,' and developed it into the Eleusinian mysteries. M. Reinach seems willing to admit this later Egyptian influence, though, as an archæologist, he protests against the assertion that the earliest civilization of Greece was derived from Egypt. He believes it to have sprung from European sources, although its development was, no doubt, modified by Oriental influence. The earliest civilization of Greece has been revealed by the archæology which goes by the name of "prehistoric," and which to-day, M. Reinach says, lends a hand to history. He adds, a little ruefully: "Je devrais peut-être dire qu'elle la lui tend, et que l'histoire n'est pas bien empressée de la prendre; je crains que M. Foucart ne me contredise pas là-dessus."

The 'Bibliographie de l'année 1894,' published by the *Annales de Geographie*, is a catalogue of nearly sixteen hundred geographical works and articles in scientific journals, each entry accompanied in most instances by a short but useful descriptive note. No attempt has been made to record all the geographical literature of the year—mere books of travel are rarely included—but only works of importance either from their subject or their manner of treatment. It is larger by nearly a hundred pages than the similar publication of last year, the chief increase being in works on Africa and America.

Americans on their travels have had good reason to know the name of Baedeker. These will hear, not without interest, that, in a case lately tried before Lord Russell, the Chief Justice of England, and a jury, a verdict for £50 damages was given against Baedeker. The suit was brought by an hotel-keeper at Jaffa named Howard, alias Award; or, perhaps, more correctly, Award, alias Howard. The plaintiff does not seem to have had "all the blood of all the Howards" in him, for he was born at Beirut, in Syria, of a Maltese father and a mother from Mount Lebanon. Baedeker had stated of him that he was an Arab; that his hotel was a second-class one; and that he was a man with whom his guests should make a bargain. The jury were of opinion that, although the statements were honestly made, they were "not substantially correct."

The authorities of the Public Record Office, London, have made arrangements for the continuance of the preparation of the calendars of Colonial Papers, hitherto so admirably carried on by the late Mr. Noel Sainsbury of the Public Record Office. The Hon. John William Fortescue, a younger son of Earl Fortescue, will henceforth be charged with this undertaking. Mr. Fortescue has for some time past been interesting himself in colonial history, and, within the last two years, has published, in *Macmillan's Magazine*, papers upon the Expedition of Penn and Venables to Jamaica in 1655, and upon other West Indian subjects. He cannot, of course, bring to the task the vast amount of information his predecessor had accumulated in the course of a long lifetime, but, from what we have heard of Mr. Fortescue, there is reason to believe that his heart will be very much in his work. Being now only thirty-six, he has the prospect of long usefulness before him. Mr. Fortescue was at one time Private Secretary at Barbados to Gov. Sir William Robinson of the then Windward Islands, in the West Indies.

Mr. Arthur Prestwood Lucas, B.A., of the Colonial Office, London, who has for some years past been bringing out a series of historical-geographical works upon the British colonies, through the Clarendon Press, Oxford, is now engaged upon a volume dealing with South Africa.

Thanks to the practical efforts of some American educators (the "International Institute for Girls in Spain," incorporated by the Commonwealth of Massachusetts and placed at San Sebastian, on the Bay of Biscay), the University of Madrid has fallen into line with the general movement for the higher education of women. Two graduates of this Spanish-American School for Girls having taken their B.A. degree (1894) at the Government Institute for Boys at San Sebastian, continued their studies in the Madrid University course of philosophy and fine arts, for their M.A. degree, taken this summer at the regular term of the University in Madrid. The grades given at the examinations, which extend over a week, are three—*aprobado*, *bueno*, *sobresaliente*. In every examination the young women received "sobresaliente" and passed "gloriosamente." A detail of this latest episode in current educational history shows that the spirit of chivalry is not extinct in modern Spain: the University has 1,000 male students, some of whose number have testified their approbation of their new fellows by making a pathway of their caps before the girls, and chanting in line on the staircase of the University library the Royal March, as the pair walked by.

The Vienna Society for Providing Academic Lectures for Women has just issued a circular containing the syllabus for 1895-96, which embraces the whole range of science and art, including the literary study of modern languages. While most of the lecturers are young *Universitäts-Docenten*, a prominent painter will lecture on the history of art, and two members of the Hoftheater are to give instruction in elocution and recitation. We are also informed that the University of Prague has granted to women permission to attend its lectures as *ausserordentliche Zuhörer* (or what certain of our colleges call "hearers"), and although this privilege carries with it no academic status, it is an entering wedge of opportunity which time may be trusted to drive home.

—Among the documents of interest now being shown to American visitors to the Public Record Office, London, is a hitherto unpublished letter from Benjamin Franklin to the Earl of Shelburne. It was recently discovered among papers in the Record Office connected with the Department of Foreign Affairs. It runs thus:

PASSY, March 22, 1782.

Lord Cholmondeley having kindly offered to take a Letter from me to Your Lordship I embrace the Opportunity of assuring the continuance of my ancient Respect for your Talents and Virtues, and of congratulating you upon the returning good Disposition of your Country in favour of America, which appears in the late Resolution of the Commons. I am persuaded it will have good effects. I hope it will tend to produce a general Peace, which I am persuaded Your Lordship, with all good Men, desires, which I wish to see before I die, and to which I shall with infinite Pleasure, contribute everything in my Power. Your friends the Abbé Morellet and Madam Helvetius are well. You have made the latter very happy by your kind present of Gooseberry Bushes which arriv'd in five days, and in excellent order. With great and sincere Esteem, I have the honour to be,

My Lord,

Your Lordship's Most Obedient and most humble servant,

B. FRANKLIN.

LORD SHELBURNE.

—In 1848, the Hakluyt Society, London, published a reprint of 'The Discoverie of the Large, Rich, and Bewtiful Empire of Guiana, . . . Performed in the yeare 1595 by Sir W. Ralegh, Knight, Captain of Her Maiesties Guard, &c., &c.' The Hakluyt edition of this work was admirably edited by that distinguished traveller the late Sir Robert Schomburgk, who, in 1841, as the Queen of England's Commissioner to survey the boundaries of British Guiana, explored the Delta of the Orinoco. In his Introduction to the work Sir Robert says (p. lxv): "The general belief that during Ralegh's lifetime only one edition of his Voyage was separately published is erroneous, as,

on a recent comparison of two copies bearing the date of 1596, we have observed some trifling typographical differences." This statement has been confirmed by the recent acquisition by the British Museum of a copy of the second edition. Both editions appeared in 1596, "imprinted at London by Robert Robinson." The edition published by the Hakluyt Society is that which, at the Museum, bears the press number C. 32, g. 25. The reference to the new acquisition is C. 32, c. 10. A correspondent of the *Nation*, at present in London, says that he has compared the two editions now in the Museum, and finds that they are two distinct publications. At the same time, he thinks that there must have been three, rather than only two, editions of the 'Discoverie,' for the differences between the two copies in the Museum are not identical with those which Schomburgk gives in his note (1) on p. lxv. of his Introduction. It is worth mentioning that, a year or two after the Hakluyt edition appeared, the Museum authorities acquired a manuscript map of Guiana, which is attributed by Mr. Cooke, an expert in such matters, to 1595, and is now classed as Sir Walter Raleigh's map of Guiana. The press number of this chart is 17.940a of the "Additional" classification. Schomburgk appears to have been unaware of the existence of this map; at all events, he does not mention it. It is among those treasures of the Museum that have lately been put out in glass cases, in a locked room, for the edification of the savants attending the Geographical Congress in London. In 1892 a Hamburg firm published a reproduction of this map of Guiana in connection with the celebration of the discovery of America.

—The Selden Society's edition of 'The Mirror of Justices' has already received mention in these columns. It remains only to say that Prof. Maitland's Introduction is a new proof of his comprehensive learning and acute suggestiveness; and that his unwillingness to propose a positive solution leaves the question of this book's authorship and motive likely to become the permanent riddle of English legal history. As relevant circumstances, hardly brought out, however, by Prof. Maitland, it may, perhaps, be noted (1) that to "deliberately state as law what he knew was not law" (p. xxxvii.) is not, especially in that age, as significant as it seems; for that is exactly what the judge Bracton himself did, even on points where in other places he recounts the actual practice; (2) that, as indicated in Liebermann's 'Consiliatio Cnuti' (pp. xiii., 1), the local customs of England were for a long time very varied (as in Germany), and both the "law" and the "abuses" of the 'Mirror's' author may often represent his experience, though not the practice of some or all of the king's judges, who themselves could hardly have been entirely uniform in rulings at that time. The Selden Society's 'Select Pleas in the Court of Admiralty' (edited by Reginald D. Marsden), mainly covering the earliest period of extant regular records, 1527-1545, has a special interest in the facilities which it begins to supply for the study of the history of our commercial law. It is much to be regretted that Goldschmidt's masterly 'Handelsrechtsgeschichte' has not been done into English to reveal to our lawyers the complicated and fascinating past of our commercial legal ideas. The bills of debt on pp. 55, 72, 93, serve as apt illustrations of Goldschmidt's theory that the bill of exchange is historically an outgrowth in part of the old bottomry bond; we here in the 1500s see the process going on before our eyes. Another interesting thing is the form of the old bill of lading, which often, as in older Asiatic commerce, is written by the consignor in the first person, "I have delivered, etc." (pp. 61, 126).

—We must not fail to call attention to the rich treat offered in the next few years by the Selden Society. Besides the 'Bracton and Azo' and 'Coroners' Rolls, H. III. to H. V.,' they now announce: Earliest Records of the Equitable Jurisdiction of the Court of Chancery (nearly ready); Select Admiralty Pleas, vol. ii. (nearly ready); Select Pleas from the Court of Requests, vol. i., H. VII., and H. VIII. (in preparation); Forest Plea Rolls; Memoranda of the Court of Exchequer; Plea Rolls of the Jewish Exchequer; Pleas of the Star Chamber; Pleas of Manorial Courts, vol. ii.; Civil Pleas, vol. ii.; Conveyancing Precedents of the 1200s; a book of precedents of pleading of the same time; and the History of the Register of Original Writs.

—A toothsome dish has, within a few weeks, been served up for the refection of faddomaniacs. M. Louis Martin, encouraged by the success of his 'Angleterre et la Franc-Maçonnerie,' has aimed to astonish the nations by answering in the affirmative the question which forms the title of a book he has lately issued, 'L'Anglais est-il un Juif?' Before grappling with his new theme, however, he once more relieves himself on the subject of his former effusion. According to his reading of history, Freemasonry had its origin, at least in its modern form, in London, about 1717, was imported to the Continent, and bore its first fruits, as regarded his own countrymen, in the loss, by France, of possessions in India and Canada. Its subsequent effects, he maintains, are seen in the French Revolution, the emancipation of the Jews, the *cordiale entente*, the reign of Napoleon III., 'the present anglolatrous Republic,' and what not; English Protestants and French Huguenots utilizing and exploiting it for their own ends. France, he estimates, furnishes only 26,500 Freemasons, while England has 287,100, and the United States, 569,600. But not only thus is heirship to perdition established for the Anglo-Saxon race. Another proof that we are speeding to the pit is discovered in the fact that we are Hebrews. To what the Anglo-Israelite Society has made out, to its satisfaction, on this point, M. Martin seems to attach no particular value. He takes his stand on the infallible ground of psychology. Jews and Anglo-Saxons, as, but for the conceit of invincible obtuseness, we should not hesitate to acknowledge, exhibit, unmistakably, a family likeness, in being equally distinguished by want of conscience and sense of responsibility, perfidy, deceitfulness of bearing, avarice, stupidity, cowardice, pride, ferocity, and so on. Except in popular nomenclature and other non-essentials, the two races are, consequently, identical. Q. E. D.

—The diggings at Delphi have brought to light a fourth sacred hymn, some account of which was given to the Académie des Inscriptions et Belles-Lettres, at its session of August 9, by M. Henri Weil. The hymn is in honor of Dionysos, and dates from the last third of the fourth century before our era. This makes it of an earlier date than the pieces already discovered, which it surpasses also in historical interest, although it is not accompanied by musical notation. The first strophes turn on the legend of the god; the rest bear upon historical events then going on. Other epigraphic documents recently discovered show that the work of rebuilding the temple of Delphi proceeded throughout the whole of the fourth century. The present discovery shows that these works received a lively impulse after the close of the sacred war against the Phocians, who had pillaged the treasuries of the temple. The poet looks forward to the day when there shall rise on the desecrated site a new temple, resplendent with gold, which shall be thenceforth safe from profanation, and he felicitates the generation that shall accomplish this pious work. Speaking as the mouthpiece of the priests of Delphi and of the Amphictyonic Council, which was directed at that time by the Macedonian princes, he extols the panhellenic idea and the policy of the new chiefs of Greece. The *Bulletin de Correspondance Hellénique* will publish the text of the pæan with notes and supplements by M. Weil.

—At the session of the Académie des Inscriptions et Belles-Lettres of July 5, M. Bréal read a paper of more than ordinary interest on the different divinities of ancient Italy. It has been commonly held that the Romans, when they were brought into contact with the Greeks, identified their own divinities with the Hellenic gods. Mars, for instance, was regarded as identical with Ares, Minerva with Athene, and so on. M. Bréal, however, believes that this identification was of much earlier date, and that it was made by the Etruscans. The names of Mars and Minerva are not Latin, but Etruscan. This is also true of Neptune, whose name, under the form "Nephtil," is found on a mirror. The Latin language is an Indo-European tongue—there can be no doubt about that; but because the language is Aryan it does not follow that the religion was also Aryan—at any rate, the whole of it. One only needs to glance at the religions of Europe to see that this is so. The Etruscan religion has, besides, left other traces among the Romans, and, through them, among the French. For example, the name of the gens Aurelia, to which belonged the Emperor Marcus Aurelius, is derived from the word "usil"=the sun. This name has been naturalized in France in the name of the city of Orléans, and from France it has crossed the Atlantic "pour baptiser l'un des États de la république américaine." The closer one looks into the question, the more one perceives that civilization is the work of many collaborators. The language of these old peoples, though apparently extinct, is not wholly dead; it reappears at intervals in some mythological allusion, or in some name of a place or of a man. In the discussion which followed M. Bréal's reading, M. d'Arbois de Jubainville said that he believed that the general principles laid down by M. Bréal could hardly be contested. The religious doctrines of the Romans contained elements, borrowed from the Etruscans, which are not Indo-European; such as the doctrine that, in the art of augury, the left and not the right is of good omen. But there are still details which be thought might be disputed. The word "usil," for instance, and the name of the Aurelii, primitively Auselii, seem to come from the same root as the Latin *aurora*, the origin of which appears to be Indo-European.

A RUSSIAN WOMAN.

Sónia Kovalévsky: Her Recollections of Childhood. Translated from the Russian by Isabel F. Hapgood, with a Biography by Anna Carlotta, Duchess of Cajanello, translated from the Swedish by A. M. Clive Bayley, and a Biographical Note by Lily Wolff-

sohn. New York: The Century Co. 8vo, pp. 318. 1895.

Sonia Kovalevsky: Biography and Autobiography. I. Memoir. By A. C. Leffler (Edgren), Duchessa di Cajanello. II. Reminiscences of Childhood, written by herself. Translated into English by Louise von Cassell. With portraits. Macmillan. 12mo, pp. 317. 1895.

MR. GLADSTONE is right in saying that the biography of Sonia Kovalevsky is a book of extraordinary interest. (How wrong he is in his further comment upon it, we shall point out further on.) There is nothing in the world more interesting than to obtain fresh insight into the real nature of a human soul; and when a biography is of an intimate nature and is written with masterly strokes, it is a human document which one must be very thankful for. In this case there is the additional feature that the character described is that of a woman of extraordinary intellectual powers and of extraordinary richness and force of character.

All criticism, whether of persons or of books, is, as Jules Lemaître has pointed out, necessarily subjective in its character, whatever may be the critical principles which its author professes to abide by. It is always essential that we should be able to make allowance for the writer's point of view, and hence it would not be a bad plan if every important biography were preceded by the biography of its author. This volume has that advantage; the life of the Duchess of Cajanello, although it comes at the end of the book, the wise reader will turn to first. She, too, was a remarkable woman and led a life full of interest. Anna Carlotta Leffler was the sister of the distinguished Swedish mathematician, Mittag-Leffler, and the only daughter of a Swedish rector. She inherited from her mother literary tendencies which showed themselves at an early age; when she was six years old she dictated a tale to her older brother which he wrote down, and she was only twenty-three when her play, "The Actress," a precursor of "The Doll's House," was given for an entire season at the Stockholm theatre. No one suspected her to be the author of it; she had, in fact, never been in a theatre more than two or three times in her life, for her parents during her early youth considered theatre-going a luxury, and her own religious convictions forbade her to indulge in such a pleasure often. A few years later a collection of tales entitled 'From Life,' the first book she had published under her own name, obtained an immense success, and from this time she was an admired and a prolific writer. Her home was the meeting-place for the best and the most distinguished literary spirits of the day, and she was herself the gracious and inspiring hostess, who nevertheless gave to the conversation the impress of her own personality. In 1888 she accompanied her brother to the mathematical congress held in Algiers, and upon returning through Italy she met for the first time the Duke of Cajanello, with whom her brother had long been in correspondence—a man who had broken with the prejudices of his class sufficiently to become professor of mathematics at the University of Naples. Her marriage with him was an extremely happy one, and she became again, in Naples, the centre of a brilliant literary circle.

Upon the death of Sonia Kovalevsky, with whom she had lived upon terms of the most intimate friendship, she devoted herself to the writing of her biography, and she had just finished correcting the proof-sheets of this work when she succumbed to a sudden attack of peritonitis. She had lately returned from a summer spent in the island of Capri, she had set her house in order for the winter, and had commenced a new novel which she felt would be her greatest work.

"With the cradle of her child close beside her, she wrote with ever-increasing delight, interrupting herself every now and then to attend to her infant, and again resuming her work without the least impatience. There also stood one who awaited the result of her work with intense sympathy, ready to hear her read the freshly written pages, which she communicated with the calmness induced by the certainty of being comprehended. She trembled at all this happiness, and she was snatched away just as she had tasted its full sweetness."

It is not inappropriate to bear in mind that the biography before us was written by a woman intoxicated with the joys of early married life (her first marriage had not been a happy one), and that allowance may need to be made for an unconscious tendency to exaggerate the indispensableness of such sources of contentment.

The life of Sonia Kovalevsky is depicted for us in two parts. We have already called attention in the *Nation* to the dramatic quality, the keen psychological analysis, and the absorbing interest of her own recollections of her childhood, which were first published in Russian under the title of 'The Raevsky Sisters,' and which appeared a year ago in French in the *Revue de Paris*. The most interesting figure in this tale is not Sonia, but her sister Aniuta, a young girl of brilliant endowments and of charming personality. The life of the two sisters on a remote estate in Russia, Aniuta's first attempts at literary composition, her delight when her tales were accepted by Dostoievsky for his journal, the *Epoch*, at a time when neither of the sisters had ever seen a human being who had written a single line for publication, the meeting with Dostoievsky later in St. Petersburg, and finally the escape of the two sisters from family restrictions which were no longer to be endured—all this must be read in the book itself if one would obtain its true flavor. They were not the only girls who were drawn into the vortex of the new ideas (we quote from the biography):

"The inhabitants of Palibino lived on peacefully and quietly; they grew up and waxed old; they quarrelled and became reconciled to each other; by way of passing the time they bickered about this or that magazine article, about this or that scientific discovery, being all the while thoroughly convinced, nevertheless, that all these questions pertained to another world, wholly distinct from theirs, and that they would never have any direct contact with every-day life. And all of a sudden, no one could say how, signs were revealed close beside them of some strange fermentation which was indisputably drawing nearer and nearer. . . . In the period of time included between the years 1860 and 1870 all the educated classes of Russia were occupied exclusively with one question—the family discord between the old and the young. Ask about whatever noble family you would at that time, you always heard one and the same thing—the parents had quarrelled with the children. And the quarrels had not arisen from any substantial material causes, but simply upon questions of a purely theoretical, abstract character. 'They could not agree about their convictions!' It was only that, but this 'only' sufficed to make children abandon their parents and parents disown their children. . . . An epidemic seemed to seize upon the children, especially the girls—an epidemic of fleeing from the parental roof; the daughter, now of this, now of that, landed proprietor had run away; this one abroad, the other to Petersburg to the 'Nihilists.'"

A common means of escape was to go through the form of marriage with young men devoted to the same ideas which they held sacred; in this manner, as married women, they became free from parental authority, and were enabled to pursue their studies at foreign universities. To Sonia and to her friends at this time this seemed a far higher conception of the marriage state than the commonplace idea of a union for purely selfish happiness. "The sacrifice of self for unselfish purposes was their noble intention, and the development of intellect was the means by which these young people hoped to infuse new vigor into the fatherland they loved so dearly, and to assist its struggle from darkness and oppression into light and freedom." We seem to be living again in the exciting atmosphere of 'Fathers and Sons.' In Sonia's case, however, her father, an irascible and charming old gentleman, immediately forgave her, when there was nothing else to do, and she continued on most affectionate terms with both her parents as long as they lived.

The newly married couple remained for six months in St. Petersburg, where Sonia was introduced by her husband to circles interested in political events, and thus one of her great desires was fulfilled. She was at this time just eighteen, but looked much younger. A friend who made her acquaintance then describes her as having very mobile features; "her eyes especially were exceedingly expressive, sometimes bright and dancing, sometimes dreamy and full of melancholy. She attracted every one by her unconscious charm; old and young, men and women, all were fascinated by her." In the spring of 1869 Sonia and her husband left for Heidelberg, she to study mathematics and he to study geology. After matriculating there, they went to England, where they met the most celebrated persons of the day—George Eliot, Darwin, Spencer, Huxley, and others. In George Eliot's diary occurs this entry:

"Last Sunday we had a visit from an interesting Russian couple, M. and Mme. Kovalévsky. She a sweet, taking creature, with a shy voice and manner. . . . He, amiable and intelligent, studying the natural sciences."

Sonia remained for two years at Heidelberg, and she was then for four years the beloved pupil of the great Weierstrass at Berlin. At the end of this time she took the degree of Doctor of Philosophy at Göttingen, having handed in three important papers instead of the one thesis required, and being excused from the oral examination. Upon returning to Russia, there followed some years of happy family life and of social and literary activity. She felt at this time a certain temporary distaste for mathematics—a not uncommon phenomenon after years of too exclusive devotion to it. Her only child, a daughter, was born soon afterwards, and she had now every prospect of a happy life. But financial difficulties, her husband's absorption in unwise speculations, and especially his falling completely under the influence of an unscrupulous adventurer, broke up this happy home. After heroic efforts to restore her husband to his right mind and to preserve a *modus vivendi*, she decided to make a future for herself and her little daughter entirely by her own endeavor, and she left Russia for Paris. There had before this time been some correspondence with reference to her becoming a lecturer in the University of Stockholm. Prof. Mittag-Leffler, who was greatly interested in the University lately established in his native town, and who also took a warm interest in the woman question, was eager to secure for his University the

glory of attracting to it the first great woman mathematician. But it was not until after the death of her husband that she finally went to Stockholm, towards the end of the year 1883. Here, also, in the eight years that remained to her of life, her mathematical activity was much broken in upon by her absorption in literary work. In a very interesting letter, she says:

"I understand your surprise at my being able to busy myself simultaneously with literature and mathematics. Many who have never had an opportunity of knowing any more about mathematics confound it with arithmetic, and consider it an arid science. In reality, however, it is a science which requires a great amount of imagination, and one of the leading mathematicians of our century states the case quite correctly when he says that it is impossible to be a mathematician without being a poet in soul. . . . As for myself, all my life I have been unable to decide for which I had the greater inclination, mathematics or literature. As soon as my brain grows wearied of purely abstract speculations, it immediately begins to incline to observations on life, to narrative; and, *vice versa*, everything in life begins to appear insignificant and uninteresting, and only the eternal, immutable laws of science attract me. It is very possible that I might have accomplished more in either of these lines if I had devoted myself exclusively to it; nevertheless I cannot give up either of them completely."

Her interest in a play which she was engaged in writing in collaboration with Anna Carlotta Leffler, with whom she had come to live on terms of the most intimate friendship, was so great that she neglected until the last moment the mathematical paper with which she was to compete for the Prix Bordin of the French Academy of Sciences, and was finally obliged to work night and day in the effort to get it finished in time. The paper was entitled, "On a Particular Case of the Problem of the Rotation of a Heavy Body Around a Fixed Point," and it involved the first application that had been made of the theta functions to the solution of a physical problem. It received the prize, the award being doubled by the Academy (to five thousand francs) on account of the "quite extraordinary service rendered to mathematical physics by this work." She received the prize in person, and she became the heroine of the hour. Speeches were made in her honor, which she was obliged to acknowledge in like manner; she was interviewed, and received visits all day long. A more brilliant recognition of more brilliant scientific achievement in the most difficult field of intellectual endeavor it has seldom fallen to the lot of any one to receive.

But in the midst of these days of public triumph, the real Sonia Kovalevsky was very miserable. An unfortunate love affair was reaching its climax at the same moment that the brilliant world of Paris lay at her feet, and she cannot give herself up completely to either the joy or the misery of the extraordinary occasion. She is far removed from the shrinking girl of eighteen whom George Eliot knew; she is also far from having had the springs of strong emotion dried up by her scientific pursuits, as happened to Charles Darwin. She is the Russian woman, of stormy passions, of constantly varying moods, of tyrannical nature in friendship as well as in love, making vast demands upon life and contented with nothing that this world can give. Anna Carlotta writes: "Her friendship, though in one way so precious to me and fecund in delight, now began to oppress me by its exactions." "She was continually in want of stimulus. She desired dramatic interests in life, and was ever hungering for high-wrought mental delights." But if at times she thought passionate devotion to some human being the one thing worth living for, at other times she was equally enraptured with the joy of creation in the region of pure mathematics:

"She had been in Paris with Poincaré and other mathematicians. . . . It now seemed to her that nothing was worth living for but science. Everything else—personal happiness, love, love of nature—all was vain. The search for scientific truth was now to her the highest and most desirable of things. Interchange of ideas with her intellectual peers, apart from any personal tie, was the loftiest of all intercourse. The joy of creation was upon her, and now she entered upon one of those brilliant periods of hers, when she was handsome, full of genius, sparkling with wit and humor."

At other times she was again, as she had been during seven years of married life in Russia, the simple, affectionate woman. She writes from near Moscow, where she was staying with a friend, and where she was "always introduced to new acquaintances as Fouzi's mamma": "You cannot imagine what an effect this has. It calls forth in me a perfect crop of genuine virtues, which spring up like mushrooms, and of which you would never suppose me capable." Again she had periods of absolute laziness, when it was an effort to rise from the chair into which she had sunk—when the most trivial novel, the most mechanical fancywork, a few cigarettes, and some tea were all that was necessary to give her for months more happiness, she said, than anything else in life. She had the ways of a charming woman in her graceful acceptance of the aid of men in removing the annoyances of railway travel, but, "notwithstanding all this, there was never a woman who, in the deepest sense of the word, could be more independent of others than she."

Two years after the awarding of the Prix Bordin, she died. Exposure during a journey from Italy to Stockholm in the month of February, 1891, brought on an attack of pleurisy from which she had not courage to rally. She was at this time in a period of great depression, but she had the schemes of several new novels already worked out in her head, and she had just communicated to Mittag-Leffler the idea of a mathematical work which he thought would be the greatest that she had yet written.

What moral are we to draw from the life history of this extraordinary nature—stormy, tempestuous, unregulated, and full of genius? The book has been noticed at much length by the French and the English reviews, and the moral has seemed to the reviewers a very easy one to draw; it is that the highest possible success as a mathematician cannot give happiness to a woman, that she can find that only, and always, in the gratification of her affections. Mr. Gladstone, in his letter to Mr. Fisher Unwin, says: "The two works [in the English edition the biography and the autobiography are in separate volumes] present a great deal of salutary warning." The writer of the biography takes a similar view, saying: "This is one of the strongest objections that can be made to intellectual talent in woman: the exercise of it prevents her from throwing herself entirely into matters of affection." For those who are already in the possession of this belief, this may furnish another occasion for reiterating it; as a deduction from the life of Sonia Kovalevsky nothing could well be more wide of the mark. A calm and simple absorption in the joys of a well-ordered family life is what the critics have in view as the natural antithesis to a mathematical career, but this is by no means the antithesis that Sonia had in mind when she declared her life to be an unhappy one. The man who made her later years so stormy wished to marry her at the beginning of their acquaintance, and she might have had as happy and simple a life from this time on as any woman, and carried on her mathematical researches as well. It was not her mathematics which stood in the way of this, but her own high-strung and passionate temperament, which made her dissatisfied with the kind of love he offered her, and insisted upon such an utter absorption and self-abnegation as would be possible for hardly any mortal. The story of her life is intensely interesting and intensely sad; as a source from which to draw a norm for other women, it has no significance whatever. Do many normal women find it necessary to lead a life of high-wrought passion at the age of thirty-eight? The lesson, if there is a lesson for ordinary natures, is that the well-regulated Anglo-Saxon temperament is more likely to be productive of happiness, in the long run, than the erratic Russian one; extraordinary natures make laws unto themselves, and will not be guided by the experience of other mortals.

The Defence of Plevna, 1877. By William V. Herbert. Longmans, Green & Co. 1895.

PLEVNA, the latest of the world's greater battles, and the decisive battle of a mighty war, is of especial value to the military student as the best example, perhaps, of the attack and defence of intrenchments under comparatively recent conditions. The account of the Turco-Russian war of 1877-8 with which American readers are most familiar is that of F. V. Greene, formerly of the Engineer Corps of the United States Army, who was selected by our Government to witness the war from the Russian side, being officially accredited to Russia as military attaché. He entered on his mission free from prejudice, he had as a foundation the training of our military academy and several years of service in the army; during the campaign he had access to the official plans and orders, and heard them discussed in his presence; he was now at headquarters, now on the skirmish line; and all parts of the field, wherever the most interesting events happened to be occurring, were open to him. He was therefore enabled to take a broad view of the situation at any time, as well as to familiarize himself with the details of every-day events. The work before us, on the other hand, is written by a man of no previous military instruction or training, possessing the strong prejudices of the English against the Russians, almost a mere boy at the breaking out of the war, and occupying a subordinate position in the Turkish army during the battle of Plevna, who accordingly had no means of comprehending at the time the significance of any movement in his immediate vicinity, or its bearing on the general plan of campaign. In spite of these disadvantages, he has given us a stirring account of the various battles for the possession of Plevna and its final investment and surrender, all the more interesting as presenting the Turkish side of the contest.

Mr. Herbert appeared in Constantinople in 1877, at the age of eighteen, with his application to serve in the Turkish army, and, after a short sojourn at a war school, was commissioned second lieutenant, and was soon afterwards ordered to join his company at Widdin,

where he remained for two or three months, or until the army was concentrated in Plevna. There he remained throughout the four desperate battles for the possession of the city, during the period of investment and until the final surrender. The story of the daily life of the Turkish soldier within the lines of Plevna, of his occupations, amusements, and characteristics, of his privations and sufferings in camp, on the battle-field, and in the hospitals, of the manner in which the intrenchments grew (as they did in our civil war) by the individual need and initiative of the private soldier, and of the skirmishes and battles, is replete with interest. The military operations are sketched in outline only, but with clearness sufficient to render intelligent the particular movements described. The value of the work as a whole rests not on its military science, but on its portrayal of the personal experiences of the author.

After these general remarks we must content ourselves with a few extracts. They show the quality of the description, and are a timely reminder of the horrors of war. The first relates to the second battle of Plevna:

"As to my personal experience, I remember nothing. The actual contact, the psychological moment of such a charge, lasts but a minute or so; and such a lifetime of experience is crowded into it that memory is hopelessly at fault. All I know is that I discharged the six chambers of my revolver, but at whom I have no notion; that my sabre was stained with blood, but with whose I cannot tell; and that suddenly we looked at one another in blank surprise—for the Russians had gone, save those on the ground, and we were among friends, all frantic, breathless, perspiring; many bleeding, the lines broken, the tactical units dissolved; most of us jabbering, shouting, laughing, cursing, dancing about like maniacs. . . . Fifteen or twenty minutes after the first charge the Russians returned. . . . A giant on a horse to match—a colonel, I think—galloped up to me and dealt me a terrific blow from above. . . . It seemed to me as if I had been insensible for weeks, whereas it can only have been an hour, or less. It was still daylight when I awoke. The firing in the neighborhood had ceased, but from afar came the angry growl of the cannonade. . . .

"The sight that met my opening eyes was one so ghastly that I do not care to recall it. . . . Imagine the interior of a low, long, roughly built shed (I do not know whether it had been erected by our troops, or had originally served as a storehouse or barn). Imagine a thick, hot, reeking atmosphere, filled with indescribable odors, enough to sicken you by the very recollection. Imagine some hundreds of men—yourself among them, with a raging thirst devouring you, a burning pain in the face, every particle of strength and vitality gone—lying on the bare boards, with bundles of rags or filthy straw for pillows, many in sensible, many dead or dying, many in convulsions, some horribly mutilated, all bleeding, most of them groaning, others screaming, or pitifully whining for a drop of water, in half-a dozen languages. Oh, that cry for '*Su!*'—how often have I heard it! . . . Imagine surgeons, with tucked-up shirt-sleeves and bloody hands, giving the first aid; for this was a temporary ambulance in rear of the lines."

In the third battle a little sketch:

"Wednesday, September 12, opened with a hideous, iron-gray, lustreless dawn. A cold wind, like the chill of death, swept over the fields, with their silent or faintly moaning victims of yesterday's slaughter. The rain had ceased, but the uniform gray sky gave promise of another wet day, a promise which it fulfilled faithfully, for after an hour's interruption the rain recommenced and continued till late at night. The ground was a morass. The men shivered in their wet clothes. Biscuits were nibbled for breakfast; those who were lucky enough to possess water shared it with famishing comrades. Notwithstanding orders, many lay down on their stomachs and lapped up the pool-slush, whilst near them corpses were lying in a compound of blood and mud."

Finally, a glimpse at the hospitals during the investment:

"There was a deficiency of drugs: quinine was almost entirely absent. Lint was wanting; garments had to be cut up for bandages, however much clothing of every description was in demand. Linen rags were treasured as priceless. During the last few days of the investment, wounds could not be bound up afresh for want of material. Convalescents had no strengthening food, and numbers succumbed to weakness."

As will have been seen, Mr. Herbert's style is crude at times as if of the camp-fire, but on the whole the interest of his narrative is well sustained. The maps accompanying the text are good and adequate. There is no map of the seat of war in the East, in the Caucasus, but as the events there are merely referred to it was hardly called for. As a military history the book will be useful in supplementing and rounding off its predecessors, but its main attractiveness for the general reader lies in the author's personal experiences in the camp of Plevna.

Off the Mill. By G. F. Browne, B.D., D.C.L., Bishop of Stepney. Macmillan & Co. 1895.

It is probable that since the galleys became obsolete no class of men has been more hard-worked than Anglican bishops of the present day. *Nolo episcopari* used to be considered an insincere phrase, but a new and real meaning has been lent it by the vast increase of routine administrative duties which growth of population has entailed. Neither Philip II. nor Frederick the Great kept at his task more diligently than a conscientious bishop, in a densely peopled diocese, now keeps at his. No wonder that the memory of days "off the mill" is grateful.

The Bishop of Stepney has brought together in book form a number of vacation pieces which have already seen the light in periodicals. There are eleven of them, ranging in time over the last thirty-two years, and all except one, "The Château in the Ardennes," worth reprinting. Seven of the eleven relate to Switzerland and Savoy, three to climbing, two to the exploration of ice-caves, one to topography, and one to local history. They are written with wit and vigor, and ring true to their stimulating subjects. The ascents described are not out of the ordinary—are such, in fact, as many people make without setting pen to paper. But, while the history of adventure gains nothing from Dr Browne's expeditions, his account of them is above the average of Alpine writing. Like most high-souled men, he can be eloquent when on the summit of a mountain. His reflections on the summit of the Oldenhorn are those of a churchman, just as Prof. Tyndall's reflections on the summit of the Matterhorn are those of a scientist. It is interesting to compare the difference of thought and the resemblance of mood. Neither changed his views in crossing the glaciers, but both felt the same thrill. Both were filled by the same rapture, the same spirit of exaltation.

The articles on Pontresina and the Engadine—perhaps intended as ballast to the purely sportive articles—deserve notice both for themselves and for the author's motive in writing them. These papers, he says in the preface, "will not be without result if they induce any one to take more than a surface interest in the beautiful district to which so many of us in London owe such strength as we have." Davos and St. Moritz must boast each year more than one *Kurgast* who is competent not only to read Ulric Chiampel, but to make original researches in the history of the Grisons. Why does not some one, in the intervals of skating and tobogganing, take up Georg Jenatsch? It is well known that Symonds intended to bring this wonderfully able and energetic man to the notice of English readers. Meyer's novel has aroused a certain amount of curiosity about him, and a sound historical study of his part in the Thirty Years' War would receive a wide welcome. And then the constitutional history of the Grisons is another important theme for some grateful person who has been cured by its air.

A delightful paper on "Collecting Ancestors" is the best of Dr. Browne's remaining essays, but "A Night with a Salmon" describes the most unusual experience which is recorded in his book. In 1868 he hooked a fish in the Tay which fought ten hours and a half and then escaped. He has reason to believe that it was the same monster which was soon after captured in the nets at Newburgh, and proved to be the largest salmon on record. It weighed seventy-four pounds, and is honored by a cast at South Kensington. A photograph of the fish is reproduced at p. 138.

An account of "Archæological Frauds in Palestine," based on M. Clermont Ganneau, seems hardly in keeping with the rest of 'Off the Mill,' but sounds a needed warning to the ignorant collector of "Mosaic" antiquities. However, it is certain that the same people who *construct* ruins in their grounds will, in spite of all revelations, continue to buy Jerusalem relics for their museums.

Progressive Morality: An Essay in Ethics. By Thomas Fowler, D.D., LL.D. Macmillan & Co. 1895.

One may admire such studies of the fundamental principles of morality as those of Sidgwick and Martineau and Stephen, and find them a good gymnastic for the mind, and yet wonder whether they have much or any influence on the conduct of life, so impossible it seems to infer the concrete of action from any theory of ethics. During our civil war the Transcendentalists who were enamoured of the intuitional morality of Carlyle and Martineau, must have been not a little grieved, if not confounded, to find these high-stepping ones totally unable to appreciate the moral values of our situation, while such dealers in utilitarian "pig's-wash" as Spencer and Mill and Darwin had no difficulty in determining the merits of the conflict between the opposing parties. Because these things are so, it is encouraging to be assured at the outset that Dr. Fowler means to treat his subject with direct reference to practical moral questions; and, when we have read to the last page, we find that his promise has been at least tolerably kept. Something less of introductory matter and a wider range of practical illustration would have improved his book, especially as, with a certain prurient prudishness, he has avoided the relations of the sexes altogether, notwithstanding the fact that exactly here the transition from a traditional and authoritative to a rational morality seems to be attended with more danger than at any other point.

In an introductory chapter we have a discrimination between the physical, legal, social, and religious sanctions of conduct on the one hand, and a purely moral sanction on the other. In the next we have some thrashing of old straw in the argument to prove that conscience is not an infallible guide; and something better in the development of the idea

that not only are the dictates of conscience variable, but the duties of mankind from generation to generation. Seeking for a test of the validity of the moral sanction, Dr. Fowler finds it in the tendency of actions to produce the welfare or well-being of society. If this doctrine is utilitarian, it is interpreted in a manner that takes from it all the grossness commonly attributed to the type of ethical theory which it represents. It is refreshing to find the writer allowing that doing right will not invariably insure individual happiness. Dr. Fowler concedes that his test is vague, but when he comes to examples of its practical application in his closing chapter, with much that is obvious and even trite, he has a series of reflections which, if seriously conned and heeded, might be productive of much benefit. His examples, among others, are smuggling, the evasion of taxes, the piracy of books, partisan patronage, bribery, the refusal of able men to accept office, the slackness of Government officials. The treatment of suicide is unsatisfactory, and also the treatment of sports; fox-hunting, for example, being justified on the ground that "the additional suffering caused to the fox is far more than counterbalanced by the beneficial effects in health and enjoyment to the hunter." The borrowing and lending of money, the rearing of children as if they were playthings or pet animals, and many other matters of great importance, are touched upon less carefully than we could wish; but, taken altogether, the book is a more helpful one than many others of its kind. The frequent references to the author's other books smack too much of the "reading advertisement."

Biography of James G. Blaine. By Gail Hamilton. Norwich, Conn.: The Henry Bill Publishing Co.; New York: Charles Barmore. 1895. 8vo, pp. iv, 722.

The Conkling and Blaine-Fry Controversy, 1866. By James B. Fry. (For private distribution.) 8vo, pp. 341.

Carter Henry Harrison. A Memoir. By Willis John Abbot. Dodd, Mead & Co. 1895. 8vo, pp. 254.

GAIL HAMILTON'S Life of Blaine is a performance that will shed renown neither on its author nor on its subject. Its outward garb is that of the usual subscription book. The paper and print are good, save that the former is glossy; but there are no headlines, except the title of the book, no marginal dates or other aids to the reader, no index, no list of the illustrations. The tale of the latter is made up by including plates of the Capitol at Washington, an interior of the House of Representatives, etc. As for literary qualities, it can only be said that the work offends against the canons of good taste in every conceivable way. It is written in a turgid and bombastic style that breaks out even in its title, it abounds in phrases and sentences that are evidently intended to have a Scriptural twang, and it is full of an ambitious species of fustian that often degenerates into sheer nonsense. Perhaps two or three specimens will best serve to indicate its peculiar qualities. Of some Scotch Presbyterians among Blaine's ancestors we are told that "they died under contract with God, in full expectation that he would, and moral demand that he should, grant them immortal life in Jesus Christ our Lord." After mentioning that Mr. Blaine's voice was not heard in prayer-meeting, his biographer adds: "The lamp of his faith glowed with a steady, cheerful, and far-reaching light, but that particular burner he never used." Elsewhere we learn that "thus along the general principles which shaped themselves in the great seething mass of facts, he trod a clear path to logical positions which often seemed to the desultory mind segregated and sometimes inconsistent." And it seems that among the brilliant features of his eulogy of Garfield was "the insight which lifted Garfield's pedigree from the zone of demagogism to the dignity of self-respecting independence."

Infelicity of diction, however, and newspaper rhetoric might be tolerated in these tolerant times if the book otherwise furnished what its readers would naturally expect to find in it. But here also it fails, for it gives no information on various matters that a Life of Blaine should not ignore. For instance, although considerable space is devoted to high-flown descriptions of his ancestors and their matrimonial alliances, there is not a word about his own marriage, not a word about his wife's family or connections or circumstances; not even her name is once mentioned; and when letters written by or to her are printed, there is no indication except in the context that she was the writer or the recipient, although in the case of other letters this information is properly given. Another serious omission is the absence of any particulars concerning the contents of the celebrated Mulligan letters, so that the reader who has no knowledge of them except what can be derived from this book will be quite unable to understand the most important incident in the life of Blaine. In fact, the whole arrangement of the biographic material and the chaotic manner in which the correspondence is injected must tend to bewilder and confuse, instead of furnishing a vivid portrait of a man who was certainly a conspicuous and picturesque figure of his time.

The late Gen. Fry's account of the breaking out of the fateful quarrel between Blaine and Conkling, *par nobile fratrum*, may be of service to the future historian in that it embalms the choice flowers of rhetoric which these two distinguished party leaders were accustomed to fling about them in their debates in Congress. It also throws some interesting sidelights on the business of bounty-jumping during the war, and on the peculiar methods pursued by various towns and counties to procure substitutes for citizens drafted into the military service.

Mr. Abbot's memoir of Carter Harrison is a piece of journalism put up in handsome book form. It is an absurdly high-flown eulogy of a typical American politician, instead of supplying, as it could have done, a truthful picture of a remarkable career. Here, as in the 'Life of Blaine,' it will be utterly impossible for the otherwise uninstructed reader to understand how it could happen that so pure a patriot should have aroused such bitter opposition. A biographer can have but little esteem for his subject if he considers it necessary to suppress or ignore conspicuous and familiar facts and circumstances.

The Constitutional Antiquities of Sparta and Athens. By Gustav Gilbert. Translated by E. J. Brooks and T. Nicklin. London: Sonnenschein; New York: Macmillan. 1895.

DR. SANDYS, well known for his many and considerable contributions to classical studies, all remarkable for good taste, sound judgment, and non-insular command of the literature of the matter in hand, has, of late, done good service in promoting translations from the German, as recently in the English edition of Seyffert's 'Dictionary of Classical Antiquities' and now in the English version of Gilbert's standard work 'Handbuch der griechischen Staatsalterthümer.' The demand for the translation of German works into English is apparently not so great in America as in England, because American scholars are, as a rule, far better acquainted with German than are English scholars of the same grade, and German works are often in familiar use here years and years before our English kinsmen wake up to the importance of them, and sometimes the translation is absurdly unnecessary. Why, for instance, should anybody have translated Kluge's 'Etymological Dictionary of German' from the fourth edition when the fifth edition of the original was out, and what conceivable use could anybody make of an Etymological Dictionary of German who could not read German? Some years ago an English scholar translated Paul's 'Principien' into English and retained all the German illustrations. To be sure, Paul's own German is much more crabbed than the German of his illustrations, but even this is no justification for so absurd a proceeding. And there are other enterprises not necessary to specify that are scarcely less unreasonable. On the other hand, American journals have been attacked by their English contemporaries for admitting articles written in German on German themes, or themes of comparative grammar, which cannot be understood without a good knowledge of German.

At the same time, there are German textbooks enough that demand translation, and among these we may class Gilbert's work, which was recognized immediately upon its appearance as a production of uncommon merit, and which, in a comparatively short time, passed into a second edition—although it may be noted that a second edition in Germany has not so much significance as a second edition here. It is a valuable work, and the original need not be discussed in this place, as the value of it has not been enhanced by the translation except in the Introduction, which deals with the Aristotelian Constitution of Athens, and which has naturally elicited a number of notes from Prof. Sandys. The translation itself, by Messrs. Brooks and Nicklin, appears to have been made with unusual regard to the requirements of English idiom, and does not translate itself back into German with the fatal facility characteristic of so many mechanical renderings. The long sentences are broken up, and the intercalated relative clauses are smoothed out. Fine turns on which a German would pride himself are sacrificed to English directness, and the translation has a decidedly business air. In short, a more immediate feeling of German might have given us a worse rendering.

The degree of accuracy seems to be above the average, but no one can vouch for absolute fidelity without a line-for-line comparison throughout, which can hardly be expected of the midsummer reviewer. But the specimens selected for examination have not revealed any vital errors. The troublesome question of the transliteration of Greek names has been solved, if it may be called a solution, by following the Lesbian rule, according to which familiar words take the Latin, unfamiliar words the Greek form. Of course, on this "system," we must expect inconsistencies. He who writes *Eubulos* ought not to write *Bouleutai;* and on p. 99, l. 18, we have Acropolis, and l. 21, Akropolis.

The Great Frozen Land (Bolshaia Zemelskiia Tundra): Narrative of a winter journey across the Tundras, and a sojourn among the Samoyads. By Frederick George Jackson. With illustrations and maps. Edited from his journals by Arthur Montefiore. Macmillan. 1895. 8vo, pp. xviii, 297.

THE author of this book left England more than a year ago, with eight companions, to explore Franz Josef Land; but as the ship in which they sailed has not returned, it is uncertain whether he was able to reach his destination. The intention was to establish a permanent camp from which to make sledge journeys as far north as possible. It was in order to prepare himself for this work, to acclimatize himself, and to submit various foods, clothing, sledges, and other apparatus to the rigorous test of an arctic winter, that the adventurous journey was made of which this interesting volume is the record.

In August, 1893, Mr. Jackson landed at Habarova, a little summer settlement of the Samoyads, on the straits which separate Waigatz Island from the mainland of European Russia. This island is regarded by the natives as holy ground, and in a sledge-journey around its coast Mr. Jackson discovered a burial-place and a sacrificial pile, consisting of a "few posts stuck in the ground, around which a pile of reindeer horns and driftwood had been made. On the top of one of the posts a bear's skull was placed, and several were rudely cut into something resembling the features of the human face. We wanted wood badly, but Vasili would not touch any of that on the pile, for reasons religious of course. Yet, like the rest of the Samoyads, he was nominally a Christian." Early in October the winter came with surprising suddenness, and by the middle of the month the whole settlement had begun its annual migration across the Great Tundra to the Pechora River, a distance of about seven hundred miles. Of this vast swamp, which is practically impassable during the summer season, Mr. Jackson says: "Nothing that I know in nature can equal the dreariness and solitude of the Tundra. . . . Track there is none, and you may wander east, west, north, and south without landmark to set you right. Day after day and week after week your deer will gallop along their frozen way, and your compass, or, if the gray clouds will lift for a while, the stars in the heaven above, will be your only guide." Even the frequent gales that drive furiously across it, accompanied by a cold so intense "that even to breathe is painful," bring an almost welcome relief to its monotony. The only incidents of the journey, which Mr. Jackson was the first Englishman to make, were an occasional upset; and once he lost his way owing to a thick fog, and was compelled to sleep in the open with the thermometer thirteen degrees below zero. In order to test the capacity of the Russian horses for arctic work he continued his winter drive across the Pechora valley and the Little Tundra to Archangel, and from thence around the coast of the White Sea to Kirkeness in Lapland, in all a distance of twenty-five hundred miles. Here he took steamer for Vadsö, where he arrived on January 18, just in time to join in "a sort of annual fête—the first sight of the returning sun." The people climbed the hills behind the town and greeted the appearance of its golden upper rim "with loud and prolonged cheers." The remainder of the journey was by sea, round the North Cape and down the Norwegian coast, in the small steamers that make the dangerous mid-winter passage at irregular intervals.

The Samoyad, as pictured by Mr. Jackson, notwithstanding his good qualities, his peacefulness, honesty, and hospitality, is an uninteresting and in some respects a very disagreeable companion. It is evident, however, that in his dress, his dwelling, and his food, into which blood largely enters, he has wisely adapted himself to his circumstances. His most unpleasant characteristic is his uncleanliness, and the discomforts of our traveller, who spent months in a choom or wigwam nine feet by ten, which often held nine people swarming with vermin, and sometimes drunk, can be better imagined than described. In fact, Mr. Jackson's pluck and enthusiasm for his chosen task in voluntarily subjecting himself to suffering, privation, and peril for the sake merely of the training which they gave him, are perhaps the strongest impressions which we have received from his book. His winter's experience taught him much about the relative strength of the different kinds of sledges used in the regions traversed, and also proved to him the value of the Samoyad's deer-skin clothing and tent for protection from the cold. At the same time it compelled him reluctantly to abandon the intention of using the reindeer on his Polar expedition, on account of the impossibility of supplying him with the moss or lichen which is his only food. Accordingly, ponies and dogs were substituted for him.

The author's friend and editor, Mr. Arthur Montefiore, has added many useful notes to Mr. Jackson's narrative, besides giving an interesting chapter on the Samoyad language and three of their folk-tales. In an appendix he has also given a lucid account of the Jackson-Harmsworth expedition, its objects and equipment. There are some interesting illustrations, several maps, and an excellent index.

Memoirs of the Prince de Joinville. Macmillan & Co. 1895.

THE 'Vieux Souvenirs' of the Prince de Joinville do not cover the whole of his life, but only the most active and interesting part of it, the period before 1848. As he was born in 1818, he was but thirty at the time of the February Revolution, which banished him from France. Still, thanks to his career as a sailor and to his birth, which enabled him to rise through the ranks more quickly than ordinary mortals, he had already seen much by the time his career was put an end to. He had even commanded the fleet which, in 1844, bombarded Tangiers and Mogador to punish the Sultan of Morocco for aid given to Abd-el-Kader.

The Prince tells of his experiences in a light, genial way. He takes us to many countries, brings us into the best society—kings, princes, and distinguished men of all sorts. He tells many anecdotes, some of them pretty good ones, and reports many curious sights—for instance, an old Circassian on his way to Mecca with "the twelve best-looking girls in his family" to sell on the way in order "to pay the expenses of his journey." In short, he has given us a volume any part of which is pleasant reading in whatever order we read it.

The least interesting part is the lamentations about the evils of these later days. These jeremiads, are, of course, entirely natural on the part of the son of a deposed king, but they are not very convincing. No doubt France, like the world in general, was a pleasanter place for the highest classes before the "revolutionary spirit" got abroad; but, whatever the evils of the rise of European democracy, they are not entirely due to the jealous ambition of a few self-seeking demagogues and the blind delusion of the masses, as the Prince thinks. On the other hand, he has much sympathy for America, but we fear it is for the America of fifty years ago rather than that of to-day. His description of a trip to the West is interesting, even if we get no new light from it. In Washington, on his different visits, he met several Presidents and other notable men. Here is a comment on Congress:

"In the United States the Senate is the body which has the real power and which actually governs. This assembly, very few in numbers, especially at the time of which I speak, chosen by the Chamber [*sic*], and of which the members were almost invariably reëlected, had leisure to learn the necessities of administrative government and to become a permanent body, whose action was both lasting and intelligent, like the Council of Ten at Venice, or the Committee of the Comédie-Française. But the Representative Chamber, full as it was of journalists who had never studied anything beyond the art of attracting subscriptions to their papers, knew nothing whatever. Luckily it only formed a second wheel in the Constitution, but, in spite of that fact, anything likely to add to its enlightenment was useful."

In Philadelphia on one occasion he had taken tickets for the theatre, but, when he arrived, "saw a huge poster over the door, 'Prince de Joinville at 8:30,' and beat an instant and hasty retreat." At another time he had "to go to Boston for a great ball in the old town hall, called Faneuil Hall, the cradle of American Independence. I made my entry at that ball preceded and surrounded by an army of solemn stewards wearing huge wigs, and with rather a good-looking woman whom no one knew on my arm. She called herself America Vespucia, and she began to swear like any heathen when somebody spilt a glass of lemonade over her fine velvet gown."

The translation is better than the average, the binding neither pretty nor appropriate; the numerous illustrations by the author show that he was more of a soldier than an artist.

Essai de Bibliographie Canadienne. Par Philéas Gagnon. Imprimé pour l'Auteur. Quebec. 1895.

THIS "Essai" is not a systematic account of the sources of Canadian history. It is the catalogue of a private library, with the owner's comments on his rare and remarkable books. But Canadian bibliography is in such a primitive condition that the catalogue of a good library deserves notice. M. Gagnon has been an active collector for twenty years, and his spoils are disclosed in 5,018 titles. They are of every species known to the library, and of every degree of value. Books and newspapers furnish 3,747 titles, and the list also includes autographs, manuscripts, maps, plans, portraits, and book plates. An enumeration of the whole, with occasional notes, fills 711 pages.

M. Gagnon has treasures of the utmost rarity. For instance, his set of the Quebec *Herald*, 1788–90, is unique. The Historical Society of Quebec owned a set at one time, but a few years ago it disappeared. Until this comes to light, M. Gagnon is the sole possessor of a much-coveted file of newspapers. On the other hand, he has brought together many things which, to those who are not of the microscopic school, will seem mere junk. A reprint of Stanley's 'Through the Dark Continent,' Montreal, 1878, is out of place here, nor would Richard de Bury's

'Philobiblon,' "traduit par H. Cocheris, Paris, 1856," be of much service to the student of Canadian history. The greatest disparity of merit occurs among the pamphlets. Canada is not famous for the production of extensive works, but its literature has always abounded in *brochures*. M. Gagnon sweeps in every pamphlet he can find. "C'est dans ces plaquettes de cinq, dix, ou trente pages, si faciles à perdre, que les historiens puisent quelquefois un renseignement cherché vainement ailleurs, et qui leur est d'un grand secours. C'est pour cela que nous gardons avec un soin jaloux toutes nos brochures." And so we have M. Laramée's "Lecture sur l'alcoolisme, Montréal, 1878," and an essay of M. Barré, "On Mr. W. Lynch's pamphlet entitled Scientific Buttermaking, Montreal, 1884." Should these treatises survive a general cataclysm, some future age may cherish them as we cherish Athenæus. At present they can claim no place in a distinctively national library.

But while M. Gagnon's catalogue would be the better for a little pruning, he has erred on the safe side. Most of his books are, in their field, of permanent importance. He is especially strong in whatever relates to the Province of Quebec, though here a *lacuna* in the bibliography of the Eastern Townships remains to be filled. His copious list of French Canadian books comes to the aid of Morgan's 'Bibliotheca Canadensis,' which is weak on that side. Canadian incunabula are fully represented. Indeed, M. Gagnon has unearthed certain episcopal charges of Pontbriand, issued in 1759, which seem to have been printed on a press presented to the Bishop of Quebec by Louis XV. This puts back the introduction of printing to the year of the Conquest. The date hitherto accepted is June 21, 1764, the day when the first number of the *Gazette de Québec* was published. Anything printed in Canada before 1800 may be called rare.

One vital question is always before the Province of Quebec—the relation, namely, of French and English, of Roman Catholic and Protestant. A large number of books in M. Gagnon's library relate to the contest of religious parties. No attempt of Protestants to win over Roman Catholic proselytes has escaped his notice. His comment on Chiniquy's 'Le Prêtre, la Femme et le Confessional' is as follows: "Ce livre est probablement le plus méchant qu'on ait publié au Canada. À raison de notre qualité de bibliophile canadien, on nous pardonnera de le laisser figurer ici dans notre collection. L'histoire aura besoin de connaître ces ouvrages pour les flétrir." Not every bibliography can show so spirited a note as this.

BOOKS OF THE WEEK.

An Infatuation. By Gyp. R. F. Fenno & Co. 50 cents.
Anstey, F. Lyre and Lancet: A Story in Scenes. Macmillan. $1.25.
Beaman, A. H. M. Stambuloff. [Public Men of To-day.] F. Warne & Co. $1.25.
Beaumont, Mary. A Ringby Lass, and Other Stories. Macmillan. 75 cents.
Billings, Dr. J. S. Index-Catalogue of the Library of the Surgeon-General's Office, U. S. Army. Vol. XVI. W—Zythus.
Bliss, H. L. Coin's Financial Fraud. Chicago: Donohue, Henneberry & Co. 25 cents.
Breton, Frederic. God-Forsaken: A Novel. Putnams. 50 cents.
Carleton, Will. Rhymes of Our Planet. Harpers. $1.25.
Carpenter, Prof. G. R. Irving's Tales of a Traveller. [English Classics.] Longmans, Green & Co. $1.
Cartwright, Julia. Raphael in Rome. [*Portfolio* Monographs.] Macmillan.
Cooper, O. H., Estill, H. F., and Lemmon, Leonard. History of Our Country: A Text-Book for Schools. Boston: Ginn & Co. $1.15.
Crawford. F. M. Mr. Isaacs. Macmillan. 50 cents.
Crosby, Prof. W. O. Tables for the Determination of Common Minerals. 3d ed. Boston: The Author. $1.25.
Curry, S. S. Lessons in Vocal Expression. Course I. Boston: School of Expression.
Darmesteter, James. The Zend-Avesta. Part I. 2d ed. Oxford: Clarendon Press; New York: Macmillan.
Davis, R. H. About Paris. Harpers. $1.25.
Defoe, Daniel. A Journal of the Plague Year. London: Dent; New York: Macmillan. $1.
Denison, T. S. Lively Plays for Live People. Chicago: T. S. Denison.
Greenough, Prof. J. B., and Kittredge, Prof. G. L. First Six Books of the Æneid. Boston: Ginn & Co.
Hardy, Thomas. Two on a Tower. Harpers. $1.50.
Hawthorne, Nathaniel. Twice-told Tales. Boston: Houghton, Mifflin & Co. 60 cents.
Hill, Prof. A. S. The Principles of Rhetoric. New ed., revised and enlarged. Harpers $1.20.
Holm, Adolf. The History of Greece. Vol. II. The Fifth Century B. C. Macmillan $2.50.
Hunt, W. H. The Obligations of the Universities towards Art. [Romanes Lectures, 1895.] Oxford: Clarendon Press; New York Macmillan.
Kinealy, Prof. J. H. An Elementary Text-Book on Steam Engines and Boilers. Spon & Chamberlain. $2.
King Richard III. King Henry V. [Temple Shakspere.] London: Dent; New York: Macmillan. Each 45 cents.
Kingsley, Henry. Leighton Court. Scribners. $1.
Langhans, Paul. Kleiner Handelsatlas. Gotha: Justus Perthes; New York: Westermann.
Laughlin versus Coin: Facts about Money. Chicago: E. A. Weeks & Co. 50 cents.
Lee, Sidney. Dictionary of National Biography. Vol. XLIII. Owens—Passelewe. Macmillan. $3.75.
Lubbock, Sir John. The Pleasures of Life. Macmillan. 25 cents.
Masterpieces of British Literature. Boston: Houghton, Mifflin & Co.
Meade, Mrs. L. T. A Soldier of Fortune. R. F. Fenno & Co. $1.
Mommsen, Prof. Theodor. The History of Rome. 5 vols. Scribners. $10.
New, C. H. Franc Elliott. G. W. Dillingham. 50 cents.
Not Counting the Cost. Appletons. $1.
Pater, Walter. The Child in the House: An Imaginary Portrait. Boston: Copeland & Day. $1.50.
Peacock, T. L. Maid Marian and Crochet Castle. Macmillan. $1.25.
Roberts, Dr. J. B. Modern Medicine and Homœopathy. Philadelphia: Edwards & Docker Co. 75 cents.
Robert Louis Stevenson: A Study. Boston: Copeland & Day. $2.50.
Rothwell, R. P. The Mineral Industry: Its Statistics, Technology and Trade. 1894. Scientific Publishing Co. $5.
Southworth, Mrs. The Three Beauties. M. J. Ivers & Co. 25 cents.
Swain, Dr. Rachel. Swain Cookery, with Health Hints. Fowler & Wells Co. $1.50.
Swift, F. D. Demosthenes against Conon and Callicles. London: Methuen & Co.
Tucker, Dr. J. C. To the Golden Goal, and Other Sketches. San Francisco: William Doxey.
Wallace, Lew. Ben-Hur: Eine Geschichte aus der Zeit des Herrn Jesu. Harpers. $1.50.
Woolson, Constance F. The Front Yard, and Other Italian Stories. Harpers. $1.25.

READY.

THOMAS'S PRACTICAL GERMAN GRAMMAR.

For Schools and Colleges. By CALVIN THOMAS, Professor in the University of Michigan. X+411 pp. 12mo. $1.12 *net*.

Consists of two parts: I. A drill-book for beginners. II. A grammar for students of literature. An especially attractive feature of Part I. is the exercises, which are made up of reading lessons and colloquies, the latter being closely related in vocabulary and expression to the former. The reading lessons are connected wholes, and are mostly in the form of letters supposed to be written by a German-American boy who goes to Germany for study and travel.

The grammatical material in Part I. is limited to the essentials, so as to avoid bewildering the beginner, but the treatment is systematic and scientific. Part II. is intended mainly for reference, and contains all the information necessary for any ordinary school or college course. Pronunciation is taught on a basis of scientific phonetics, but without confusing the learner at the threshold with a mass of difficult technicalities, or requiring him to master a phonetic alphabet.

HENRY HOLT & CO., N. Y.

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

MARBURG BROS.,
The American Tobacco Co., Successor,
Baltimore, Md.

NEW BOOK BY

STANLEY J. WEYMAN.

From the Memoirs of a Minister of France.

BY

STANLEY J. WEYMAN,

Author of "A Gentleman of France," "My Lady Rotha," etc., etc.

With 36 Illustrations, of which 15 are full-page.

Crown 8vo, Cloth, Ornamental, $1.25.

NEW YORK:

LONGMANS, GREEN, & CO.

Fourth Edition

of the striking story,

CHRISTINE ROCHEFORT.

By HELEN CHOATE PRINCE. $1.25.

HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

COPELAND & DAY,

69 Cornhill, Boston.

THOMPSON (FRANCIS). Poems. Small quarto, $1 50. Fourth Edition.

"He takes some reading, but appreciation only grows with further acquaintance, and all who have an instinct for poetry cannot but feel, as they read him, that they are in the presence of one who in no ordinary degree possesses the vision and the faculty divine."—*The Observer, N. Y.*

"His poetry merits the consideration of all who care to know what is being produced in the realm of true literature."—*Transcript, Boston.*

"He has the magnificent Elizabethan manner, the splendor of conception, the largeness of imagery. Coming out of some of these poems, with their extraordinary wealth of imagination, is like leaving a treasure-house to face the unimaginative day."—*Book Buyer.*

THOMPSON (FRANCIS). Sister Songs. Cloth, small quarto, $1.50. Published Sept. 1, 1895.

COPELAND & DAY.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by PARK & TILFORD, New York, and all wine merchants. Send for price list.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 12, 1895.

The Week.

A SIGNIFICANT indication of the growth of business appears in the Treasury report for August. For a long time the circulation of the national banks has shown little increase, but last month it appears to have been enlarged by nearly $1,500,000. This indicates an increased demand for currency, and it is also worth notice that the new notes are secured by the deposit of new 4 per cent. bonds. At the price paid for these bonds, the profit of issuing banknotes is so small that very few will be issued except in response to the actual demands of trade. The continued large receipts of revenue point in the same direction. The present month opens with receipts at the rate of nearly $1,000,000 a day, which has been about the average since the 1st of July. If we were to adopt the methods of some protectionist journals, and compare the month of August, 1895, with August, 1894, the last month in which the McKinley tariff was in force, we might demonstrate that the present tariff was very productive of revenue, for the receipts from customs this August were $3,800,000 more than last. Upon examination, however, it appears that this increase was almost wholly due to the duty on sugar, which produced last month about $3,000,000. This will be a much larger item of revenue the present year than the year before, and will go far of itself to extinguish the deficit. On the other hand, the continued small receipts from the excise on distilled liquors properly arouse grave apprehensions. These receipts are much below what was obtained when the tax was ninety cents a gallon, and by this time the extra supply forced on the market last summer in order to escape the increased tax should have been absorbed. But the price of spirits has fallen, and now stands at a figure which suggests the existence of illicit production.

The very great advance in the price of cotton, which has already amounted to 50 per cent. on last year's figures, and may go considerably further, ought to suggest to the Southern farmers that free-silver coinage may not be the only means of raising prices. Without very profound reflection they can now see that as the high prices of this year are explained by a partial failure of the cotton crop, so the low prices of last year admit of other explanation than the machinations of capitalists. The cotton-worm appears to be considerably more potent than the gold-bug, and the Southern farmers will accomplish much more for themselves by fighting the former than the latter. Nor can the reduction in the amount of cotton be regarded as altogether disastrous. The demand was outrun by the enormous supply of last year, and the present short crop will be supplemented by the stock carried over.

It is an encouraging sign that, in more than one Southern State, Democratic candidates for the United States Senate are announcing that they will make their canvass on a sound-money platform, and that the indications favor their success. One recent illustration of this was the excellent open letter in which Gov. O'Ferrall of Virginia made a clear and cogent argument against free coinage as the basis of his appeal for popular support in his ambition to succeed Senator Daniel. The term of Senator Pugh of Alabama is approaching its end, and Congressman Clarke of the Mobile district, who has been denounced by the silverites as "the worst gold-bug in the State," has declared himself a candidate for the succession, and is receiving warm support from a large part of the party press. Alabama is suffering sadly from old-fogyism in her senatorial representation, and it is greatly to be hoped that she will not make the mistake in Pugh's case that was committed in Morgan's, of giving a fourth term to a man who has outlived his capacity for usefulness.

New possibilities in the way of export trade are constantly presenting themselves, making prominent a side of the tariff question which protectionists generally ignore. The latest step reported in this direction is the exportation of Lake Champlain iron ore to Germany. A furnace in that country which had been using a native ore made the experiment of substituting ore from Lake Champlain, and found that, in spite of the higher cost of the American ore, it could be used with so much economy of coke as to decrease the cost of pig iron. It is said that the furnaces on the Rhine can show even better results, owing to cheaper freights. This example demonstrates the folly of the import duties on iron ore which the protectionist Senators forced into the tariff bill. There are many varieties of iron ore, some of which it is evident we can export and some of which we need to import. The manufacture of iron can be prosecuted to the greatest advantage by taking advantage of these diversities, and nowhere is the policy of relieving raw materials of taxation more beneficial.

The Philadelphia *Manufacturer* is suffering acute mental distress over the course that is likely to be taken by the Republican party concerning protection and bimetallism. In the first place it fears that the platform recently adopted by the Pennsylvania Republicans was the "perpetration of a premeditated fraud." Instead of saying "we demand the use of both gold and silver as *standard* money," this platform said "we demand the use of both gold and silver money." This change in language was made at the instance of the gold-bugs, and was "in harmony with the other methods employed to bolster up a cause which is based upon delusion, quackery, and lies; which fears free discussion in the press; which procured the demonetization of silver by means which no man at this day can explain," and so on. As there is a disposition among some Republicans to suppress the silver issue, so there is a desire to keep quiet about the tariff. This the *Manufacturer* fiercely declares will not be tolerated. If the tariff is not going to be the issue next year, it wants to know what will be the issue. If both parties agree to drop both the tariff and silver, we should have "a love-feast, instead of campaign." Nothing of the kind shall take place if the *Manufacturer* has anything to say about it. Instead of that it promises "a tremendous row of a most complicated character." The Eastern Republicans want higher duties and do not care about silver. The Western Republicans want silver and do not care for higher duties. If the Eastern Republicans will not consent to favor silver, then the Western Republicans will join the free-silver Democrats. In that case the Eastern Republicans "will have the pleasure of joining hands with the worst enemies of protection in the East, or of going alone." That is the alternative that confronts the protectionists of this part of the country.

It must be said that there is a great deal of truth in these observations. The situation which they indicate is doubtless depressing from a party point of view, but it is on many other accounts extremely hopeful. It suggests the possibility of the breaking up and the rearranging of parties. If it is true, as the *Manufacturer* asserts, that the gold monometallists of the Republican party are already in full fellowship with the Reform Club of New York, "the most venomous nest of free-traders in the country," why is it not better that they should be allowed to stay there? If it is true that "British free trade" and the "British gold system" are both hostile to American interests, the believers in the latter system ought not to be allowed in the protectionist camp. If it is true that the fate of the protective-tariff system is "bound up with that of bimetallism," it is time for Republicans to make up their minds which issue is more important. Conservative Republicans were driven to support the Sherman bill to placate the bimetallists,

and they are now warned that they must do the same thing again. With the consequences of their former concession fresh in the memory of the country, it is not very probable that the experiment will be repeated, and if the ultra-protection and silver element demand it, there may indeed be a "tremendous row"; and the more violent it is, the better it will be for the cause of good government.

Conventions of Republican League clubs continue to lend a spice of humor to our politics. The national gathering at Cleveland a few weeks ago amused the country by devising an original method for "dodging" the burning issue of silver, by the sudden discovery that it had no right to make any platform, and never had possessed any right to do so during all the years that conventions had been adopting resolutions, because the constitution had always provided that the League "shall not in any manner endeavor to influence the action of any national, State, county or municipal convention"! The League clubs of New York State met at Binghamton last week, and the delegates, according to the *Tribune's* report, talked about the Sunday-saloon question, "to the exclusion of almost every topic"; but when it came to taking a position on this issue, they contented themselves with commending the action of the police authorities in enforcing the law in this city, declaring that "the question of open saloons on Sunday is not a political question, but is one the determination of which will, to a large extent, measure the moral tone of the Empire State," and gravely making this announcement: "We believe in the American Sunday, and that the traditions of the Republican party favor the preservation of all those conditions and principles calculated to bring peace, prosperity, and happiness to the masses of the people."

Ingalls has announced his candidacy for the United States senatorship which is to be filled by the next Kansas Legislature, and comes out in favor of the election of President and Vice-President, as well as of Senators, by the people. The idea of popular election of Senators is supposed by aspiring politicians to be popular with the masses, particularly in the West and South; and Ingalls probably reasons that the further he pushes the principle, the stronger will his candidacy be. But there is one objection to the direct choice of the executive which must be conclusive with thoughtful people, all other considerations, pro or con, left out of the account. This is the fact that with such a system the nation might be kept for weeks in uncertainty as to who had been elected President. In 1884, for example, the popular vote was divided almost evenly between Cleveland and Blaine; the Democratic candidate receiving 4,874,986 and the Republican 4,851,981. But it was not until the official vote of Texas was canvassed, nearly a month after the election, that anybody knew which candidate would finally come out ahead. In 1880 the margin was still narrower, Garfield's plurality over Hancock being only 9,464; and in that year also the question which candidate was ahead on the popular vote remained open for weeks while the returns from the immense and in large parts thinly settled State of Texas were being gathered and compiled. For the whole country to wait perhaps a month in order to find out which nominee got a few more ballots than the other, is not to be thought of.

The Democrats of more than one State will probably have to go through the clarifying process which the party is undergoing in Nebraska. Where the remedy is needed it is a most excellent one to apply. In 1893, Nebraska Democrats adopted a thoroughly sound-money platform. Last year, led away by an offer of Populist support, they swung themselves clear over into the Populist ranks and demanded silver and paper *ad libitum*. As a result, the free-silver wing of the party has deemed itself strong enough to go alone this year, and has adopted a platform of the Populist model. The sound-money Democrats have taken up the gage of battle, and their separate convention, held on Thursday, cannot fail to result in practical good to the sound-money cause, even beyond the boundaries of the State. Its platform not only declares against free coinage of silver, but speaks out boldly in favor of the gold standard, saying:

> "We declare ourselves unequivocally and unreservedly for that metallic money as the standard unit the bullion and mint value of which are approximately the same, the purchasing power of which, regardless of Government mintage, is the least fluctuating in all the markets of the civilized world."

Conventions, even when dominated by anti-silver men, are so apt to think it necessary to say something about the use of silver-through-international-agreement, etc., etc., that it is encouraging to find these Western men avowing plainly what is an evident financial truth. The educating effect of such a convention and platform can hardly be overestimated.

The results of the examination of Tammany candidates for election inspectors are calculated to make every true Boy in the old hall say with one of the victims who was caught cheating in the preparation of his papers, "T'ell with reform and reformers!" Out of 2,397 persons examined, 460, or nearly one-fifth, were found to be unfit. No less than 358 others failed to appear for examination, and 12 others resigned, making 370 more who were undoubtedly unfit and realized that they would be found to be so on investigation. As the whole number notified to appear was 2,782, it has thus been shown that 830 of them were unfit, or more than a fourth of the whole. The city has thus been spared the services of these men, and will get in their places men who are competent for the performance of their duties. This is the result of the examination of the candidates of only one party. A like number of Republican candidates have since undergone the same examination, with a like result. Nothing more valuable in the way of securing honest elections has happened in the city for a long time, and for this we have to thank the Police Board.

The first of this year's international yacht races (the second was vitiated by a foul) seems to have convinced nearly everybody that Valkyrie III. has little more chance of taking the America's cup away from us than her predecessors had. Undoubtedly the widespread and uproarious enthusiasm over Defender's first victory, exceeding anything of the kind over former victories, is due to the fact that more anxiety was felt about the result this year than in any previous match. It seems to be demonstrated that the Herreshoffs are able to build a faster boat every year, no matter what the requirements may be. How long they can continue to do this no man can say, but there is cause for congratulation in the quite general agreement that whatever advance is made in future will be along different lines. Both English and American authorities are agreed in thinking that the present type of racing-machine has reached its limit, and that the racers of the future should be smaller, and constructed on models which will fit them for some other use than racing. It cannot be said that the present competition is of any value in scientific yacht construction, for the boats are practically worthless for anything except racing. If we can get construction upon more practical lines, it will be a decided gain.

There has been some complaint in this country about the slowness of the Chinese authorities in making reparation for the outrages committed upon Americans by mobs in that country. But Mr. John W. Foster points out that the Oriental Government has been most prompt in comparison with the action of our own Government under similar circumstances. Although only a few weeks have elapsed since the Kucheng massacre, nearly a score of participants have already been condemned to death, more than a hundred others are in prison awaiting trial, and the Government is arranging to compensate the missions for all their losses. On the other hand, no punishment whatever was ever inflicted upon the white men guilty of the atrocious outrages upon the Chinese committed at Rock Springs, Wyoming, a few years ago, and compensation was delayed for three years, and then accompanied by legislation against the Chinese, which was pronounced by our Supreme Court in violation of treaty, although without remedy. No wonder Mr. Foster thinks that, in view of such facts,

"we in America should be chary of our condemnation."

The English Parliament was prorogued on Thursday after having been held strictly to the programme of doing nothing in this session but voting supply. On no other question has the Government committed itself, and Mr. Balfour the other day refused to commit it to any policy whatever, even for the next session. This *non-possumus* attitude has been pretty hard for some of the Cabinet to maintain—for none, perhaps, harder than for the new Secretary for India, Lord George Hamilton. Only last February, when in Opposition, he spoke and voted for the immediate repeal of the Indian cotton duties, which had caused such an outcry in Lancashire, on the ground that they were protective. It is alleged, and probably with truth, that the Unionists elected several Lancashire members on the promise to repeal these duties. But Lord George has now discovered, as Indian Secretary, that nothing must be done "hastily," that there is "great difficulty" in doing anything, and that, anyhow, the Indian Government unquestionably have the power to do what they please about it. It will not appease the wrath of Lancashire to be told that Lord George remains of the opinion he held last February. An opinion which a Government retains as a pious and private article of belief, without attempting to act upon it, might as well be an opinion to the contrary, so far as the angry cotton-spinners are concerned.

Mr. Balfour's explanation of his reasons for putting a knife into international bimetallism succeeds only in giving the knife another twist. He is pained that any of his old bimetallic friends should think he had recanted—the true bimetallic faith has no stancher adherent than he. But it must remain an ideal faith, something hanging in the clouds, never to be realized on this earth. International bimetallism is utterly impossible, but Mr. Balfour is a devout believer in it. It is a new application of the old saying, *Credo quia impossibile est.* As to a conference in order to an agreement, he pours philosophic scorn upon the proposition. First agree, then confer, is the true order, he says. The faithful old bimetallists who have borne the heat and burden of the day will shake their heads over this. They have always maintained that the way to agree is to confer. All you have to do is to get together delegates of radically different views, under stringent and radically different instructions from their respective governments, have some banquets, give Jones the floor, and wind up with a grand agreement, like the witches in "Macbeth"—"Fair is foul and foul is fair"—in other words, 16 is 30 and 30 is 16. Experience is against this, it must be confessed, and now that Mr. Balfour arrays his philosophy against it too, it looks as if the international bimetallists would have to do their conferring in their private capacity. Their obvious duty now is to say that they are glad Mr. Balfour has shown himself in his true colors, and that they are well rid of him; that the situation is now cleared up; they have got the gold-bugs just where they want 'em, and now they will go ahead and have free silver without waiting for anybody on earth.

"Josephus Africanus" is the name, half grandiloquent and half sarcastic, with which Mr. Chamberlain was dubbed by the London papers when he announced his ambitious policy for the colonial development of West Africa. In his speech in the Commons on the vote of supply for the Colonial Office, and more specifically the next day, August 23, when he received a deputation on the subject of African railroads, he outlined what he called his "new policy," his "great policy." It is, in effect, that the time has come for Great Britain vigorously to take hold of her "great estate" and develop it. The people of England must put into the colonies "some of their superfluous wealth," or there is "no future for those countries." It is ridiculous to wait longer for private initiative and capital to build railroads and open up trade in Africa. The hour has struck for imperial grants in aid of African railroads, and, in general, for "imperial assistance" in developing the colonies. Mr. Chamberlain eloquently assured the Commons that nothing was more "extraordinary to his mind than the extraordinary growth of trade in those West African colonies." But the *Economist* cruelly produces figures which show that there has been "no appreciable growth" at all, and, moreover, that "the trade is confined to a comparatively small range of products." Beginning with such a cold dash of facts, this expert rather contemptuously defers criticism of Mr. Chamberlain's general policy to a more convenient season.

The Trade-Union Congress in England opened with a substantial victory for the conservative element. For a number of years a set of socialistic agitators have been trying to induce the trade-unions to endorse their theories, and last year they succeeded in getting the congress to pass a resolution in favor of the "nationalization" of land and capital. This resolution was very far from expressing the real convictions of the members of the unions, and the oldest and best-managed of these organizations determined to rid themselves of the control of the radicals. This they appear now to have accomplished, by securing the adoption of two new rules. One of these simply provides that no person who does not follow a trade shall be admitted as a delegate to the congress as a representative of the union of that trade. The effect of this is to exclude a number of agitators whose labors are oral rather than manual. Mr. John Burns and other representatives of "labor" in Parliament will hereafter be unable to appear as so accredited by the trade-unions, and their congresses will now be directed by business men and not by half-crazy theorists. The second rule is directed against the "trade-councils," which are not properly trade-unions, but are composed of members elected by the unions. These bodies have gone actively into politics and are responsible for many of the schemes of "municipal socialism" which have been attempted in England. It appears that the socialistic element was defeated by a vote of two to one, and the result is extremely creditable to the good sense of English workingmen. Their trade-unions have for many years been increasing in wisdom and in favor, discouraging strikes and devoting themselves to improving the condition of their numbers. The action of the congress last year was therefore highly discouraging to those who have the true interests of workingmen at heart, and the course now adopted is correspondingly cheering.

A very notable illustration of what is possible in the way of improved relations between workmen and their masters has been afforded recently in the iron trade in England. Owing to a number of causes, the prices obtained for the manufactures of iron of late have been very low, and at the same time the demand has fallen off. Hence, it became necessary to reduce wages, and instead of engaging in a ruinous strike the men faced the situation with intelligence and good feeling. Since it was believed that foreign establishments were making gains at the expense of the English, it was decided to appoint a committee, made up of employers and men, to visit these establishments and study their methods and processes, with a view to obtaining suggestions of possible improvements. This plan was carried out, and a number of the principal establishments of Belgium and Germany were inspected. What is equally remarkable as showing the improved relations between competing employers, the foreign managers, who were informed of the purpose of the visit, received the committee with the greatest courtesy, and gave them every facility in their tour of inspection. It was reserved for some of the German newspapers to distinguish themselves by attacking the English visitors as spies, and denouncing them as having procured admission to the foreign establishments by false representations. There is little doubt that a large part of the hatred and jealousy that exist between nations is due to the lies of journalists, and this incident is a proof of it. Whether the committee obtained any ideas of practical use or not cannot yet be told, but their expedition suggests how much may be accomplished by patience and forbearance in settling trade disputes.

THE EMPLOYMENT OF PRISONERS.

When the people of New York were called on last year to ratify or reject the amendments framed by the Constitutional Convention, they were confronted with a disagreeable alternative. On the one hand, the amendments were in the main desirable, and in some cases extremely important. On the other hand, there were some that were very objectionable. But as nearly all the amendments were submitted to be voted on in a body, it was necessary either to vote against them all, thereby opposing all reform, or to take the evil with the good. The amendment prohibiting the employment of prisoners at productive labor was a bitter dose for most people to swallow, but it seemed best to accept it, trusting to the future to bring about some remedy for the evil condition of affairs which it was sure to create. Fortunately it was provided that the amendment should not go into effect until 1897, so that this optimism was not unjustifiable.

It is not improbable that many people were deceived as to the real nature of this amendment by some rather specious features. It contained a proviso that convicts might be employed in producing articles which they could use, or which could be utilized in any of the public institutions of the State, or any of its political divisions. Here, it was doubtless argued by many, was ample opportunity for the employment of convicts without bringing them into competition with private industries. Mr. Eugene Smith, in a paper read last week before the Social Science Association at Saratoga, exposes the utter fallacy of this argument. He shows that there is no public work for the State of any importance except that which is farmed out to contractors. The Constitution requires that all contracts for work or materials on the canals shall be made with the lowest bidder therefor, and the same requirement exists by statute in the case of repairs to armories and arsenals, in the purchase of arms, uniforms, and equipment for the national guard, in the printing and binding of public documents, and practically in all the departments of public work. The system of having such work done by competitive contract is generally regarded as necessary for the repression of jobbery, and it is highly improbable that any support could be obtained for a measure which should replace this system with one of convict labor. It is enough to suggest what would happen if the State printing, for example, were taken out of the hands of the Printers' Union and carried on in the penitentiaries. The eleemosynary institutions of the State now manufacture their own supplies to a large extent, and do not require the assistance of convicts. Mr. Smith does not hesitate to say that the total amount of public work which is practically available under this section of the Constitution will not be sufficient to give employment to one per cent. of the prisoners. The superintendent of State prisons estimates that fifty convicts could do it all.

If any one supposes that these estimates are merely conjectural, he need only refer to some of our previous experience to convince himself of their accuracy. It so happens that only six years ago what was known as the Yates law was enacted—a statute which was practically identical with the present constitutional provision. Under that law the prison workshops were closed, and the prisoners had to be shut up in their cells in idleness. Almost immediately the most piteous appeals for employment began to be heard. Prisoners begged for work of any kind, no matter how hard or how menial, and declared that confinement in idleness was slow death. In fact, while this law was in force, the death-rate in the prisons rose to the highest figure ever known, and there was a marked increase of insanity. In its financial results the law was equally disastrous. For six years prior to 1887 the State prisons had more than paid their expenses. The Yates law produced a deficit of $150,000 in 1888, although it did not go into effect until August, and in the following year the deficit was $370,000, although the law was repealed in June. Thus, in about ten months this piece of "labor" legislation wasted about half a million of the money produced by the labor of the people, and there is no reason to suppose that higher wages were obtained in a single trade through the suppression of prison competition.

It is hardly necessary to add that such a system of dealing with prisoners as this is utterly opposed to the conclusions of all those who have devoted themselves to prison science. These conclusions are no longer theoretical, but have been confirmed by experience. It is established positively that it is merciful and wise and just for the State to subject criminals to reformatory influences, and that when so subjected nearly four-fifths of them can be reformed. But in this reformatory process an essential agency is useful labor. The prisoner must be taught to work, and to work at industries which will afford him support when he is discharged. The constitutional amendment just adopted, therefore, sounds the knell of prison reform in this State. It means financial loss to the people, disease and demoralization to the prisoners, and discouragement to the benevolent.

The situation, however, is more hopeful than is commonly known. The last Legislature was not a body that deserved much gratitude from the public; but it must be reckoned to its credit that it passed a resolution providing that another prison amendment shall be offered to the people. The amendment now proposed, which was prepared by the Prison Association, prohibits contract labor, and directs that prisoners shall be employed, so far as practicable, in public work, but does not prohibit the sale of the products of their labor. Under this amendment the prisoners can be instructed and employed, and the prisons be made self-supporting. No one doubts what the verdict of the people on this amendment will be, if they get a chance to vote on it. The trade-union vote, although a dreadful bogy to politicians, never amounts to much in the election returns. The important point is to induce the next Legislature to allow the people to have a chance to vote on the question; and those who wish to do what they can to lessen crime and to reform criminals may properly direct their efforts to this end.

THE CANAL MANIA.

The success of the Suez Canal has had an extraordinary number of unexpected consequences. Before the passage to India around the Cape of Good Hope was discovered, all Oriental trade, as Bagehot has said, centred in the Mediterranean region, and was thence diffused through Europe. After that discovery the Mediterranean ports lost their commerce, and the trade between India and Europe fell into the hands of the Dutch and the English. Every one predicted that the digging of a canal through the Isthmus of Suez would be a very bad thing, so far as the English monopoly was concerned, for the East-Indian traffic. It was expected that it would restore prosperity to the ports of Southern Europe at the expense of London and Liverpool. So astute an observer as Tocqueville was deceived, and declared to Senior that it would be the Greeks, the Styrians, the Dalmatians, the Italians, and the Sicilians who would use the Canal, if anybody used it. Hence the English would have nothing to do with the enterprise, and would have prevented it if they could. But they could not, and they presently found to their astonishment not only that the Canal was a success, but also that they were almost the only people using it. The merchandise of India once more came to the Mediterranean Sea, but not to the Mediterranean ports. Instead of going to Venice and Genoa for European distribution, it went to England as it did before, and her enemies had the mortification of seeing a scheme which it was thought would end her commercial supremacy inure almost to her sole benefit.

This unexpected success had the result of making it impossible to consider seriously the schemes for other canals which were at once brought forward by enthusiastic projectors. Whoever attempted to criticise these schemes was silenced by the argument that financial prophecy was proved worthless by the example of Suez. Every one said that that would be a failure, and gave good reasons why it should be. As a matter of fact it proved a success, and so it might turn out with the Isthmus of Panama. Hence De Lesseps found little difficulty in raising enormous sums of money for this enterprise by vo-

luntary subscription. His appalling failure ought to be a warning to sober-minded people that the mistaken predictions in regard to the Suez Canal did not dispense with the necessity of foresight and calculation in such enterprises. Probably it will for a long time be difficult to enlist private capital in these vast and uncertain schemes, but it is different with governments. Legislators are invariably lavish of the money of their constituents, in spite of the fact that their lavishness is almost invariably unproductive. Nothing but the embarrassment of the Treasury of this country will prevent Congress from listening to suggestions for donating a hundred millions, more or less, to the projectors of the Nicaragua Canal, on the chance of its being repaid out of future profits. And within a few days it has actually been proposed by one of our metropolitan journals that $200,000,000 be expended in digging a channel which will enable ocean steamers to carry their cargoes past this city to the lakes without breaking bulk.

This is certainly an extraordinary proposal to emanate from the city of New York. It may recommend itself to the people of Chicago and Duluth, but it would be carrying altruism to an extreme for the inhabitants of this city to expend large sums to enable the craft that now swarm in their docks to sail by without touching. The ship canal that connects Manchester with the sea was not suggested by Liverpool, and the merchants of Liverpool would probably have questioned the sanity of one of their number who should have suggested that they ought to contribute to the expense of its construction. Such a proposal, however, is only an illustration of the entrancing speculations that are constantly dangled before the eyes of legislators. These are always influenced by national jealousy, and when they are told that if we do not spend our money in digging a canal through Nicaragua other people will, the appeal is irresistible. The very vastness of these schemes makes them attractive: the bigger they are, the more suitable for a great people. What Yankee could calmly behold a petty state like Canada constructing at its own expense a system of ship canals that should furnish cheap transportation for our commerce? Such a spectacle would drive a high-spirited Congressman wild, and, rather than witness it, he would vote to turn all the waters of the St. Lawrence into the Hudson and the Mississippi.

But if we inquire concerning the success of canal enterprises, we shall find much reason for caution. It is hard to name any considerable canal except that of Suez that is profitable. It is unnecessary to refer to the awful loss of life and property at Panama. The folly displayed there was too stupendous to be repeated. But the Manchester Canal is in its way equally portentous. That city should be governed by sagacious men, but it is probable that they have saddled it with a permanent incubus. It has been found that the Canal has benefited Liverpool, because that city has secured lower rates by rail; but Manchester has so far only secured higher rates of taxation. The Canal has cost $75,000,000, and the net receipts last year were possibly $125,000. They may perhaps exceed this hereafter, but the enterprise is hopelessly bankrupt, and the city of Manchester is obliged to raise the interest on the money it has sunk by a severe increase in taxation. The North Sea Canal, which has just been completed, may be justified as a naval necessity, but it is hardly probable that it can be a commercial success. The Corinth Canal, it is reported, does not earn enough to pay for its dredging. Our own Erie Canal, although indirectly profitable, has, owing to our corrupt Legislature, been a steady drain on the resources of the State. All these examples should teach caution; but we apprehend that they will be appealed to in vain. There is now fresh talk of a ship canal from the Bay of Biscay to the Mediterranean, of a great canal from the Mediterranean into the interior of Africa, of a canal at the mouth of the Rhone, of a canal to connect Berlin with the North Sea, and of we know not what others. We have on hand the deepening of the Erie Canal, and the Hennepin Canal, with several others in prospect. The most formidable of these is doubtless the Nicaragua Canal, and it is significant of what is to come that the cost of this, which was first put at $50,000,000, then at $65,000,000, and afterwards at $70,000,000 to $90,000,000, is by the latest estimates to be $110,000,000. But estimates in such matters are notoriously delusive.

THE LEADER OF A DEMOCRACY.

Discussion among the English Liberals of the question who is to lead their party in the future has already begun, and will doubtless grow sharper in the parliamentary vacation. The National Liberal Federation, which is perhaps the nearest thing to our nominating and platform-making conventions that the English parties have, will meet before Parliament reassembles in November, and the question of party leadership cannot be kept out of the debates. There is no denying that Lord Rosebery has failed as a Liberal leader. It is not that he was disastrously beaten in the elections. It was clear that he was a failure before he was beaten. Had he won, his unfitness permanently to be the head of a great democratic and reforming party would have remained conspicuous. It is not that he is a peer. It is not that he is a horse-racer. Both those facts have been and would be a handicap to him, to borrow a metaphor from his favorite sport, but he might have carried the extra weight had he possessed the prime qualities requisite in the leader of a democracy.

One of these qualities is seriousness. No great democratic leader was ever an habitual jester. If seriousness can rise, on occasion, to solemnity, to high moral earnestness and enthusiasm, so much the better. But a character without a solid basis of seriousness is not a character which a democracy will ever make an ideal of, or accept as satisfactory in its chosen leader. Now, Lord Rosebery is not serious, or, if he is, he does not make men believe that he is, which is practically the same thing. One need not go for proof beyond his House of Lords speech on August 15. It was a clever speech, as almost everything that Rosebery does is clever, but it was essentially a flippant speech. He made a lot of jokes, and some of them were very good ones. He praised the House of Lords as "a sort of political Thebaïs—a region of holy hermits, separated from all the vain tumults of the world, absorbed in our own silent and solitary meditations." Of Lord Ampthill's father, he said that he explained his assiduous attendance upon the House of Lords, though never speaking, on the ground that he found it "a pleasing opportunity for repose." "Laughter" followed these sallies, and "much laughter" followed Lord Rosebery's dismissal of the Duke of Argyll's charge that the conduct of the late Government was "infamous," by saying that this was "very strong language, even for a honeymoon"—the noble Duke having lately married for the third time.

All this excellent fooling set the Lords in a roar, but what did they do, one wonders, when Rosebery pulled a long face and began to speak solemnly of the late massacres in China and the Armenian "atrocities which have horrified the conscience of Europe"? They yawned, we should suppose, or went to sleep, or, if they had themselves any appreciable share of the conscience of Europe, were disgusted at this introduction of atrocities between jests. Under the circumstances, the jests were themselves the greatest atrocity. Imagine Mr. Gladstone speaking on the same subject! But we do not need to leave it to the imagination; turn to Mr. Gladstone's Chester speech on Armenia, and note the moral elevation, the hot indignation, the high note of personal intensity and authority, and you get some idea of why one orator is fitted to be a great popular leader, and why the other is fatally disqualified by levity. Mr. Gladstone is not without wit, but his wit usually takes the form of cutting sarcasm, and thus but adds to the total impression of immense earnestness which all his oratory and his public utterances are designed to produce and do produce; his enemies themselves being witnesses.

Wit and literary skill are no drawback in a democratic leader if he uses them discreetly, but seriousness without them is better than they are without seriousness. Even if the earnestness becomes ponderous and awkward in expression, a democracy will put up with it with better grace than with the absence of it. A

witty man said of President Cleveland, "He is the greatest master of platitude since Washington." There was truth as well as wit in the observation. Practised writers who find Mr. Cleveland's style heavy and dull, and who could never bring themselves to utter so many commonplaces so solemnly, are continually amazed and at fault in regard to his great popular influence. "The man writes like a schoolboy," they say, "yet the masses like him and believe in him." If they do, it is because they find him dead in earnest. They do not make nice distinctions about style. For their part they rather like platitudes—certainly like them better in their leaders than they do too clever a wit. A joker is all very well on the stump, but for the actual business of government give them a serious man every time. How could it be otherwise? Democracy takes itself most seriously, and will have serious men to represent it and transact its affairs. An absolute monarch would not put up for a day with a smirking Prime Minister; and we may be sure that democracy is fully as exigent, and will insist upon its leaders taking it as seriously as it takes itself.

The only other quality requisite in a democratic leader which we will now mention, and in which Lord Rosebery is notably deficient, is the quality of courage, or authority. Demagogues blunder sadly at this point. They think a democracy must be fooled to the top of its bent, never bluntly told what it ought to do. They watch anxiously for indications of the popular will, never dare try to shape that will. But democracy, taken in the large sense, is not built that way. It likes a man who will stand boldly up with clear and firm convictions; not one who lies with his ear to the ground. Democracy is not, as so many rashly say, intolerant of personal distinction, of strength, of authority. It worships them, worships them devoutly, even when it has set up idols of its own in place of the real thing. Mr. Cleveland's blunt courage has done as much for him as his obvious earnestness. Mr. Gladstone has always had the note of command about him. Even the Tories now admit that it was nothing but his magical personal influence which made the last House of Commons a home-rule House.

But Rosebery has little of this bold outspokenness. He tentatively puts out a phrase, like his famous one about the "predominant partner," and then scuttles away from it. He cries out "Down with the Lords!" but, if they won't down, says it is just as well. He turns again and again to his party and the country and beseechingly exclaims, "Do tell me, in heaven's name, what you want me to do." A man thus feebly looking about for a popular mandate is not the man to be a popular leader. The true popular leader gives his mandates, does not take them. He has to do it at the right time, with some tact, with a certain political instinct which is almost prophetic in its nature, but he does it. Lord Farrer, in his recent speech before the Cobden Club, quoted an unpublished remark of John Bright's which is very much in point, and which may aptly enough sum up the whole discussion about the nature of democracy and the stuff of which democratic leaders are made. It was this:

"The people are, on the whole, a very good people. They have now got the power in their own hands, and if those whose business it is to lead and advise them will speak the truth to them, all will go well, and if they do not, God help them both."

THE BOOMING OF BOOKS.

THE London *Times* is publishing a series of articles on "Literature in America" from a contributor the veil of whose anonymity we will not impertinently lift. He has evidently been in this country, and has as evidently "got up" his subject under experienced tutors. It would be easy to point out here and there a mistake in fact, and oftener in judgment, but on the whole he is accurate and sane. Discussing the chances of English authors in the American book-market, he observes:

"Curiosity may be felt as to what constitutes the foundation of an English author's success in America. The reply is that he must be 'boomed'—that is to say, his books must have become the rage in London, and the press must be unanimous in his praise. Nothing but a boom here will induce the American publisher to take the trouble of booming him there. 'Get the English papers to rave about an author and he will surely make way here,' said an eminent New York publisher. There are very few literary journals in the United States, so that ours have remarkable influence, and their verdict on a new work is eagerly scanned and, as a rule, accepted."

Objections to this statement will instantly occur to every reader. Indeed, the writer himself is dimly aware that something is wrong with it, as he has immediately to confess that the 'Trilby' boom was spontaneous and indigenous in this country, and he also innocently wonders why it is that popular English authors like Mr. Frankfort Moore, Miss Cholmondeley, and Mrs. F. A. Steele, have "failed to capture the American public." We fear, also, that his American tutors ought to be rapped over the knuckles for allowing him to suppose that the verdicts of English literary journals are "eagerly scanned" in the United States for the purpose of saying ditto to Mr. Burke. But in his main contention he has undoubtedly hit upon a great truth. The great book successes among us go not always by merit, not by favor necessarily, but in all cases, with or without merit or favor, in large part by booming. Not all boomed books are successful, but all successful books are boomed. Into the philosophy and the methods of this booming, however, the *Times* writer has not seen, or, at any rate gone, very deeply.

There remains a great deal that is mysterious about it, when all is said. The most artful booming often refuses to work, and, on the other hand, a publisher who has in vain squandered money on preliminary puffing has many times the mortification of seeing a rival's book suddenly begin to sell by the thousand without any foregoing dark hints at all. Hence comes the frequent confession of those who have given a life to the business, that a great literary success is of the nature of a lottery. Go to the shelves blindfold, and the book you pick out by chance is as likely to be in huge demand as the one you exercise your best judgment upon. But this really puts us upon the track of the true solution of the problem. If the booming of books were purely a literary phenomenon, then the literary judgment would not so often be at fault about it. But it is not primarily or chiefly a literary phenomenon. It is a social phenomenon. The literary element is secondary, often disappears altogether. A book may boom as furiously as a fashion in dress may ravage, without there being, in the one case, a sound literary reason, any more than there is, in the other, a sound æsthetic or hygienic reason. There is something essentially unreasoning, if not irrational, about it, as there is about many other social phenomena. A panic sweeps through a nation, laughter ripples through a theatre, or wailing surges through a camp-meeting, and why the feeling leaps from mind to mind in the way it does it is almost impossible to say. We cannot do much more than accept the ultimate fact; neither can we in the case of a book which wins a great social, often falsely called a great literary, success.

It is to be said for the shrewder and less scrupulous publishers and critics that they begin to have a glimmering of this important truth. We see evidence of this in the kind of puffs preliminary that the first now desire and the second furnish. "I predict that this book will be much talked about." "This volume is destined to make a great sensation." That is the kind of profound criticism which certain advertisers most eagerly employ. What matters it if the predicter is a person who delights in parading her own silliness, and the prediction is printed in a paper that you would not let your daughter touch with a pair of tongs? The thing is, to give the impression that the book is certain to be chattered over at afternoon teas and buzzed about at evening receptions. That impression once firmly established, the boom is on. The great principle involved, the great principle for critics to seize, is that books are not meant to be read, enjoyed, meditated over, but to be *talked about*. In other words, the thing to aim at is a social success—to make a book as much *de règle* as evening dress, and ignorance of it as horrible a thing as appearing in public without balloon sleeves.

We hope this will not seem a low view of literature to take. Did not Macaulay hope to see his 'History of England' upon every lady's dressing-table? A plain novelist, we should think, might

well be content to fill up the blanks in conversation between sips of sherbet. For our part, it is not the authors that we pity, but the unfortunate slaves of fashion who are compelled to read them so as to keep up a decent appearance in society. Terrible sufferings on this score have been brought to our notice—worse than anything tight lacing or high-heeled slippers ever caused. Young ladies whose natural allowance of books would be about two *per* existence, are often compelled to read as many as three or four novels in a single summer, merely as a result of social tyranny. Gloomy men have been observed to shut themselves up for a whole evening with books over which they pish and pshaw incessantly, and, when asked why they read what they find so inane or repellent, have sternly replied: "I've got to. Everybody's talking about the thing. My wife made me promise to read it." Such burdens does Fashion lay upon her votaries. Time was when a skilful man could parry the question, "Have you read 'The Unseen Woman'?" He could say he had heard of it, but had not yet had time to read it; that he had read an able review of it; that he had read last year's dead favorite; that he had read other things, and would like to talk about them. But the fair questioner cannot any longer be put off in that manner. You have to be able to tell her that you have read it, that you think chapter xxiii. particularly fine, and consider the situation on p. 193 a little morbid, or else you are a lost man socially. Clearly, book notices must soon be exiled from the literary columns and find their true home under "Society Events."

ALASKA REVISITED—V.

COOK'S INLET.

AUGUST, 1895.

THE magnificent sheet of water which preserves the name of Cook was, not unnaturally, supposed by him at first to be the long sought-for Northwest Passage, and his disappointment was marked by the name he gave to its shallow northeastern extreme, the Turnagain Arm of the charts. Two hundred miles in length and more than fifty miles wide at its entrance, it is one of the most interesting regions in Alaska, and yet is hardly mentioned in the literature outside of Coast Pilots and marine directories. Of late, attention has been drawn to it by an influx of placer miners and prospectors in search of the gold of which Doroshin, a Russian mining engineer, indicated the existence half a century ago. Some account of its natural features will have a certain interest, and a report on its mineral resources will probably be issued before long by the United States Geological Survey.

The western shore of the Inlet is formed by that projection of the mainland known as Aliaska Peninsula, while on the east it is bounded by the peninsula of Kenai, which separates it from the intricate system of fiords compre hended under the name of Prince William Sound. In the entrance is the desolate group of rocky islets known as the Barren Islands, the favorite resort of the persecuted sea-otter and myriads of sea-fowl. The peninsular shore is more or less mountainous, while Kenai rises in low bluffs to a low and level table land, backed by large glacial lakes fed from the watershed between the Inlet and the Sound. This watershed is formed by a range of snowy mountains, but so distant as to be barely visible from the Inlet. The table-land is geologically younger than the mountains, and has long been noted for the continuous beds of Tertiary coal, sometimes passing into lignite, by which it is everywhere underlaid. The bluffs it presents are broken only by a few small rivers, the site of an important salmon-canning industry, and the water adjacent to them is shoal. Only at the southern end of the table land is the coast broken by harbors, Kachekmak Bay being one of the finest on the whole northwest coast. The peninsular shore begins at Cape Douglas, and the mountains are disposed in groups with lower areas between the groups, affording a certain number of anchorages. These groups offer some of the finest mountain scenery on the continent after the St. Elias Alps. Back of Cape Douglas rises a mass of mountains, parent of four or five glaciers, one of which is admirably proportioned, larger than the Davidson, and much more attractive from its snowy whiteness and particularly graceful curves. It reaches close to the sea, the others on the southwestern side of the *massif* being less extended and smaller. The structure of the rocks is accentuated by the disappearance of the snow, except from the ravines and hollows, while on the northeastern slope the dazzling whiteness of the snowy covering is hardly disturbed in any part. The mountains are of the Fairweather type, and the whole group gives a profound impression of stern repose.

Northward the land subsides to plains behind Kamishak Bay, noted for its shoals and the many caribou which range over the grasslands near it. Off this depression the volcano island of St. Augustine rises in symmetrical grandeur. A few years ago this island possessed an excellent harbor for small craft and was the resort of native hunters. A violent eruption closed the entrance to the harbor, which is now a placid lagoon dotted with enormous volcanic blocks; ashes were carried by the wind for more than one hundred miles, the fish in the sea adjacent were cooked alive, and the inhabitants of the whole inlet were terror-stricken by tidal waves. At present, slender clouds of steam serve as a barometer for the otter-hunter, who, when they ascend undisturbed by the upper currents, mushroom-like, puts out to sea in his frail kayak, confident of two or three days of calm.

Proceeding northward along the western shore, the next group of mountains is that clustered around the volcano Iliamna. This is less concentrated than that near Cape Douglas, and, on a near view, is much more extended, broken, and confused. It is only at a distance of thirty or forty miles that the majestic cone of the volcano disengages itself from its accessories and stands revealed in all its beauty. It sends out five or six parallel columns of steam, and seems peaceful enough, but a few years ago it was active and sent out such a profusion of hot ashes that hundreds of square miles on the Kenai table-land are covered with dead spruce-trees killed by their excessive load of powdered pumice. Still further to the north a similar mass of mountains groups itself around the Redoubt Volcano, so named because opposite the ancient Russian redoubt at Kenai River. A fourth group, apparently without a volcanic nucleus, rises inland from the cape named by Cook the North Foreland, and far to the north the series is completed by Sushitna Mountain, a single low but massive peak near the river of the same name, draining from the continent. The North Foreland *massif* is especially remarkable for its fine and severe outlines.

The middle of the Inlet is marked by a series of low islands and extensive rocky shoals, a hundred miles in length, and its northern extreme turns to the eastward towards the head of Prince William Sound between high mountains. This is Turnagain Arm, into which discharge a number of small creeks and the larger Fire River from the northward, the southern shore being partly formed by the low edge of the Kenai table-land. The water is shoal and the bottom sandy. The tides throughout the Inlet are remarkable for their range and strength. Vessels usually anchor for a favorable flood or ebb, finding it impracticable to make way against a head tide, but in the Arm they are phenomenal. The range of extreme tides is about fifty feet, and nowhere less than thirty-six feet. The ebb, carefully measured, runs from five and a half to six and a half miles an hour, slack water lasts only a few minutes, and the flood tide comes back over the sands with an angry roar, in a wave three or four feet high, running more than seven miles an hour. In ten minutes the water is six feet deep over the sands where all was dry; the least rate of current in the channel during the whole flood tide was six and a half miles. I have seen a 240-pound anchor of good Swedish iron twisted like a hank of yarn in vain efforts to hold a little tug of twenty-four tons against the tide. The magazine writers who lately went to the Bay of Fundy and vainly searched for the "bore," can be abundantly satisfied in Turnagain Arm.

The industries of the Inlet are comprised, apart from mining and prospecting, in hunting and fishing. There are a number of small, widely separated villages, each with its trader's "store," and half a dozen canneries and fisheries where salmon are salted. The United States is unrepresented by any official in the whole expanse of the Inlet. The climate is much finer than in most parts of Alaska, but the winters are colder and the winter gales severe. The mosquito is painfully evident in many places, moose and caribou abound, and the great king salmon reach enormous proportions, authentic records being accessible of single fish weighing 135 pounds. Altogether the Inlet is a place to remember, and with its volcanoes, glaciers, coal-beds, and game, is a promising locality for a summer school of geology.

W. H. D.

THE TOURIST SEASON IN SWITZERLAND.

LUGANO, August 22, 1895.

TWENTY thousand more Americans than last year have crossed the ocean to Europe this summer; so I was told by a steamship agent. I have also read somewhere that the hotel-keepers in American resorts are not all pleased with their receipts. Swiss hotels, on the other hand, have perhaps never been so crowded as this summer. At all the favorite resorts it has been quite impossible to secure rooms unless they were ordered days or even weeks in advance. This has been true not only of fashionable resorts like Interlaken, Lucerne, and St. Moritz, but of the Alpine-summit hotels as well. At Interlaken, which is simply a town of hotels strung out in two rows, I had to spend an hour before I could find quarters.

At Lucerne we had to put up with private lodgings, and heard of a large party that had to spend the night in the railway station. At Pontresina not a room in hotel or private house could be found for love or money. At Mürren, which has two of the largest hotels in the mountains, besides several smaller ones, one of our party of three had to sleep in a little room in the shanty which serves as a post-office. A new hotel, with forty workmen still engaged on it, was already offering shelter and beds, and at one of the large hotels I was told that not a few families engage their rooms for July in May, just as we engage berths on favorite steamers three months ahead.

It would be well if American hotel-keepers were to learn a lesson from this state of affairs. If you can get comfortable rooms, excellent meals, and cheap, good wines in a Swiss mountain-top hotel to which everything has to be brought on horseback, for $2 to $3 a day, there is no reason why American hotel-keepers, who have all their supplies brought near their doors by railways, should charge twice that sum, while serving meals infinitely less satisfactory than the Swiss hotels, which, in point of cuisine, are the best in the world. My experience has been that it costs just half as much to spend a summer travelling in Europe as it does in America. This saving more than pays for the return trip on the steamer; and that is one reason, and perhaps the main one, why Americans prefer to travel abroad, and so often surprise the Europeans by their ignorance of the attractions of their own country. Our hotels are suicidally expensive. The regular rate of $4 a day, or $8 for a double room, is absurdly high; and as long as it remains so high, Americans will continue to crowd the Atlantic steamers and the European summer resorts. Will our hotel-keepers take the hint? It is true, we have plenty of cheap (and bad) hotels, but the comparison here made is between first-class hotels in the two countries. Of course, there is a difference in the cost of supplies and service, but the cost is far from being double in America.

There are, however, other reasons, besides the influx of Americans, why the Swiss hotels are so crowded this summer. Ten years ago, and even four years ago, when I visited Switzerland for the last time, there were certain attractive resorts, like the Riffel Alp at Zermatt, the Hôtel des Alpes at Mürren, the hotel on the Eggishorn, and the whole of Pontresina, that were almost monopolized by the English. This year I found all these places invaded by hosts of Germans and French, so that I not only failed to get my favorite rooms, but sometimes was glad to get any at all. The British tourists are quite disgusted at this German and French invasion, and will doubtless soon emigrate to more remote and inaccessible Alpine view-points, taking their indispensable mountain chapels and chaplains with them. The Germans have also driven from St. Moritz most of the French, who still feel so sore at having been beaten a quarter of a century ago that they refuse to live with Teutons under the same roof. What accounts for the presence of so many Germans in these (comparatively) expensive hotels, I cannot say, for the Germans have hitherto had a rather bad name among the hotel-keepers on account of their economic propensities. The only explanation I can think of is that the wonderful growth of all the large German cities during the last decade has largely increased the number of wealthy families who are able to spend a few weeks in the Alps without economizing. There is also at present a mild sort of Anglomania among the Germans and the French, which causes them to flock to places formerly monopolized by the British. Some of the young Parisian Anglomaniacs that one sees in Swiss hotels are amusing specimens of humanity.

In some of the places referred to—especially Zermatt and Mürren—the new mountain railways are largely responsible for the present overcrowding. Four years ago, in writing about these new mountain railways, I was inclined to take quite a favorable view of them, as I did not then realize that they would spoil some of my favorite spots by bringing such mobs of tourists to overcrowd the hotels. Even now, when I look at the matter unselfishly, I cannot treat these cog-wheel roads with the scorn of the veteran climbers. I find that in all cases a walk of fifteen or twenty minutes from the station restores the coveted Alpine solitude and silence, while, on the other hand, I feel that hundreds of tourists who cannot climb to these heights—especially ladies—benefit by the new means of locomotion, which, besides, does away with the former daily cruelty to burden-bearing porters and horses. It is useless to declaim against the mountain railways. They have come to stay and to multiply. At present, of all parts of Switzerland, the Bernese Oberland is best supplied with them. After the Rigi and Pilatus roads, the most popular is the one which enables you to leave Interlaken, go up to Lauterbrunnen and Mürren, down again to Lauterbrunnen, up the Wengern Alp to the Kleine Scheidegg, down to Grindelwald, and back to Interlaken—all in about eight hours—a tour which, a few years ago, would have taken two days. It is the grandest railway in the world, but it will, of course, be far surpassed in sublimity by the projected Jungfrau railway, which will raise tourists to an elevation of 13,670 feet, whereas the highest point of the Scheidegg road is only 6,788 feet. The Jungfrau railway, which, a decade ago, would have seemed a Jules-Vernean chimera, is now a certain thing and merely a question of time. The federal authorities have granted a concession for it, and its general course has already been mapped out. There will be stations on the Eiger (10,567 feet) and Mönch (11,886), while the highest point on the Jungfrau will be reached by an elevator 216 feet high. For the most part the road will traverse tunnels, and those who fear that the railway will anywhere spoil the aspect of the most beautiful mountain in Switzerland, may feel reassured on being told that, at such a height and distance, it will take a good telescope even to see the road from any accessible view-point below. Before the construction begins, however, various problems have to be solved. On July 29 and 30 there was a special session at the Scheidegg, at which it was decided to offer prizes amounting to 21,000 francs for the solution of certain electric and tunnelling problems, and a number of expert guides were sent up to the summit to investigate certain snow-problems. The engineer Imfeld (noted for his Alpine panoramas), M. Guyer-Zeller, and Prof. Koppe appear to be at the head of this stupendous undertaking.

Of other projected railways the one that will be most welcomed by tourists will connect Coire with Thusis (Via Mala), thus shortening the long, dusty, and expensive trip to the Engadine. This road, which is to be finished by next June, can hardly be called a mountain railway, as it will make a rise of only 500 feet. On the other hand, the Gorner Grat railway from Zermatt will in about an hour haul up passengers to what is in some respects the grandest tourist view-point in Switzerland, 10,290 feet above the ocean and 4,975 above Zermatt. Here you are surrounded by a complete circle of snow-peaks, including the Monte Rosa, Lyskamm, Castor and Pollux, Breithorn, Matterhorn, Weisshorn, etc.—a simply overwhelming panorama of Alpine sublimity. To my horror and indignation, I found, on reaching the top of the Gorner Grat this year, that a wretched stone hotel had been built on its very summit, utterly ruining the place and making it impossible to see more than half of the glorious view at a time. It is an almost incredible bit of vandalism, which makes one wonder what the Alpine clubs, with their thousands of members, exist for. Surely they ought not to have permitted this outrage, and surely it is their duty to see to it that, when the railway is built, the station shall not obstruct the view, and that the offensive hotel be demolished. Altogether, I do not think such a railway is at all desirable, except as far as the Riffel Hotel, for the Gorner Grat is very easily ascended even by ladies. It is different with the combined cog-wheel and ordinary railway to Zermatt from Visp. This not only shortens a long and expensive road, but makes it more fascinating than it ever was even to pedestrians, because it usually runs so closely along or over the Visp as to give one the most delightful views of that savagely turbulent stream, which suggests the lower Merced in the Yosemite. These two instances show that it is as irrational to condemn the *Zahnradbahn* unreservedly as to approve it in all cases.

I have often wondered why the Chamonix region has so far escaped the attention of the mountain-railway builders, since Chamonix continues to be the favorite resort of Americans and many others, especially the "Cookies" and other "personally conducted" parties, addicted to ease and hurry. I have often wondered, too, why Americans persist in making this their favorite resort in Switzerland. Mont Blanc is indeed the biggest and the highest of all Swiss mountains, but to me it seems the least interesting of all the giants, because it lacks individuality and distinction of form. It is a huge mass of snow and rocks without either the stern, terrific grandeur of the masculine Matterhorn, or the immaculate snowy beauty of the feminine Jungfrau. And what is most strange of all is, that the finest point of view—the Brévant—is so neglected by tourists. So few of them take the trouble to climb up this mountain, whence the rosy sunset on the snow-fields of Mont Blanc can be best observed, that no place of refuge has yet been built for their accommodation, except a small restaurant with one room and two wretched hard beds. What the tourists all do go to see is the so-called Mer de Glace, on which in reality it is foolish to waste a moment of time if one has a chance to visit the Aletsch, Gorner, or Rhone glaciers. It must be admitted, however, that none of the Swiss glaciers equal in size, beauty of color, and grandeur our own glaciers in Alaska and British Columbia.

In going from the Valaisian Alps to the Berner Oberland, tourists have hitherto had to decide between the rival claims of the Gemmi and Grimsel passes. Both are grandly desolate, and as long as both had to be traversed partly on foot or horseback they were perhaps equally popular. But since the opening, last June, of the new Grimsel road for carriages and diligence, the Grimsel has gained the ascendency; which is, perhaps, not to be regretted, since to a tourist who cannot see both these passes I should usually give the ad-

vice to choose the Grimsel. The new carriage road over this famous old pass, which has been constructed at a cost of $312,000, is as interesting in its way as the St. Gothard railway. It passes five bridges and three tunnels, and tackles all the mountain-side problems so boldly that it is, even for pedestrians, grander than the old bridle-path; while those who like to travel at their ease in a carriage can now enjoy all the beauty and grandeur of this incomparable pass, from the precipitous slope of the Rhone glacier, with all the accompanying snow-peaks, to the desolate but beautiful lake at the Hospice, the glacier-smoothed mountain-sides, and the superb waterfalls of Handegg and Reichembach, near Meiringen.

I cannot close this letter without a brief reference to Baedeker's marvellous guide-book to Switzerland. I verily believe there is not a cow-path in the whole country that is not referred to in it; but the most praiseworthy thing about it is the conscientious way in which it is kept up to date. The current edition has apparently only a few more pages than the older one, but in reality there are many more, for the whole book has been rewritten and condensed to make room for new matter. A comparison of two editions of Baedeker impresses one strongly with the fact that, while the mountains are immutable, everything else in Switzerland undergoes as rapid changes as in America.

HENRY T. FINCK.

RENAN'S CORRESPONDENCE WITH HIS SISTER.

PARIS, August 28, 1895.

RENAN has given us the history of his earliest years in Brittany, of his life in the seminary when he was preparing for the priesthood, with such minuteness that we seem to have lived those years with him; his psychological development has been completely revealed to us. The chapter of his memoirs which describes his life at Saint-Sulpice and his relations with his clerical directors and professors, is one of the most interesting documents that can be found by those who like to study the inner life of a soul and the transition from belief to unbelief. We have more frequent occasions to study the transition from unbelief to belief, or from one religion to another. There is always in what is called a conversion a moral phenomenon which touches the deepest chords of our intellectual and moral nature. At the time when the 'Life of Jesus' appeared, Renan was attacked with the greatest violence in the Catholic press; he was treated as apostate and renegade. One day, in the presence of Monseigneur Dupanloup, the Archbishop of Orleans, somebody compared him to the Abbé Lamennais. "Take care," said Dupanloup; "Renan is not in the same category as Lamennais; he stopped at the foot of the altar"—by which he meant that Renan had never been ordained.

I have now before me some curious letters, published in the *Revue de Paris*, which refer to the period of probation and uncertainty which Renan went through before he renounced entering the church. These letters, written at Issy in 1842, are addressed to his sister, Henriette Renan, who was at that time governess in Poland in the house of Count André Zamoyski (the Zamoyskis are one of the greatest families of Poland—as great, perhaps, as the Czartoryskis). This sister, Henriette, was already known to a few by a small pamphlet of which only a hundred copies were printed in September, 1862, under the title: "Henriette Renan: Souvenirs pour ceux qui l'ont connue"; with the note, "These pages are not intended for the public." In 1883, in the preface to the 'Souvenirs d'Enfance et de Jeunesse,' Renan wrote these lines: "The person who has had the greatest influence on my life—I mean my sister Henriette—occupies here no place. In September, 1862, a year after the death of this precious friend, for the few people who had known her, a little work was dedicated to her memory. . . . My sister was so modest, she had such an aversion to the noise of the world, that she would have reproached me from the grave if I had made these pages public." In a codicil to his will, however, Renan allowed his wife to publish this small volume. He allowed also the publication of his correspondence with his sister, which is now beginning.

Henriette Renan was born July 22, 1811, at Tréguier, a place which has become now almost famous from the charming descriptions which Renan has given of it. She was twelve years older than her brother. After the death of her father (who was found dead one day on the beach), she was obliged to keep a school, but was not very successful, and, at the age of twenty-four, she left for Paris, where she accepted the situation of teacher (*sous-maîtresse*) in a small girls' school. In 1838 she sent to Tréguier for her brother, and placed him in the seminary of Saint-Nicolas, which was then under the direction of M. Dupanloup. Renan was fifteen years old. In 1841 Henriette received advantageous offers from Poland, and in 1842 she left for that distant country, where, fortunately for her, she had to remain in a most excellent and distinguished family.

Renan tells us, in his memoir on his sister, that she did not quite like the clerical turn which circumstances had given to his education. "Her religious ideas had become modified; history had taught her the insufficiency of any particular dogma. But the religious foundation which was in her a gift of nature and the result of her first education, was too solid to be shaken." As Henriette Renan, from the castle to which she was exiled, remained a constant correspondent and spiritual adviser of her brother, and as the young and gifted seminarist looked to her for advice and help in all his mental troubles, it is easy to understand what an interest their correspondence can have for those who like to witness the daily incidents of a spiritual life.

In September, 1842, Renan was hindered from spending his vacation time in Brittany by want of money. He remained in the seminary at Issy, but was quite consoled: "the situation is agreeable, the park truly delicious." He enjoyed the quietness of the place. He had just finished his year of philosophy and mathematics: "It is curious to see the revolution which these studies operate on the mind after the frivolous studies of the year of rhetoric. You make as much progress in one year as mankind has done in a century. You see things in such a different way, you recognize so many errors and prejudices where you thought that you had seen the truth, that you would be tempted to adopt a universal scepticism. Such is the first impression of the study of philosophy." While he was in this state of mind, he began to reflect more seriously on his own future. On one thing he seems to have always been determined: he was not a man of action, he desired a life of study and of intellectual work. "I think I have discovered with certainty that I was not born for what is vulgarly called the world. . . . I was not born for the small and empty things of which the world, since it must so be called, is made."

He considers closed to him any career which would not be a career of study and of meditation.

"Therefore, the question becomes simple and the choice easy; besides, the sublimity of priesthood, when it is viewed from above, has always struck me; even if Christianity were but a dream, priesthood would nevertheless be a divine type. I know that, great though it be in itself, men have made it very small, obliged, as they were, to reduce it to their level. I understand, though I consider it a prejudice, the contempt which some people have for it. It is clear that as soon as any ministry requires numerous ministers, there will be among them low and vile souls who will lower it in the eyes of those who look superficially on things and always put the man in the place of his ministry; but things must always be considered in themselves."

He felt, however, already some hesitation, and asked his sister's advice, begging her not to trouble their mother on the subject. His sister writes to him (October 30, 1842), that she shudders at the thought of the questions which occupy his mind:

"I cannot sufficiently repeat to you, my beloved Ernest, and ask you with an almost maternal tenderness: Do not let anything bind you too suddenly. Know well, before you accept them, the engagements which will seal your fate. . . . You say with truth, my Ernest, you were not born for a frivolous life. More than anybody, your sister is capable of appreciating the charm of a retired life, free, independent, laborious, useful; but where is it to be found? I think that independence is, if not impossible, at least given to a very few, and, for my part, I have never known it; yet can I hope that it will be your lot in a society which has hierarchy for its basis, and in which you justly anticipate a watchful authority? I cherish no illusion—such an authority exists in every career; but in this case is it not more fearful, since an oath obliges you to submit to it? I merely put the question; you have full liberty to answer, and the right to decide. To this question I will add another: Can a churchman entirely dispose of himself? Is he not obliged to follow the direction given by his superiors? I will not combat what you say of the elevation of his ministry; surely, if all looked upon it as you do, nothing could be greater, more worthy of a superior soul, than to consecrate life to the alleviation of misfortune, to propagate and to put in practice the sublime truths of the Gospel."

The life led by Henriette Renan was singularly quiet. She was in a "solitude of which nothing in France can give an idea: a fine château surrounded by immense forests, where one feels apart from the rest of the universe." She recommends her brother to study German philosophy.

"Germany is the classic land of tranquil dreams and of metaphysical reasonings. It will be difficult for the other nations of Europe to raise their philosophical school to the height which the German school has attained; his contemplative humor, his tranquil ways, his climate, even, have tended to develop in the North German this liberty of thought which he enjoys. Our French mind, so quick, so amiable, is generally too light for a profound philosophy."

The correspondence continues in the same mood. Renan is more and more preoccupied with doubts about the choice of a career; he shows less and less inclination to tie himself to a life of absolute obedience. He likes his clerical professors. He discusses freely with them and finds them very kind. He reads Malebranche, "the finest dreamer and the most terrible logician that ever existed." "I find in him a double joy; Malebranche was assuredly a bold thinker, and, nevertheless, he was a priest. He was, moreover, a member of a religious congregation, and he lived tranquil at a time when the secular authority and the

spirit of the age gave to the ecclesiastical authority even more pride and power." Renan, on the whole, felt little inclination for clerical life; he might have said with Emerson:

> "I like a church, I like a cowl,
> I love a prophet of the soul,
> And on my heart monastic aisles
> Fall like sweet strains or pensive smiles;
> Yet not for all his faith can see
> Would I that cowled churchman be."

Renan left the seminary of Saint-Sulpice in 1845.

"Thanks," he says, "to the serious and liberal spirit which presided over this establishment, I had carried my philological studies very far, and my religious opinions had been much shaken by these studies. Here again my sister became my help. She had preceded me on the way; her Catholic belief had completely come to an end; but she had been careful not to influence me on this subject. When I confided to her the doubts that tormented me and made it a duty for me to abandon a career in which an absolute faith is required, she was delighted and offered to make this difficult passage easier for me. I was entering life at the age of twenty-three, old with thought, but as ignorant of the world as it is possible to be. I literally knew nobody; the smallest sum which a boy of fifteen possesses, I did not possess; I was not even a bachelor of arts."

His sister Henriette gave him the sum of fifteen hundred francs, and he tried to find in the schools of Paris an occupation which should give him board and lodging and some leisure for working. His sister had fallen ill in Poland; she returned to Paris after ten years' absence, and they lived together in a small apartment, near the Val de Grâce. They worked, they travelled together. She wrote articles in papers devoted to education. They lived there for six years, till he married Mademoiselle Scheffer.

In 1860 Renan was intrusted with a scientific mission in the East by Napoleon III. His sister joined him on his journey, and accompanied him over Syria, in the Lebanon mountains, in Palestine, in the Maronite convents. She fell ill while he was taking notes for the 'Life of Jesus,' but continued to help him in his work. Both were obliged to return to Beirut, where he fell ill himself. His sister died on the 24th of September, 1861, and he was not near her at the fatal moment.

Renan's memoir of his sister ends with a fine page, written in his best style:

"Heart in which awoke such a sweet flame of love; brain in which resided such a pure thought; charming eyes, in which goodness shone; long and delicate hand, which I so often pressed—I shudder with horror when I think that you have fallen into dust. But everything here is mere symbol and image. The truly eternal part of each of us is his relation with the Infinite. It is in the memory of God that man is immortal. There lives our Henriette, for ever radiant, for ever pure, a thousand times more really than when she struggled with her weak organs to create her spiritual person, and when, thrown into a world which could not understand her, she strove obstinately towards perfection. . . . I have never doubted the reality of a moral order; but I see now, with evidence, that all the logic of the universe would be upset if such lives were but a fallacy and an illusion."

Correspondence.

IMPROVED LEGISLATION.

To the Editor of The Nation:

Sir: In reading your article with the above title I am lost in amazement for the thousandth time—an amazement which is more profound the older I grow—that such men as Mr. Carter, not to speak of the hand which guides your editorial pen, do not perceive that there is one perfectly simple remedy, and only one, which will be of any avail for checking the flood of reckless legislation, and that is to put the work under executive guidance and control.

As everybody knows, in Great Britain no measure of public interest is ever taken into consideration by Parliament unless upon the proposal of the Ministry, and the most valuable function of the Ministry is that of *preventing* legislation. Why has Great Britain adhered steadily to free trade for half a century, showing no signs of wavering, while almost every other nation is getting more and more entangled in the meshes of protection? Simply because no change can be made except through the Chancellor of the Exchequer, and no Chancellor of the Exchequer can be found to propose it. Home rule for Ireland has blocked the course of legislation for the last ten years; but that is not necessarily an evil. It has allowed the business of the country to go on without the fear of revolutionary and irresponsible law-making.

Of course the reply is, and Mr. Carter would probably accept it without a murmur, that executive guidance of legislation is contrary to the American system. Yes; the American system is to allow any one of several hundred representatives to introduce as many laws as he pleases upon as many hundred subjects, without the slightest reference to history or their effect upon the public welfare, and without any criticism from anybody responsible for administration; and which or how many of these laws shall be enacted depends upon chance, the energy of the lobby, or the interest of party intrigue. Well, if this is the system which the American people decide to maintain, let us frankly admit it. Biennial sessions of the Legislature will do no good, nor any amount of care given by the people to the choice of representatives, as the Legislature will remain just as much of a mob, and its work just as chaotic then as now.

Nowhere would the change be more important than in interstate matters. If the guidance lay with the respective executives, they could confer together as to the measures to be submitted to their Legislatures, whereas there is now absolutely no means of communication except through commissions, which, even if any more competent, are wholly without the authority which would be wielded by a Governor elected by the whole people of a State.

Nowhere is the field more ripe for such agitation than in Massachusetts, and I have striven hard to induce the Democratic managers to take up the subject; but it would be about as useful to talk to the north wind, and this autumn campaign of purely State elections, with the most important question pressing for solution, will doubtless be conducted upon the tariff and the free coinage of silver.

G. B.

Boston, September 7, 1895.

EFFECT ON THE SOUTH OF THE LOW PRICE OF COTTON.

To the Editor of The Nation:

Sir: Prior to the late war the tillable lands of the South were divided into large plantations. Every plantation was a little world unto itself. The smoke-house groaned with its load of hams, breakfast bacon, lard, and sidemeat. The water-mill on the creek ground the flour and meal. The sorghum-field furnished the molasses, while the cribs were overflowing with corn, oats, and hay for the "stock." After the late "unpleasantness," this set of conditions changed. The high value of cotton induced the people to utilize every acre for producing the fleecy staple. The South began to keep her corn-crib in the North and West instead of at home. The proceeds of the cotton crop were used to defray every expense. All things were bought and sold on a credit of a year's time, and the farmer not only paid excessive profits for what he got, but bought extravagantly. During these years the rural South did not improve her condition. The planter at "settling" time either was in debt to his merchant or had little to his credit. If in debt, the merchant "secured" himself by a mortgage on the plantation.

The mechanism that controlled the growing and marketing of the crop, however, became rich. These middlemen are called cotton factors or commission merchants, and have generally in connection with their cotton offices a wholesale grocery house. They make a business of advancing supplies for making the crop, and, when the cotton is gathered in the fall, it is shipped to them to be sold. A stiff rate of interest is charged on the sum of money representing the amount of supplies advanced. The commission received by the factor for selling cotton is 2½ per cent.; besides, there are numerous incidentals, such as profits on storage, insurance, and loose sample cotton. This commission, until within the past few years, amounted to about $2 for each bale of cotton. The number of bales received each year by the average commission merchant was 20,000, although some have received as high as 160,000 bales in a single season. As a consequence, the South's wealthiest class are those who are or who have been cotton factors.

When the price of cotton fell below the cost of production, commission merchants generally declined to make advances, or, when they were made, curtailed them very much. The Southern tiller of the soil for the first time experienced the feeling of not being able to buy everything he wanted on credit. He was, however, not put to extreme hardship thereby. Climatic conditions did not cause him to worry for many clothes. His severest deprivation was the lack of the chief articles of his diet, viz., clear-rib pork, molasses, corn-bread, and coffee. He was in no danger of starving, as his cow furnished milk and butter, his chickens supplied eggs and meat, his "garden-patch" vegetables, while fruit grew wild in abundance. This condition of affairs he set about to remedy, and right well has he succeeded. In three years he has revolutionized his economics of farming. Instead of paying the large profits of numerous middlemen, he grows at home what he uses. In the past spring the South, instead of buying from the West millions of dollars' worth of corn and meal, has, for the first time in twenty-five years, a surplus, and is shipping it. The wheat area has been much widened, and sorghum molasses is a drug on the market. Very few packing-house products have been bought, and, from the large number of hogs in sight, the South will be a liberal seller of meat next year.

While these facts are such as to cause rejoicing in one section, they cause alarm elsewhere. The West has lost her best customer. The coming corn crop will be at least 250,000,000 bushels larger than the country's greatest crop, and the prospect is of an extremely low price. Northern and Western packing-houses will be much more restricted to exporting their product. Therefore every foreign discrimination against the American hog becomes doubly important.

The Southern planter, by his new method of farming, can make a fair profit in cotton at even the present low price. Not being under obligations to the factor, the grower disposes of his cotton at the nearest railroad depot, thus saving both freight and commissions. He can sell his cotton when he thinks the price is right, and his ideas in that respect cannot be criticised for being too low. This fact will tend to maintain prices, as it will prevent an avalanche of cotton from being thrown upon the market during the first four months of the cotton season, and the crop will be sold more gradually throughout the year.

The crop diversification consists principally in fruits, vegetables, grains, and grasses. During the past spring a very large crop of potatoes was planted and a splendid price gotten. In fact, many who sold at the best time realized, net, over one hundred dollars an acre. It is to be remembered that there is also the fall crop, which is generally more profitable. Arkansas, Tennessee, and Mississippi were especially successful with the spring potato crop. This diversification of crops has been much accelerated by the intelligent sefishness of many of the railroads in the matter of rates and daily fruit expresses, thus putting thousands of miles of virgin territory into close communication with the great consuming centres. Another effect of the crop variation is that it has killed the credit system. Instead of money coming in only once a year, the marketing of various crops at different times has kept it coming in at all seasons.

A most striking result of the decline in cotton values has been the rapid breaking up of large plantations into smaller farms, which fact assures a careful cultivation of the soil up to the point of diminishing returns. This was brought about as follows: The fall in the price of cotton caused the foreclosure of many mortgages on plantations, which were bought in by the crediting loan companies and commission merchants. There was absolutely no demand for land. The drop, therefore, in value was very marked. The best lands could be bought for from ten to fifteen dollars per acre. The only way to sell at all was to break the plantations up into small farms. Real-estate firms began to send representatives to travel among the class of people in the Northern-Middle and some of the Northwestern States who rent land. There values range from seventy-five to one hundred and five dollars per acre, and the property is in strong hands and cannot be bought for less. Many of these tenants have accumulated two or three thousand dollars, a sum for which they cannot buy where they are, but can buy a very nice farm in the South. Besides, the South's climatic conditions are more favorable. The heat in summer is no greater than it is in the North, and the summers are longer; consequently, there is less danger of crop failure. Again, many articles permit of two and even three crops a year. In winter the weather is so mild that cattle do not need to be housed; in short, the material advantages of the South were shown to be such as to make living there easier than in the North.

Accordingly, prospective buyers have come down by the thousands. A great many have bought and settled, while others are coming in every day. At last the tide of emigration has turned to the South. The great Southern trunk lines have been largely instrumental in bringing about the result. They have not only been extremely active in settling parties along their lines, but have also brought in a great many excursions of prospective buyers.

The rapid betterment of the condition of the agricultural South will have its beneficial effect on the industrial South. The change in the method of selling the cotton crop will lessen the need for the present great number of commission merchants. The growing of home supplies will decrease the need for the large number of wholesale grocers. Home capital will thus be loosed to find its way especially into those industries which use as raw materials iron, cotton, and lumber — industries which the South must ultimately control because of her cheap labor and the cheapness and proximity of her fuel and raw materials.

WYATT COLLIER ESTES.

THE MIDDLE AGES AND THE RENAISSANCE.

TO THE EDITOR OF THE NATION:

SIR: The communication of "A. L." in the current number of the *Nation* shows that a juster estimate of the Middle Ages is forming among men who are now devoting themselves to mediæval studies. A faithful student of the fine arts of those times can hardly retain the view that has been widely held respecting them. Every such student must be impressed with the fact that they afford evidence of intellectual life and executive powers of the highest order. In these arts he finds the fundamental principles that gave form to the arts of antiquity still largely operative, though, under changed conditions, the modes of expression are naturally changed. The value of the best product of the Renaissance will doubtless always be recognized; but to regard the movement as a return to principles that had been wholly lost sight of, and as in all respects salutary in spirit, is to misapprehend it. In fact, the Italian Renaissance, though fruitful in works expressing the highest order of genius, was animated by a spirit of brilliant retrospection rather than of new life, and contained from the first the seeds of the deplorable decadence of the arts that marked the close of the sixteenth century.—Yours very truly,

CHARLES H. MOORE.

EAST BOXFORD, MASS., September 6, 1895.

Notes.

THE important announcement is made in the 'Publishers' Trade-List Annual for 1895' (New York: *The Publishers' Weekly*), that, if the trade support the undertaking, an index like that of the English Whitaker's 'Reference Catalogue' will be attempted next year in connection with the American work. It will not be bound up with the latter, but will appear very shortly after the issue of the 'Annual.' Some omissions of preliminary lists have kept the bulk of this year's 'Annual' within that of its immediate predecessor.

Charles Scribner's Sons have nearly ready 'The Huguenots and the Revocation of the Edict of Nantes,' by Prof. Henry Martyn Baird; and 'Margaret Winslow,' by Mrs. Alice Morse Earle, the first volume in a new series of "Women of Colonial and Revolutionary Times."

Henry Holt & Co. will issue 'The Science of Finance,' by Prof. Henry C. Adams of the University of Michigan; 'The Ideals of German Literature,' by Prof. Kuno Francke of Harvard; 'A Reader in Scientific German,' by Profs. Brandt of Hamilton and Day of Swarthmore; and Hertwig's 'General Principles of Zoölogy,' translated by Prof. G. W. Field of Brown.

From Roberts Bros. we are to have 'Constantinople,' by Prof. Edwin A. Grosvenor of Amherst; 'The Wood beyond the World,' a prose romance by William Morris; the first volume of Harnack's 'History of Dogma'; the fifth of Renan's 'History of the People of Israel'; 'From Jerusalem to Nicæa: The Church in the First Three Centuries,' by Philip Stafford Moxom; 'Modern German Literature,' by Benjamin W. Wells; Hamerton's 'Painting in France, after the Decline of Classicism,' 'Contemporary French Painters,' and 'Imagination in Landscape Painting,' all numerously illustrated; 'Dante Gabriel Rossetti: his Family Letters,' in two volumes, by William M. Rossetti; 'An Old Convent School, and Other Papers,' by Susan Coolidge; 'The Helen Jackson Year-Book,' edited by Harriet T. Perry; and 'Margaret and Her Friends, or Ten Conversations with Margaret Fuller upon the Mythology of the Greeks and its Expression in Art,' reported by Caroline W. Healey (Mrs. Dall).

We make the following selections from the extended list of autumn publications put forth by Macmillan & Co.: 'The Law of Civilization and Decay: An Essay in History,' by Brooks Adams; 'The Principles of Sociology,' by Prof. F. H. Giddings of Columbia College; 'Essays in Taxation,' by Prof. E. R. A. Seligman of Columbia; 'The Life, Letters, and Works of Louis Agassiz,' in two volumes, by Jules Marcou; 'The Structure and Development of the Mosses and Ferns (Archegoniatæ),' by Prof. D. H. Campbell of Leland Stanford Junior University; 'Fishes, Living and Fossil,' by Bashford Dean of Columbia; 'Cases of Roman Law,' selected and arranged by Prof. Munroe Smith of Columbia; 'Bookbindings, Old and New,' by Prof. Brander Matthews of Columbia; 'A Brief History of English,' by Prof. O. F. Emerson of Cornell: 'New Orleans: The Place and the People,' by Grace King; 'Lectures on Art,' by John La Farge; 'The Political History of England,' by Goldwin Smith; 'Ethical Discourses,' by Leslie Stephen; 'Lectures on Political Science,' and 'The Growth of the British Policy,' by Sir John R. Seeley; 'The Letters of Matthew Arnold, 1848-1888,' in two volumes, edited by George W. E. Russell; 'The Works of William and Dorothy Wordsworth,' in sixteen volumes, edited by William Knight; 'The Works of Alfred, Lord Tennyson, Poet Laureate,' *édition de luxe* in ten volumes, limited to 150 copies for sale; 'A Handbook to Tennyson's Works,' by E. Morton Luce; 'Browning as a Philosophical and Religious Teacher,' by Prof. Henry Jones of the University of Glasgow; 'The Letters of Edward Fitzgerald to Fanny Kemble,' edited by William Aldis Wright; 'Literary Types (De Quincey, etc.),' by E. Beresford Chancellor; 'The Greater Victorian Poets,' by Prof. Hugh Walker; a new volume of Poems by the late Christina Rossetti, edited by her brother; 'Masterpieces of the Great Artists, 1400-1700,' with numerous illustrations, the text by "N. D'Anvers"; 'Raphael,' by Julia Cartwright; 'A Guide to the Paintings of Venice,' by Karl Karoly; 'The Art of Velasquez: A Critical Study,' by R. A. M. Stevenson; 'Sir Frederick Leighton, Bart., P. R. A.; An Illustrated Chronicle,' by Ernest Rhys; 'Architecture in Italy, from the Sixth to the Eleventh Century,' by Raffaele Cattaneo; 'A Handbook of Greek Sculpture,' by Ernest Gardner; 'Etching in England,' by Frederick Wedmore; 'Modern Book Illustration,' by Joseph Pennell; 'Ladies' Bookplates,' by Norna Labouchere; 'Picture Post-

ers : A Handbook on the History of the Illustrated Placard,' by C. T. J. Hiatt ; 'A Book about Fans,' by Mary Cadwalader Jones ; 'The Beginning of the Middle Ages,' by Dean Church ; 'The Oxford Church Movement,' by the late George Wakeling ; 'The Life of Cardinal Manning,' by Edmund Sheridan Purcell ; 'The Constitutional History and Constitution of the Church of England,' by Dr. F. Makower ; 'Sources of the Apostolic Canon,' by Prof. Adolf Harnack ; 'Outlines of Church History,' by Prof. Sohm ; 'John Knox,' by P. Hume Brown ; 'Hedonism and Hedonistic Theories, from Aristippus to Spencer,' by Prof. John Watson of Queen's University, Canada ; 'Vergil in the Middle Ages,' from the Italian of Prof. D. Comparetti ; 'Socrates and his Disciples,' by A. D. Godley ; 'Western Europe in the Fifth Century' and 'Western Europe in the Eighth Century,' Oxford lectures by the late Edward A. Freeman ; 'Essays in Historical Subjects,' by the late Bishop Lightfoot ; 'Oxford and her Colleges : A View from the Radcliffe Library' ; 'Rome,' by Mrs. Oliphant ; 'History of the Ptolemies,' by Prof. J. P. Mahaffy ; 'Studies in Economics,' by Prof. William Smart ; 'Old-World Japan,' legends retold by Frank Rinder ; 'The Scenery of Switzerland,' by Sir John Lubbock ; 'An Artist in the Himalayas,' by A. D. McCormick, companion of Sir W. M. Conway in his recent exploration ; 'The Blind Musician,' a story of Handel, by Emma Marshall ; 'The Private Life of Warren Hastings,' by Sir Charles Lawson ; 'Sketches in Sport and Natural History,' by the late George Kingsley, M.D. ; 'Wild England of To-day, and the Wild Life in It,' by C. J. Cornish ; 'Inmates of My House and Garden, by Mrs. Brightwen ; 'Dog Stories' from the *Spectator* of the past fifteen years, by J. St. Leo Strachey ; 'Artistic and Scientific Taxidermy and Modelling,' by Montagu Browne ; 'Studies in the Art Anatomy of Animals,' by Ernest E. Thompson ; 'Zoölogy,' in three volumes, by Prof. E. Ray Lankester ; 'The Structure of Man,' by Prof. Wiedersheim ; 'A History of Mankind,' by Prof. F. Ratzel ; 'Elements of Palæontology,' by Prof. von Zittel ; 'Andersen's Fairy Tales,' selected and translated by Mrs. Edgar Lucas, with illustrations by Linley Sambourne ; and 'The Song of Roland,' a summary with verse renderings by Arthur Way and Frederic Spencer.

'Mind and Motion and Monism,' the last work of the late George John Romanes, and 'The Tribal System in Wales,' by Frederick Seebohm, are announced by Longmans, Green & Co.

The Bowen-Merrill Co., Indianapolis, are on the point of issuing in two volumes 'Conquest of the Northwest,' by Hon. William H. English, which will embrace a complete life of Gen. George Rogers Clark, with much novel information regarding the settlers on Clark's Grant in Indiana.

The Sargent Publishing Co., Chicago, have in press 'Francis Bacon and his Shakspere,' a new Baconian advocacy, by Theron S. E. Dixon, a member of the bar.

Stone & Kimball, Chicago, will make a volume of Izaak Walton's lives of Donne, Wotton, Hooker, Herbert, and Sanderson for their "English Classics Series." They will also issue a volume of translations of tales from the current "Belgian Renaissance" by Mrs. Wingate Rinder, entitled 'The Massacre of the Innocents.'

'A Sketch of the Life and Work of the Painter Domenico Morelli,' by Ashton R. Willard, with seven illustrations of that artist's work; a 'Whittier Year-book,' and a new and enlarged edition of Miss Agnes Repplier's 'Essays in Miniature,' along with a new edition of her five volumes in uniform binding, are shortly to be brought out by Houghton, Mifflin & Co.

The article on Thomas Paine in the forty-third volume of the 'Dictionary of National Biography' (Macmillan) has the greatest interest for Americans; but though Leslie Stephen reserved it for himself, and displays in it his well-known powers of compression and of pithy interjection, he seems to be working at second hand. There are also two unfortunate misprints, viz. : on p. 73, Mallison for Madison, and on p. 76, "Penn's house at Bordentown" for Paine's. Mr. Stephen is, again, the biographer of Paley, with much more immediate knowledge and with a genial sympathy. Genial in a markedly British degree is the account of Sir Harry Parkes, on which one craves some Oriental glosses. Twenty pages are given to Parnell, the notice being unsigned. One meets in this volume, with a shade of surprise, with Paoli and Parepa-Rosa, but, on the other hand, one looks in vain for the British-born James Parton, the historian. Readers who remember how Franklin in his 'Poor Richard' ruined a rival almanac-maker by pretending he was dead, will find the hint for this trickery in Swift's treatment of the astrologer John Partridge.

The most interesting reprint of the week is the German translation of 'Ben-Hur' issued by the Messrs. Harper themselves. The version is by "H. W. S.," and is presented in the Gothic letter of a readable size. The same house sends us a revised and much-enlarged edition of Prof. Adams S. Hill's 'Principles of Rhetoric,' whose merits are well known in teaching circles. From the Scribners we have another of the pretty volumes in the uniform Henry Kingsley series, viz., 'Leighton Court: A Country-House Story.' Another volume in Macmillan's revivals of the notable novels of the early part of the present century is made up of Thomas Love Peacock's 'Maid Marian and Crotchet Castle,' to which Mr. Saintsbury furnishes an introduction, biographical and critical. The dainty Dent-Macmillan "Temple Shakspere" still proceeds, with "King Richard III." and "King Henry V.," and it is announced that a request from one of the principal American universities has led to a change in the order of appearance, so that "Hamlet," "King Lear," and "Othello" will follow "King Henry VIII."

A State Library Bulletin issued at Albany under nominal date of June, 1895, embodies tabulated statistics for 1894 of New York libraries, which number 704; the larger half being in the University system. Eighty-one contain 10,000 volumes or more. The Astor Library is in the lead with 257,000 volumes, followed closely by the New York Mercantile with 244,000, and at a greater distance by the State (reference) Library at Albany with 193,712. Columbia's library of 175,000 is first in its class; Cornell coming next with 159,000, and so raising the averages in its (Tompkins) County that this county possesses 5,509 books for every 1,000 persons, whereas New York County has but 997.

Petermann's Mitteilungen for August opens with an interesting notice of the various Indian tribes of southeastern Mexico and British Honduras, by Dr. C. Sapper. He briefly indicates the habitats of some twenty tribes, eleven of which belong to the Maya family, and then shows in what respects they are distinguished from each other, as, in the construction of their huts, their dress, occupations, musical instruments, and weapons. Among the latter are still to be found blow-guns, though European arms are commonly used. An ethnographical map accompanies the paper. This is followed by an account of the district of Hatzfeldthafen, one of the stations of the German New Guinea Company, together with a map of the country and a chart of the harbor, and a report of the exploration of the Rio Puelo, a river of Chili, by Dr. Hans Steffen. A supplemental number contains "Contributions to the physical geography of Montenegro, with particular reference to the Karst," by Dr. Kurt Hassert, with hydrographic and geological maps.

Sun and Shade (N. Y. Photo-Gravure Co.) seizes the occasion of the international yacht race to bring out a souvenir edition of "Cup Challengers and Defenders" from the *America* to date. The present contestants have each a full plate; the other pairs divide the page.

A Boston correspondent informs us that Franklin's letter to Shelburne, printed in our last number as a novelty, is to be found in Sparks's 'Diplomatic Correspondence,' vol. iii., p. 377. We had satisfied ourselves that it was not included in Bigelow's edition of Franklin's Writings.

—In the September *Harper's*, articles of merit are dealt out with a free hand. Whether, however, the winning card turns out to be Richard Harding Davis's "Three Gringos in Central America" or Owen Wister's clever "Evolution of the Cow-Puncher," is a sufficiently open question to give zest to a critical comparison of the two. It would hardly be possible to write more readably than does Mr. Davis in the account of his scramble on mule-back towards the inland capital of Honduras—not yet reached in the present paper. Good-humor and an eye for details, even when these consist largely of alligators, insects, and personal discomforts, are excellent adjuncts to pioneering in the interest of journalism. Owen Wister, on the other hand, shows that the swashing qualities of the cow-puncher are merely those which are bred in the bone of the Saxon, expressing themselves in different ways at different times and places. The riata, the quirt, and the cinch are thus but nineteenth-century substitutes for sword and buckler, as the rider who riots over our Western cattle-ranges is brother in blood to knight, buccaneer, or colonist. A plentiful number of bright sayings find place in this argument, which is illustrated by an international episode that deserves credit for unexpectedly preserving, at this late date, the savor of originality. Slight as it is, Thomas A. Janvier's "At the Grand Hôtel du Paradis" bears, in its finish of outline and delicacy of touch, the stamp of the artist. In strong contrast to it is Ian Maclaren's "Jamie," which entices the reader through the difficulties of its broad Scotch by passages of the sly humor whose secret is known only to that canny vernacular, and which has a pathos of the fine type that draws a smile and a tear at one and the same moment.

—*Scribner's* does not, this month, put its best foot foremost. Were it not for Mr. Van Dyke's paper "Au Large," not even the droll finale of Anthony Hope's two-part story, "The Wheel of Love," or Robert Grant's fluent and wide-awake summing up of the perennial journalistic *cause célèbre* of man versus the modern woman, could float the number to the level of interest demanded by the sophisticated consumer of periodical literature. Mr. Van Dyke, however, lights up fact with imagination in his

account of camping and canoeing in the depths of the Canadian woods, and thereby makes the dangers of rapids-shooting and the vicissitudes of weather a pleasant tale to many to whom their reality would be a dubious enjoyment. His paper not only responds to the increasing inclination of those who stay at home as well as of those who ramble, to explore, by proxy or in person, comparatively untried and unfamiliar paths, but is a pleasant reminder that the ancient line of fishing-poets is happily not yet extinct.

—On the literary side, the *Century's* most successful representative for the month is Miss Jewett, who once more contrives to bring local color out of a white-faced Maine village, and complicated crises out of seemingly unrelieved monotony. Articles in periodicals by Prof. Woodrow Wilson are not of frequent occurrence; nevertheless, his urgent advocacy in this magazine of the need for imagination in the writing of history leaves room for the hope that he may, at some future time, be moved to explain at what point the historian should lay down and the historical novelist take up the pen. Foremost in claim upon immediate attention is, however, the paper in which General Boynton explains, with the aid of map and plan, the outlines, magnitude, and objects of the National Military Park, embracing the battlefields of Chickamauga and Chattanooga, which is to be dedicated with imposing ceremonies and fraternal participation of Federal and Confederate veterans alike, on September 19 to 21. In liberality of expenditure ($725,000 from Congress and $400,000 from the States) and in largeness of plan (which includes the marking by monuments, historical tablets, and batteries at the fighting positions of artillery, of the lines of six battlefields representing "eight days' operations, in five of which great armies were engaged") the national love of carrying out schemes on a huge scale is fully gratified. That the "one hundred and six monuments and the one hundred and fifty granite markers under contract to be finished and set up before the dedication" will expose on equally colossal scale the crying national need for education in another direction, seems only too likely. Ultimately to make, by the appointment of suitable commissions, this and our other national military parks object-lessons to the multitude in the arts of sculpture and landscape-gardening, as well as of battle, is an aim worth striving for, even in the face of improbability.

—The field of Chickamauga has already, indeed, inspired, as may be seen in the current *Atlantic*, one production of the best in its kind, in the shape of an attractive personal impression of scenery and ornithology, by Bradford Torrey. Vivid impressions of some of the historical events that centre about the once obscure Georgia farmhouses, now known to fame and to the patriotic pilgrim as the Dyer, Snodgrass, and Kelly houses, are also to be gained from this paper, in which a leading interest in the feathered inhabitants of the district has by no means taken the edge from observation of the traits characteristic of natives, or of military officials. Another national theme, "John Smith in Virginia," is handled with skill and charm by John Fiske. This comparison of Smith's own accounts of episodes in his versatile career with those of his enemies and detractors already does much towards rescuing the hero from the limbo of doubt and discredit into which it has been the fashion to cast him and his story; while a still further reinstatement of his character is to be hoped for in an article dealing with what Smith "naïvely calls his Rude Answer to the London Company, a paper bristling with common sense, and not timid when it comes to calling a spade a spade." Mr. James Schouler, in a second paper drawn from President Polk's diary, throws instructive light on several phases of the despoiling, Jingo policy of an administration whose disingenuous relations with Mexico resulted in the discreditable expansion of our territory from the Gulf of Mexico to the Pacific. The diary confirms the historical suspicion that Gen. Santa Anna and staff were, by official order, passed through our lines after the declaration of war, because there was reason to expect in him an artful ally in the scheme of Mexican dismemberment. Miss Repplier, who evidently travels as she reads—with her critical faculties on the *qui-vive*—carries with her the reader's full assent and sympathy in her vivacious plea for delivery from the guides who do so frequently beset us in foreign parts. In order to extract from a poem as rhythmless and of as little apparent meaning as Michael Field's "Tiger-Lilies" the proper measure of æsthetic sensation, a reader must, on the other hand, have been initiated in the poetic code of a present coterie of English versifiers.

—The most stupendous catalogue ever achieved in this country has just come to a temporary conclusion. A sixteenth volume ends the first series of the 'Index Catalogue of the Library of the Surgeon-General's office, U. S. A.' (Washington: Government Printing-Office). We have remarked on the progress of this admirable work in its successive stages, but it may be well to repeat (1.) that it is both an author- and a subject-catalogue, so that, for example, in the thirty-eight pages devoted to the rubric *Women*, there are classifications of general works on the diseases of woman prior to 1800 and subsequently, of works relating to women as physicians, etc.; or, again, that the eighty-five pages assigned to *Water* are followed by 164 pages showing the works on Mineral Waters *by localities*—a service to physicians and patients such as is surely rendered in no other publication the world over. (2.) When we used the word "works" we should more strictly have said writings, for the Catalogue takes cognizance not only of pamphlets and bound volumes, but also of the contents of medical periodicals, the mere list of which, with expanded titles, fills a supplementary volume of the Index of 282 pages. (3.) The dates covering an author's life are, when ascertainable, annexed to his name. (4.) The more outlandish foreign titles are as a rule translated into English. (5.) The publishers of books are recorded, along with date and place. This monument we owe primarily to Surgeon (now Deputy Surgeon-General) J. S. Billings, who, in announcing a second series of five volumes to be put to press directly, relinquishes the personal supervision he has given to the first series. He pays a just tribute to his principal assistant, Dr. Robert Fletcher, for the accuracy and rare typographical excellence of the Catalogue, as well as to the skilled proof-readers of the Government Printing-Office. The recorded Corrigenda are but trifling in so vast an undertaking. The further successful conduct of the work, therefore, seems well assured, and we may say in one breath, "The King is dead—Long live the King!"

—Besides *Women* and *Water*, the most significant titles in the present volume are *Wounds* (57 pp.), including the jurisprudence of wounds; *Wounded* (23 pp.), subdivided into care, and transportation, and "first aid," etc.; *Worms* (12 pp.), and *Wine* (9 pp.). *Wills* in their jurisprudential aspect make another important, if brief, category. Medical science and the law are occasionally joined in reports of criminal trials, as when, after a list of Dr John White Webster's contributions to chemistry, we come upon the literature of his *cause célèbre*, consequent upon his murder of Dr. Parkman—a conjunction happily rare in the experience of cataloguers. History is approached on another hand by works on the last illness of Daniel Webster and of Henry Wilson; theology, in an anonymous tractate of 1776, "Was bin ich, wenn ich nicht unsterblich sein?"—a question answered directly in the title, in this fashion: "Either [man is] immortal or worse than the beasts." The ever-recurring complaint of climatic changes appears in 1806 in John Williams's remarks on the alterations in the British climate "within the last fifty years," bringing increasing humidity and cloudiness, cold springs and "ungenial seasons." Electricity threatens to hasten the obsolescence of Georg Simon Winter's veterinary handbook called 'Hippiater expertus, seu medicina equorum absolutissima' (Nuremberg, 1678); but the human race can never (*pace* Brown-Séquard) be beyond the need of something like Johann Wittich's 'Consilium apoplecticum, seu de subitanea morte' (Leipzig, 1593). We wonder, in taking leave of the Catalogue for a space, what Tammany would make of the three columns which index the sanitary publications of Col. Waring, with two of the titles in Dutch and one in Spanish.

—Prof. George Stephens, who died last month in Copenhagen, at the ripe age of eighty-two, was by birth and early education an Englishman, although the greater and most useful part of his life was spent in Sweden and in Denmark, where he became a naturalized subject more than forty years ago. He was born in Liverpool in 1813. After preparing at various private and public schools, he was ultimately matriculated at University College, London. Upon attaining his majority he travelled on the Continent, and about 1834 settled in Sweden, where his first book, a students' edition of Shakspere's "Tempest," "written," as the title page states, "to assist in spreading the study of English in Sweden," was printed in 1836. He soon became enthusiastically interested in the archæology and early culture, not only of Sweden, but of the whole Scandinavian north. In the search for material, public and private libraries were ransacked, and folk-tales, legends, and songs were collected from oral tradition. Two important works arose in this way, both written in collaboration with Hyltén-Cavallius, a Swedish author of repute, viz.: 'Svenska Folk-Sagor och Aefventyr' (1844) and 'Sveriges historiska och politiska Visor' (1853). The latter was published after he had changed his residence to Denmark, where he became lector in the English language and literature at the Copenhagen University in 1851. The year after, Anglo-Saxon was added to his subjects of instruction; the title of professor was given him in 1855. His most important work, a monument of enthusiastic, if at times not strictly critical, labor, is the great folio in English, 'The Old-Northern Runic Inscriptions of Scandinavia and England,' published from 1866 to 1884. The plan of this work was a most ambitious one, since it aimed to include the entire *corpus* of the runic inscriptions of the north (scores of

which were represented for the first time in facsimile) on stones, coins, and other objects, together with complete readings and translations. The work as a whole, however, only partially fulfilled its purpose. The last mentioned phase of the subject, particularly, was approached with more ardor than critical acumen, and the book has not become authoritative in its field, although its illustrations still entitle it to a prominent place in the literature of runes. Stephens's other literary work is of the most varied character imaginable. There is a vast array of articles, reviews and translations in Scandinavian and English journals and magazines, verse, original and translated, several more ambitious poems, and even a five act melodrama, "Revenge, or Woman's Love," which contains numerous original songs. Of the many translations, perhaps the most important is a metrical version of Tegnér's 'Frithiof's Saga' (1839). Personally Prof. Stephens was one of the kindliest and most genial of men. With an aptitude rare in members of his guild, he knew how to come into friendly personal contact with his students; and the evenings which he was accustomed to give them at his house, amid the apparently inexhaustible treasures of his library, always drew together an interested group. His particular passion, although he dipped or delved, as the case might be, in so many other directions, was always the northern runes, and it was a familiar sight on the occasions mentioned to see him buttonhole an interlocutor with one hand, while he traced imaginary runes upon him with the other. He reaped a rich crop of honors. He was member and honorary member of many learned societies, and the recipient at various times of Swedish and Danish orders.

THE *CHALLENGER* EXPEDITION.—I.

Report on the Scientific Results of the Voyage of H. M. S. Challenger during the years 1872–76: A Summary of the Scientific Results. By John Murray, one of the Naturalists of the Expedition. In two parts, with Appendices. London. 1895.

THESE two volumes bring to a close a stupendous undertaking. From the time when the *Challenger* set out on her memorable voyage in 1872, and until the issue of the concluding volumes of the Report in the early part of 1895, nothing has been left undone to make the undertaking a success. The earlier dredging expeditions off Spitzbergen by Dr. Otto Torell, the work of Dr. Wallich in 1860, that of the elder and younger Sars off the coast of Norway, the cruise of the U. S. C. S. S. *Corwin* under Pourtalès in the Straits of Florida, as well as the earlier English expeditions of the *Lightning*, *Porcupine*, and *Shearwater*, all prepared the way for the successful work of the *Challenger*. The British Government, on the representation of the Royal Society and other scientific bodies, organized an expedition for the exploration of the deep waters of the great oceans. The *Challenger* was fitted out under the direction of Admiral G. H. Richards, the Hydrographer of the Admiralty Office of the time. The naval officers were specially selected for the cruise, and a great part of the success of the expedition is due to the spirit in which the commanders of the *Challenger*, Captains Nares and Thomson, coöperated with the scientific staff of the expedition. The Scientific Director was Prof. C. Wyville Thomson, who may be said to have been, with Dr. W. B. Carpenter, the originator of the earlier English expeditions. He was assisted by Mr. J. J. Buchanan, Prof. H. N. Moseley, John Murray, Dr. R. v. Willemoes-Suhm, and Mr. J. J. Wild. On the return of the *Challenger* to England in May, 1876, began the task of examining the collections, and of preparing for publication the results of the physical and biological observations. This work was placed in charge of Sir Wyville Thomson, with Mr. Murray as his principal assistant. Thomson's health soon broke down, and on his death Mr. Murray was appointed his successor. From 1882 to the present time, Murray has been employed in the superintendence of the publications in consultation with a committee of the Royal Society of London. At the time of Sir Wyville Thomson's death, only a few of the Zoölogical memoirs had been issued, so that 48 of the 50 quarto volumes which constitute this superb series have appeared under Dr. Murray's supervision.

The Zoölogical memoirs of course fill the greater number of the volumes (32 bound in 40 parts). There are in addition two volumes of Narrative, two volumes devoted to the Physics, Chemistry, and Meteorology of the Ocean, one volume dealing with the Geology and Petrography, two volumes of Botany, and finally the concluding volumes in two parts by Dr. Murray giving a Summary of the expedition. The writing of the results was an international episode of the deepest interest for scientific investigation. It was intrusted to the leading specialists in the different departments, and the authors of these numerous memoirs belonged to many nations. Naturally the English men of science are in the great majority, but we find among the writers Germans, Danes, Russians, Norwegians, Swedes, Italians, Belgians, French, Dutch, and Americans. "The majority of the authors of the special memoirs have spent years in the examination of the collections and in the preparation of their manuscripts and illustrations for the press, without other remuneration than either a copy of the *Challenger* publications or a small honorarium to cover the outlay necessitated by their research." Many of the monographs deal with groups of animals our knowledge of which has been greatly modified by the discoveries of the *Challenger*. If the new types found living upon the floor of the Ocean have not differed from their shallow-water congeners as much as was expected in some quarters, yet the discovery of the conditions under which the inhabitants of the great depths live has been of the utmost physiological interest.

It is interesting to note the development of the methods of studying the physical and biological conditions of the sea. Although the invention of the dredge dates back to the last century, it was not extensively used, nor at any considerable depth, until comparatively lately, sharing the same fate as the maximum and minimum thermometer of Cavendish, invented at an even earlier date. As late as the middle of the present century the organisms living near the surface of the sea had been but little studied. The scooping net of Johannes Müller has little by little developed into various ingenious contrivances for catching pelagic organisms at any depth from the surface downwards. The visits of single investigators to the seashore have been replaced by the establishment of permanent laboratories at favorable localities in both Europe and America and elsewhere. Finally, the greater problems of thalassography began to be attacked by national vessels acting within their own domain, these limited explorations resulting in the equipment of the *Challenger* expedition by Great Britain, an expedition as honorable to the nation organizing it as it has been creditable to the officers and scientific staff who carried it to a successful termination. Before 1860 there was no apparatus with which to investigate the depths of the sea. All has been devised since that time, and it would be difficult to recognize in the equipment of a modern deep-sea dredger the cumbersome machinery originally in use. Thermometers, sounding-machines, bottles for collecting water and gases, dredges, trawls, tangles, surface and deep-sea nets, traps, dredging-ropes, sounding-wires, and photographic apparatus, all had to be adapted and modified to give their answers to the many new questions suggested by each of the earlier deep-sea expeditions. With their experience, thalassographic work can now be carried on by a properly equipped vessel with ease, accuracy, rapidity, and at a comparatively moderate cost.

The specialist will naturally turn to the monographs of the branch which interests him to be found in the volumes preceding the Summary. We can only hope, in this short sketch of the results of the expedition, to give the general reader some idea of what has been accomplished by the *Challenger*, using the Summary of Dr. Murray, and often in his own words. The first part of his closing volumes opens with an account of the science of oceanography, and is followed by an historical sketch beginning with the views of the ancients, passing to those held during the dark ages, the middle ages, and the Renaissance, next to the progress of knowledge from Magellan to Cook and Cook to the *Challenger* and the subsequent expeditions. This interesting sketch is illustrated with a series of maps showing the growth of our knowledge of the distribution of the sea, and we may express the hope that it will eventually be published in a form more accessible to the general reader. The second part contains an alphabetical index, which serves as a list of all the species procured by the *Challenger*. It fills 110 quarto pages of names arranged in three columns. This is followed by a general index.

The eighty-third and last part of the Zoological series and a Report on Oceanic Circulation by Dr. Buchan complete the *Challenger* series of publications. The Zoölogical memoir is by Dr. Pelsener; it treats of Spirula, and is illustrated by plates in greater part from drawings by Huxley, in whose hands the specimens collected by the *Challenger* and *Blake* had been placed. He, however, was unable to go on with the work, and it was then taken up by Dr. Pelsener. The memoir on Oceanic Circulation is a most important contribution to our knowledge of the distribution of temperature in the ocean at different depths. The temperature is shown at depths of 10, 15, 20, 25, to 200 fathoms, to ascertain approximately the depth at which the influence of the season is no longer felt in the open ocean. This depth was provisionally fixed at 100 fathoms. Dr. Buchan's memoir is accompanied by charts of the world, showing the specific gravity of the ocean at the surface and bottom and the mean distribution of temperature at depths of 100, 200, to 1,000, 1,500, and 2,200 fathoms, together with a chart showing the bottom temperatures of the ocean from 1,000 fathoms downwards. "The most striking fact revealed by deep-sea observations of temperatures is the very low temperature of the ocean at great depths in all latitudes, this being but a little way above the freezing-point of fresh water. The average of all the observations at a depth of 2,200 fathoms is 35.2°."

Perhaps the most useful summary of the work of the *Challenger* is that given by Murray of the observations carried out, and of the scientific results obtained, at each station occupied at sea. This gives us faunal lists, as it were, both bathymetrical and geographical, together with the observations made by the *Challenger* relating to the physical conditions of the locality examined. Such information could naturally not be obtained without great labor and without a most careful analysis of the memoirs forming the *Challenger* publications, and of the information contained in the log-book, in the writer's own notes and in those of his colleagues. Accompanying the station summaries are found the temperature diagrams, the detailed charts showing the positions of the *Challenger* stations prepared by Staff Commander Tizard. No less than 354 stations are thus summarized, the lists filling 1,200 pages of the quarto report. The faunal lists are supplemented by strictly bathymetrical lists, in which the species have been grouped together in seven zones of depth—the zone from the shore to 100 fathoms, the zone between 100 and 500 fathoms, that from 500 to 1,000, and so on every 500 fathoms to 2,500, and one zone beyond that depth; the 100-fathom line in reality representing the mud line, as Murray calls it, the usual limit of the extension of terrigenous deposits. The list of animals taken in each bathymetrical zone is further analyzed to show what proportion has been found in the other zones, and how far geographical range, especially north and south of the equator, has affected the bathymetrical range.

The number of stations occupied by the *Challenger* beyond the 2,500-fathom line is only twenty-five, and over 2,000 thirty; the deepest haul was made in 3,125 fathoms about 1,000 miles from the Sandwich Islands on the way from Yokohama to Honolulu. At that depth three species of annelids, four of polyzoa, and a tunicate were collected. Although the dredging tracks of the *Challenger* and of other deep-sea expeditions have covered very limited areas, yet they prove that animal life is distributed all over the floor of the ocean. Still, it is also apparent, both from the number of specimens of species and of genera found beyond the 1,000-fathom line, that animal life rapidly decreases in abundance as we go to the extreme depths of the ocean and at a great distance from continental and insular slopes. The table of bathymetrical distribution of bottom-inhabiting species given by Murray on p. 1430 is most interesting in this respect.

Murray calls attention to the greater number of genera as well as species in proportion to the number of specimens as one of the marked peculiarities of the hauls in very deep water, while in depths of less than 500 fathoms immense numbers of individuals, all belonging to the same species, may be captured in a single haul, in spite of the fact that in shallower waters the total number of genera and species inhabiting their whole areas is much greater than in deeper waters. This must depend to a certain extent on the character of the bottom, for it does not seem to hold good invariably in the deep waters of either the Panamic or West Indian areas. Within the 100-fathom line, in the shallower reaches of the ocean, a great variety of conditions exist on the floor of the shore plateaus, and on those bottoms is usually found a very different assemblage of animals. With increasing depth the nature of the deposits as well as other physical conditions become more and more uniform until a depth is reached on the continental slopes, facing the oceans immediately below, in which the conditions become nearly uniform in all parts of the world, and where the fauna likewise presents a great uniformity. Murray has placed this depth at 100 fathoms. Undoubtedly the 100-fathom line is an important limit of depth and indicates usually the edge of the oceanic continental slope. Yet it seems to us as if the more limited deep-sea explorations of the *Blake* and the *Albatross* along continental slopes indicated that in many localities there was considerable variety in the nature of the bottom, as, for instance, in volcanic and coral-reef districts and off rocky shores, where faunal conditions of very great variety extend to depths considerably beyond the mud line and approach very near the 500-fathom line. We should be inclined to extend the limit of uniformity into greater depths than 100 fathoms along the oceanic continental slopes—certainly to 150, and often to more than 300 fathoms.

While we fully agree with Murray in considering the fauna living near the 100 fathom line as probably that from which the deep-sea faunæ were derived, it seems somewhat hazardous, in our present state of knowledge, to affirm as emphatically as he does that the majority of the animals living within the 100-fathom line have pelagic larvæ, while the majority of those living at the mud line have a direct development like those found in very deep water. The interesting tables (i , p. 1430) of the bathymetrical range of the species collected by the *Challenger* present in a vivid manner the quantitative migration of the deep-water fauna which has taken place within the 100-fathom line to the other bathymetrical zones. The downward migration appears clearly indicated by the fact that of those species which are found in other zones, as well as in the one under consideration, a larger number is found in the shallower zone above than in the deeper zone below.

We should remember that the observations on which Murray bases his conclusions, although extending to all the great oceans, are yet limited to a mere thread of dredging lines across the abyssal waters of the Atlantic, Pacific, and Southern Oceans. Consequently, we may expect Murray's views on the distribution of marine organisms to be modified by explorations in more limited fields. It would be a most interesting and important addition to the work of the *Challenger* to have the material collected by the *Blake* and *Albatross* during a series of years on the two sides of the North American continent submitted to such a searching analysis as that made by Dr. Murray for the *Challenger* collections.

OMAN'S ENGLAND.

A History of England. By Charles Oman, Fellow of All Souls' College, Oxford, etc. London: Edward Arnold. Pp. iv, 760.

THIS book, its well-known author tells us, has been prepared as a result of ten years' teaching in the Honor School of Modern History at Oxford. Its special aim is to give all periods of English history a more accurately apportioned space than they get in many of the short histories already published. The task cannot be called well executed; it is, of course, not easy, but, after Dr. Johnson, one is tempted to wish it were impossible. University examinations, while they extend and encourage study, are rapidly operating to limit and discourage knowledge, by multiplying just such compends, which, even when conscientiously and intelligently written, simply supply the examined with what will be their maximum, even if it be put forward by examiners as a minimum. It is a sad prospect if in future the history of England, and many other subjects, shall be got up by almost everybody in one-volume manuals, studied from the original documents by a few specialists, and read in real books by—nobody.

Mr. Oman has tried to give his book more freshness and spirit than such compends generally have. His views are as independent as will be safe for a lecturer in just this age. Henry VIII. is a villain without redemption, though Mr. Oman admits that he thoroughly understood his people; on the other hand, Cromwell is pronounced never to have had the assent of a majority of his countrymen to his peculiar opinions. This merely shows the present state of reaction at Oxford from the Carlylism which swept over England forty years ago. Mr. Oman's one hero is Lord Palmerston, "by far the most striking personage in the middle years of the century," though he did as much in his way to coarsen English political ethics as Walpole himself, considering the difference of their times.

By far the greater space is still given to war and politics; religious, literary, social, and industrial history being admitted in rather a perfunctory way. But it requires a genius to do otherwise. The accounts of battles are helped by small sketch-plans, selected on no very definite principle, which do much to elucidate some very obscure fights—notably Poitiers. The style is generally good, sensible English; but the early periods are treated in a strange semi-romantic, semi-archaic style (like the "Lady of the Lake" without the metre), which, drawing as it does from the vocabulary of all ages, is not the pure prose of any one. Some of these fantasticalities are used throughout; for instance, "governance" is employed to describe the rule of kings and statesmen who never heard it out of the Book of Common Prayer. Such blemishes would do little harm if the book were otherwise satisfactory; but, in point of fact, it is full of omissions, blunders, and careless writing, fatal to a treatise which is nothing if not rigidly accurate. The author's position and reputation are likely to give it a wide circulation, and justify our devoting more space to it than books of its class are generally entitled to.

To begin with the omissions, nothing is said about the systematic and continuous endowment of colleges and grammar-schools under the Tudors; Wolsey's College is just mentioned, and "schools" as one of Henry's promises only. The bishopric of Westminster is mentioned as founded; its almost immediate abolition is left out (p. 303). Elizabeth's marriage schemes are dismissed in two lines, without naming either *Monsieur* or Stubbs. The shutting up of the exchequer by the Cabal does not appear. The Jacobite attempt at invasion of 1708 is unmentioned, and so are all the royal vetoes, of the last of which that attempt was the cause. In our Revolutionary war certain battles are selected for allusion; but no direct mention is made of White Plains, Trenton, Princeton, Germantown, Bennington, Monmouth, Cowpens, King's Mountain, or Eutaw; no American general is named but Washington, Gates, and Lafayette, nor is André alluded to. In the war of 1812, no captures but those of the three frigates are mentioned. The bed-chamber quarrel of 1839 finds no place in the history of the Whig and Tory ministries.

If some of these omissions do not seem serious, what shall we say of absolute blunders?

Beginning with misspellings like Huntington (p. 77), Carnwarth for Carnwath twice, Pensylvania and Charlestown for Charleston (map, p. 520), we go on to the following: Shakespeare was born in 1564, not 1566 (p. 343); New Amsterdam was settled in 1623, not 1632 (p. 409); Charles II. did not die of smallpox (p. 435); Locke was removed from his studentship by Charles II., not by James II. (p. 440); William's Assembly of Notables is confounded with the Convention Parliament (p. 446); Anne died August 1, not 30 (p. 480); Viscount Kenmure was not Earl of Kenmuir (p. 489); Fontenoy was fought in May, not in June (p. 504). On the change of style we are told (p. 513) that Julius Cæsar made the Roman year a little too short! Washington's force was not made prisoners at Great Meadows (p. 521); Byng was not tried till after Newcastle resigned (p. 524); it was not Gage who evacuated Boston in March, 1776 (p. 547); Ross did not land in Virginia, but in Maryland (p. 627); the Princess Charlotte was married in 1816, and died in 1817, not as given on p. 639; the Treaty of 1842 did not settle our Northwest boundary (p. 665).

All but the worst of these blunders, however, are less teasing than a number of careless expressions which will inevitably mislead as they stand, though not absolutely false if looked at round the corner, as it were. Thus, King Offa (757-796) is said to have had for his friend and ally Charles the Great, Emperor of the West, who was not Emperor till 800. On page 292 we are told that Wolsey was dismissed from the office of Chancellor, and his place given to the Duke of Norfolk. But the chancellorship was given to Sir Thomas More, and Norfolk succeeded to Wolsey only as general adviser. Woburn Abbey is put among the monasteries at the *North* (p. 301). Warwick, it is said, took the forfeited title of Duke of Northumberland (p. 312). He took this title, but it was only an earldom that had been forfeited. "Norfolk and Suffolk, the most Protestant shires of England" (p. 314); is it possible that Mr. Oman does not know that the counties formed in Bernicia, East Anglia, Essex, Kent, and Sussex, are not shires at all, and never were? He speaks of the Northwest Passage (p. 334) as a water-way *falsely* said to exist round the northern shores of America; but every mile of water in the passage round North America has been traversed by some craft at some time, though no one has done it continuously. On page 402 the venerable English "Commonwealth" should not be called a "Republic." Vane was not indicted as a regicide in the same category with Harrison (p. 421). The charge against the bishops was pressed in any but a "half-hearted way" (p. 441). Marlborough is called "John Churchill," and his wife "Lady Churchill," up to the creation of his Dukedom, but he was made Earl of Marlborough fourteen years before. So, in our own century, no mention is made of Lord John Russell's elevation to an earldom, though there is of Disraeli's. To call the King "Earl" of Cornwall instead of "Duke" is almost disingenuous (p. 485). Carteret's favorite drink was Burgundy, not Port (p. 503)! On the map of the thirteen colonies, the northeastern boundary is sedulously given according to the British claim, and Concord is obviously in New Hampshire (p. 520). The original accounts of the Black Hole outrage do not appear to speak of women in the plural (p. 523). Pitt's ministry and his peerage were gazetted the same day; which is not at all the sense of the account on page 542. To say Lord North's ministry "enlisted Hessian auxiliaries" (p. 547) is a strange phraseology; and it is hardly less so to speak of him as craving office at any price (p. 557). Arkwright is spoken of as if he invented all spinning-machines and those for weaving as well (p. 562). The Berlin decree and the Milan decree are confused as the "Berlin decrees" (p. 611). The efforts of Romilly and Mackintosh for the reform of the criminal law, before Peel took it up, are ignored (p. 642).

Lastly, in the attempt to be rigidly impartial as to our civil war, occurs this noble sentence (the italics are ours): "On the other side it was urged that the Southern States were exercising an *undoubted* constitutional right in severing themselves from the Union; *and this was true enough in itself.*"

A Literary History of the English People from the Origins to the Renaissance. By J. J. Jusserand. Putnams.

"In nearly every respect, thus, the Englishman of to day is formed, and receives his chief features, under the Angevin princes Edward III. and Richard II. We have had a glimpse of what he is; let us now listen to what he says." These sentences may be called the turning-point of M. Jusserand's 'History.' They close a chapter in the middle of the volume, and the next chapter takes up Chaucer as the poet of "the new nation." Our readers will readily infer the author's plan and method. In the first half of his book he seeks to define the mental and moral traits of Celt, Teuton, and Norman, to show how these races coalesced in forming a "new nation," and to describe the literature—Anglo-Saxon, French, Latin, English—produced during the coalescing periods. Thus he establishes, so to speak, the English people as we know it in Chaucer. In the second half he proceeds to bring the literary history of that people down to "the end of the Middle Ages." Throughout, the point of view is more or less ethnological. The works discussed interest the author by virtue of exemplifying the Germanic spirit, or the Celtic, or the French, or the spirit of the combined "new nation"; at all events, it is in this respect that he wishes to make them interesting to his readers. There is, to be sure, nothing new in these considerations themselves. The novelty consists in the author's submitting to their almost exclusive control in writing his 'History.' They determine the manner and have no small effect on the matter.

So far as this method serves to emphasize the composite nature of English literature, it is a good method, particularly as a corrective of the exaggerated Teutonism that has prevailed of late. But it has its disadvantages. Its exclusiveness is one: race is an important element in literature, but race is not everything. Another objection is that it tempts to a neglect of chronology: what are a few years more or less in the biography of the Anglo-Saxon spirit? M. Jusserand, at any rate, has yielded to this temptation, and some of his best chapters are embroiled thereby. Another habit of his increases the confusion. He likes to present his subject pictorially, but he does not compose his pictures well; he crowds his canvas with details till the eye is bewildered. Of course, in the case of an antiquary at once so learned and so lively, the anecdotes and extracts and the jottings of manners and customs are almost always pertinent and diverting, but the confusion remains. He seems to be not quite able to grasp his subject as a whole.

Moreover, the ethnology of the volume is not entirely sound in itself. For some reason the author appears to be bent on effacing the Scandinavians. He finds no differences worth particularizing between Old Norse poetry and Anglo-Saxon poetry—why, we cannot conceive. He has little to say of the profound changes in language and national character wrought by the "Danish" settlements in England. Finally, instead of essaying the delicate but indispensable task of distinguishing as clearly as may be between Normans and Frenchmen, he is actually at some pains to obliterate the boundary line, so that his work, though differing from its predecessors in many respects, is at one with them in its failure to give an orderly account of the influence of France upon our literature and our language. How far his worship of "the Gallic spirit"—the deity of so many of his countrymen—is to blame for this lapse we shall not undertake to decide.

As a critic M. Jusserand is superficial. He says many clever things—some new things; but he is content to illuminate the surface of his subject, and his light is rather glittering than brilliant. All his critical qualities may be seen in the chapter on Chaucer or in that on Langland. Both are readable to the last degree, but neither of them deepens knowledge. Of Chaucer's humor M. Jusserand has a keen appreciation. His views on Langland are of course the same which he set forth in the able but untrustworthy monograph reviewed in these columns some time ago. In one particular M. Jusserand has an advantage over all previous writers of English literary history: we refer to his intimate acquaintance with the social life of our mediæval ancestors. Whatever he says on this subject may be read with instruction, and it will not seldom correct the erroneous judgments of profounder critics. His unusual knowledge of mediæval English politics also stands him in good stead, enabling him to present to his readers, in their appropriate places, a number of significant facts of a kind seldom seen in works of this character. As a philologist, in the narrower sense of the term, M. Jusserand is not strong. His scanty account of the formation of a literary language in England is evidence enough of his deficiencies in this direction.

It remains to inquire into the adequacy of this volume in the details of literary history proper, or, in other words, to inquire whether the requisite facts about books and authors are given with accuracy and due fulness. The outcome of such an inquiry will be, on the whole, favorable. M. Jusserand is much better equipped in these respects than most of his competitors, and his book may usually be consulted with confidence. There are a number of rather serious omissions—some of them, strange to say, in the department of French literature—but the information furnished is generally correct. The foot-notes contain a good selection of references and commonly call attention to the best editions. In short, M. Jusserand has a pretty good acquaintance with the results of modern scholarship, his work presenting in this respect a marked contrast to the first volume of Mr Courthope's 'History of English Poetry,' recently issued. Though complete in itself, the volume before us is to be one of three, if, as is to be hoped, the author is able to carry out his plan. The second volume will bring the history down to Pope, and the third will continue it to our own day.

Æsthetic Principles. By Henry Rutgers Marshall, M.A. Macmillan. 1895. 12mo, pp. x 198.

This is a charmingly pretty volume. The text

is briefly and clearly written, and gives the results, and something more, of the investigations which the author has already published in more technical form, and which we reviewed a year ago. It has, therefore, every claim on the attention of those interested in the science of beauty, if we can speak of the science of so elusive a thing. Beauty would perhaps have been less elusive if the æstheticians had agreed better as to just what they were pursuing under that name. For the word may be used very broadly as covering the whole subject-matter of actual art, or very narrowly as implying a rare and exalted absolute quality which only the noblest and most archetypal works possess. In the latter case the quest is apt to resolve itself into that of a mere definition of an objective group of attributes, as smoothness, freedom, simplicity; in the former case the quest is psychological, and the theorist has to explain the grounds of "taste" in men and the reason of its fluctuations. What is accounted "beautiful" here becomes only one species of what may be pleasing and agreeably interesting. Mr. Marshall takes his subject in this broader way. Æsthetics is the science of what gives pleasure, whether by beauty in the narrow sense, or by mere novelty, vividness, or richness of suggestion. There can be no question of the superior importance of Mr. Marshall's point of view, or of the catholicity of his formulas. A history of art might be written *explaining* the changes of taste from age to age (and not quarrelling about them) better under cover of Mr. Marshall's theory than within the lines of any other with which we are acquainted.

And yet, when stated abstractly, this theory, like all æsthetic theories, sounds so *skinny* in comparison with the richness of the phenomena it includes that one wonders how principles so trivial should account for results so significant and precious. The field of æsthetic objects is for our author that of objects whose pleasantness remains permanent even to after-reflection. This excludes such sensual pleasures as are fleeting or give a negative after-image in retrospect. The more abundantly such permanently pleasant elements enter into a work, the richer it is; and the freer it is from unpleasant features, the purer it is æsthetically; so that the mere negative "elimination of the ugly" is one of the essential labors of the artist. Mr. Marshall's theory of pleasure and pain, including, as it does, an explanation of pains of restriction and pleasures of release, enables him to philosophize concerning the elimination of the displeasing more successfully than others have done. He goes into it with much detail in a special chapter of the book. "Imitation of nature," for example, and "truth" are often regarded as positive laws in art. Mr. Marshall well points out that they are mere negative precepts for avoiding the shocks which too suddenly violated mental habits bring. The true form of such laws rather is: "Avoid radical departures from the course of nature," "Avoid untruth"; this puts realism in its proper place in art. The principles of art criticism that follow from Mr. Marshall's æsthetic theory seem to us admirably wise and liberal. They are, moreover, very modestly stated by the author, whose book, we repeat, has an importance much greater than its bulk.

Des Effets des Annexions de Territoires sur les Dettes de l'État démembré ou annexé. Par Henri Appleton, avocat à la cour d'appel de Lyon. Paris: L. Larose. 1895.

THE author of this work has undertaken to examine a subject which has been little discussed by writers on international law, perhaps for the reason that it is one on which it is difficult to lay down precise and definitive rules. This difficulty the author has not, perhaps, fully appreciated. Treating a public debt as in some sense a lien on the whole of the debtor state, he contends that, in case a state is annexed or dismembered, the annexed state, or the detached portion of the dismembered state, should be required to bear the burden of all, or of a proportionate share, as the case may be, of the prior debt. It is evident that this is a question the equities of which, whether with regard to the state or states concerned or to the creditors, must depend largely upon circumstances. In regard to purely municipal or local debts, which the author cites to support his contention, there does not seem to be any difficulty. They are not affected by the shifting of the national sovereignty; they are in their nature local obligations. But when we come to deal with national debts, which rest upon the public faith and can scarcely be treated as liens, various complicating questions arise.

Mr. Appleton refers to the case of Texas (which became a State of the American Union not in 1843, as the text inadvertently says, but in 1845) as a State which preserved and continued to be bound by its debt, though, as is pointed out, there were subsequently certain transactions, not explicitly affecting the principle involved, by which the commonwealth was relieved of the burden. The case of Texas, however, also serves to suggest the fact that the question whether an annexed State shall continue separately to be bound by its public debt must to a great extent depend upon the political effect of the annexation. When Texas became a State of the American Union, it preserved to the same extent as the other States of the Union its political identity, with power to contract debts and to levy and collect all taxes not forbidden by the Federal Constitution. If it had become a mere administrative department, or had been divided up into several administrative departments, of a centralized national government, a different disposition of its debt might have been required. Nor would such a disposition necessarily have been injurious to the rights of the creditors or to the interests of any of the parties concerned.

But while Mr. Appleton has not given so prominent a place as it may often be necessary to give to the political effect of a change of national sovereignty, growing out of the constitutions of different states, or to the element of circumstances as affecting the equities of particular cases, his essay forms an interesting contribution to his subject.

Nuove Lettere Inedite del Conte Camillo di Cavour. Con prefazione e note di Edmondo Mayor. Turin: Roux.

IT is evident that the correspondence of only three European statesmen in our century is now recognized as sufficiently important to warrant its publication in full. These three are Napoleon, Bismarck, and Cavour. To Italy, Cavour's letters have a far greater value than Napoleon's have for France or Bismarck's for Germany, because they set forth certain political principles by which Italians can still govern themselves, if they will, whereas the principles of both Napoleon and Bismarck apply only to autocrats like themselves in their particular crises. Of Cavour's letters there have already been printed six volumes by Chiala and one volume each by Bianchi, Bert, and Nigra. Signor Mayor has recently added another volume, comprising more than five hundred letters, written between 1853-'58. Although this period is not so exciting as the years 1859-'61, in which the fruits of Cavour's genius ripened, it is still very important, and the present collection supplements the letters previously edited on such matters as the Crimean war and the Congress of Paris. It is especially rich in letters to Villamarina, who served during these years as Piedmontese ambassador in Paris, holding the most responsible diplomatic position of all at that time, because the ambassador was the medium through which Cavour was cunningly feeling his way to secure Napoleon III.'s succor for Italy.

For many readers, however, the letters referring to Mazzini's attempted capture of the city of Genoa, on the evening of June 30, 1857, will possess the greatest interest. Cavour, who believed that Mazzini abetted political assassination, finds no words too strong to express his abomination of him. "Infamous conspirator," "furious madman," "demon," "chief of a horde of ferocious and fanatical assassins," are some of the epithets which Cavour uses; but he does not underrate Mazzini's ability to concoct plots. He is angry at the inability of the Italian police to arrest the great conspirator, and sends to Paris for a detective who promises better, though Mazzini had passed through France ten times without letting the French police suspect his presence. One of the persons implicated in this Genoese outbreak was Miss Jessie White, referred to as "Miss ***," who subsequently married Alberto Mario, Garibaldi's lieutenant. That the British Minister, Sir James Hudson, refused to interfere in her behalf illustrates the ascendency Cavour had over him; because, although Miss White was doubtless concerned in the plot, no legal proofs could be brought against her.

More than a word of commendation should be given to the excellent notes and indices with which Signor Mayor has supplied the work.

Madagascar of To-day. By the Rev. W. E. Cousins. F. H. Revell Co.

THE present war in Madagascar has naturally called into existence a number of works, most of them in French, about the country. The little volume before us is of this sort, and it can be highly recommended to any one who wishes to get a few simple facts about the great African island, its nature and inhabitants, its history, and especially the story of the growth of Christianity within its borders. The author is a missionary of many years' standing, obviously familiar with his subject. He writes in a calm, sensible way, and in particular his judgment of political and religious conditions is surprisingly fair. The feeling between English Protestant and French Catholic missionaries is apt to be hostile enough, as has been seen in many instances. In Madagascar this has been markedly the case; hence one can well understand the intense disappointment of many religious people in England now that the land where her Protestant shepherds have been most successful is passing into the hands of France. When we opened Mr. Cousins's book, we expected a diatribe almost as a matter of course, and were agreeably disappointed to find that although he has regrets as well as natural fears for the future, he admits that the island would prosper more under foreign than under native rule, and states frankly that the Catholic missionaries have also done noble work for its inhabitants.

The lay reader will probably think that some of the pages the author devotes to the growth of the Christian faith might have been profitably spared for a few more statistics, remarks about the climate, the character of the natives, etc., but we should remember that the conversion of the sovereign as well as of an important percentage of her subjects is almost unique in the annals of modern Christianity. It is also one great reason of the peculiar interest which the country and its people inspire. Of course 'Madagascar of To day' gives us few details about this or any other topic, but it is completely successful in its purpose to set forth in brief the main facts as to the country and its people and history, and so enable the reader to form a sound opinion as to the present situation, and to read with intelligence the news that reaches us from month to month.

BOOKS OF THE WEEK.

Ashmore, Ruth. Side Talks with Girls. Scribners. $1.
Bagehot, Walter. Literary Studies. 3 vols. Biographical Studies. Economic Studies. New ed. Longmans, Green & Co. Each vol. $1.

TWO SUCCESSFUL NOVELS.

Her Majesty.

By ELIZABETH K. TOMPKINS. 12mo, cloth, $1.00; paper, 50 cents.

"DROCH," writing in "Life," says of it:

"'Her Majesty' is an idyllic love story of a young queen, who is altogether a very fascinating personage, a most humane, lovable woman, and, as the young Englishman who met her said, 'the jolliest girl I ever knew.' It is written with a charming style, with grace and ease and very pretty unexpected turns of expression. Moreover, there is a gentle and pervasive sense of humor that makes it real, human, and sympathetic . . . It is a satisfaction to say that 'Her Majesty' is a far better novel than most of the foreign atrocities that have been pushed into popularity. It has the good fortune to be written with intelligent skill, it sparkles with delicious fancy, and it is a clean-minded love-story that is neither prudish nor stupidly Philistine. It will be read with increasing favor by a genuine audience of appreciative people."

The Heart of Life.

By W. H. MALLOCK, author of "A Romance of the Nineteenth Century," "The New Republic," "The New Paul and Virginia," "A Human Document," etc., etc. 12mo, cloth, $1.25.

"Interesting, tender, and uniformly brilliant . . . There are a variery of brilliant threads interwoven with the plot. . . . Lord Wargrave, a cynical peer, full of mordant apothegms, is perhaps the most successful creation which Mr. Mallock has given us. . . . People will read Mr. Mallock's 'Heart of Life' for the extraordinary brilliance and cleverness with which he tells his story."—*Daily Telegraph, London.*

"Mr. Mallock is a charming and often brilliant writer. . . . The characters in this volume are very cleverly touched off, though always perhaps with a tendency towards the fantastic and the caricature. The scenes are exceptionally clever and vivid."—*London Athenæum.*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 19, 1895.

The Week.

THE Democratic politicians in Washington are reported as elated, and the Republicans as depressed, by the tone of the speeches delivered on Tuesday week, when the Republican campaign in Ohio was opened. Sherman, McKinley, Foraker, Bushnell, and all the other speakers made the tariff the chief issue, with the promise that the question should be reopened and a general revision made if the Republicans carried the national election next year. The Democratic managers in Ohio are credited with the purpose of printing verbatim reports of the Republican speeches and spreading them broadcast among the business men and in the industrial centres of the State as the best sort of campaign documents, so confident are they that the people will rebuke any party that proposes another general agitation of the tariff question just as commercial interests are adjusting themselves successfully to the existing law. The Washington correspondent of the Philadelphia *Ledger* reports that it is felt by many conservative Republicans there that, if the campaign in Ohio is waged this fall upon the tariff issue only, as seems to be indicated by the speeches at Springfield, not only will Gov. Campbell wipe out the enormous Republican majority of last year, but "the Legislature will certainly have a majority in favor of Senator Brice's reëlection." But what else can the Ohio Republicans do than threaten to overhaul the tariff and restore McKinleyism when they make McKinley their "favorite son"?

The free-coinage men, like the high-tariff men, recognize the disastrous effect upon their cause of the return of national prosperity. Congressman Newlands of Nevada, chairman of the executive committee of the National Silver party, frankly confessed on Sunday that, "if business continues to improve, and it turns out that the improvement is permanent, the silver issue is dead." The reason is that, "when the people are occupied with profitable business affairs, they have neither the time nor the inclination to discuss money questions." Moreover, Mr. Newlands sees but faint reason for doubting that the present prosperity will prove lasting. He is consequently forced to the unwilling conclusion that silver has ceased to be an issue.

We know now why Quigg has resigned his seat in Congress. He has greater work on hand as editor of the *Press*. He is going to take this terrible prosperity under a free-trade tariff sharply in hand and stop it at once. As Congressman he did his best, according to contract, to "smash" the Wilson tariff; as editor he is going to smash the higher wages and the better business which have attended that tariff. As a first step he has sent out personal letters to manufacturers whose names have appeared in nefarious articles in the Democratic press in connection with "alleged" increase in wages. Quigg tells them that "it will be a great favor to *me*," and a "service to all your countrymen," if, in some way, wages can be shown not to have increased, business to be not so good, and the country not "on the high road to unexampled prosperity." One of the firms to whom this plaintive appeal was sent has remailed it to us, with the pious wish that we would commiserate Quigg in his "desperate struggle to prove that the present prosperity is an iridescent dream." But this is doing injustice to one of our greatest thinkers. When he took charge of the *Press*, he announced that nothing but pure thought should emanate from him—thought which would be a blessing to the country. By thinking hard enough, he has no doubt whatever that he can keep wages down and diminish the volume of business by one-half.

The declaration of Senator Mills of Texas against the free coinage of silver is significant, particularly because it adds another to the list of Democratic leaders who are openly fighting against the silver delusion, and moreover a Democrat from that part of the country in which the silver heresy has had the largest following. The courage displayed by one Democratic leader after another in confessing that study of the question has convinced him of previous error, is in striking contrast with the silence of Republican leaders and Republican gatherings on this question. There was a great opportunity for the Republicans of Ohio to place themselves on record on this subject last week on the occasion which brought together their most prominent men at Springfield. McKinley, who in 1891 denounced President Cleveland as having, during his first administration, "dishonored one of our precious metals, one of our own great products, discrediting silver and enhancing the price of gold," might have set himself right before his State, but even Senator Sherman had nothing positive to say on the subject. Senator Mills presents very clearly the evils to the country at large which would follow the free coinage of silver and the adoption of the silver standard. It would be, perhaps, too much to expect that a Senator who from his seat last February advised the Secretary of the Treasury to solve his difficulties, not by issuing bonds to restore the gold-redemption fund, but by tendering silver dollars in payment of the Government's paper obligations, should understand in the following September that the retirement of greenbacks would be the true way out of our monetary embarrassment.

It is announced by Platt's friends that his victory in the primary elections of this city and Brooklyn, giving him overwhelming control of the late Republican State convention, thereby assures him control of the delegation from New York to the national Republican convention of next year. It is further announced by his friends that Platt will thus be able to use the New York delegation against Harrison and McKinley and in favor of Reed or some other candidate of his choice. It is still further announced from the same and other quarters that Quay and Platt have formed a combination to defeat the nomination of Harrison by the national convention, and to bring about the nomination of some candidate of their choice. Of their ability to do this they seem to have no doubt. Quay, following his invariable custom, makes no boasts and talks very little, but Platt, being a much less astute person, becomes hilarious over his victory in the primaries, speaks of himself as *vox populi, vox dei*, and makes little concealment of his belief that he and Quay have the next Republican candidacy for the Presidency firmly in their grasp.

Now the great obstacle in the way of Quay and Platt is their own reputations. Everybody knows what they are after in politics. Everybody knows that they are against Harrison because he did not give them all they asked when he was President. Quay claimed that Harrison owed his election entirely to him and to the way in which he, as chairman of the national committee, had conducted the campaign. He accordingly demanded as his reward the practical control of the federal patronage. Harrison not only refused this demand, but declined to have any but the most distant personal relations with Quay, on the ground that he could not, as an avowedly religious man, hold friendly intercourse with so avowedly wicked a man as Quay. Platt's grievance is of the same order. He demanded as a reward for his services not merely the distribution of all federal patronage for New York, but the secretaryship of the Treasury for himself. Harrison gave him the patronage, but refused the secretaryship, and on that ground Platt has been fighting him for four years or more.

Everybody must approve of the movement now to be undertaken by the Grand Army of the Republic to get the Supreme Court of the United States to decide that

a pension is a "vested right." The Commander-in-Chief favors bringing a suit at once to see if such a decision cannot be had, and he further shows his astuteness by suggesting ex-President Harrison as the very counsel to argue the case. If it could be brought up just before the next Republican convention, there would be no doubt of an eloquent time. We fear, however, that the McKinley and Reed judges would combine to prevent the case from being advanced. But whoever brings the suit, the great thing is to get a pension declared a vested right. There has been far too much cancelling of pensions fraudulently obtained, too many arbitrary reductions to make payments correspond with fussy laws, and what we want is some broad and high-sounding legal principle to stop all this. It should be broad enough, too, to make grand juries give over their offensive practice of indicting people for pension frauds. A Supreme Court decision that a pension is a vested right would have been an incalculable boon to those hundred-odd unfortunates in Oklahoma whom an ignorant grand jury has just indicted for being a little careless about the way they went to work to get pensions. If a man is denied a vested right, he cannot be expected to observe every petty technicality of the law in fighting to secure it. By all means let the Supreme Court hasten to round out our beautiful pension system by deciding that a pensioner's pension is his castle.

The present Governor of Mississippi is nearing the end of the longest single term ever filled by an executive in this country. His State is one which fell early into the practice of choosing a Governor for as long a period as a President, and the present incumbent was elected in 1889 to serve four years. In 1890 came the convention to revise the Constitution, and this body provided that the Governor and other State officials should have their terms, which would normally end at the close of 1893, extended through two years more, so that they would hold office continuously for six years. Moreover, the convention assumed the right to declare the new Constitution, including this provision, in force without submitting it to the people, so that the extra two years constituted a gift of power that never was endorsed at the polls. The convention that framed a new constitution for New York last year provided that the minor State officials and Senators to be elected this fall should hold office for three years, instead of two, so as to make the future elections of all State officials and Senators come in the even-numbered years; but this provision was submitted to the people, and, so far as the records show, there has never been any precedent for the action taken by the Mississippi convention.

Judge Gaynor's remarkable decision of a few months ago, to the effect that, under the Brush act of the last Legislature, all applicants for positions in the State service for which the remuneration does not exceed four dollars a day are exempt from competitive examinations, has been reversed by the General Term of the Supreme Court, second department. A war veteran had applied to the Civil-Service Commission for a non-competitive examination for a position in the service. When the Commission refused to give it to him, he applied to Judge Gaynor for a mandamus to compel the Commission to examine him. The Judge granted it, taking the ground that, if the Brush act applied to veterans only, and not to civilians, the discrimination so granted would be unconstitutional, but that the language, "competitive examinations shall not be deemed practicable or necessary in cases where the compensation or other emolument of the office does not exceed four dollars per day" applied to all candidates for such offices, and that therefore the Commission must examine the appellant non-competitively. If this view of the law were to stand, the result would be that 86 per cent. of the service in Brooklyn, 65 per cent. of that in New York State, and 87 per cent. of that in New York city would be taken from the competitive system, and all applicants for positions affected would be examined singly and non-competitively. It would, in effect, annul the civil-service act, as the positions of the higher sort not included within its scope are filled mainly by promotion from the lower. In reversing Judge Gaynor, the General Term holds that veterans must take competitive examinations, but, once having passed, they must have the preference. All the Judges concur in declaring the Brush act to be unconstitutional.

It would be cause for general congratulation if the outcome of the international yacht races could be accepted as a huge joke. Surely, when all the preparations which were in progress in two countries for many months are considered, the net result is ludicrous enough. We have succeeded in "keeping the cup" under conditions which are satisfactory to nobody. Not a single race has been sailed which anybody considers to have been a final test of the merits of the competing yachts. The American boat won one race, which was a fair test of sailing qualities in a light wind. The English boat won another, which was subsequently awarded to the American boat because by a most unfortunate mischance the latter was crippled at the start by her competitor in a foul which everybody admits was accidental. The third race was won by the American boat because the English boat declined to sail, owing to the crowded condition of the course. This was a real grievance for both contestants, but it must be remembered that Lord Dunraven was prepared for it by previous experience, and should have stipulated in advance for a change of course. An English newspaper that is seldom heard of outside of London thinks that Americans look upon the cup as an asset or a fetish, and are determined to keep it by fair means or foul. It is needless to say that no such view is taken by anybody here. The America's cup yields no income, nor is it an object of worship. Americans do not consider it worth having unless it is earned, and they deplore the chapter of accidents which frustrated the race this year as much as anybody can.

But that the yacht race dwarfed all other topics, our Jingo press would have had more to say on the case of Florencio Bustamente. Bustamente was a citizen of Salvador, and was not free from the revolutionary propensities of his fellow-citizens. His side, however, was not the winning one, and he was compelled to flee. After giving occasion for the display of considerable international law by escaping on the American steamer *Bennington*, Bustamente took refuge in Mexico, and, after some sojourn there, ventured within the jurisdiction of Salvador on the American steamer *City of Sydney*. The Salvadorean authorities, not having the fear of the American press before them, came on board the *Sydney* and dragged Bustamente forth. The case appears to be the same as that of Barrundia, in which Secretary Tracy so distinguished himself, except that in the present instance there is no naval officer to be disciplined. As the *Tribune* observes, when the particulars are more fully known similar discussions and excitement will probably take place. There will be this difference, however, that the Department of State is now conducted according to legitimate standards of international law and diplomacy, and no United States officer will be degraded for obeying the plain requirements of comity, nor any attempt be made to win party success by bullying feeble states.

Mr. Balfour's shot at bimetallism continues to be heard round the world, and its absolutely fatal effect is shown not only by the consternation and unwonted silence of bimetallists, but by the unconcealed and rather malicious hilarity of their opponents. Particularly in Germany, the country that was going to call and possess the conference which Mr. Balfour says would be, even if held, nothing but a clash of irreconcilables, has a great deal of wicked fun been poked at Herr Arendt and Count Herbert Bismarck. The latter, it seems, has made a great deal of his intimate knowledge of English politics, and has kept the agrarians and bimetallists in high feather by boasting of what "mein Freund Balfour" was going to do. Angry and irreverent inquiries are now hurled at him from all sides about this "sure thing" gone wrong like so many others of the kind. International bimetallism has ceased

to be of any use even as a "dodge" to be put into a platform; and that is about as low an estate as a man could wish for his worst enemy.

The general attitude of the new ministry towards the Irish is exciting in England the liveliest curiosity as to its effect on the home-rule question. A complete *volte-face* has evidently been determined on since the old days of "brave Mr. Balfour" and coercion. For the calm supercilious-ness and hardly veiled contempt with which Arthur Balfour treated the Irish in 1886, his brother Gerald has substituted the most studied politeness and even deference. Compliments are lavished on the Irish debaters. Credit is given them for lofty motives, and their indulgence is solicited for trying situations. "Tim" Healy, in particular, is accorded the rank of a parliamentarian of the first order, while Dillon and Justin McCarthy are reasoned with apologetically and even beseechingly. In Mr. Gerald Balfour's statement of what his Irish policy would be, he promised nearly everything the people could desire in the way of material aid and prosperity, and hoped the Irish members would approve of it all, but intimated that whether they did or not, it would be carried out. He is now travelling in Ireland, and said to be making promises of appropriations and grants in aid to every town councillor and poor-law guardian he meets. There is talk, too, of "a royal residence" to be occupied by the Duke of York, who is to win popular affection by a liberal expenditure.

The Pope's letter to the English people, politely inviting them all to become good Catholics, created no great stir that we ever heard of, but the Archbishop of Canterbury has felt compelled to answer it. He considerately refers to it as "a certain friendly advance made from a foreign church to the people of England." Christian unity is as dear to the heart of "Edw. Cantuar." as it can possibly be to Leo's. Did not the Lambeth Conference call for special prayers for the unity of Christendom? But the Pope seems to be singularly misinformed about the true road to unity. The Roman Communion once had Western Christendom united, but was not able to retain its hold on the nations. They are not likely to go back into that broken-down sheepfold. On the other hand, argues the Archbishop, the Anglican Communion is just the one for all other churches, East and West, to compromise upon. Not only is this unique position of the English Church forced upon it by "history," but that church "seems not uncertainly marked by God" to bring about reunion. We do not know what the Pope can say to this.

This year's Congress of German Catholics at Munich attracted perhaps less attention than any of its predecessors; but this of itself is highly significant. That the old militant tone should have so largely passed away is, in other words, fully as important a fact as anything that was said or done at the Congress. The change from the aggressive attitude of a few years ago is no doubt due, in good part, to the quiet but firm influence of Leo XIII.—"the reasonable Pope," as Bismarck has called him. With a larger and more statesman-like mind than Pius IX., he aims to extend the sway of the Church by conciliation instead of by violent protests and vain reclamations. The German Catholics, of course, repeated their demand for religious education in the public schools, for the creation of new Catholic universities, and for the "reform of the state on Christian principles," whatever that may mean. But this was mostly perfunctory. Real heart was put only into the orations and resolutions in favor of making religion an efficient ally of the state against anarchistic disorder and revolutionary violence. "Loyal to Pope and Emperor" was a popular phrase frequently heard, and William's despatch of greeting to the Congress falls in very well, in this view of the case, with his recent declaration of war against the German Socialists.

One of the features of the Paris Exposition of 1900 is to be a second World's Parliament of Religions. So, at least, affirms a French abbé, writing in the *Revue de Paris*, where we learn that the chief Protestant and Jewish authorities of France have agreed to coöperate in the affair, while two French cardinals and other Catholic dignitaries likewise favor the proposition. When the Chicago parliament closed, an enthusiastic delegate proposed that the next one be held at Benares, apparently on the principle that an exhibit of a good variety of religions would be most effective where religion is most needed. But Benares probably has no advantage over Paris in that regard. Indeed, if the location of the parliament were to be determined on the ground of going where there was the greatest occasion for bearing "testimony" against an evil world, for confronting wickedness, and especially ridicule, at its worst, the fitness of Paris could hardly be questioned. Some of the muftis and other parti-colored gentlemen from the Orient had a pretty hard time of it at the hands of the Chicago press; what will be left of them when the humorists of the boulevard get through with them? The least the wicked French papers will be likely to insist upon will be the need of admitting to the parliament a delegate to speak for the favorite national cult of the great goddess Lubricity.

Objection is made to the parliament by some religious leaders in France, and will be more sharply made by religious leaders in this country and in England, because it is too much like bowing in the house of Rimmon. Tolerance is all very well, but there is such a thing as being too public and effusive about it. To admit that the virtues of the heathen are not all, as St. Augustine preferred to describe them, "splendid vices" may be necessary in private, but, when proclaimed from a world's-fair platform, has a tendency to "cut the nerve of missions" even more surely than shaky ideas about probation after death. Then there is the added danger that the Hindus may send over some more of their keen disputants. It is awkward, to say the least, to have them display both better English and better logic than the men put up to answer them; such encounters cannot be too strictly confined to Calcutta and Allahabad. In short, the capital objection to a World's Parliament of Religions is, that we must not openly acknowledge the existence of a state of things which we are forced privately to admit. That alien religions are not pure devil-worship, that there are pagan virtues which it would not hurt Christians to have a touch of, that the entire basis and method of missionary work have changed—this may all be true, but it is one of those truths which are so precious that they cannot be too carefully economized.

An ingenious French writer, M. Hamon, has taken a sort of census of anarchists, and has published his results, some of which are curious. A surgeon attributed his anarchistic principles to the fact that he had been flogged at school, which certainly makes against Dr. Johnson's contention that there is nothing like a sound caning to beat the humanities into a boy's head. "Rooted objection to authority" was what made an anarchist of a journalist, who had first, no doubt, through such rooted objection, become what the French call "un journaliste du pavé." One can better understand the case of an artist who had been driven to anarchy by "the arrogance of critics," and that of an author who had gone the same way as "an alternative to suicide." What one cannot understand at all, however, is the analysis of the anarchist nature which M. Hamon professes to make on the strength of the data he has collected. He works out eight specific characteristics of the anarchist mind, some of which are obvious enough, such as "a spirit of revolt," "love of self," or even "love of liberty." But it seems strange, indeed, to read that bomb-throwers are strongly moved by "love of others," that they have marked "tender-heartedness," a powerful "feeling of justice," and a keen "sense of logic." As a final note of the anarchist it is said that he has a "thirst for knowledge." This, it must be said, a great many anarchists are in a fair way of satisfying. Their rough contact with the world's logic and justice has left them wiser if sadder men.

THE GOLD RESERVE.

THERE was taken out from this port on Saturday's European steamers $4,550,000 in gold. Including the shipments earlier in the week, the export movement since the previous Saturday amounted to $7,200,000. Most of this was withdrawn from the Treasury reserve, and it is not unnatural that the stock market and the financial community generally should have returned in some degree to the discouragement which prevailed at the periods of large gold shipments a year ago.

A new bond issue is talked of to replenish the Government's gold reserve. Whether any such thing is in contemplation by those in authority we do not know, but it seems to be the logic of the situation that the Treasury should begin to take care of itself instead of leaning longer on the syndicate that took the last lot of bonds. Under that contract the syndicate agreed to use its influence and its best endeavors to prevent the drawing of gold from the Treasury during the pendency of the contract. But the contract was fulfilled some time ago. All the gold that has been turned into the Treasury by it since that time has been over and above any agreement or promise, expressed or implied.

For this reason it is fitting that the Treasury should now stand on its own bottom. It ought to meet its responsibilities like an ordinary business corporation, which pays its debts with its own assets, and not to lean on individuals or subsist from day to day on benevolence. The spectacle of daily gold withdrawals followed by voluntary contributions from bankers is not at all reassuring. It is especially detrimental to our credit abroad, since no such thing ever happens there. No government except our own is engaged in the banking business. No other government attempts to maintain the gold reserve which commerce requires. In England, France, Germany, and all other commercial countries, such tasks are left to merchants and bankers. Being an essential part of commerce, the gold reserve adjusts itself automatically. It did so in our own country before fiat money made its appearance among us. When foreigners see us persistently violating the principles of sound finance long after the supposed necessity has passed away, they naturally distrust us and keep their money at home as much as possible.

While it is for these reasons fitting that the Government should take decisive steps to maintain its gold reserve with its own credit and resources, instead of leaning upon the benevolence and good will of banks and individuals, there are other considerations which make a new bond issue desirable, or at all events not undesirable. Nothing in our experience has yielded so much public enlightenment on financial subjects as the three bond issues that have taken place within eighteen months to replenish the gold reserve. Undoubtedly there was more than one cause for the drain of gold from the Treasury. There was the silver-purchase act of 1890, which crammed the circulation with fiat money that could not be digested; there was a deficit of ordinary receipts as compared with ordinary expenditures; and there was the panic of 1893 on top of these things and partly in consequence of them. Some of these things the public could understand and some they could not, but all could see the demand for gold and its outflow, and the steps taken to replenish it. All could see that the interest-bearing debt was increased more than a hundred and fifty million dollars in consequence, and nearly all could see that there was no way to avoid it.

The consequence was a large number of conversions to the idea that the Government must go out of the banking business with all convenient speed. How extensive this change of opinion has been we have some means of estimating by Mr. Cleveland's present popularity. It is safe to say that but for the national tradition against third terms he would be renominated and reëlected next year. But for this obstacle there would be no candidate against him in the Democratic party, and the Republicans would be appalled and paralyzed by his presence in the field once more. Now this popularity of Mr. Cleveland is due to no one thing more than to his firmness and determination to preserve the national credit and the gold standard. As the laws now stand, these two terms are synonymous, and Mr. Cleveland is their personal embodiment before the people. This constitutes his tower of strength, and it furnishes a very fair measuring-rod to test the change of public opinion on the question of fiat money. Every bond put out by the Government to maintain the gold reserve is a fresh argument for retiring the legal-tender notes; and this circumstance reconciles us to a new issue, if it must come, although we would not justify it if the $100,000,000 reserve could be maintained without it.

A TRUMPET OF UNCERTAIN SOUND.

SENATOR SHERMAN'S speech at the Republican mass-meeting in Springfield, O., last week is hailed as the blowing of a bugle. This doubtless refers to his declaration about the tariff policy of his party. He said:

> "What we propose and intend is, to restore the protective policy of the Republican party, to collect enough revenue to pay current expenses, to reduce the national debt, and to build up and increase domestic manufactures and productions, not only of the workshop, but of the farm and mine. The McKinley law, with such changes as time may make necessary, will accomplish this purpose."

This is probably more of a bugle blast than any Republican of Mr. Sherman's standing has emitted. It comes nearer to meaning something. The usual thing has been to say that the Republican party still stands firm for the grand system of protection, for general prosperity, happiness, and virtue; details to be had only on private application. Senator Sherman, with a great show of positiveness and boldness, comes out for the restoration of the McKinley bill, "with such changes as time may make necessary." This innocent saving clause really turns the whole thing into mist, it is evident. The bold Senator was not so vague when he rose in the Senate on September 29, 1890, to say terrible things of the McKinley bill just before voting for it. He then frankly admitted that some of the rates in it were "too high." He plaintively recognized the truth that it was a bill dictated by the manufacturers and Trusts, and that this well-known fact was a "great obstacle and menace in the way of the success of this bill." With ridiculous fatuity he appealed to the beneficiaries of the bill to act "judiciously," and to "avoid those contracts" which had aroused "popular discontent," winding up with the awful threat, "If they do not, I, for one, will be as ready to repeal this law as I am now ready to vote for it."

As far as Senator Sherman is concerned, therefore, it is clear that time will make necessary many changes in the McKinley bill. He would no doubt swallow his principles as meekly as before if driven to it again; but if he could have his way, he would not let the party break its leg a second time on the McKinley stone of stumbling. What is incumbent upon him, however, and upon all Republican leaders who talk of going back to McKinleyism, with "changes," is to say what changes. The country is entitled to a bill of particulars. Is Senator Sherman in favor of restoring the McKinley favors to the Sugar Trust, the Lead Trust, the Cotton-bagging, Binding-twine, Plate-glass, Linseed-oil Trusts, and the rest of them? Never mind now about the Democrats having also jumped into the same mire up to their waists; are the Republicans prepared to plunge in again up to their necks? If a duty is to be put on wool again, how high is it to be? The Ohio wool-growers demand that all foreign wool be excluded. Does Senator Sherman, do the Ohio Republicans, agree to that? They do not say. Nobody knows, yet every business man is entitled to know.

Our point is, that the Republican party cannot conduct a second tariff campaign on a platform of ambiguities and false pretences. Such was their campaign of 1888. It is safe to say that President Harrison would never have been elected if the Republican voters had dreamed that his election involved the McKinley bill. What the Republican platforms had been talking about was the need of "correcting the irregularities of the tariff" and "reducing the surplus," "effecting all needed reduction of the national revenue" by a wise "revision of the tariff laws," and, above all, deadly hostility to "all combinations of capital organized in Trusts." No

man could have inferred the McKinley abominations from such declarations. They did not mean or intend anything of the kind. When the Philadelphia Manufacturers' Club and the Ohio Wool-Growers and the Sugar Trust closed down on the luckless McKinley, and exacted from him the tariff which they unblushingly said they had "bought and paid for," no one was more surprised and disgusted than the mass of the Republican party itself. Thousands of Republican voters felt that they had been "buncoed"; and they had been.

Now, we say, such a thing ought not to happen again, cannot happen again. The Republican platform-makers this year and next, candidates for Congress next year, have got to put down in black and white, before the business and industry of this country, what they intend to do, if anything, about the tariff. The first question they must answer, and answer without shuffling or ambiguity, is the question whether a general revision of the tariff is to cast its paralysis over business again in 1897. Business men will insist upon knowing before voting; and their votes will depend, not upon party affiliations, but upon business reasons. Thousands of Republican business men are in the position of a large woollen-manufacturer who recently said: "I am and always have been a Republican, but if my party proposes to rip up the tariff again, I shall have seriously to consider how I shall vote." Similarly in the matter of separate and minor tariff changes. We do not believe any such can be made, but if the Republicans purpose making them, they must say how and when and what. Ambiguity, general mellifluous phrases, will not do. They will not even charm campaign contributions out of expectant beneficiaries; certainly they will win no votes, though they will repel many. Senator Sherman will have to try again. His trumpet gives too uncertain a sound to make even the Republicans prepare for battle; it will merely alarm the conservative business interests of the country. Their devout wish is to be let alone and allowed to work out their own salvation without interference from either Republicans or Democrats. Above all, they want nothing to do with a political leader or a political party that faces north by south on the tariff.

SOUTH CAROLINA'S PROBLEM.

South Carolina by the last census had a population of 1,151,149, of whom 462,008 were white and 688,934 black—as nearly as possible, 40 whites to every 60 blacks. Of males of the voting age there were 102,657 whites against 132,949 blacks; in other words, of the men who had reached the age of twenty-one there were in every hundred 43 whites and 57 blacks.

The Constitution of South Carolina, adopted under reconstruction rule in 1868, provides that every male citizen of the United States, twenty-one years old, "without distinction of race, color, or former condition," except those usually disfranchised everywhere as paupers, criminals, or lunatics, "shall be entitled to vote for all officers elected by the people, and upon all questions submitted to the electors at any election." It is obvious that, under this Constitution, if a race line should be drawn in politics, the party supported by the blacks would, with "a free vote and a fair count," beat the white party by about 30,000 majority.

The race line was drawn so strictly that scarcely any blacks voted the Democratic ticket, and but few whites (except carpet-baggers from the North) the Republican. As a result, the Republicans carried the State by large majorities for several years—33,534 for Governor in 1870, and 49,587 for President in 1872, when the Democrats were so demoralized by Greeley's candidacy that half of those who had voted for Seymour four years before would not go to the polls. Meanwhile, the carpet-baggers from the North, the native white "scalawags" who joined hands with them, and the majority of ignorant blacks were making the administration of public affairs a travesty upon democratic government by such a carnival of corruption and downright stealing as was never before seen in an American commonwealth.

The situation at last became intolerable. While the white adventurers insisted that there were some "years of good stealing" still left, the white minority felt in 1876 that they could not stand this sort of rule any longer. They resolved to get control of the State at all hazards. With the aid of intimidation they managed to secure the narrow majority of 1,134 for Wade Hampton running as the Democratic nominee for Governor, and although the Republicans tried to hold on to power by throwing out two counties on this ground, and thus giving Chamberlain the lead as a candidate for reëlection, the Hayes Administration withdrew the troops that were essential to the assertion of Republican claims, and the former masters ceased to be ruled by their former slaves.

Since then the Republicans have "stood no show" in South Carolina elections. The white Democrats frightened the negroes from trying to vote until most of them ceased to make any further effort, except in one Congressional district in which the blackest counties were lumped; and they put such obstacles in the way of the more persistent, through registration laws with which it was hard to comply, that few maintained what seemed a useless struggle—especially with the probability that they would be counted out if they really got their ballots in. For President in 1892 Harrison received only 13,384 votes, against 72,290 for Grant twenty years before; the Democratic vote, through the lack of any contest, being but 51,698—a total of only 65,082 for 235,606 males of the voting age, whereas Maryland, with a smaller population, cast 213,275 votes.

For years there has been among the better class of the whites a growing feeling of disgust at the methods of intimidation and fraud by which the black majority has been kept under, and a new constitution has been demanded under which the white minority might lawfully retain control. The Tillman element took up this cry, when they were fully established in power, hoping also to secure factional advantage by changes in the fundamental law. Their domination in the State disinclined many of the more intelligent whites to favor a convention which the more ignorant and reckless of their race would control, and the "Conservatives" aver that the proposition to hold one was really voted down at the polls last fall. However, the Tillmanites returned it as carried, delegates were chosen last month, and the body opened its sessions at Columbia on September 10.

The outlook for a wise solution of the problem is not encouraging. The Tillmanites constitute a large majority of the delegates, and the Tillmanite Governor was chosen President. Whether Tillmanites or Conservatives, the white delegates (there are only a very few blacks) are united in a resolution to secure "white supremacy" by any device that will not be declared in conflict with the United States Constitution. The purpose is openly proclaimed by the press. The object, says the Greenville *News*, is to "provide a system of elections which will give a white majority of from 20,000 to 40,000 without disfranchising anybody [anybody evidently here meaning any whites] and without requiring officers of elections to be experts in perjury, fraud, and cheating." The convention, says the Charleston *News and Courier*, "has been called to accomplish in a constitutional way the overthrow of negro suffrage"; and it adds:

> "Nobody tries to conceal it, nobody seeks to excuse it. It is not meant to disfranchise every negro in this State—there are some of them who are qualified by education and property to vote—but it is intended that every colored voter who can be disfranchised without violating the higher law of the United States Constitution shall be deprived of the right to vote. On the other hand, it is meant to disfranchise no white man except for crime if any way can be found to do it without violating the United States Constitution."

The problem which has long confronted South Carolina is a most difficult one—to secure good government in a State where three-fourths of the black voters and one-sixth of the white are illiterates. But the spirit in which this convention approaches it gives little hope of a correct solution.

WANTED—A GREAT POET.

That the English-speaking world is badly off for a great living poet, or at least one whom it can make a good face at accepting as great, is a fact for which there is a deal of painful evidence. The vacant Laureateship will not let some men rest.

Only the other day in the House of Commons, Mr. Balfour, who is said to have a pretty taste in poetry, was asked when the next Laureate would be appointed. He replied, however, with a lamentable appearance of hurrying away from an unpleasant subject, that this was a matter entirely within the hands of the Prime Minister. At about this time, as the almanacs say, and as a coincidence which would be dear to the heart of an almanac-maker, Mr. (now Sir) Lewis Morris published an ode on Armenia in the *Daily News*. If the laurel was to decorate a living head again, the willing brows must not be hidden from the sight of those in authority. But the only result of this piece of timely poetry that we have thus far observed was the anxious inquiry of the *Saturday Review* as to who, even if Lord Salisbury succeeded in delivering the Armenians from their Turkish oppressors, was to deliver the public from Sir Lewis Morris.

This desire to have the Laureateship filled, even if ill filled, doubtless has many and complex motives back of it. One is, apparently, regret at the waste of so much good poetic material. Subjects for poems are not so easy to come at as some might think. If any one doubts it, let him look at the unpromising themes which many of our hardest-working poets are compelled to take up, and which, after they have got through with them, appear to have neither promise nor fulfilment about them. But water runs to the Laureate's mill without half trying; and it is harrowing to a true poetic sense to consider the number of official poems that might have been written since Tennyson's death, but which now must for ever remain uncomposed for lack of an official poet. There is the son born to the Duke of York, possible successor to the English crown: can any truly poetic mind contemplate that infant in his cradle, unwept, unhonored, and unsung, without mourning over a lost opportunity? Then there were the victories of the Prince of Wales's *Britannia* over *Navahoe* and *Vigilant*, several good purses set down to the credit of his stud, besides the extraordinary event of two Derbys won by a peer and a Prime Minister, upon all of which much lofty rhyme might have been built by a Laureate, had there been one. For an outsider to touch such inviting and inspiring subjects would look like pushing himself forward for the vacancy ; and no one who remembers how shrinking and hermit-like all poets are by nature, would suppose it possible for any of them to think of such a thing.

It is said that the Laureateship should be filled as a state recognition of poetry. This is entirely irrespective of whether the poetry is good or the poet great. In fact, it is thought to be rather better not to have the Laureate too great a poet. He will serve a good purpose if he enables other poets to say, "How rich England is in poetic genius when such poets as we are *not* Laureates." Still, the general demand that a great poet stand forth is not abated by any such considerations, and has now, indeed, become so strong that many English critics are desperately thrusting greatness on various poets, whether they will or no. The *Spectator's* rather tiresome forcing of the bays upon Mr. William Watson is perhaps the most conspicuous instance. We have not a word to say against that meritorious writer; but to keep on insisting that he is another Wordsworth, if not another Milton, is very much like hailing the bramble as satisfactory king over all the trees.

Advertising for a great poet this side the Atlantic has not, perhaps, been so urgent, but there is no doubt that, in this country also, the man who could show the true strawberry mark of genius on his arm would hear of something to his advantage. Arms are bared in plenty and in public, but the marks are not fast colors. We have no poetical Laureateship, but we have a poetical "mantle." When Bryant dropped it, there was a palpable bending of receptive shoulders among some of the younger poets, but they straightened up when it was recalled that Longfellow still survived. When he passed away, Lowell's presence restrained them from stepping forward too confidently, but after he also was gone, and then Whittier and Holmes, they saw no reason for longer disguising their fitness to wear the mantle. But the public, which takes the place of the Prime Minister this side the water, has been as slow in bestowing the mantle as have Rosebery and Salisbury the laurel. Perhaps it dreads, like them, the making of both giver, gift, and recipient a little ridiculous.

No off-hand receipt can be given for making a great poet. The surest way to make a little poet is for a man to say to himself, "Go to, I will be a great poet"; or, still more fatally, "Go to, I will artfully make people think I am a great poet, whether I am or not." It may be safely said, however (Milton said it in unkind anticipation of his successors), that being a great man has something to do with being a great poet. A man must have lived and thought to some purpose—been great in mind if not in character and achievements—before he can write poetry, or prose either, that will affect the lives and thoughts of others to some purpose. Arthur Hugh Clough was as eager as any one for the coming of a great poet, but he knew perfectly well what he wanted him to come for, and with what equipment he must be provided when he did come. He must be prepared to tell the thousands of laborers what their tasks tended to, and at the same time tell trembling thinkers how to think. He must be able to portray in lasting lineaments the substance of the shadowy day—in fine:

> "Our real and inner deeds rehearse,
> And make our meaning clear in verse."

It takes something more than a genius for exclamation to do that. A great poet of that kind, when he comes, will come like the kingdom of heaven, without observation. Certainly he will not come sounding a trumpet before him. A part of his greatness will consist in not being at all anxious about greatness, in not knowing that he is great. Clough himself, without consciously striving for it or being conscious of it, was so near to being a poet of that kind that Lowell could say of him: "We have a foreboding that Clough, imperfect as he was in many respects, and dying before he had subdued his sensitive temperament to the sterner requirements of his art, will be thought a hundred years hence to have been the truest expression in verse of the moral and intellectual tendencies, the doubt and struggle towards settled convictions, of the period in which he lived." His example may be commended to the poets who, not having been born great or achieved greatness, are so manifestly willing to have greatness thrust upon them.

A LIBERAL'S VIEW OF THE GENERAL ELECTION IN ENGLAND.

LONDON, August, 1895.

EVER since the recent general election ended, the Liberal party has been trying hard to explain the causes of the unexpected defeat it suffered. It was not, however, so much the fact of defeat itself that took everybody by surprise as the magnitude of the catastrophe. The Liberal party had not counted on improving its position. Some thought that it might hold its own. Others looked for an equilibrium of parties. Those who had studied the constituencies reckoned on seeing a majority of from thirty to fifty against them. Nobody had the least idea that the majority would exceed sixty; and any one who had predicted that it would reach 152 would have been laughed to scorn. Nor were the party who proved victorious much better prepared for their victory. A few of them put their probable majority as high as seventy or eighty; none (it is believed) ventured to anticipate more than one hundred. Since the election which followed the reform bill of 1832 there has been no such "tidal wave" in English politics.

Now that the smoke of battle has cleared off the field, it is becoming pretty easy to criticise the tactics and assign the causes of the defeat. As usually happens in England, perhaps in all popularly governed countries, it was not so much the promises of the victorious party that influenced the electors as discontent with the party which was vanquished. Promises, indeed, were profusely made ; for although the Tory leaders had the prudence to issue no "authorized programme" or "platform," the Tory candidates were less cautious, and indulged in all sorts of declarations as to the measures which their party would carry, and the blessed results in the way of employment for everybody and abounding prosperity which would follow. These allurements, however, do not appear to have told very greatly on English people, who are now getting accustomed to the devices of electioneering. It was rather on the measures to which the Liberal party stood pledged that the elections seem to have turned, than on any fondness for the

Tories or any attractiveness in the Tory platform.

These measures, every one now admits, constituted too large and too ambitious a programme. Among them, however, that which, as most people think, injured the Liberals most was the Local Veto bill. There are few things for which the English workingman cares more than he does for his glass of beer. The bill went no further than to permit a two-thirds majority to prohibit, after three years' notice, the sale of intoxicants in a parish or ward of a town; but this was a detail which the popular eye overlooked, and it was supposed that, once the bill passed, the poor man would no longer be able to have his glass of beer, because all the public houses would be closed. The brewers and the publicans naturally encouraged this view of the measure, and worked like horses in every constituency for the Tory candidates. Moreover, the brewing business, which has of late years been extremely profitable in England, has largely passed into the hands of joint-stock companies, and the shareholders in these companies felt their pockets touched. Thus the drink question told mightily; and, though the teetotal party stood by the Liberals, it was heavily outnumbered. Probably some twenty or thirty seats, possibly many more, were fought and won mainly upon this issue.

Next in importance came the question of Disestablishment in Wales. It roused the clergy of the Established Church not in Wales only, but all over England also, as they had not been roused for many years. The English clergy sympathized with their Welsh brethren, and thought that they would themselves be the next to see their legal position and their endowments threatened. Many who, from their interest in the temperance cause, might otherwise have helped the Liberals, or at any rate remained neutral, were in this way drawn into the Tory ranks, and exerted no small influence on the result. In Wales itself the Liberal party lost six seats; and it is admitted that this loss constitutes a serious "set-back" to the Disestablishment movement, whose strength was largely drawn from the fact that Wales had returned in 1886 and in 1892 an increasing number of members pledged to that policy.

The Liberals had not expected to gain anything by their advocacy of home rule for Ireland, because in England, and perhaps even in Scotland, the electors were a little tired of that subject, having ceased, since Ireland had become comparatively quiet, to deem it urgent, and having become more or less provoked and repelled by the intestine feuds that have divided the Irish Nationalists ever since 1890, the year when Mr. Parnell was deposed from the leadership. The Tories on their side had expected benefit from pushing this question to the front, and descanted incessantly on one particular provision of the home-rule bill of 1893—that which allowed Irish members to vote in the House of Commons on questions affecting England only. But it does not appear that the home-rule issue had really any great influence. Men generally retained the opinions they had held at the election of 1892, and comparatively few who had voted for the Liberals then were led to vote against them now out of dislike to the particular scheme propounded in 1893. It must be remembered that, although the feeling against granting autonomy to Ireland is very strong in the richer sections of English society, it is comparatively feeble among the poorer. Thus the Tories drew less advantage from this quarter than they expected; their own rank and file being, indeed, somewhat indifferent to the whole matter.

Just as the Tories experienced a disappointment in this direction, so also were the Liberals disappointed by the attitude of the masses upon the subject of the House of Lords. They had counted on rousing the country against the upper chamber by dwelling on its hereditary and therefore irresponsible character, and by enumerating the many useful measures which it had in time past defeated or delayed. The country, however, did not respond. Those who were already attached to democratic principles went heartily into the fight, and probably cared more about this issue than about any other submitted to them. But the bulk of those comparatively indifferent or moderate men who, by throwing themselves into one or other scale, determine the result of an election, saw no great reason for touching the Lords. A hereditary chamber was no doubt an anomaly, but it was not (so they thought) doing them any particular harm, for it had not recently rejected any measure in which they, as Englishmen, felt directly and warmly interested. However, the Liberal leaders had not specifically declared what was to be done with the second chamber. Some were believed to desire merely to restrict its powers; others, to wish to turn it into an elective assembly; others, to abolish it altogether, and leave the House of Commons to stand alone. This third course, which was, of course, represented by Tory speakers as being that which the Liberals would, in fact, adopt, alarmed the more cautious persons who did not think the popular house so perfect a body as to require no sort of constitutional check. Thus it would seem that if the Liberals did not actually suffer from their onslaught upon the Lords, neither did they gain much by it.
